Every indication points toward a long and heated work stoppage. I have no doubt whatsoever that while the companies and union can withstand the effects of a prolonged strike, cattlemen will be particularly hard hit in light of the depressed market over the last 41 months.

The National Livestock Feeders Association has prepared a report which sheds some light on the current status of this strike.

Mr. President, I ask unanimous consent that this situation report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SITUATION REPORT: LABOR PROBLEMS IN CATTLE SLAUGHTERING AND PROCESSING PLANTS—MISSOURI RIVER AREA

(Prepared by National Livestock Feeders Association)

The members of the National Livestock Feeeders Association are grossly concerned over the fact that the Amalgamated Meat Cutters and Butchers Workmen of North America has struck seven beef slaughter and processing plants in the Eastern Nebraska-Western Iowa-St. Joseph, Missouri areas. Several plants have been out of operation for a month or more.

Daily slaughter loss in the seven plants has been 7,350 head of cattle, and weekly slaughter loss has exceeded 40,000 head. Besides, there is a breaking and processing loss of 28,000 to 30,000 beef carcasses per week, all at the struck Iowa Beef Processors Plant at Dakota City, Nebraska.

To the producers and feeders of beef cattle it is imperative that the slaughter and movement of cattle and beef be uninterrupted. The very nature of the business dictates that cattle must move to slaughtering plants as they become ready for market in order to avoid penalties through lesser values, and that the beef be moved into channels continuously.

Cattle feeders have been in a loss position for the past 41 months—with the exception of about 7 months in the last 3 quarters of 1975. Producers have been suffering similar losses. Idle slaughtering plants compound the grave financial problems of the cattle feeders who cannot stand the monetary devastation resulting from irresponsible idling of slaughtering and processing facilities.

The companies—particularly Iowa Beef Processors at Dakota City and Dubuque Packing Company at LeMars, Iowa (see details below)—have made what are obviously fabulous offers for 3½ and 3 year contracts, respectively. The union leadership has turned these down and continues the strikes. The strike at IBP was called without any strike vote by the members.

The union leadership has maintained a very arbitrary position. The union insists on bringing the contract wage rates up to what is known as the Master Pork Contract level, and from the beginning of negotiations last fall they have been unwilling to budge even 1¢ per hour from that position. Yet labor arbitrators have determined that specialty beef slaughters such as the plants involved, cannot operate successfully and profitably at the hourly rates contained in the Master Pork Contract.

Specialty beef killers, which slaughter about 85% of the fed cattle in the country, are dealing in a commodity—such as Good, Choice and Prime beef—which their competitors also have; whereas multi-specie slaughterers and straight hog slaughterers are dealing with a product which can be branded—such as Swift Premium Ham or Bacon, Armour Star, etc. The handling of branded products permits an add-on to the price to cover increased costs. Fuprthermore, multi-specie slaughterers can subsidize their beef operations from other sources. The specialty beef killers can do neither.

Thus, the real competition for the specialty beef killers—such as IBP, MBPXL, National, Dubuque-LeMars-Omaha, Flavorland, ABP, etc.—is among themselves, and not with the multi-specie killers who slaughter only a small percentage of the fed cattle. The union leaders refuse to acknowledge this situation, and continue to argue that IBP's wage level is at substandard rates. The fact of the matter is that IBP's wage rates are higher than the vast majority of specialty beef killers. Last fall, the union entered a contract with MBPXL at rates considerably below what IBP is now paying, even before the contract offer.

The credibility of these arguments is further substantiated by the fact that Swift & Company (Esmark) has announced the closing of five plants and there are reports that six more may be closed. The company cites high labor costs as a reason, and has said it plans to move into a number of name-brand "value-added" products, and away from cyclical, basic, commodity lines in an effort to boost profits which have plunged sharply. MBPXL has also reported losses in the quarter ended January 29, 1977, despite an hourly slaughter rate considerably below IBP's current hourly rate.

In the case of the Dubuque Packing Company's plants at LeMars, Iowa, and Omaha, Nebraska, the company has agreed to settle with the union at the LeMars plant for all the union has asked for—every dollar and detail. Yet the union has been unwilling to let the members go back to work unless the company will also include the Omaha plant in the same settlement. The company refuses—justifiably and legally.

Recently, the Dubuque Packing Company purchased the Omaha physical plant from Flavorland. It did not buy the company at Omaha. Thus, Dubuque is completely within its rights to refuse to recognize the union at that Omaha operation. Dubuque has been recruiting new labor at Omaha and announced intentions to open that plant today—March 7. The Company expects trouble.

The Amalgamated Meat Cutters and Butchers Workmen of North America is the same union that is standing in the way of a free flow of beef into many cities by refusing to handle boxed beef. Cities where boxed beef cannot be sold comprise about 16% of the U.S. population. The same union is responsible for the hours restrictions on sale of fresh meat in the Chicago metropolitan area plus some other major cities in the U.S.

These are arbitrary and irresponsible positions taken by the union leadership, all of which are having an adverse effect on the fed cattle market, distribution of beef, and also upon customers.

The table below shows the plants that have been struck by the Amalgamated Meat Cutters and Butchers of North America, the daily and weekly slaughter of cattle at these plants as well as the weekly processing of beef carcasses.

Plants closed—labor on strike	Daily kill (head)	Weekly kill (head)	Weekly processing (carcasses)
Iowa Beef Processors, Dakota City, Nebr.	2,600	14,300	28,000
Flavorland, Sioux City, Iowa	1,450	7,985	----------
Dubuque Packing Co., LeMars, Iowa	900	4,950	----------
Dubuque Packing Co., Omaha, Nebr.	900	4,950	----------
Raskin Packing Co., Sioux City, Iowa	600	3,300	----------
Dugdale Packing Co., St. Joseph, Mo.	600	3,300	----------
Hawarden of Iowa Beef Packers, Hawarden, Iowa [1]	300	1,650	----------
Total	7,350	40,425	28,000

[1] Settlement was achieved late last week at $5.47 per hour at beginning of contract, which is 66¢ less per hour than IBP's offer ($5.87 + 26¢ = $6.13).

In the following table are base hourly pay rates of some beef specialists as of March 1, 1977:

Companies and plant locations

	Base Slaughter Rate	Base Processing Rate
MBPXL:		
Friona, Tex.	$4.65	------
Plainview, Tex.	4.35	$4.35
Rockport, Mo.	5.37	4.61
Wichita, Kans.	5.22	5.09
National Beef	4.65	4.65
Spencer Foods:		
Spencer, Iowa	6.00	------
Schuyler, Neb.	5.72	5.42
Hartley, Iowa	----------	5.03
American Beef Packers:		
Oakland, Iowa	4.80	------
Omaha, Nebr.	4.80	------
Flavorland:		
Sioux City, Iowa (closed)	5.53	------
Omaha, Nebr. (closed and sold)	5.53	------
Fargo, N. Dak.	5.73	------
Iowa Beef Processors:		
Dakota City, Nebr. (closed)	5.87	5.57

The new contract offer by Iowa Beef Processors, which has been turned down by the union leaders and a strike called, is summarized below:

Base hourly pay rate now—slaughtering	$5.87
Hourly rate increases of 26¢ per hour for each year of 42-month contract. Jan. 1977, Jan. 1978, Jan. 1979, July 1979	1.04
Cost of living increase in hourly rate figuring inflation at 6% per year	.81
Base hourly pay rate for slaughtering after 3d year	7.72

In addition, the Company has offered new fringe benefits including insurance and a profit sharing pension plan, bringing total increase to around $2.90 per hour. Total hourly equivalent would be $8.77 by end of 42 months.

As of now, March 1977, the average W–2 income per year of non-management employees at IBP's Dakota City plant is $15,400.00. (Several hourly employees will exceed $20,000.00 this year)

Under the wage increases offered by the company, the average W–2 income per year of non-management employees in 42 months will be $19,840.00.

To these figures would be added all fringe benefits. An astounding wage rate . . . yet union leaders call a strike.

The contract offered by Dubuque Packing Company at LeMars, Iowa, also turned down by union leaders even though it is exactly what the leaders ask for, is summarized below:

Base hourly pay rate now	$5.87
Hourly rate increases at beginning of each year of 3-year contract amounting to 28, 28 and 29 cents	.85
Cost of living increase at .3 index—1 cent per hour increase for every 0.3% increase in 1967 cost of living index. Est.	1.03
Base hourly pay rate for slaughtering at beginning of 3rd year	7.75

In addition, Company has offered—

Non-contributory pension beginning in last month of contract.

Substantial increase in Hospital, Medical & Surgical benefits plus non-contributory optical, dental and drug program for employee and entire family.

Meal allowance of $2.50 if work shift goes beyond 10 hours.

Non-contributory sick leave at rate of $100 per week.

$100,000 major medical program.

This is the contract the union leaders have refused to take at the LeMars, Iowa, plant.

We earnestly solicit the influence of your office in prevailing on the union leaders to settle these strikes, accept the contracts offered, and let the people go back to work.

Actually, the cattle feeders are justified in being up in arms over these fabulous offers. To pay them, the companies have to get the extra money someplace . . . either by buying cattle lower or selling meat higher. Under circumstances today, the latter is not possible.

Thus, it will be the cattle feeder . . .

already in a serious loss position and financial bind . . . who will pay the extra bill.

NATIONAL ENERGY POLICY MUST BE COMPREHENSIVE TO BE EFFECTIVE

Mr. STONE. Mr. President, the Wall Street Journal of March 16, 1977, contains a very instructive article on the difficulty in implementing a national energy policy. Describing the problems of a Missouri Municipal Public Utility in complying with a notice from the Federal Energy Administration to convert from natural gas to coal, this article is an excellent illustration of conflicting Federal Government policy with respect to energy and environmental quality. It documents the almost impossible burden placed upon those who are caught in a "Catch 22" trap of attempting to comply with one Federal Government policy and, in doing so, running the risk of violating another, conflicting Federal Government policy. It also demonstrates the complex and widespread impact of implementing Government policies and regulations.

I assume, Mr. President, that President Carter's April 20 energy message will include some program for conservation of our limited natural gas supplies. I anticipate that such a program will include some effort to require boiler fuel users of natural gas to convert to coal or other fuels in generating electricity. While conversion from natural gas to other, more abundant fuels is probably a necessary component of an effective energy conservation program, I trust that Dr. Schlesinger, the President, and the Congress will take note of the experiences of the Springfield, Mo., City Utilities as outlined by the Wall Street Journal. This article demonstrates that, to be effective, our energy policy must be based on an understanding of the economic, the environmental, and the technological aspects of energy. It also underlines the fact that our energy policy must be comprehensive in its concept and implementation. We can no longer afford the delay and frustration of conflicting Government regulations.

Mr. President, I ask unanimous consent that the Wall Street Journal article to which I refer be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UTILITY'S FORCED SWITCH FROM GAS TO COAL LEADS TO A SERIES OF PITFALLS

(By David P. Garino)

SPRINGFIELD, MO.—John McMahan keeps a bottle of aspirin handy on his desk. As general manager of City Utilities, which operates the municipal electric, gas, water and transit systems here, he has been dealing with quite a few headaches lately.

Because of the natural-gas shortage and a Federal Energy Administration directive, City Utilities has been trying to convert its James River electric-power plant to coal from natural gas.

Besides encouraging a host of financial and operational problems in the conversion process, City Utilities has run afoul of the Environmental Protection Agency over clean-air rules in the burning of coal.

"It's been a hell of a job," the soft-spoken Mr. McMahan says. The problems he has met at this small utility are in effect a microcosm of the woes that may face many utilities that must phase out the use of natural gas in generating electricity.

The FEA has so far given notices to more than 70 power systems besides City Utilities to prepare to stop using natural gas. Electricity generation is an inefficient use of natural gas, which is needed for such things as heating of homes and producing of petrochemicals, the FEA contends. More than 125 power plants that are planned or are under construction are being told to install coal-burning capability.

GAS UNAVAILABLE ANYWAY

City Utilities hasn't received a definitive order about when it must stop using natural gas, but that may be academic anyway. Because of gas shortage, the utility hasn't received any gas during the past two winters from its supplier, Cities Service Gas Co. It has received some gas at other times of the year to help meet peak loads, but there may not be any gas available to City Utilities by 1979.

The James River facility has been using trouble-free natural gas ever since the first two of its five units came on stream in 1957. It was designed to use coal for only 15% of its power requirements.

With the conversion directive, City Utilities had to obtain long-term coal-supply contracts, and these supplies currently are coming from mines in Garland, Kans., and Welch, Okla. Last year, Mr. McMahan says, the plant used 270,619 tons of coal, against just 37,887 tons five years before.

With the use of more coal have come a lot of problems. The plant's coal-feeder pipes are so narrow that workers must use steel rods to keep loosening clogged coal.

RALKY BELT AND A BLAST

The conveyor belt that carries coal into the plant has had to be patched several times, and Mr. McMahan would like to replace it with a bigger belt and improved motors to move coal better. The mills that grind the coal should also be upgraded, he says, because of recurring breakdowns, and new equipment is needed to keep soot from collecting in the boilers.

Last month, a boiler on a 60-megawatt generator blew up, putting it out of service for 12 to 24 months. Although insurance will cover much of the cost, City Utilities will still have to cough up at least $250,000. The cause of the explosion hasn't been pinpointed, but Mr. McMahan suggests that if natural gas had still been the fuel, the blast never would have occurred.

Less than two weeks after the explosion a hopper that feeds coal onto the conveyor belt collapsed from corrosion, so a new hopper with a thicker steel plant will have to be constructed.

Operational costs are also increased by the extra maintenance that the use of coal requires, according to Robert Hogan, assistant general manager of City Utilities. "It's sad to see gas go," he says wistfully.

"YOU COULD EAT OFF THE FLOOR"

Clean-burning gas required "next to no maintenance," says Charles Courtney, a 32-year employe of the utility. "It was almost monotonous," he says: "The plant was so clean, you could eat off the floor." Now, he adds, crews constantly have to sweep up the dirt.

It was the FEA, of course, that ordered the conversion to coal, but the dirt problems with coal have caused new problems with the EPA. "I wish the federal agencies would get their act together," an exasperated executive of the utility says.

The EPA has ordered City Utilities to put electrostatic precipitators on its units to reduce particle emissions into the air around the plant. The utility has received one variance from the order and now has been told to comply with the Clean Air Act by 1979.

At a second plant of City Utilities, built specifically for coal and started up last summer, the EPA has been pressing for installation of a scrubber to treat sulphur dioxide emissions. The scrubber will represent 25 percent of the plant's total cost of $75 million.

All of these problems have put City Utilities in something of a financial bind, so it has sought to float bond issues. But seeking voter approval for the issues has been a frustrating experience for the utility, and has seemed to heighten customers' resentments.

Bond issues of $12.5 million for pollution-control equipment and $4 million for coal-handling equipment were defeated last year. In one vote, in August, a narrow majority favored the bond issue, but technicalities forced a new election. In the November election, the bond issues received only 40 percent acceptance.

"At the heart of the issue," says David Lages, a member of the city board that oversees City Utilities, "was the feeling that Washington isn't going to tell us what to do." An executive says he surmises that "people just didn't believe us."

Amid all the other problems, management of City Utilities was castigated by a self-styled citizens committee as a "self-perpetuating, self-serving monster." The committee also suggested that the utility be sold to private interests.

A long-time resident, however, argues that "given the circumstances, management is doing as good a job as can be expected, or even better. None of this is any of their doing." Besides, sale to a private company would surely entail even higher rates, some residents argue.

Defenders of City Utilities maintain that, as elsewhere in the country, people were long spoiled by low rates. For instance, after Springfield bought the electric system in 1945, the average annual cost of a kilowatt hour dropped from 2.87 cents to a low of 1.83 cents in 1972. Inflation and other factors boosted the cost of 3.51 cents last year, however. "The days of cheap energy are long gone," Mr. Hogan of City Utilities says.

COMPLIANCE "IMPOSSIBLE"

The setback of the bond issues means "it'll be physically impossible for us to meet" the 1979 pollution-compliance deadline, Mr. McMahan says. He has asked the Missouri Air Conservation Commission, which enforces the EPA rules, for a two-year extension.

For its part, the Missouri agency expressed regrets that the bonds failed but added. "This doesn't relieve City Utilities from complying with the regulations." A decision is due in April. City Utilities could be fined if a variance isn't granted to extend the time for complying.

The utility did get some relief from the City Council, which passed a controversial 8% rate increase earlier this year. At best, though, "that'll stretch out to five or six years what we wanted to do in three," Mr. Hogan says.

Because of the boiler explosion and other new problems, City Utilities is asking the city council for an additional 7% electric rate increase, which is, of course, a politically sensitive issue.

NEED FOR EXPANSION

Besides present worries, the utility must plan for future expansion of capacity, Mr. McMahan emphasizes. "A 50-megawatt turbine will probably be needed in 1981–82 and a 250-megawatt unit in 1985–86," he says. As this southwestern part of Missouri has grown, the peak use of electricity has climbed from

18.3 megawatts in 1945 to 322 megawatts last summer.

Despite the recent travail, the 150,000 or so residents haven't experienced a brown-out, "though we've been on the ragged edge," Mr. Hogan says.

A City Utilities executive reasons, "Some people won't believe how serious things are till they turn on the switch and nothing happens."

Robert Schroff, a member of the board that supervises City Utilities, says, "We'd probably get the money we need" if capacity were reduced so that curtailments had to be made. He adds with a broad smile, "Then we'd be in hog heaven."

"SEXPLOITING" KIDS—AN ABUSE OF POWER

Mr. ROTH. Mr. President, yesterday I introduced S. 1011, a bill which provides strong criminal penalties for the dissemination of pornography exhibiting children. The practice of displaying children in sexual conduct cannot be tolerated. An editorial by Ellen Goodman in today's Washington Post calls "sexploitation" of children a matter of "protecting real lives." I direct my colleagues' attention to this editorial.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

'SEXPLOITING' KIDS—AN ABUSE OF POWER

(By Ellen Goodman)

BOSTON.—There is almost a sense of relief in talking about it. At last, a simple matter of right and wrong. There is no "redeeming social value" for "Lollitots" with its sex shots of little girls. There is surely no "community standard" left unviolated by "Moppets" with its children posing in adult fantasies.

No. Finally there is an unequivocal villain. Finally a group we can pursue with a clear sense that "This, we know, is wrong."

After being force-fed the "heroics" of a creep like Larry Flynt, after pondering the defense of an obtuse sexual gymnast like Harry Reems, the question of kidporn is refreshingly uncomplicated.

Our reaction is equally direct: Stop it! Already there are two federal bills and half a dozen pieces of state legislation designed to stop the use of children's bodies as sexual capital.

The speed with which child pornography has become a national concern says a great deal about our gut feelings about pornography in general. Kidporn is just a distillation of the worst of the genre: the perversion of the healthy, the rape of the natural, the sale of people.

But it has been dangerous and difficult to ban the trafficking among "consenting adults"—those who pose and those who peer. The Supreme Court's notion—to determine what is pornographic by "community standards"—is so flexible and flaky that 12 jurors in a remote village could sentence Masters and Johnson to jail.

But the children cut through all of the murkiness. This is not a First Amendment issue. It is not a matter of legislating the sexual fantasies of adults. It's a matter of protecting the real lives of the young models.

We can take kidporn out of the realm of sex and into the realm of power, where it belongs. The children are victims, and kidporn is the exploitation of the powerless by the more powerful. That exploitation is as common to the history of adult-child relationship as is protection.

Children have always been the dependent subjects of adults. Until recently they were the objects as well. For centuries, parents simply owned them as property, and only gradually has society modified that power.

Now adults are not allowed to abuse their children, at least not badly, and not allowed to send them to work, at least not hard work or long work.

Yet it's estimated that thousands of children are killed every year by their "guardians" and that two million are "abused." In the home, the majority are merely "hit." In the schools, others are administered "corporal punishment." In the fields, thousands are put to work beside desperate migrant-worker parents.

Numerically, there are far, far fewer cases of sexploitation than of other forms of misuse. But now the federal legislation against kidporn will appear under two peculiarly appropriate categories. One has been filed under child abuse, the other under child labor statutes. These are the areas that already legislate restraint.

If we take this issue, and look at it as a matter of the abuse of power rather than of sexual deviance, we may begin to look at adult-child relationships more intently and more generally. We can continue to sort out and deal with our own confused notions of what is the appropriate use of power by adults over children. How should we use it and how should we further limit it?

At least on the kidporn question we are sure. As a Village Voice writer noted: Even Lolita, a teenage "seductress," was finally a powerless child. In the novel, after her mother dies, Lolita goes to the bed of the obsessed Humbert, who explains: "You see, she had absolutely nowhere else to go."

ON THE DEATH OF MAURICE WILLIAMS

Mr. BAYH. Mr. President, on Thursday, March 10, our country was shocked by the wave of violence that struck the Nation's Capital. The American people stood by for 2 days while a band of religious zealots attempted to inflict their own brand of justice on their enemies. And in the process of carrying out this ghastly deed, they succeeded in killing a young aspiring reporter, and wounding a member of the Washington, D.C., City Council. Instead of inflicting their brand of justice on their enemies, they unnecessarily inflicted pain and suffering on hundreds of innocent American citizens.

Given the circumstances surrounding the brutal and senseless killings of members of Hanafi Muslim Sect in 1973, one can understand how Hamaas Abdul Khaalis would harbor pent-up feelings of aggression against the murderers. But the one lesson that extremists such as Khaalis always fail to comprehend is that justice cannot be accomplished at gunpoint. It pains me to know that many of our citizens are so filled with bitterness and hatred toward their fellow human beings that they arbitrarily will inflict injustice in pursuit of their distorted form of revenge. In further pains me to know that many Americans have so little confidence in our system that they totally ignore the established legal mechanisms through which to express their grievances.

Though there is no question that those who participate in these acts of terrorism should be promptly brought to justice, it seems to me that we all share, in a small way, in the death of Maurice Williams. For this talented young man's untimely demise was due in part to a lack of compassion, patience, and understanding on the part of a society that is becoming so engrossed in its own pursuits that it can no longer take time to understand the problems and frustrations of its members. Let us hope that Mr. Williams' death can be symbolized as a need for change. Let us hope that such change will lead us toward a greater understanding of our fellow human being on an individual, national, and worldwide basis. And finally, let us hope that Maurice Williams' death will signal the beginning of the end of such nonsensical tragedies. We, as individual Americans, can honor this young man's death by dedicating ourselves to compassion, understanding and patience for our fellow human beings.

POLL SHOWS SUPPORT FOR PRIVATE SECTOR NHI

Mr. HANSEN. Mr. President, earlier this month Dr. Richard Palmer, president of the American Medical Association, delivered a speech on the subject of public attitudes toward health care and health care issues. In that address, he made reference to a recent Gallup organization survey on the same topic.

Because of my longstanding commitment to improving the health care delivery system of our country—consistent with the needs and desires of those it serves—I was particularly interested in what both Dr. Palmer and the Gallup poll had to say. For the same reason, I think many of my colleagues may find the opinion data and accompanying commentary worthy of their personal review.

In calling it to the attention of the Senate, I would like to point out that the conclusions it reaches are very similar to those I myself had made regarding public attitudes before introducing the Comprehensive Health Care Insurance Act, S. 218, back on January 14. We now have additional support, I believe, for the proposition that it is the private sector—not the Federal Government—which should have primary responsibility for financing and administering any type of national health insurance plan.

Mr. President, for the benefit of all Members of the Senate who are concerned with this timely and important issue, I ask unanimous consent that the relevant speech excerpts of Dr. Palmer at St. Petersburg, Fla., and complete Gallup survey which I have described be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPTS OF SPEECH BY DR. RICHARD PALMER

There are those in government who believe that a paramount way to help people is to enact a national health program run by the federal government—notably by the Social Security Administration with all of its flair for redtape and red ink.

At the other extreme are those in our profession who sincerely believe that organized medicine should avoid offering a Na-

tional Health Insurance bill of its own . . . that the present system of health protection is good enough . . . and that plenty of data shows most people are satisfied with it.

Well, let's look at what the people really are saying.

A Gallup poll, released at the end of last year, shows that the current systems of voluntary health and medical care is favored by only one out of four people—a drop from the 30 percent who favored it in 1972.

A plurality—39 percent of the people polled—endorses the following:

"A system of compulsory health insurance covering everybody who has a job and his or her family, with employers and employees sharing the cost, and the federal government providing health insurance only for people who do not have jobs."

That comes fairly close to being a description of the AMA's comprehensive health insurance measure, which would mandate employers to offer health—care coverage, make acceptance of that offer voluntary for employees, and allow the self-employed to get income-tax credits, scaled inversely to income, to help pay for their coverage.

It would apply federal funds only to the poor and jobless. These funds would come from general revenue, not from any hike in the already burdensome Social Security tax.

If the 39 percent who chose this mixed system of coverage are added to the 25 percent favoring the present system of combined private and public funding, we see some sort of shared responsibility.

This total, when contrasted with only 28 percent who prefer universal coverage paid entirely by taxes, makes it clear that the public has not been convinced that fundamental change is needed.

To repeat, by better than 2 to 1, the people favor a mix of private and public funding.

On the question of who should run an NHI program, only 28 percent of the Gallup interviewees think the federal government should—a drop of 12 percentage points since 1972.

In contrast, there has been growing public confidence in the ability of local government, insurance companies, and "local organizations run by citizens and doctors" to administer NHI. The total partial to these three categories has risen 13 percent since 1972.

As for paying for health insurance, a poll by the NBC network last October showed 48 percent opposing an NHI program paid through increased taxation, 36 percent favoring it, and 16 percent unsure.

But let me return to the Gallup survey.

In general, it reflected a large amount of faith in our profession—including the American Medical Association.

No organization was rated higher in credibility than the AMA, which surpassed the average for four other professional associations, five trade associations, six government agencies, and ten labor unions.

Asked if they have "a great deal of fair amount of trust and confidence" in various groups, the Gallup interviewees gave us the top rating. Physician organizations—such as the AMA—got a 71 percent nod, compared with 68 percent for insurance companies, 63 percent for hospital administrators, only 49 percent for federal health officials, and 47 percent for labor unions.

The complete survey follows:

SUMMARY

To summarize the findings of recent Gallup surveys:

There has been a significant decline in the number of Americans who want to see a national health care plan administered and controlled by the Federal Government. This has occurred over a period of time when trust in government has fallen sharply.

Secondly, there is increased interest in having national health care administered by local organizations. This is occuring in an attitudinal environment in which medical doctors and the A.M.A. are held in high esteem, and there is a greater desire for citizens to have a more direct control over their lives.

On the periphery of this, there are some important demographic trends. The poor and lower socio-economic groups, who have in the past expressed the most interest in national care, continue to express a higher rate of medical deprivation. However, there are increasing signs that the middle and upper socio-economic groups are less satisfied with their health care today.

While the upper socio-economic groups are showing more discontent with health care and more support for national health insurance, they are less likely today to want the Federal Government to administer it.

In conclusion, as policy for national health care is formulated, the degree of public satisfaction with health care and the degree of trust it has in the social institutions which may administer it are some of the factors that will influence public opinion and in turn influence legislation.

Findings of the details

For close to a decade survey organizations have been reporting a lack of public confidence in our social institutions. Although Vietnam and Watergate are passing into the history books, their legacy, public mistrust, remains very much with us today.

The credibility of America's institutions are at issue in virtually every area of public policy. Elections, energy questions, economic policy and problems of health care are and will be affected by the degree of public trust in its institutions. The purpose of this report is to examine public confidence in the medical profession and the American Medical Association itself, compare this to public confidence in other social institutions, and illustrate how such attitudes are affecting opinion about national health care.

An examination of attitudes toward the medical profession and the AMA

In June of this year Gallup asked a nationally representative sample of the public to rate the honesty and ethical standards of 11 occupations. The survey showed that Americans feel that honesty and ethical standards are most evident in professional occupations, such as among medical doctors, engineers, and educators, and are least evident among politicians, labor leaders and advertising practitioners. Of the 11 occupations tested, medical doctors ranked number one on the public scale of honesty and ethical standards. Fifty six percent rated medical doctors as having very high or high standards of honesty and ethics. Engineers and college professors were the only other occupations to be so rated by close to a majority of our sample. Comparatively, 11% gave advertising practitioners high marks for honesty, 12% labor union leaders, and 14% congressmen.

Although medical doctors are held in high esteem relative to the other 10 occupations tested, it should be noted that 44% of the public does not feel that doctors are highly ethical and honest. Critics of the medical profession have a distinct demographic character. Suspicion or skepticism about the honesty and ethical standards of doctors is more evident among the following: low income families, blacks, families where the head of household is a manual worker, and among persons without college educations. In short, the poor of this country have not as much faith in the medical profession as do the middle class and upper socio-economic groups.

This finding is not surprising when examined in the context of other Gallup survey findings. In a global survey, which measured human needs and satisfaction in over 60 countries of the world, we found that reports of medical deprivation were higher in the U.S. than in all countries of Western Europe, Canada and Japan. (See table 3 in Appendix).

In the U.S., 15% reported that in the past year they could not afford the medical care they needed. Comparatively, in Canada 4% made such reports, in Western Europe as a whole 5%, in France 8%, and in Italy 9%. To give this perspective, about as many Americans report incidence of when they could not afford food or clothing. However, in terms of rank order, the U.S. ranks first among industrialized nations in incidences of reported medical deprivation, third in terms of food and ties for fourth place with the United Kingdom for clothing.

Reports of medical deprivation in the U.S. are highly clustered socio-economically. Among the lowest income groups, 44% reported an instance of not having sufficient money for medical care in the past year, and among non-whites 36% made such reports.

In effect, while the medical profession is highly regarded and enjoys a level of public trust above that of other occupations, lower socio-economic groups express significantly less faith in the medical profession.

Turning to the American Medical Association itself, a series of Gallup surveys were conducted in 1976 to access the communications credibility of American social institutions. These studies were designed to determine the degree to which the public believes the communications of government agencies, labor unions, business corporations and professional and trade organizations.

As the public gives medical doctors the highest marks for honesty and ethical standards, the public expresses the most belief in the communications of the American Medical Association.

Of ten well known professional and trade association rated with respect to the credibility of their communications by a representative sample of the American public, the A.M.A. was rated as one of the most credible. The overall credibility rating given to the A.M.A. was 6.8 on a 10 point scale with 10 representing organizations whose statements were most believable.

The public is more believing in what the American Medical Association and other health care associations say, than believing in the communications of many government agencies, and a wide range of social institutions tested by Gallup.

To a large degree the public perceives the American Medical Association to be an organization which regulates and standardizes the medical profession. Relatively small proportions of the public see the A.M.A. as a protective or lobbying organization. When asked an open ended question—"What does the A.M.A. do?" by far the most frequent response was "regulates/standardizes the medical profession," mentioned by 41% overall. A relatively small proportion (8%) felt the A.M.A. protects doctors and a smaller number (4%) felt the A.M.A. serves as a lobby group. Importantly the survey indicates the credibility rating of the American Medical Association is significantly lower among those who define the organization as one which protects or lobbys for doctors. Among those who felt the A.M.A. was a protective or lobby organization the A.M.A. credibility rating was 5.5. Among those who ascribed some other function to the A.M.A. its rating was 7.0.

To this point, the disposition of public opinion is that the actions and policies of the American Medical Association are in the public interest. On a ten point scale the or-

ganization received a 6.6 rating with 10 representing organizations whose policies and activities are in the public interest. Relatedly, the A.M.A. is viewed as effective in performing its work by a majority of the public.

The A.M.A. has a high level of communications credibility among all groups in the population, however, it is found most credible by those groups who expressed the least trust in medical doctors: the grade school educated, lower income, and manual worker groups. The A.M.A. also has a high level of communications credibility among women relative to men.

The A.M. A. achieved somewhat lower credibility ratings and lower ratings as acting in the public interest among the better educated, the more affluent population, and upper socio-economic groups. These groups were also more likely to see the American Medical Association as an organization which seeks to protect doctors and acts as a lobby group. Further analysis of the survey suggests that the lower credibility rating among upper socio-economic groups is related to the fact that these segments of the public are more likely to define the A.M.A. in "protective or lobbyist terms."

To summarize, the medical profession and the American Medical Association itself evoke a high level of public trust, relative to a wide range of occupations and social institutions respectively.

Given such attitudes, it is not surprising that the public has the most trust in doctors' organizations and health insurance companies to propose a fair and workable program. In December 1976 71% had a great deal or fair amount of trust in doctors' organizations such as the A.M.A., and about an equal number had trust and confidence in health insurance companies, such as Blue Cross/Blue Shield. Hospital administrators were positively rated by 63%. However, somewhat less than a majority have trust and confidence in labor unions, and about half have trust and confidence in Federal Health Officials.

These questions were first asked by Gallup in 1971 on behalf of the Potomac Associates. Examining the trend we find:

Slightly fewer reporting a great deal of trust and confidence in doctors' organizations and an increase in the lack of confidence categories.

With respect to insurance companies, there is no significant trend.

Similarly, with respect to hospital administrators and labor unions, opinion is at about the 1971 level, with a slight decrease in confidence in hospital administrators and a slight increase in confidence in labor unions.

However, for federal health officials, a nine point decline in a great deal/fair amount of trust and confidence is observed.

In this regard, there has been a slight decrease in trust and confidence in virtually all groups tested, save labor. This probably reflects an overall erosion in trust and confidence in social institutions since 1971. However, this decline is most precipitous with respect to federal health officials.

Attitudes toward health care issues and national health insurance

In 1971 and again in 1974 the Gallup Organization conducted a study in which a nationally representative sample of Americans were questioned concerning their attitudes toward health care. The study was conducted for the Potomac Associates and published in U.S. Health Care, What's Wrong and What's Right. To investigate how attitudes concerning health care have changed, Gallup recently repeated a number of questions. The recent surveys were conducted in September and December 1976. The first question asked was: "All things considered, how much confidence do you have in being able to get good medical care for you and your family when you need it—a great deal of confidence, a fair amount, not so much, or none at all?

As can be seen. Americans have consistently expressed confidence in being able to obtain adequate medical care. In all three studies, more than 80 percent expressed either a great deal or a fair amount of confidence in being able to get good medical care for themselves and their families when they need it. (See Table 11 in Appendix).

The trend since 1971 would indicate, however, that this confidence has been eroding. In 1971, 45 percent expressed a great deal of confidence, declining to 43 percent in the 1974 study and to 40 percent in 1976.

In analyzing the downward trend, it is interesting to note that most of the loss of confidence has come from among the upper socio-economic groups.

Not surprisingly, in all three surveys the upper socio-economic groups have expressed more confidence in being able to obtain good medical care than those respondents from the lower socio-economic groups. However, it is among the better educated—those with a college or high school education—that confidence has shown a significant decline. As many of the grade school educated expressed a great deal of confidence in being able to obtain good medical care in 1976 as did in 1971. A similar pattern can be seen when this question is looked at by occupation and income.

In the health care study conducted in June 1972, those interviewed were asked who should control a national health insurance program. Respondents were asked: "Congress may soon pass some form of national health insurance partly paid for out of taxes. From among those listed on this card, who would you prefer to have run this program?"

The categories were:

The Federal Government in Washington
The State Government
Local Governments
Private Insurance Companies
Local Organizations run by citizens and doctors together

It is the results of this question that show the most dramatic change in attitude. In 1972, a plurality of all respondents interviewed (40%) felt the Federal Government should run the program, followed by 16% who would prefer State Government, 7% local government, 13% insurance companies, and 13% local organizations run by citizens and doctors.

When the 1972 findings are compared to the September 1976 findings a significant change in attitude as to who should administer a national health insurance program is evident:

The proportion who would like to see the Federal Government run a national health insurance program has dropped dramatically from 40% in 1972 to only 28% today. This shows a decline of 12 percentage points, or about a third. (See Table 14 in Appendix.)

During this same time period, support for local organizations run by citizens and doctors together has increased significantly. From 13% in 1972 to 20% today—an increase of seven percentage points, or over 50 percent.

A preference for local government has also increased slightly from 7% to 11% today.

The results show an obvious change in attitude in favor of more local control. In analyzing the shift in attitude, it was found that the greatest change took place among the upper socio-economic groups and among younger people. Among the college-educated preference for the Federal Government's running a national health insurance program has shown the greatest decline—35% in 1972 and only 21% in the September 1976 study—a loss of 14 percentage points. Among the high school educated there was a decline of 11 percentage points, while the grade school group declined by only 8 percentage points.

On the other hand preference for local organizations is dramatically higher among the college educated compared to those with only a grade school education. This was true in both the 1972 study and the 1976 study.

In the most recent survey, 24% of the college educated would prefer local organizations run by citizens and doctors, compared to only 10% among the grade school educated.

While this question asked specifically about who should control a national health care system, it is likely that the change in attitude seen here reflects, at least in part, a more general change in attitude, rather than a change limited to health care. The results of work done by The Gallup Organization, as well as other organizations, have shown that such factors as the growing interdependence of individuals and institutions, the growth and influence of government, and the increasing domination of big business have left people with a feeling of increasing dependency and the uneasy feeling that they are having less and less control over the direction and well-being of their own lives and the lives of their families.

The end result has been alienation, and a feeling of helplessness and isolation. People view the very institutions which have been portrayed to them as being in disarray and decay, as exerting more and more control over their lives. The desire to regain the feeling that they have some influence, that they have a degree of control over what happens to them, has been growing.

The change in attitude concerning health care which observed here is, at least in part, another manifestation of the public's alienation and desire to be in on the decisions that will affect their lives, and to have a degree of control over what happens to them.

In another survey conducted in 1972, again for the Potomac Associates, respondents were asked which health care system they felt was the best way to provide adequate health care for everyone.

The choices were:

A universal system of health insurance covering everybody and paid for by the Federal Government out of money raised by taxes;

A system of compulsory health insurance covering everybody who has a job and his or her family, with employers and employees sharing the costs. and the Federal Government providing health insurance only for people who do not have jobs;

The present system of voluntary health and medical care.

In 1972, although 40% favored a mixed system of public and private participation, no system was favored by a majority. (See Table 17 in appendix.) Three in ten (30%) expressed a preference for the current system. Only about one in five (22%) thought a universal system paid for through taxes would be the best system.

This question was repeated in December of 1976. The results show a decline in support for the present system of voluntary medical care and an increase in support for a universal system paid for through taxes. As would be expected, as confidence in being able to obtain adequate medical care has declined, support for the present system has also declined.

A mixed system is still favored by a plurality (39%). If those favoring the present system are added, approximately two thirds (64%) of the respondents interviewed favor a mixed system of public and private participation.

The 1971 study also questioned respondents concerning the areas they would like to see the Federal Government most involved in when it comes to medical and health requirements. Respondents were asked the question: "Which of the items on this card would you most like to see the Federal Government involved in when it comes to medical and health needs?"

As might be expected, "seeing that medical costs will not be an obstacle to people get-

ting the care they need" was the most frequently mentioned, followed by "sponsoring health research" and "training doctors' assistants."

When this question was repeated this past September, the results indicated an interesting shift in attitude. While respondents in the most recent survey tended to name all of the areas to a greater extent than they did in 1971, it is the areas that have shown the greatest increase that reveal an interesting pattern. The areas where the greatest increases occurred were:

1. Enforcement of higher standards for hospitals and nursing homes,
2. Sponsoring more research,
3. Conducting periodic re-examination of doctors, and
4. Insuring that the American consumer is represented in the development and management of health services.

Those areas that have shown the least increase were:

1. Training doctors' assistants, and
2. Building more medical schools.

The trend would suggest that there is a growing desire on the part of the public for more policing of the health care system, and less sentiment for the expansion of facilities. However, it should be emphasized that in both surveys "seeing that medical costs will not be an obstacle to people getting the care they need" was the most frequently mentioned item. Medical costs are foremost on the public's mind.

THE SUCCESS OF THE ALL-VOLUNTEER FORCE: AN EVALUATION OF THE KING REPORT

Mr. PROXMIRE. Mr. President, today I would like to discuss the recently released Senate Armed Services Committee study of the All-Volunteer Force. Titled "Achieving America's Goals: National Service of the All-Volunteer Armed Force," the study was conducted by Prof. William R. King, of the University of Pittsburgh.

First, I would like to compliment Professor King on a job well done. The report is very thorough and deals with many aspects of the All-Volunteer Army. However, I am afraid that the report has been inaccurately portrayed by publicity citing only its most ominous predictions.

After studying the report, I do not find reason to believe the All-Volunteer Army is in danger of failure. The King report has revealed problem areas in the maintenance of the All-Volunteer concept, but it has not proved that a return to the draft or the establishment of a national service requirement is required.

The report deals equally with an evaluation of the All-Volunteer Forces and the possibility of the institution of a nation service system. I will discuss only the first half of the study because I believe the data concerning the performance of the All-Volunteer Forces have made consideration of a national service unnecessary.

THE AVF HAS WORKED

Concerning the past and current performance of the All-Volunteer armed services, the King report finds that the All-Volunteer concept has been a success. In its own words, the report finds:

Now that the AVF has been in existence for nearly four years, it has shown to be feasible in terms of aggregate measures applied to the recruitment of personnel in sufficient quantity and quality to permit the armed forces to function according to its assigned role.

Thus, in direct contradiction to the issues surrounding the national service concept, the AVF has been demonstrated to be generally feasible—at least under the current peacetime conditions.

In summary, the King report for the Armed Services Committee has found that the All-Volunteer Force has operated adequately, maintaining sufficient manpower levels, both quantitatively and qualitatively.

In relation to recruiting and manpower requirements, the King report cites figures indicating that the Defense Department has met 99-plus percent of its required quota in fiscal year 1976 and projects meeting 99 percent in transition quarter 197t and 99.7 percent in fiscal year 1977.

Concerning quality standards, the report states that today's armed services personnel rate higher than the personnel of 1964 when judged by the standards of high school diplomas and armed services vocational aptitude battery scores—ASVAB.

Military officials emphasize the importance of a high school diploma because statistics show high school graduates are more likely to successfully complete the basic training of the military. Sixty-nine percent of today's enlistees hold high school diplomas as compared to 68 percent in 1964 and 61 percent in 1974.

The ASVAB tests, which measure arithmetic reasoning, word knowledge, tool knowledge and pattern analysis, also show a higher quality recruit today then in 1964. The percentage of recruits falling into test score categories I and II, the highest achievers, is greater than the 1964 percentage, while category IV enlistees have declined.

The King report also measures the representativeness of the All-Volunteer Forces according to geography, race, and family income. The statistics cited by the study show a remarkable degree of representativeness.

On the basis of family income, the report states that 6.4 percent of enlistees come from families with an income of 0 to $2,999. These families make up 5.3 percent of the general population. On the other end of the spectrum, 55 percent of army enlistees come from families making over $11,000, while this income group comprises 58.9 percent of the general population.

What these figures show is that the fear of the All-Volunteer Army becoming predominantly a lower-class fighting force is not valid. Persons from all economic backgrounds are entering the Armed Forces, producing a military force which adequately reflects the backgrounds and values of the populace as a whole.

The other measure of representativeness in the Armed Forces—race—has caused alarm in some individuals and

in the King report itself. The percentage of blacks in the Defense Department has risen from 9.7 in 1964 to 16.6 in 1976. This trend has been more pronounced in the Army, with the black percentage rising from 11.8 percent in 1964 to 23.7 percent in 1976.

This increase in the percentage of blacks in the Armed Forces has stirred concern that blacks are carrying an excessive burden in the defense effort in relation to their percentage of the national population. I cannot share this fear.

The 7-percent rise in the number of blacks in the Armed Forces simply indicates to me that more blacks are taking advantage of the benefits the military offers.

This increase in the black percentage is also reflected in more black officers in the Defense Department, thereby improving the morale and status of blacks in the military. The military is more than 3-to-1 white today, but it is the color of the uniform, not the skin, that matters. Furthermore, military variations from the national percentage racial composition statistics have no clear meaning.

The bottom line of these facts and figures is that the All-Volunteer Force has been operating efficiently, without any loss of manpower quantity, quality, or representativeness. Consequently, the next logical question to ask is how much has this success cost us in Defense Department dollars.

PRESENT AND FUTURE COST OF AVF

In addressing this question, the King report, like most other studies of the same topic, cannot nail down a precise cost of the AVF. However, the study does show that much of the recent personnel cost rise in the military stems from causes other than the AVF, including the increasing number of retired personnel and the placing of military pay on par with civilian pay. These cost-increasing factors would have existed with or without the move to the AVF.

The most important conclusion regarding cost that the King report found is that:

> Whatever may be the true cost of the AVF, the full cost is not recoupable through a return to the draft. Many benefits have been institutionalized so that it is unlikely that draft-era cost levels could again be achieved.

Although the King report states the AVF cannot be blamed for most of the rise in personnel costs and a return to the draft will not allay these costs, the study does warn that the AVF may cause an alarming increase in manpower costs during the coming years. The King report cites a Congressional Budget Office study which predicts a 36-percent increase in personnel costs over the next 4 years if no military policy changes are made.

From another perspective, the King study warns that any increase in the troop quantity levels will be more expensive under an AVF system than under a conscription system. For instance, a return to Vietnam-era troop levels would require $29 billion more under the AVF than under a draft.

These potential cost increases are important and the King study rendered us a service by pointing them out. However, these figures were determined while assuming there would be no military policy changes concerning manpower costs. Yet, it is through the change of existing manpower policies that we can and must reduce personnel costs. A return to conscription labor for the armed services is simply not necessary.

NEEDED POLICY CHANGES

The first and most effective step we can take to control personnel costs is to bring "grade-creep" inflation under control. The vast number of civilian employees in the Defense Department and an average GS grade rise from 7.2 to 7.8 since fiscal year 1964 have cost the Defense Department enormously. If we had the same grade and rank distribution today as existed in 1964, we could save $400 million per year in civilian costs and $700 million per year in military payroll costs. We can also reduce some privileges and overstaffing, such as headquarters staffs and servants. Finally, the King report suggests that current personnel costs can be cut by capital substitution and reenlistment rate improvement.

By combining all of these policy changes, we can control and reduce military manpower costs while still adhering to the All-Volunteer Force concept. We can have our cake and eat it too.

FUTURE RECRUITING PROBLEMS

Perhaps the most ominous conclusion of the King report is that the military will find it increasingly more difficult to attract qualified recruits during the 1980's because of a shrinking number of available males and an improved economic situation. According to the study, recent declining birth rates have already insured a scarce supply of young, qualified males for the military to recruit during the 1980's.

The King report's finding in this matter is considerably more pessimistic than a December 1974 Defense Department study on the same topic. This Defense Department report to the Armed Services Committee concluded that the All-Volunteer Force could be maintained throughout the 1975 to 1990 period because military accession requirements would be lower than the fiscal year 1975 requirement—which was successfully met—for all but three of the next 15 years. The 1974 report was optimistic that the armed services could meet all of its needs in the coming years.

There are also some relatively minor policy changes that could be made to assist the military in meetings its recruiting needs. Women, which comprise only 5.3 percent of the military now, should be recruited in greater numbers for combat and noncombat positions.

The Defense Department can also ease reenlistment restrictions, allowing the military composition to include more than the currently permitted 40 percent reenlistments. Finally, a Congressional Budget Office study has stated that by extending maximum and minimum weight limits by 10 percent the military would increase the pool of potential eligible recruits by 5 percent.

The conclusion to be drawn from this data is that the Defense Department can meet its recruiting quotas with only minimal policy changes. A return to the draft is unnecessary.

MILITARY AND CIVILIAN MORALE

Another concern expressed by the King report is that of increasing first term attrition rates in the military. The study indicates that more recruits leave the armed services before the conclusion of their first term of service today than did during the last years of the draft. This trend is both costly and demoralizing to the Defense Department, according to the King report.

The attrition problem seems of dubious validity when one considers the greater tendency of today's military to allow early releases. As a Martin Binkin article in the Washington Post pointed out, recruits are leaving the service early "partly because of excessively liberal discharge policies." This liberal attitude was hardly present in the military during the Vietnam years.

The AVF concept has also provided many beneficial morale and public image side effects to the armed services. A 1976 U.S. News & World Report study found that young people across the Nation have a much more positive attitude toward the military since the draft ended. With student opposition subsided, schools such as Harvard and Princeton have been able to reinstitute campus ROTC programs.

In the armed services themselves, more than two-thirds of the personnel agree with the AVF concept, while only 18 percent disagree. A 1976 study at Fort Knox, the Nation's third largest military installation, showed an overwhelmingly more positive attitude toward the military on the part of enlistees as compared to draftees. To illustrate their point, Fort Knox officials indicated that the AWOL rate dropped from 36.6 to 13.4 per thousand soldiers in the period from 1972 to 1976.

Finally, it must be stated that 79 percent of all Americans favored abolition of the draft in 1973 and the King report has found "no reason to believe that this overall level of support has declined substantially."

Mr. President, to summarize this entire evaluation is not difficult. The King report has shown that with a few relatively minor policy changes the All-Volunteer Force can continue to exist and perform its function. We can protect the security of our Nation without returning to the conscription of our people. I cannot think of a more welcome situation.

WASP GAIN SUPPORT

Mr. GOLDWATER. Mr. President, it is a pleasure for me to announce that a third national veterans group has publicly declared itself in support of legislation to provide veterans benefits to former Women's Air Force Service Pilots.

Earlier, the Retired Officers Association and the Reserve Officers Association have endorsed the efforts of the women pilots of World War II to obtain

veterans benefits. Now, I am happy to report that the Air Force Association has gone on record in support of the WASP. This action was taken on March 5, when the board of directors of the Air Force Association unanimously approved a resolution calling upon the Congress and the President to enact legislation bringing justice to this long-overlooked group of women.

Mr. President, the Air Force Association is a well-known professional organization which was founded in 1946. It presently has over 150,000 members who represent all elements of the aviation field. I am very proud for the World War II women pilots to have this latest endorsement of their cause by such an esteemed organization.

Mr. Chairman, I ask unanimous consent that the resolution adopted by the Air Force Association be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION RELATIVE TO WOMEN AIRFORCE SERVICE PILOTS

Whereas The service of the Women Airforce Service Pilots (WASP) during World War II (between September, 1942—December, 1944) met the highest aviation standards of the military; and

Whereas These women, who volunteered to serve their country without question and who flew side-by-side with their male counterparts for less compensation, and as Civil Servants were never officially made a part of the military even though they flew more than 60 million miles and lost 38 of their number during operational flights or training missions; and

Whereas This meant, that upon deactivation, they received no veterans' benefits; and yet the record is clear that it was always the intention of the military that this group be militarized; and legislation submitted over the years to correct this inequity has not been favorably acted on and some of these women are in particular need of hospitalization and veterans' pension benefits; therefore be it

Resolved, That the Board of Directors of the Air Force Association calls upon the Congress to enact and the President to execute legislation bringing justice to this long overlooked group of fewer than 1,000 survivors; and be it further

Resolved, That the Air Force Association hereby endorses and supports S 247, a Bill introduced by Senator Barry M. Goldwater, which would provide recognition to the WASP for their W.W. II service by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration.

S. 995—PREGNANCY DISCRIMINATION

Mr. BAYH. Mr. President, I am very pleased to be a sponsor of S. 995, legislation which will end employment discrimination against pregnant workers. This legislation was made necessary by an unfortunate decision rendered by the Supreme Court in the case of *Gilbert* v. *General Electric*, 45 U.S.L.N. 4031 (1976). In handing down its decision last December, the Court declared that employment discrimination against a woman on account of pregnancy or childbirth did not constitute sex discrimination under title VII of the Civil Rights Act of 1964. In making this finding, the Court specifically held that the General Electric Co., in denying temporary disability benefits to women unable to work due to pregnancy, childbirth, or complications thereof, was not in violation of title VII's statutory prohibition of discrimination on the basis of sex in employment or fringe benefit plans. The Supreme Court decision in Gilbert runs directly counter to six unanimous Federal appellate court decisions, the sex discrimination guidelines implementing title VII issued by the Equal Employment Opportunity Commission, and the intent of Congress in prohibiting sex discrimination in employment under the 1964 Civil Rights Act.

I. GILBERT V. GENERAL ELECTRIC

The particular issue contested in the Gilbert decision concerned the payment of temporary nonoccupational disability benefits to women workers who were medically determined to be physically unable to work due to pregnancy, childbirth or related medical conditions such as miscarriage or hypertension. Temporary disability benefits are defined as payments made on a voluntary basis by companies to compensate workers for wages lost while they are physically unable to work; 63 percent of the civilian workforce has some form of temporary disability coverage.

In the case of General Electric, the company voluntarily provided these benefits to all of its employees in an amount equal to 60 percent of an employee's straight time weekly wages up to a maximum benefit of $150 per week for up to 26 weeks for any one disability. The General Electric plan offered disability payments for all types of male disabilities including vasectomies, circumcisions, prostatectomies, as well as covering hair transplants, injuries incurred as a result of fight, sports injuries, and incapacity due to alcoholism or drug abuse. Specifically excluded from coverage by the GE plan are disabilities which arise from pregnancy, childbirth or complications therefrom. Interestingly, plans such as General Electric represent only 40 percent of all disability plans offered in the United States, 60 percent of the disability plans in this Nation voluntarily cover pregnancy and childbirth. Among the companies offering the more comprehensive, nondiscriminatory coverage are IBM, Line French, Cummins Engines, Martin Marietta, and Polaroid.

The plaintiffs in the Gilbert case brought action against General Electric on the grounds that GE's disability plan excluding pregnancy and childbirth was a violation of title VII of the Civil Rights Act which prohibits employment discrimination on the basis of sex. In support of their case, the planitiffs pointed to the sex discrimination guidelines implementing title VII issued by the Equal Employment Opportunity Commission. According to these guidelines: "Disabilities caused by or contributed to by pregnancy, miscarriage, abortion, childbirth, and recovery therefrom are, for all job related purposes, temporary disabilities, and should be treated as such under any health or temporary disability insurance or sick leave plan available in connection with employment. Written and unwritten employment policies and practices shall be applied to disability due to pregnancy or childbirth on the same terms and conditions as they apply to other temporary disabilities."

Unfortunately, the Court, basing much of its argument on the Court's prior decision in *Geduldig* v. *Aiello*, 417 U.S. 484 (1974), rejected the argument that discrimination on the basis of pregnancy is discrimination against a woman on the basis of her sex. The court in Aiello had rejected an equal protection challenge to a similar disability insurance program financed by the State of California. Holding that the same principle applied in the statutory challenge under title VII, Justice Rehnquist stated:

As there is no proof that the package is in fact worth more to men than to women, it is impossible to find any gender based discriminatory effect in this scheme because women disabled as a result of pregnancies do not receive benefits; that is to say, gender-based discrimination does not result simply because an employer's disability benefit plan is less than all-inclusive. For all that appears, pregnancy related disabilities constitute an additional risk, unique to women, and the failure to compensate them for this risk does not destroy the presumed parity of the benefits . . .

The Court's strained logic in the majority opinion was well articulated by both Justices Brennan and Stevens in their separate dissents. Commenting on the GE plan, Justice Stevens stated:

By definition such a rule discriminates on account of sex; for it is the capacity to become pregnant which primarily differentiates the female from the male.

In addition to setting a disturbing precedent for other pregnancy-related sex discrimination cases, the majority decision in Gilbert has several other far-reaching consequences for working women. First, the decision permits companies to deny temporary disability payments to women who are disabled as a result of medical complication arising from pregnancy or childbirth. This means that a woman who suffers from miscarriage, massive hemorrhaging, or toxemia in connection with pregnancy or childbirth cannot receive disability benefits on the same basis as a man who is disabled from a hair transplant.

Second, the Gilbert decision would allow companies to deny coverage for any nonpregnancy related medical condition or accident occurring while an employee is on pregnancy leave. A spokesperson for General Electric gave a synopsis of how this policy works in testimony before the district court. He stated that if a male employee has taken an unpaid leave of absence, and within the first several days of this leave is struck by a car, he is provided full coverage under the GE plan. If a pregnant woman is on an unpaid leave of absence and within the first few days of her leave is struck by a car, she receives no coverage whatsoever under the disability plan.

Third, the denial of temporary disability benefits for that period when a woman is physically unable to work due to pregnancy, childbirth or related medical conditions has potentially devastating economic consequences for millions of

working women. A brief look at the statistics on working mothers helps to document the importance of disability payments for these women. The number of working mothers has more than tripled since 1950. About 85 percent of all working women will be pregnant at some time during their working lives. Many of these working mothers are the heads of families. Among all families with income the poverty level in 1974, 46 percent are headed by women; 65 percent of such minority families are headed by women.

A more vivid illustration of the economic consequences of denying disability benefits to pregnant workers is revealed in the case history of Mrs. Sherril O'Steen, one of the plaintiffs in the Gilbert case. Mrs. O'Steen went to work for General Electric at its Portsmouth, Va. plant on June 1, 1971, at which time she was given an employee handbook stating that pregnant workers would be required to go on unpaid leave at the end of their sixth month. At no time during her employment at GE was she told that the company's practice in this regard was held unconstitutional. She accidentally became pregnant in 1972.

Shortly thereafter, she was separated from her husband, and became the sole support for her 2-year-old daughter. After going on unpaid leave, Mr. O'Steen was forced to apply for welfare in order to continue to be able to support both herself, her daughter, and her unborn baby. Before she could receive her first welfare check, her electricity and gas were turned off because she could not afford to pay the bills. For the months of November and December, Mrs. O'Steen and her daughter lived without any light, heat, refrigeration, or cooking facilities. Mrs. O'Steen's nervous state over her lack of income threatened the loss of her unborn child.

II. SUMMARY OF LEGISLATION

In handing down its decision in Gilbert, the Court made it clear that, if Congress wanted to make sure that discrimination on the basis of pregnancy was to be considered sex discrimination it would have to make that clear in its legislation. That is precisely what this legislation we are introducing today does—it adds a new section to section 701 of the Civil Rights Act of 1964 specifying that for the purpose of that act discrimination on the basis of sex includes discrimination on the basis of pregnancy, childbirth, or related medical conditions.

Nothing in this legislation would require a company to offer disability insurance to its employees. Under the provisions of our legislation, only those companies which already voluntarily offer disability coverage would be affected.

III. COST OF THE LEGISLATION

There has been a great deal of concern expressed about the potential cost of our legislation. There is no question that covering pregnancy under employer disability insurance plans will entail some cost; however, I feel that the size of this expense has been greatly overblown. Currently 60 percent of the females working for employers with disability plans are already covered for an average of 6 weeks of benefits for pregnancy. The 6-week figure is a reasonable one given that expert medical testimony has indicated that 95 percent of all pregnant working women return to work within a 6- to 8-week period.

The cost for the 60 percent of female workers now covered is $225 million which would mean that it could cost $150 million to cover the remaining 40 percent of women workers which would be affected by our legislation.

I think that it is important to point out as well that many of the companies which have voluntarily covered pregnancy have found this practice to be cost effective in relation to its women workers. For example, the Xerox Corp. found that the rate of return for females after childbirth has risen dramatically since the company instituted its policy of providing full disability benefits for pregnancy and childbirth.

IV. SUPPORT FOR THE LEGISLATION

Mr. President, this legislation has been endorsed by a very wide ranging coalition of interest groups ranging from major labor unions to women's groups. The following list of organizations have indicated support for this legislation:

LIST OF ORGANIZATIONS

AFL–CIO.
Amer. Alliance for Health & Physical Recreation.
Amer. Assn. of University Women.
Amer. Civil Liberties Union.
American Federation of State & County Municipal Employees.
Amer. Federation of Teachers AFL–CIO.
Amer. Newspaper Guild AFL–CIO.
Amer. Nurses Association.
Amalg. Clothing and Textile Workers Union.
Americans for Democratic Action.
Assn. of Flight Attendants AFL–CIO.
Coalition of Labor Union Women.
Comm. Feminist Organizations & Other Non-Aligned Women.
Communications Workers of America AFL–CIO.
Delta Sigma Theta Sorority.
Federally Employed Women.
Int'l. Union of Elec. Radio & Machine Workers, AFL–CIO.
Leadership Conference on Civil Rights.
Mass. Governor's Commssn. on *the Status of Women.*
Mexican-American Womens Nat'l Assn.
Nat'l. Assn. for Advancement of Colored People.
Nat'l. Assn. of Commissions for Women
National Education Association.
National Federation of Business & Professional Women's Clubs, Inc.
National Organization for Women.
National Women's Health Network.
New Jersey Insurance Department.
Penna. Commission for Women.
United Auto Workers.
United Electrical, Radio & Machine Workers.
Urban League.
Women for Racial & Economic Equality.
Women United for Action.
Women Employed.
Women's Equity Action League.
Women's Law Project of Philadelphia.
Women's Lobby, Inc.

I hope that the Congress will join our efforts to speedily overturn the injustices of the Gilbert decision, and help provide true equality for the working women of this Nation.

I ask unanimous consent that a fact-sheet on the legislation be printed in the RECORD.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

FACT SHEET ON S. 995

AMENDING TITLE VII OF THE CIVIL RIGHTS ACT OF 1964 TO PROHIBIT SEX DISCRIMINATION ON THE BASIS OF PREGNANCY

Purpose of the Bill: To amend Title VII of the Civil Rights Act of 1964 to prohibit sex discrimination in employment based on pregnancy, childbirth, or related medical conditions.

Why this Legislation is Needed:

On December 7, 1976, the U.S. Supreme Court issued its decision in the case of *General Electric* v. *Gilbert,* 45 U.S.L.W. 4031, and ruled that it is not sex discrimination within the meaning of Title VII to exclude pregnancy and related disabilities from otherwise comprehensive insurance plans.

By this action, the Supreme Court overruled the pregnancy guidelines of the Equal Employment Opportunity Commission as well as six Federal Appellate Courts and eighteen Federal trial courts, all of which had ruled that pregnancy-related disabilities must be treated the same as any other temporary disability for all job related purposes—including any health, disability insurance, or sick leave plan.

The Court made it clear that the only way to make sure that pregnancy discrimination does not continue is for Congress to clearly indicate through legislation that such discrimination is illegal.

What Will Happen if the Law is Not Changed?

Many women temporarily disabled by pregnancy and childbirth will be forced to take leave without pay. The resulting loss of income may have a devastating effect on the family unit.

The loss of a mother's salary will make it difficult for many families to provide their children with proper nutrition and health care.

Many pregnant women and their families without alternative sources of support may be forced to dissipate family savings and security and go on welfare.

Many women, especially low income women, may be discouraged from carrying their pregnancy to term.

Employers may be encouraged to cut back on other insurance and benefit programs which affect pregnancy.

Don't most pregnant women have husbands to support them?

Society has changed in recent years, and the family unit has changed with it. These changes and economic conditions have resulted in increasing numbers of women leaving the home to help provide for themselves and their families.

Women have become a major part of our work force. Currently, about 46 percent of all women over the age of sixteen are in the labor force.

There are now thirty-nine (39) million women who are working or seeking work. Twenty-five (25) million of those women are doing so because of the need to support their families—because they have husbands who earn less than $7,000 a year, or because they are single, divorced or widowed.

One out of every ten babies is born to a single, divorced or widowed mother.

Isn't pregnancy voluntary?

In a large percentage of cases it is not. There is no perfect contraceptive.

The National Fertility Survey recently conducted at Princeton showed that 44 percent of births to married women were unplanned; 22 percent of first births occur in the first eight months of marriage.

Opponents argue that pregnancy is voluntary because anyone who does not want a child or can not afford to cease work without pay can have an abortion.

G.E. paid benefits for *all* disabilities incurred by males, voluntary and involuntary. Hence, even if a particular pregnancy was voluntary, the failure to pay was discriminatory.

What time period are we talking about?

This "disability" period includes only that time when a woman is medically certified as unable to work because of pregnancy or childbirth, or related medical conditions.

For most women (95 percent), this period of physical disability is six weeks or less.

This period does *not* include the leave a woman (or man) may wish to take before or after birth to care for the child or to make other arrangements.

Facts brought out in Court revealed that even when employers force pregnant women out of the work force earlier than is medically necessary, most return as soon as they can.

Would This Bill Mandate Compulsory Disability Coverage?

No. It will simply require employers who do provide a disability plan to treat disability due to pregnancy or a related medical condition the same as any other non-work-related disability with respect to benefits and leave policies.

How Much Will Sick Pay and Temporary Disability Coverage for Pregnancy Cost?

Several employers (Xerox, IBM, Martin-Marietta, to name a few) already voluntarily provide regular disability benefits for pregnant workers and have found that doing so is cost effective.

Presently, 60 percent of all women employees who are covered by a temporary disability plan may receive benefits in the event of disability due to pregnancy or a related condition. This leaves 40 percent left uncovered.

Calculations based on actuarial evidence in the court record in Gilbert indicate that it will cost American industry less than $150 million a year to cover the remaining 40 percent and not $1.5 billion has has been widely publicized.

Medical evidence presented by doctors in the case (including G.E.'s doctor) revealed that 90 percent of all childbearing women are disabled for six weeks or less by pregnancy and childbirth. The $1.5 billion figure represents what the cost would be if all women got benefits at the male rate of pay and were absent for 30 weeks each.

Fourteen States including Alaska, California, Connecticut, Hawaii, and New Jersey have laws which require that pregnancy disabilities be treated the same as any other kind of disability.

Thus, in estimating how much a Federal law will cost, all states which already have laws to cover pregnancy discrimination must be excluded.

If you have any further questions on any of these matters, please contact Maria Landolfo of the Labor Subcommittee staff (43674), Chuck Warren in Senator Javits' office (46542), or Barbara Dixon in Senator Bayh's office (48741).

U.S. POLICY IN ASIA

Mr. GLENN. Mr. President, East Asia as a whole is still undergoing some of the most rapid change and development of any region in the world. It is in our interests to be a part of that process of development—and to be aware of the trends and forces in that key area. With that in mind, Mr. President, and as chairman of the Subcommittee on East Asian Affairs of the Foreign Relations Committee, I wish to call to the attention of the Senate an informed article on Asia by my distinguished friend and colleague from Illinois, Senator PERCY. Senator PERCY's remarks, entitled "U.S. Policy in Asia," appeared in the Asia Mail for March 1977, and are well worthy of our consideration. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. POLICY IN ASIA

(By Senator CHARLES H. PERCY)

I have visited Japan a number of times since I came to the Senate in 1966, because Japan is the focal point of U.S. policy in Asia. The range of common interests between our two countries is almost without parallel in today's world.

Last December, the U.S.-Japan Interparliamentary Conference took place in Tokyo under circumstances which might have seemed somewhat awkward. The people of Japan and the United States had just withdrawn the mandates of Prime Minister Miki and President Ford, who had led their nations out of constitutional crises. The new administrations of President Carter and Prime Minister Fukuda were not yet in place. Parliamentary leaders at the conference naturally were eager to exchange views about the emerging leadership and policies in both countries. But the significant fact is that no one from either country had any doubts about the continuity of our alliance, on which the stability of the Western Pacific still depends.

It is true that Japanese leaders have emphasized the importance of avoiding further "shocks," such as the sudden reversal of our China policy in 1971. The Japanese government would be gravely embarrassed if we were to remove our troops from Korea without consulting with them fully in advance.

I think that most American, Japanese and Korean specialists now agree that our troops are not critical to the military balance in Korea. Yet they form an important and visible symbol of our pledge to maintain peace on the peninsula. Therefore we must take care that, when and if we make withdrawals, the people and leaders of Japan and South Korea and the leaders in Pyongyang fully understand that our policy remains unchanged. Vice President Mondale appears to have reassured the Japanese government that Washington is well aware of this need for consultation.

President Carter has reaffirmed this country's support for basic human rights—whether they are threatened by dictators of the left or right. The President's statements reflect the best instincts of the American people and their representatives in Congress. I hope we will never send forces anywhere for the purpose of maintaining a dictator's crumbling power. Our troops in Korea—and our bases in the Philippines—are there only to maintain stability in the region. I think Korea may be an area, like Western Europe, where it would be prudent to maintain some visible U.S. military presence for the foreseeable future. The same, I believe, is true of most of our base facilities in the Philippines.

We should not forget that war followed shortly after the withdrawal of our forces from Korea in 1949—and the announcement, in 1950, that Korea was not within our defense perimeter. Moreover, in 1960, Korean students sparked the one attempt at democratic revolution that their nation has seen in modern times—and they were certainly not inhibited then by the presence of far more U.S. troops that we have there today.

On questions concerning China, Taiwan and Southeast Asia, our Japanese allies seem to have thought through their positions carefully and realistically, no doubt largely because Japan is a part of the Asian community of nations. Regarding China and Taiwan for example, Japan has transferred full diplomatic recognition to Peking—while maintaining close economic links with Taiwan. Our interests in the region—particularly our treaty to defend Taiwan—will require that we develop a formula different from the Japanese formula but hopefully no less appropriate to our purposes.

In Southeast Asia, Japan and the United States are the major trading partners of the five ASEAN states—the Philippines, Thailand, Malaysia, Singapore, and Indonesia. The Association for Southeast Asian Nations are coordinating their economic, social, and cultural activities through informal ministerial meetings rather than elaborate programs and bureaucracies. The drift toward more authoritarian government in each of these countries is regrettable. Yet the people continue to enjoy far more freedom than in neighboring Communist states.

The ASEAN countries comprise an important economic hinterland for Japan, with whom their relations are mutually profitable, although still very brittle because of Japan's present economic dominance and the memory of her actions during World War II. The United States can serve its own interest in promoting regional stability by helping the ASEAN states and Japan broaden their understanding of each other's social and cultural needs.

Japan now has normal diplomatic and economic relations with Vietnam. The ASEAN states and most European powers have also normalized their relations with Hanoi. Initial statements by the Carter Administration appear to indicate that we are heading in that direction as well.

It is clear that the U.S. Congress will not, and should not, authorize payment of "reparations" to Vietnam in any form. I do believe it is one of our country's finest traditions that we have always normalized relations with former enemies after a war.

The new regime in Cambodia—in contrast to Hanoi—does not appear to be interested in establishing relations with the United States, though it has established ties with China and Thailand; Cambodia is no doubt apprehensive about her strong neighbor, Vietnam. It will take time and effort to dispel the morbid atmosphere created by widely credited reports of brutal massacres committed by the new Khmer regime in the name of social revolution. However, if a less inhumane style of leadership should emerge in Phnom Penh, the American people would not want to do anything to discourage this.

East Asia as a whole is still undergoing the most rapid change and development of any region in the world. And it is very much in the U.S. interest to be part of that process of development—while helping wherever we can to promote democratic and humane values.

A U.S. DEPARTMENT OF EDUCATION

Mr. CRANSTON. Mr. President, I am pleased to cosponsor the measure introduced by the distinguished Senator from Connecticut (Mr. RIBICOFF) to create a Cabinet level Department of Education. I believe this is an idea whose time has come. And I believe this is a measure that evidences strong Senate support for a position advanced by President Carter during his campaign—support strong enough to translate the idea into reality.

For some time, while serving as a member of the Senate Education Subcommittee, I have seen the expectations for the Federal effort in education, and

the need for Federal leadership in education, grow with each session of Congress. Yet, the ability to deliver on these important needs and expectations has simply not kept pace. Our education programs have become increasingly vital to the Nation's schools, but also increasingly tangled in a web of conflicting priorities and programs, many of them scattered throughout a dozen different agencies and departments, uncoordinated and sometimes duplicative.

Too, I have become more and more convinced that no matter how hard U.S. education officials try to penetrate the administrative maze that surrounds them, they are simply unable to achieve the priority status other programs hold. HEW Secretary Califano has made some important moves in his efforts to reorganize the vast agency that is the Department of Health, Education, and Welfare. But many of our concerns in health and welfare programs more easily capture public and governmental attention than does education; education programs, by their very nature, achieve less notice than their urgency deserves.

I do have some concerns with regard to this specific legislation, concerns that I know will be addressed by me and by others during Senate hearings. For one, I am concerned that the proposed transfer of Headstart from HEW's Office of Child Development could run counter to the strong community-based orientation of the program.

Traditionally, Head Start has achieved its enormous success outside the schools and with full involvement by the community, especially parents.

It is possible these concerns can be resolved; but until that is done, I would want to leave Head Start with the other human development programs presently carried out in HEW.

Also, Mr. President, I believe we must examine thoroughly the proposed transfer of education-related civil rights programs from HEW's Office for Civil Rights to a new Department of Education. There may be much merit in this approach, but I want to be completely certain that such a bifurcation does not impair overall civil rights strategy and enforcement or lead to unnecessary duplication, overlap, and paperwork.

ADDRESS OF GARRET FITZGERALD OF IRELAND TO THE NATIONAL PRESS CLUB

Mr. KENNEDY. Mr. President, in the course of his address to the National Press Club today in Washington, Dr. Garret FitzGerald, the Foreign Minister of Ireland, delivered an eloquent endorsement of President Carter's concern for human rights as a cornerstone of American foreign policy.

In his address, Dr. FitzGerald also made a number of significant comments on the situation Northern Ireland with respect to human rights and the Irish Government's pending case in the European Court of Human Rights in Strasbourg.

Mr. President, I believe that Dr. FitzGerald's remarks will be of interest to all of us concerned about the cause of peace and human rights in Northern Ireland, and I ask unanimous consent that his text, containing excerpts of his remarks, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM THE REMARKS OF THE IRISH FOREIGN MINISTER, DR. GARRET FITZGERALD, TO THE NATIONAL PRESS CLUB, WASHINGTON, D.C., MARCH 18, 1977

The cause of human rights is one to which the Irish Government and people have been deeply committed since the foundation of our State. In my talks over the past few days with the new Administration of President Carter, I assured them of our warm support for their words and action in this area. My Government has for some time now been seeking to promote in various international organizations, notably the Council of Europe and the United Nations, the policy which President Carter and his new Administration favour of strengthening and making more effective the investigative and judicial powers of these organizations in the area of human rights. What are needed are international bodies with binding supra-national powers so far as participating states are concerned. We in Western Europe have such a body, the machinery enshrined in the European Convention of Human Rights,—which is in marked contrast to the weak and ineffective U.N. Commission on Human Rights. Through this machinery an individual or a state can seek vindication of human rights, as my country has been doing since 1971 in respect of acts of torture and concerted brutality in Northern Ireland. We won our case at the first stage before the European Commission on Human Rights and a final adjudication is now taking place before the European Court of Human Rights. It is our hope that as a result of these proceedings, the use of psychological as well as physical torture, which have become tolerated even by allegedly civilised states in recent decades, will once and for all be banned from Europe at least.

This case has been used—or rather abused—by the Soviet media in an attempt to distract attention from the problem of dissidents in the Soviet Union and other European countries. Pravda's London Correspondent, and two of Izvestia's London Correspondents, have written at length on this subject, adding references to such matters as "the tragic position of the Italian unemployed", alleged persecution of "dissidents" in the Federal Republic of Germany, alleged arbitrary dismissal of workers in Sweden, and in Austria.

All this is quite evidently part of a preparatory campaign before the Belgrade Review of the Conference on Security and Cooperation in Europe, with particular reference to its section devoted to human rights. But what these Soviet correspondents do not bring out is the fact that in the countries they criticise, human rights are recognised as supra-national—transcending national boundaries—and anyone whose rights are prejudiced and are not protected by his own courts can appeal over the heads of his government to the Human Rights Commission and Court in Strasbourg, which is open to the citizens of democratic European countries. No such remedy is open to the citizens of the Soviet Union or Eastern European countries—and that is why the campaign of dissidents in these countries has attracted such sympathy and support in Western Europe and in the United States.

We make no apologies for having taken our action in respect of torture and maltreatment of prisoners in Northern Ireland, but we recognise that this action would have been fruitless but for the fact that the British Government, like our own, accepts the supranational jurisdiction of the Strasbourg institutions; it is that that is important; it is that which must be emphasised in reply to Soviet attempts to confuse the issue in the months before the Belgrade Conference; it is that which—if it existed in Eastern Europe—would give to the dissidents in these countries the chance to vindicate their rights internationally.

It is important, and in this President Carter and Vice President Mondale fully agree with me, that the Governments, legislators and the public be on their guard against those who abuse the noble cause of human rights. There have surely been few more unscrupulous exercises than the attempts made in this city in recent weeks by a few supporters of a campaign of murder and destruction in Ireland to represent themselves as the champions of the human rights of the Irish people. Their purpose was not to promote the welfare and rights of our people. Rather, through a blatant distortion of their unsuccessful efforts to deceive most of those in the new Administration and Congress whom they sought to contact, they tried to represent themselves and the organisation they support, namely the Provisional IRA, to people in Ireland as having secured a degree of support in the capital of the most powerful country in the West. Their efforts, we have been happy to learn, did not succeed in Washington. This did not prevent them from blatantly misrepresenting their lack of success to the Irish people.

The statement issued yesterday by Secretary of State Vance and me records the appreciation of my Government of the wish of the American Government, of which my officials and I have been repeatedly assured by the American Government, to ensure that legitimate concern for human rights is not misused by those who support violence as a means to political ends in Ireland. Most Irish people and most American people would agree—although evidently the men of violence and their supporters would not—that the first and most fundamental human right is the right to live—the right for example of the individual not be murdered in his own home because he is a Protestant or a Catholic. Those who deny this right, those who finance them, those who support them by specious arguments, deserve no hearings from people of good will when they pretend to speak for human rights. I am delighted to be able to tell you and the Irish people that President Carter, Vice President Mondale, Secretary of State Vance and the leadership of the U.S. Congress have assured me that they fully support this important principle.

The Irish people in their own struggle for human rights during the 19th century and early part of the 20th century and during the Civil Rights agitation of the late 60's in Northern Ireland, have always been inspired by the great American tradition of civil rights. Our people were yesterday greatly moved by a statement published by four very distinguished American leaders of Irish descent, the Speaker of the House of Representatives, the Honorable Thomas P. O'Neill, Senator Edward Kennedy, Senator Daniel Moynihan and Governor Hugh Carey from New York who, at their own initiative, have called for peace in Ireland and an end to support for violence in Ireland. This is most encouraging evidence of the growing community of feeling and compassionate understanding between the Irish in Ireland and the Irish in America about the difficult, tragic problem of Northern Ireland, and it augurs well for the future of that relationship, which has always been precious to us Irish, and has sometimes, as at this difficult time, been crucial.

COMMITTEE ON GOVERNMENTAL AFFAIRS SUBCOMMITTEES

Mr. RIBICOFF. Mr. President, I wish to announce the following subcommittees for the Committee on Governmental Affairs:

Permanent Subcommittee on Investigations:

Senator Jackson, Chairman.

Senator Nunn, Vice Chairman.

Senator McClellan, Senator Eagleton, Senator Chiles, Senator Glenn, Senator Percy, Senator Javits, Senator Roth, Senator Mathias, Senator Danforth.

Subcommittee on Intergovernmental Relations:

Senator Muskie, Chairman.

Senator Metcalf, Senator Chiles, Senator Glenn, Senator Sasser, Senator Roth, Senator Percy, Senator Danforth, Senator Heinz.

Subcommittee on Reports, Accounting and Management:

Senator Metcalf, Chairman.

Senator Jackson, Senator Nunn, Senator Danforth, Senator Percy.

Subcommittee on Governmental Efficiency and the District of Columbia:

Senator Eagleton, Chairman.

Senator Sasser, Senator Mathias, Senator Stevens.

Subcommittee on Federal Spending Practices and Open Government:

Senator Chiles, Chairman.

Senator McClellan, Senator Nunn, Senator Jackson, Senator Heinz, Senator Javits, Senator Roth.

Subcommittee on Energy, Nuclear Proliferation, and Federal Services:

Senator Glenn, Chairman.

Senator Eagleton, Senator Metcalf, Senator Muskie, Senator Javits, Senator Stevens, Senator Mathias.

Subcommittee on Civil Service and General Services:

Senator Sasser, Chairman.

Senator Muskie, Senator McClellan, Senator Stevens, Senator Heinz.

(This concludes Additional Statements submitted by Senators today.)

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

OFFICIAL CONDUCT AMENDMENTS OF 1977

The Senate resumed the consideration of the resolution (S. Res. 110) to establish a code of official conduct for the Members, officers, and employees of the U.S. Senate; and for other purposes.

The PRESIDING OFFICER. The pending business is amendment No. 91.

Who yields time?

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time be charged equally against both sides on the resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk called the roll, and the following Senators entered the Chamber and answered to their names:

[Quorum No. 14 Leg.]

Abourezk	Byrd, Robert C.	Matsunaga
Allen	Curtis	McIntyre
Anderson	Dole	Packwood
Baker	Durkin	Sasser
Bayh	Hansen	Thurmond
Byrd, Harry F., Jr.	Humphrey	
	Lugar	

The PRESIDING OFFICER. A quorum is not present.

Mr. MATSUNAGA. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Hawaii.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Hawaii (Mr. MATSUNAGA) to direct the Sergeant at Arms to compel the attendance of absent Senators. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arizona (Mr. DECONCINI), the Senator from Maine (Mr. HATHAWAY), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Washington (Mr. MAGNUSON), the Senator from Montana (Mr. MELCHER), and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

I further announce that the Senator from Rhode Island (Mr. PELL), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Alaska (Mr. GRAVEL) are absent on official business.

I also announce that the Senator from Nevada (Mr. CANNON) is absent due to the death of his mother.

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from California (Mr. HAYAKAWA), the Senator from Maryland (Mr. MATHIAS), the Senator from Illinois (Mr. PERCY), the Senator from Virginia (Mr. SCOTT), the Senator from Vermont (Mr. STAFFORD), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The result was announced—yeas 78, nays 2, as follows:

[Rollcall Vote No. 62 Leg.]

YEAS—78

Abourezk	Chiles	Haskell
Allen	Church	Hatch
Anderson	Clark	Hatfield
Baker	Cranston	Heinz
Bartlett	Culver	Helms
Bayh	Curtis	Huddleston
Bellmon	Danforth	Humphrey
Bentsen	Dole	Inouye
Biden	Domenici	Jackson
Bumpers	Durkin	Javits
Burdick	Eagleton	Kennedy
Byrd, Harry F., Jr.	Eastland	Laxalt
	Ford	Leahy
Byrd, Robert C.	Glenn	Long
Case	Hansen	Lugar
Chafee	Hart	Matsunaga
McClellan	Pearson	Stennis
McClure	Proxmire	Stevens
McGovern	Randolph	Stevenson
McIntyre	Ribicoff	Stone
Metcalf	Riegle	Talmadge
Metzenbaum	Roth	Thurmond
Morgan	Sarbanes	Wallop
Muskie	Sasser	Young
Nelson	Schmitt	Zorinsky
Nunn	Schweiker	
Packwood	Sparkman	

NAYS—2

Garn	Weicker

NOT VOTING—20

Brooke	Hayakawa	Pell
Cannon	Hollings	Percy
DeConcini	Johnston	Scott
Goldwater	Magnuson	Stafford
Gravel	Mathias	Tower
Griffin	Melcher	Williams
Hathaway	Moynihan	

So the motion was agreed to.

The PRESIDING OFFICER. With the addition of Senators voting who did not answer the quorum call, a quorum is now present.

Who yields time?

Mr. ROBERT C. BYRD. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Chamber will come to order. There will be no business conducted until the Chamber is in order.

The Chair asks all Senators who are conversing to remove themselves from the Chamber.

Mr. STEVENSON. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending business is amendment No. 91, on which there are 41 minutes of time remaining, all the time under the control of the Senator from Wisconsin (Mr. NELSON).

Mr. DURKIN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DURKIN. On the allocation of time, I thought the Senator from Illinois had 6 minutes left before the quorum call began.

The PRESIDING OFFICER. The Senator is correct. However, the quorum call used up 6 minutes.

Mr. ROBERT C. BYRD. Mr. President, my request was the quorum call be charged against both sides on the resolution, not on the amendment.

The PRESIDING OFFICER. The Chair misunderstood. We will correct that. Therefore, the Senator from Illinois has 6 minutes and the Senator from Wisconsin has 61 minutes remaining.

Mr. STEVENSON. Will the Senator from Wisconsin yield me 10 minutes either on the amendment or on the bill?

Mr. NELSON. I yield whatever time the Senator from Illinois wants, 10 minutes or 15 minutes. If in the course of the debate the time runs out and further time is desired, I will yield time from the bill.

Mr. STEVENSON. I thank the Senator from Wisconsin.

The PRESIDING OFFICER. How much time does the Senator yield?

Mr. NELSON. Fifteen minutes.

Mr. LUGAR. Will the Senator yield?

UP AMENDMENT NO. 84

Mr. STEVENSON. Mr. President, I send a modification to the desk and ask

that my amendment be modified in accordance with this modification.

Mr. LUGAR. Will the Senator yield for a unanimous-consent request?

The PRESIDING OFFICER. The modification will be stated.

The second assistant legislative clerk read as follows:

The Senator from Illinois (Mr. STEVENSON) proposes a modification, unprinted amendment No. 84, to amendment No. 91.

Mr. STEVENSON. Mr. President, I ask that further reading of the modification be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The modification is as follows:

On page 32, strike lines 11 through 24, and on page 33, strike lines 1 through 13, and insert in lieu thereof the following:

RULE XLVI

PROHIBITION OF UNOFFICIAL OFFICE ACCOUNTS

1. No Member may maintain or have maintained for his use an unofficial office account.

2. The term "unofficial office account" means an account or repository into which funds are received for the purpose of defraying ordinary and necessary expenses in the operation of a senatorial office.

3. No funds derived from a political committee (as defined in section 301(d) of the Federal Election Campaign Act of 1971 (2 U.S.C. 431)) can be used for the purpose of defraying ordinary and necessary expenses in the operation of a senatorial office.

4. No contribution (as defined in section 301(e) of the Federal Election Campaign Act of 1971 (2 U.S.C. 431)) shall be converted to the personal use of any Member, or any former Member who is defeated for reelection or does not seek reelection.

On page 55, after line 4, insert the following: (3) paragraph 3 of Rule XLVI shall take effect thirty days after the Senate takes final action on the legislation reported pursuant to Sec. 301 of this title.

Mr. STEVENSON. Mr. President, without losing my right to the floor, I yield to the Senator from Indiana for a unanimous-consent request.

Mr. LUGAR. Mr. President, I ask unanimous consent that Pete Schellie, of my staff, be granted the privilege of the floor during the debate and votes on Senate Resolution 110.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUMPERS. Mr. President, we still do not have order. This is a very important modification.

The PRESIDING OFFICER. The Senator's point is well taken.

The Chair asks all Senators who are conversing to remove themselves from the Chamber so this debate may continue. The Senator will not proceed until the Chamber is in order.

The Senator may proceed.

Mr. STEVENSON. Mr. President, I ask unanimous consent that the amendment, as modified, be printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENSON. Mr. President, this amendment prohibits the use of political funds for official expenses. It anticipates that official expenses will be covered in the future by official funds, as is required by the provisions of section 301 of the resolution.

In the debate yesterday, some of the Members expressed what I believe to be a legitimate concern. That concern is, having prohibited the use of political funds, including excess campaign funds, for official expenses, the Senate might not then act to cover those expenses with adequate allowances, as the House has already acted to do.

To respond to that concern, this modification will make the amendment effective only at such time as the Senate has acted, and after the Appropriations and Rules Committees have acted, to establish adequate allowances for all the ordinary and reasonable expenses of service in the Senate.

In addition, Mr. President, a concern was expressed yesterday about the possible involvement of the Internal Revenue Service in determinations as to what is and is not an official expense of Senators. To address that concern, this amendment, as modified, would leave that determination of what is an ordinary and a reasonable expense of service in the Senate to the Senate itself. In the future, it is anticipated that Senators would be reimbursed directly by the Senate for the reasonable, the ordinary expenses of conducting their business. In those circumstances, it is to be hoped that no deductions will be necessary for expenditures by Senators out of their own pockets for such expenses. If such expenditures are required beyond the allowances that are made available by the Senate, they could, of course, continue to be defrayed by the personal funds, including honoraria, of the Members.

That, Mr. President, is what this amendment, as modified, does.

Mr. PACKWOOD. Will the Senator yield for a question?

Mr. STEVENSON. I hope, now, that it would be in order to lay this amendment, as modified, aside. It will be printed and, over the weekend, I hope that all the Members will then have a chance to study it and that we might return to it and vote on it on Monday. In the meantime, starting this afternoon, as I believe many of the Members expect, we can begin to debate certain other amendments, including an amendment which I believe is to be offered by the Senator from Maine.

Mr. DURKIN. Will the Senator yield for a question?

Mr. PACKWOOD. Will the Senator yield for a question?

Mr. STEVENSON. Mr. President, I shall yield for a question or two, but then it is my intention to ask unanimous consent—I believe this is in accordance with the wishes of the leadership—to lay this amendment aside so we can debate certain other matters and return to it and go into debate on this amendment on Monday.

I yield to the Senator from New Hampshire.

Mr. DURKIN. I thank the Senator.

My question is, in an effort to save time and an effort to give everyone a chance to take a look at it, I have an amendment that I would like to attach to the Senator's amendment, have it printed, and then it can lay over until Monday and everyone can get a good look at it and we can have a chance to thrash it out.

My amendment would do two things. In the committee print, the committee allows honoraria in excess of 15 percent if a Senator is going to give those honoraria to charity. That seems to fly in the face of the logic. The logic, to date, has been that taking time away from the Chamber is one of the problems, as well as the potential corrosive influence of the honoraria. So my amendment to the Senator's amendment would strike the provisions that allow anyone to earn beyond 15 percent, even if they were going to devote it to charity, because that is going to take time from the Chamber.

The second part of my amendment to the amendment of the Senator from Illinois would limit even further the honoraria. As to the honoraria, if I understand the logic of the committee report and the logic of the debate so far, what the institution is attempting to do is eliminate any possible corrosive effect of honoraria. So the second part of my amendment would provide that a Senator shall not receive any honoraria from any person, organization, or corporation having a direct interest in legislation before Congress or from any foreign national.

This is the same rationale that the committee used in proscribing, restricting and controlling gifts. If someone has an interest in legislation before this Chamber or if someone has a political action fund, it would be unethical to accept an honorarium from those groups. I think this addresses itself to the very real problem and the apprehension across the country that it is the honorarium from a group who wants to hear you for 10 or 15 minutes on the eve or possibly on the eve of a very key vote. If the ethics code is going to go far enough, then I think what we should do is eliminate and make it unethical to receive honoraria from any group that has a direct interest.

Mr. CLARK. Will the Senator from New Hampshire yield for a 5-second question?

Mr. DURKIN. Yes.

Mr. CLARK. Would not his amendment more appropriately be to rule XLIV, instead of rule XLVI, which deals with outside earned income?

Mr. DURKIN. Well, it may, but I think it still has the same effect. What I am concerned with is that there may not have been—I am still learning the rules. I just arrived. I am not sure that I would be able to get this up in time, with the limitations on amendments and so forth, unless it is offered as an amendment to the amendment of the distinguished Senator from Illinois.

Mr. CLARK. I would suggest that the rules allow any Member to raise that question for 2 hours, an hour on each side, and that we have a perfect right to do so at any point in the debate. I am looking at page 24 of the print. Rule XLIV deals with outside earned income. I think that would be the appropriate place, rather than rule XLVI on page 32, because that deals with prohibition of unofficial office accounts. I just think that would be the right place to offer it.

Mr. DURKIN. That may make the job of the indexer easier, but I would like to get it up now so it can be discussed, so it can be printed, and it can be discussed over the weekend and voted upon as an amendment to the amendment of the Senator from Illinois.

Without objection, I would like to offer that amendment.

Mr. STEVENSON. Mr. President, I concur in the observations of the Senator from Iowa. This amendment raises an important issue, but it has nothing to do with my amendment. In fact, it amends a different part of the resolution.

Mr. President, is this amendment in order as an amendment to my amendment?

The PRESIDING OFFICER. The Chair states that there is no amendment in order to the Stevenson amendment until the time on the Stevenson amendment has expired or been yielded back.

Mr. DURKIN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DURKIN. I offered the amendment without objection. I heard no objection in the Chamber.

The PRESIDING OFFICER. The Chair was not aware of any amendment being offered to the Stevenson amendment.

Mr. STEVENSON. Mr. President, I have yet to hear the Senator send up an amendment to the desk. I do not believe it has been ordered. I hope that he will withdraw his amendment. The point has been made. There will be an opportunity to act on this amendment and in a context that is appropriate.

It is not appropriate in this context and I believe it is subject to a point of order, or would be if it were offered.

The PRESIDING OFFICER. The Chair must again state that no amendment is in order until the time has expired on the Stevenson amendment, or until yielded back.

Mr. STEVENSON. Mr. President, I ask unanimous consent that my amendment be laid aside.

Mr. DURKIN. I object.

Mr. President, I ask unanimous consent that the amendment to the Stevenson amendment that I have offered be accepted at this time notwithstanding there are a few minutes left on the rule.

Mr. STEVENSON. Mr. President, I have to object to that request.

The PRESIDING OFFICER. The Chair will ask for order and try to straighten out the parliamentary situation.

Does the Senator from Illinois wish to withdraw his amendment, which he has a right to do without a unanimous-consent request?

Mr. STEVENSON. No, I do not wish to withdraw the amendment. I wish to lay it aside.

The PRESIDING OFFICER. That has been objected to.

Is there objection to the request of the Senator from New Hampshire that his amendment be in order as an amendment to the Stevenson amendment?

Mr. STEVENSON. I object.

The PRESIDING OFFICER. Objection is heard.

Who yields time?

Mr. ALLEN. Will the Senator yield?

Mr. DURKIN addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. ALLEN. Will the Senator yield for a question? It will not be prolonged.

Mr. STEVENSON. Yes, I yield to the Senator from Alabama.

Mr. ALLEN. I ask the distinguished Senator if, in fact, the thrust of his amendment is not that official nonreimbursable expenses of a Senator's office shall be paid by the taxpayer rather than at present to have the ultimate method of paying these expenses from political funds?

Mr. STEVENSON. The Senator is not entirely accurate. That is the thrust——

Mr. ALLEN. Yes, that is what I asked.

Mr. STEVENSON. That is the thrust, not of this amendment, that is the thrust of the resolution, and I refer——

Mr. ALLEN. The resolution with the Senator's amendment, not without the Senator's amendment.

Mr. STEVENSON. That is the thrust of this resolution without my amendment. I refer the Senator——

Mr. ALLEN. I am familiar with section 301.

Mr. STEVENSON. On page 49.

The thrust of my amendment, I believe this is sound, if the Senate in accordance with section 301 designates official expenses that are reimbursable, then there is no need to continue to permit the payment of such expenses out of political funds, and to condone conduct for which the Senate once censured a Member.

Mr. ALLEN. Yes, but without the Senator's amendment, there is no prohibition against using political funds for official nonreimbursable expenses.

Mr. STEVENSON. That is correct, that is the thrust. There would be a prohibition against use of political funds for nonreimbursed expenses.

Mr. ALLEN. So the issue is whether the taxpayer shall pay these expenses or whether they be paid out of political funds.

I just wanted to pinpoint the issue.

Mr. McCLURE. Will the Senator yield for a question?

Mr. STEVENSON. Yes.

Mr. McCLURE. Would the intention of the Senator from Illinois be that those expenses which are not now reimbursed at the taxpayers' expense would automatically be paid at taxpayers' expense?

Mr. STEVENSON. Let me refer the Senator again to section 301, page 49, which reads:

> The Committee on Rules and Administration and the Committee on Appropriations shall, within one hundred and twenty days after the day on which this resolution is agreed to, report to the Senate legislation to adjust the amounts and permissible uses of Senatorial allowances so that such allowances will be adequate to defray the necessary and appropriate expenses incurred in connection with the operation of a Member's office.

My amendment will not become effective, that is to say, the prohibition against use of political funds for such purposes, until and unless the Committee on Rules and Administration and the Senate itself act to adequately fund official expenses. Only at that point would this amendment come into play to prohibit the use of political funds for those purposes.

Mr. McCLURE. I have not seen the revised amendment, but do I understand from the Senator from Illinois that there is an effective date for the amendment, or a triggering device for his amendment, that is conditioned upon the Committee on Rules and Administration and the Committee on Appropriations actually providing the funds for all these expenses?

Mr. STEVENSON. Yes. The Senator is substantially correct.

The amendment, as modified, would not take effect until 30 days after the Senate takes final action on the legislation reported pursuant to the section.

The PRESIDING OFFICER. The time of the Senator from Illinois has expired.

Mr. McCLURE. Would the Senator from Wisconsin yield some time to the Senator from Idaho so I might ask further questions of the Senator from Illinois?

Mr. NELSON. I yield 30 minutes to the Senator from Illinois from the bill.

Mr. STEVENSON. I thank the Senator. I am prepared to answer questions, but I had hoped——

The PRESIDING OFFICER. Would the Senator suspend just briefly?

The Senator from Wisconsin is yielding 30 minutes on the amendment or on the bill?

Mr. NELSON. How much time is left on the amendment?

The PRESIDING OFFICER. Forty-four minutes on the amendment.

Mr. NELSON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. NELSON. If the time were allowed to expire or were used up, we may still yield additional time from the bill?

The PRESIDING OFFICER. That is correct.

Mr. NELSON. I will yield 30 minutes on the amendment.

Mr. DURKIN. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. DURKIN. Is unanimous consent required to yield further time from the bill?

The PRESIDING OFFICER. No.

Mr. DURKIN. I thank the Chair.

Mr. McCLURE. Will the Senator yield for a further question?

Mr. STEVENSON. Mr. President, I will yield, but I was under the impression that Members and the leadership wanted this amendment laid aside so we could spend this afternoon on an amendment offered by Senator MUSKIE and then return to debate and, hopefully, vote on my amendment on Monday.

Mr. DURKIN. Will the Senator yield?

Mr. STEVENSON. So I will yield, but I hope we will not have many more questions and that the Senator from New Hampshire might let me lay this amendment aside temporarily.

Mr. McCLURE. Will the Senator yield? If the Senator would, I think it might be helpful to have on the record today——

Mr. STEVENSON. Yes.

Mr. McCLURE. Some of the answers to the questions so other Members might then have an opportunity over the weekend not only to read the amendment, but also some of the explanation in determining what further action they might have to take on it on Monday.

Mr. STEVENSON. Very well. But I remind Senators they may be called to act upon some other amendments on Monday, and had expected a chance to discuss them, too.

Mr. McCLURE. I understand and I hope the Senator is correct and we will have the opportunity to discuss some other amendments today and Monday.

But as the Senator knows, there is some restriction on Senator's travel, or I should say not all of the Senator's travel is reimbursed now at taxpayers' expense. The travel of a Senator from the District to his home State and return is covered. But the travel of a Senator from the District or his home State to some other destination is not covered under the existing rules and statutes. Would it be the intention of the Senator from Illinois that that kind of travel would be paid for at the taxpayers' expense?

Mr. STEVENSON. I believe that is the intention of the resolution as it is now drawn, and the intention would not be changed by my amendment.

Yes, reasonable and ordinary official business expense, such as travel within a State, including not only travel but also food and lodging, would be reimbursed, as it is in the executive branch, as it is, I believe, now in the House, as it is in industry. Yes.

Mr. McCLURE. Whenever the Senator was traveling anywhere, not just within his own State, but anywhere else that he was traveling, that would be reimbursed?

Mr. STEVENSON. Only if it is on official business.

Mr. McCLURE. I understand that. But I assume that if he is going to a meeting in Hawaii or one in Miami or one in Chicago, if that meeting were in connection with the business of the U.S. Senate, or on a legislative matter, or information upon public policy, that travel by a Member of the Senate would be paid for by the taxpayers. Am I correct in assuming that that is what the Senator from Illinois has in mind?

Mr. STEVENSON. Yes. But with respect to the kinds of travel to which the Senator has referred, if it is on official business, it is already compensated for.

Mr. McCLURE. Unless I am traveling from here to my State or from my State to here, it is not covered, unless it happens to be on committee business, an official trip. But if I were to travel from here to a meeting in Chicago and return here, I would not be reimbursed for that travel, under existing regulations.

Mr. STEVENSON. If a Senator is traveling as a member of a committee, he can be reimbursed for such travel.

Mr. McCLURE. He can, if he goes through the committee in order to do it and has it allowed as official committee expense.

Mr. STEVENSON. That is correct.

Mr. McCLURE. But unless he does it as official committee business, that would not be allowed. Am I correct?

Mr. STEVENSON. That is the way it is now. If it is official business in the Senator's State, he is not compensated for it. If it is official business outside his State, it is different. With this amendment, the Senator would be compensated for all official expenses presumably up to a certain amount. He would be given an allowance. How much, I do not know. What the guidelines would be, I do not know. That would be up to the Rules Committee to decide, under the mandate of section 301.

Mr. McCLURE. How do we determine when the trigger date goes into effect, the triggering of the Senator's amendment, unless we know what is going to be allowed? How do we know when the provision has been complied with? Do I correctly understand that under the provisions of the Senator's amendment, if the Rules Committee meets and says there will be no further expense allowance and the Appropriations Committee says there will be no money for it, in spite of that negative report, the Senator's amendment will go into effect?

Mr. STEVENSON. No; that is not the intention in that case. I think it is clear from my amendment, as modified, that it would not go into effect.

Mr. McCLURE. I thought it would go into effect when they had complied with the provisions of section 301.

Mr. STEVENSON. Section 301 refers to allowances adequate to defray the necessary and appropriate expenses in connection with the operation of a Member's office.

Mr. McCLURE. And if they came in with a recommendation that says zero or $5 or $10 is sufficient and adequate, that brings the Senator's amendment into play.

Mr. STEVENSON. No. That is not the intention.

Every Member of this body knows that zero dollars is not adequate to defray necessary and appropriate expenses incurred in connection with the operation of a Member's office. One may argue that there should not be any such allowance, but one cannot argue that no allowance at all is adequate to cover the necessary and appropriate expenses incurred in connection with the operation of a Member's office.

Mr. McCLURE. I say to the Senator from Illinois that I understand that he would think that was inadequate, but it might not be the judgment of the Rules Committee that that was inadequate, or the judgment of the Appropriations Committee.

Mr. BUMPERS. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. STEVENSON. I yield for a unanimous-consent request.

Mr. BUMPERS. Mr. President, since the Senator has made a unanimous-consent request that his amendment be laid aside for the precise purpose that this debate is going on, I now ask unanimous consent that the Senator from Illinois be allowed to lay his amendment aside and that the Senator from New Hampshire be allowed to offer what was originally a substitute amendment, immediately after, as an amendment in the first degree.

The PRESIDING OFFICER. Is there objection?

Mr. McCLURE. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. McCLURE. Mr. President, will the Senator yield so that I might ask one or two additional questions, so that they can be in the RECORD for the perusal of Members?

Mr. STEVENSON. I yield.

Mr. McCLURE. Would such matters as the necessary travel of a Member's wife to such a meeting be an allowable expense, in the view of the Senator from Illinois?

Mr. STEVENSON. In my view, it would not be, but my view is irrelevant. I am not establishing the rules, nor would I presume to establish rules which are the responsibility of the Rules Committee.

Mr. McCLURE. Would the expense of an accountant to audit the books and records of a Member's official account be an allowable expense?

Mr. STEVENSON. That is a question the Rules Committee will consider, along with all the other subjects.

Mr. McCLURE. Does the Senator from Illinois believe that it should be allowable?

Mr. STEVENSON. The expenses of an accountant?

Mr. McCLURE. Of an accountant, to audit the official books in a Senator's office.

Mr. STEVENSON. If he does not request assistance with those expenses, he will be acting unreasonably. Those expenses are going to be increased by the adoption of this resolution.

Mr. President, if there are more questions, it makes little difference to me. I will withdraw the amendment and offer it at a later time, in order to give others the opportunity to speak.

Mr. BROOKE. Mr. President, before the Senator withdraws the amendment, to offer it at another time, I would like to point out that the Senator from Idaho has a valid point. For this is a very important amendment. There are many Senators, even if we do not have a vote on this amendment today, who would like certain points clarified so that they can be prepared to vote on it, if the Senator offers it on Monday for a record vote. So I think the Senator from Idaho is performing a great service in trying to get an understanding as to just what the Senator's amendment does and does not do.

Very simply, it seems to me that the amendment takes out subsection (c) of rule XLVI, funds derived from a political committee defined in section 301.

The Senator asks the question of the distinguished Senator from Illinois as to what would be the triggering device. I think that is very important. If the Rules Committee does not provide official funds or taxpayers' funds, as the Senator from Idaho has specified very adequately, then would the political committee funds be allowable for the pur-

poses for which they are now being used?

Mr. STEVENSON. The purpose of this amendment is to get rid of every last slush fund, from now until doomsday, in the U.S. Senate. That is the purpose.

Mr. BROOKE. We are not talking about funds.

Mr. STEVENSON. If the allowances are inadequate, if there are insufficient funds from legitimate sources for defrayal of official expenses, they will have to come out of the Senator's pocket.

The elimination of slush funds is what this amendment is all about. That is the whole issue. It is whether or not we are going to perpetuate a course of conduct for which the Senate censured a Senator, and that Senator was Thomas Dodd, of Connecticut.

Mr. BROOKE. The Senator knows that "slush" is an inflammatory word. We are not talking about slush funds. We are talking about legitimate funds of a legitimate political committee.

If there is a legitimate political committee, and a Senator wants to send out 1,000 copies of something to his constituents, which are on the record which cannot come out of his official funds, is it not proper then for him to send that out under the political funds that he has?

Mr. STEVENSON. No, I do not believe it is. It is allowed now. It is allowed by the Federal Election Commission Act, but I think it is an improper practice. It means that Senators, in their campaigns, and even between their campaigns, are going to continue going around collecting, with their tambourine and tin cup, funds from labor organizations, from the automobile industry, the oil industry, anybody who has an interest in legislation and therefore an incentive to make such contributions of moneys for the defrayal of office expenses. But in every other branch of this Government, and in industry, such expenses are defrayed from appropriate funds—in this case, official funds.

Eliminating of the use of political funds for official purposes is the purpose of this amendment. I hope the Senate will follow the example of the House, which has been applauded for the action it took, and do the obvious, which is to make official funds allowable for ordinary and reasonable official expenses.

Mr. BROOKE. Suppose the funds are not solicited, suppose there is a surplus in a candidate's previous campaign? He is left with the surplus and he wants to use that money for political purposes, and political purposes might be disseminating something that appeared in the official Record of the Senate. Suppose he wants to send out a thousand copies of that? He obviously could not send it out at the cost of the taxpayers nor should he send it out at the cost of the taxpayers.

Why then could he not send it out from his political committee?

Mr. STEVENSON. If it is a political piece he could, but if it is official business he could not, through an unofficial office account. If he has problems in disposing of such surplus campaign funds, he can do exactly what the Senator from Illinois did with his surplus after the election. He turned it over to the Democratic National Committee.

Mr. BROOKE. I commend the Senator for being so generous to the Democratic National Committee, but there are some of us who do not feel that sense of generosity.

But what is the difference? Who draws the distinction between what is political and what is official? Does the Senator recognize this to be a very valid and a very serious problem?

Mr. STEVENSON. I recognize that it is a problem. I do not recognize that it is a serious problem. It is a problem and it is a decision the Senator from Massachusetts, a conscientious, ethical, always honorable man, makes every day of his political life. It is a decision we make every time we use the franking privilege. It is a decision every time you go down to the television studio. It is a decision a politician can make, and if there is any doubt in the mind of the Senator I would assume he would err on the side of prudence, on the side of public appearances, public confidence. He can do what Senators do day in and day out, and I think the Senator, as a former member of the Select Committee on Standards and Conduct, knows what I mean. You can go to the agencies to get opinions, opinions you can rely on. Scarcely a day passes that the Senate Ethics Committee does not get a request for an opinion in that murky, gray area of what is political and what is nonpolitical. That will be possible in the future just as it has been in the past.

Mr. BROOKE. The distinguished Senator is now the chairman of the Ethics Committee. If he makes a speech on the subject of ethics and he wants to inform his constitutents in the great State of Illinois by disseminating that speech, who would pay for that, the taxpayers or the Senator's political campaign committee?

Mr. STEVENSON. That is a decision that would be made as it is now under the statute and rules which govern the use of the frank. It is a nonpartisan communication with one set of constituents and it is not prohibited.

Mr. BROOKE. I am not talking about the frank but the cost of production. You have a very large constituency. Suppose you want to send out 15,000 or 25,000 or 50,000 copies of that speech to your constituents, which really would not be a large number for the State of Illinois. Who would pay for that, the taxpayers, or would you pay for that out of your political funds?

Mr. STEVENSON. If I understand the Senator correctly that is an expense that the taxpayers pay now.

Mr. BROOKE. Is that official or is that political?

Mr. STEVENSON. If it is not political it is official. It is a communication——

Mr. BROOKE. That does not answer my question. Is it political or is it official? We will be faced with this time and time again. Is that political, your sending out 50,000 copies to your constituents in the State of Illinois? Obviously you made the speech and you think it is a good speech. It has educational value, and you want to inform your constituents. Is that political when you send it out to 50,000 of your constituents or is it official, and if it is official do the taxpayers pay for it or do you pay for it out of your political campaign?

Mr. STEVENSON. If the Senator from Massachusetts would show me the speech I would give him the benefit of my opinion.

Mr. BROOKE. Who is going to sit in judgment on that? Is your committee going to sit in judgment? Is the Rules Committee going to sit in judgment on that?

Mr. STEVENSON. The Senator would have to decide, just as he has to do every time he decides whether a letter is frankable, just as the manager of the television studio downstairs has to make a judgment every time a Senator uses those facilities. They cannot be used for political purposes. Senators and staff are responsible to see they are not.

Mr. BROOKE. Is it the Senator's intent to leave it up to the judgment of each individual Senator as to whether it is official or whether it is political?

Mr. STEVENSON. I might add it is a decision that the Senators have to make for themselves now every time they take political funds and use them for expenses that are official or that may not be official.

Mr. PACKWOOD. Mr. President, will the Senator yield for a further question?

Mr. STEVENSON. There are Internal Revenue tax implications that a Senator has to face every time he uses political funds for nonpolitical purposes.

Mr. BROOKE. But the distinction is so vague. The Senator would agree the distinction is so vague, that almost everything we do has political significance to it. When we stand on the floor of the Senate and we debate a bill it has political significance.

When we vote it has political significance. When we answer a constituent's letter it has a political significance. We cannot kid the public about that. We are constantly campaigning in everything we do. I do not think it is our primary purpose, to be sure. We are working on the Nation's business, but in so working on the Nation's business there is always a political benefit or a political detriment to be derived from it. Every time we stand on this floor and vote we either get a political benefit or a political detriment. The Senator is well aware of it. I am merely trying to point out to him it will be very, very difficult because of the vagueness of it for the enforcement of such a rule.

If you are going to leave it up to each individual Senator as to whether it is political or whether it is official, obviously we are going to have a hodgepodge. I do not want to see any Senator guilty of some violation of a Senate rule or certainly of any law, because he makes a decision that this is official rather than political and, therefore, the taxpayer pays for it. Nor do I want to see a Senator make a decision that it is political rather than official and then have an IRS problem.

If we can avoid that we should avoid it. I am just trying to ask the Senator what he does under this amendment that could clarify this and avoid the situation

in which our Senators might find themselves.

Mr. STEVENSON. Well, the Senator from Massachusetts makes complex, difficult decisions day in and day out. He makes them every time he sends out a letter. Every time he does that he makes a decision. There are any number of provisions in Senate Resolution 110 that will require him to make decisions. They are not decisions it is difficult for a politician to make.

Every time now, as it is now, a Member of the Senate takes a political fund, a surplus campaign contribution, and uses it for official expenses he may be exposing himself to income tax liability for the use of those funds. He may or may not be entitled to a deduction in the use of those funds. Under this amendment, he will not be placed in such difficult, potentially embarrassing, circumstances.

Presumably, the Senate, not the IRS, would make the decision whether it will be in order. I cannot address every different context here. There will be an opportunity for the Rules Committee to lay down some guidelines. There will be an opportunity for the Ethics Committee, as I indicated, to render advisory opinions to the Senate. Within that framework, the Senate will reimburse its Members for reasonable and ordinary official expenses, and relieve them of some of the very difficult decisions that Senators will have to make if they use such funds for official expenses, the same decisions they face now.

(Mr. SARBANES assumed the Chair at this point.)

Mr. BROOKE. The Senator will recognize that the Official Conduct Committee, under the distinguished leadership of Senator NELSON and Senator THURMOND, addressed itself to this question specifically. They debated it, and they voted unanimously upon it. I refer the Senator to the report of the Special Committee on Official Conduct on page 11. The committee says:

The Committee recognizes further that certain expenditures related to official duties inevitably will fall into a "gray area." That is, certain expenditures will not be eligible for reimbursement by the Senate and, at the same time, will not be directly related to a campaign for election to public office. The Committee provides, therefore, in Rule XLVI, that funds derived from a political committee (fully disclosed and regulated under the Federal Elections Campaign Act) may be used to defray expenses incurred by a Member in connection with his official duties. In addition, to deal with potential tax problems mentioned earlier, the Committee recommends that the Rules Committee and the Appropriations Committee, in consultation with the Finance Committee, review provisions of the Internal Revenue Code and related regulations regarding funds used to defray the ordinary and necessary expenses of Members, and report recommendations to the Senate within 120 days.

Does this not take care of what the Senator from Illinois is trying to do? I think the committee has done a very sound and reasonable job in arriving at this decision because the Senator himself agrees that there is a very difficult gray area. Here we are talking about fully disclosed funds. So we are not talking about a slush fund, as the Senator from Illinois has mentioned. And I know what he means by a slush fund. We are not talking about a slush fund. If we were talking about a slush fund, I would personally have no problem with this. But we are not talking about a slush fund. We are talking about a duly organized and registered committee's fully disclosed income and expenditure.

Why then cannot that committee provide expenses for things which should not be paid for by the taxpayer? That is the specific question that I put to the distinguished Senator from Illinois.

Mr. STEVENSON. What we are talking about here are campaign contributions, political contributions, the Checkers Fund, the slush fund, the fund that Senator Dodd once maintained. When it was pointed out to the Nelson committee that its resolution came perilously close to authorizing, if not, in fact authorizing, maintenance of such funds for official expenses and conduct of the kind which brought Senator Dodd censure of this body and have been recently prohibited by the other body, some of the Members changed their minds.

Mr. DURKIN. Mr. President, will the Senator yield?

Mr. STEVENSON. I call the attention of my good friend from Massachusetts to the fact the sponsors of this amendment include the Senator from Iowa (Mr. CLARK), the Senator from Connecticut (Mr. RIBICOFF)——

Mr. DURKIN. Mr. President, will the Senator yield for a question?

Mr. STEVENSON. And, of course, the chairman, Senator NELSON.

Mr. BROOKE. As the Senator will recognize, section 439(a) of the Federal election campaign law provides specifically that political funds can be used for educational purposes.

As to the speech that I referred to earlier, the hypothetical speech that the Senator from Illinois made, it would have educational value to constituents in his home State and copies could be disseminated elsewhere across the country. If he wishes to disseminate that speech, as he should be able to, he cannot do so with official funds. I think the intent of Congress and the President who signed this into law was that he be able to do so by using political campaign funds for that purpose.

As I understand it, the Senator's amendment would deny him the right to use those funds for these additional purposes.

Mr. STEVENSON. The Senator's amendment would not deny any Senator the right to use official funds for the kind of mailings that he is talking about and, in fact, he would be required to do so.

In the rule on page 35 of the resolution, at line 15, the resolution reads:

A Senator shall use only official funds of the Senate to purchase paper, to print, or to prepare any mass mailing material which is to be sent out under the frank.

Mr. BROOKE. The Senator talks about official funds. That is what it says here, if I read it correctly, and I guess the Senator has in mind line 15 on page 35:

A Senator shall use only official funds of the Senate to purchase paper, to print, or to prepare any mass mailing material which is to be sent out under the frank.

So the Senator is talking about official funds. He is talking about taxpayers' money. I am saying we do not have that money.

The PRESIDING OFFICER. The time of the Senator from Illinois has expired.

Mr. STEVENSON. Do we have time remaining?

Mr. DURKIN, Mr. STEVENS, and Mr. JAVITS addressed the Chair.

Mr. DURKIN. Mr. President, I wish to call up my amendment which is at the desk.

The PRESIDING OFFICER. It is not in order for the Senator's amendment to be called up until all time has been used on the current pending amendment.

Mr. STEVENSON. Mr. President, I ask unanimous consent that my amendment be temporarily laid aside.

The PRESIDING OFFICER. Is there objection?

Mr. DURKIN. Mr. President, reserving the right to object.

The PRESIDING OFFICER. Reservation is heard.

Mr. DURKIN. Mr. President, reserving the right to object, I will be willing to eliminate my objection if I can get consent to bring up the amendment that I have at the desk which we discussed earlier but which eliminates or prohibits honoraria from any group having a direct interest in legislation before the Senate. If I can get that unanimous-consent request, I have no objection to him withdrawing his amendment temporarily.

Mr. STEVENSON. Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. DURKIN and Mr. JAVITS addressed the Chair.

The PRESIDING OFFICER. The Senator from New Hampshire.

Mr. DURKIN. Mr. President, I thank the Chair.

UP AMENDMENT NO. 85

Mr. President, at this time I call up my amendment which is at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Hampshire (Mr. DURKIN) proposes unprinted amendment No. 85.

On page 25, strike lines 11 through 18 and insert the following:

(c) A Senator shall not receive any honoraria from any person, organization, or corporation having a direct interest in legislation before the Congress or from any foreign national.

(d) For purposes of subparagraph (c), only the following shall be deemed to have a direct interest in legislation before the Congress:

"(1) a person, organization, or corporation registered under the Federal Regulation of Lobbying Act of 1946, or any successor statute, a person who is an officer or director of such a registered lobbyist, or a person who has been employed or retained by such a registered lobbyist for the purpose of influencing legislation before the Congress; or

"(2) a corporation, labor organization, or other organization which maintains a separate segregated fund for political purposes

(within the meaning of section 321 of the Federal Election Campaign Act of 1971 (2 U.S.C. 441b)), a person who is an officer or director of such corporation, labor organization, or other organization, or a person who has been employed or retained by such corporation, labor organization, or other organization for the purpose of influencing legislation before the Congress.

Mr. JAVITS and Mr. DURKIN addressed the Chair.

The PRESIDING OFFICER. The Senator from New Hampshire.

Mr. DURKIN. Mr. President, could we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. DURKIN. Mr. President, this amendment is a very short, simple and direct-to-the point amendment. It does two things.

The first part eliminates the provision in the resolution which will allow Members of the Senate to receive in excess of 15 percent by way of honoraria if they were donating that honoraria to charitable organizations as defined under 501 (c), I believe.

The rationale of the effort of the Senator from Wisconsin—and I commend him for the hard work in producing what he did in such a short time—the rationale for the work of the Select Committee on Ethics was that the less affluent Members of the Senate should not detract their time from the committee deliberations and the floor sessions by pursuing honoraria. I think it is at cross purposes with the general thrust of the act to allow them to receive honoraria in excess of 15 percent, because that would take an even greater amount of time away from the floor and from the committees.

I do not wish to sound as though I am speaking out against clarity. I am not. I am probably going to qualify for it before we are through. As I said yesterday, I realize that the competition for poorest man in the Senate is as severe as the leadership fights on both sides of the aisle this year, but, since I see the distinguished chairman of the Finance Committee is here, I might state that I think I am the only Member of the Senate that has been able to use the income averaging provision for my first 2 years in this body, so I want to set the record straight as to where I am speaking from.

But if time is the problem, then it should be unethical to devote time to making the speeches and gathering the honoraria, and leaving town to do so, even though you are going to devote them to charity.

Mr. ALLEN. Mr. President, will the Senator yield on this point, before he goes on to the second part of his amendment?

Mr. DURKIN. I yield for the purpose of a question.

Mr. ALLEN. Yes; that is my purpose. As I understand the first part of the Senator's amendment, he would maintain the 15-percent limit and would not lift that limit for honoraria that are devoted to charity; the 15-percent limit would be maintained throughout. Is that what the Senator's amendment does?

Mr. DURKIN. Yes. It would not affect the 15 percent except in two ways. It would affect the 15 percent in that you could not earn above 15 percent even if you were going to give it to charity.

Mr. ALLEN. That is the way I understood.

Mr. DURKIN. And the second part of the amendment is that you could not earn the 15 percent—in compiling that 15 percent, you cannot except honoraria from the people you cannot accept a gift from.

If it makes sense, on page 22, to eliminate gifts from anyone who has a political action fund, to eliminate or restrict gifts—and I endorse that—if we are going to eliminate the gifts, because people have a direct interest in legislation, if they cannot buy you a meal at Duke Zeibert's, they ought not to be able to give you an honorarium.

The amendment says that in arriving at that 15 percent, you cannot accept honoraria from a political group or anyone who has a direct interest in legislation before this body, and the definition of who has a direct interest is set forth in the amendment.

I think it is fairly clear. It is simply an organization or group which has a political action fund under the FEC Act which we passed not too long ago, or a corporation, labor organization, or other organization which maintains a political action fund or has a registered lobbyist.

So it is the same definition, the same rationale, as for gifts. If you cannot go to dinner with them, I do not think you should be able to accept an honorarium, because I do not think the people back home can very well understand some of the subtle distinctions set forth in the resolution as currently drafted.

I make this statement: I reject the proposition that ethics and money are tied together, that ethics and money are inextricably entwined. I do not think it is the case that if you pay money, you have——

Mr. NELSON. Mr. President, may we have order? I cannot hear the Senator.

The PRESIDING OFFICER. The Senate will be in order.

Mr. DURKIN. I thank the Senator. As I say, I reject the connection between ethics and money, and the implication that if we are paid enough we will be ethical. I think in addressing the ethics question, we should address not only the real concern, but the perception that the people back home have with respect to our conduct. That is why I also have several other amendments at the desk, which I shall call up before the 50 hours have expired.

I do not need a tremendous amount of time to explain this. I think the amendment sort of speaks for itself. It eliminates, as I say, the possibility that someone would be tempted to take his time away from the Senate in order to meet charitable urges, wonderful as the works done by those charitable groups may be. It eliminates the apprehension, the appreciation, or the perception that Members of this body are accepting honoraria from groups that have an interest in legislation.

That is why I believe it tracks very well with another amendment I offered yesterday, which says we are going to have to disclose our assets and liabilities, which I do anyway, that we are going to have to turn over our tax returns, and then, like Federal judges, if we are to be treated to the same pay rates the Federal judges are, I think we should be bound by the same code. So the amendment at the desk would say that once you disclose your assets and liabilities statement, you could not vote if you had a conflict represented by your portfolio and your financial holdings, and also that you could not introduce legislation whose purpose was to benefit yourself or a class of people who are in some way connected with it. I think it has the same thrust, and strengthens the good work done by my good friend from Wisconsin and the Ethics Committee.

Mr. President, at this time, while we have a sufficient number of Senators present, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. McCLURE. Mr. President——

The PRESIDING OFFICER. The Senator from New Hampshire has the floor.

Mr. McCLURE. Will the Senator yield for a parliamentary inquiry?

Mr. DURKIN. I yield for a parliamentary inquiry only.

Mr. McCLURE. Mr. President, is this question subject to a division?

The PRESIDING OFFICER. The amendment is an amendment to strike and insert. No amendment to strike and insert is divisible.

Mr. McCLURE. I thank the Chair.

Mr. NELSON. Mr. President, will the Senator from New Hampshire yield to me for a question?

Mr. DURKIN. I am happy to yield for a question.

Mr. NELSON. Is it the Senator's intention—perhaps one or two other Senators may have some remarks on this amendment—to yield back the time and vote? There are 2 hours on each amendment; I am just trying to find out whether the Senator intends to use all that time.

Mr. DURKIN. This amendment, as I say, speaks for itself. I do not need 2 hours. Whatever the collective wisdom seems to be.

I do not need to have a vote on it today; I am willing to let it go over to Monday, or I am willing to have the vote this afternoon.

Mr. NELSON. Will the Senator yield for another question?

Mr. DURKIN. I yield.

Mr. NELSON. Members will have their opportunity to comment on the amendment of the Senator from New Hampshire, which speaks for itself quite clearly—I do not know whether the Senator was in the Chamber yesterday, but Senator MUSKIE came to the floor and we had a colloquy, and he had a desire to present for the record the position of Senators, including the Senator from Maine, as to the income limitation. We had planned to discuss the issues which were in-

volved, and he has been waiting this afternoon.

My query is: Would the Senator be prepared to allow that colloquy to begin, or did the Senator intend to call up further amendments today?

Mr. DURKIN. I am very flexible on that.

Mr. NELSON. Maybe we could have a vote, then, on the Senator's amendment. I realize the Senator is exercising his rights, but a number of the Senators were notified of the planned colloquy.

Mr. DURKIN. I am not sure of all the rules, as I say. I keep finding new ones every day. Is a unanimous-consent request in order that this amendment be voted upon at a time certain on Monday afternoon, without losing my right to the floor?

Mr. ROBERT C. BYRD. Such a unanimous-consent request would be in order.

Mr. DURKIN. Could I make the unanimous-consent request that the amendment which is the pending business now be voted upon at 4 o'clock Monday afternoon, a time certain?

Mr. ROBERT C. BYRD. I would have to object to that at this point, may I say to my friend, for various reasons. I would like to study his amendment further, for one. I have not been in the Chamber to hear the debate. I want a little better understanding of the amendment before I would agree to a request to vote on it at a particular time.

Mr. DURKIN. Can the distinguished majority leader suggest an agreement that we could all agree to?

Mr. ROBERT C. BYRD. No; not at this point. As I say, I would like to study the amendment a little further.

Mr. DURKIN. I guess we better vote on it this afternoon, then.

Mr. NELSON. That is satisfactory. Would the Senator be willing to permit, after the vote, the presentation by Senator MUSKIE and the dialog on the income limitation question?

Mr. DURKIN. Yes; as long as I can be assured that later on, before the 50 hours have expired, I may call up my other three or four amendments which are at the desk.

Mr. NELSON. The Senator can call them up. There is no question about that.

Mr. DURKIN. As long as there is unanimous consent that I would not be foreclosed from getting a vote on the amendments which are already at the desk——

Mr. ROBERT C. BYRD. The Senator will not be foreclosed.

Mr. NELSON. May I make this very brief comment on the amendment of the Senator from New Hampshire:

The amendment provides there would be a prohibition against speaking before certain interest groups. That is No. 1. No. 2, the amendment provides that the provision in the resolution which allows honoraria to be earned up to $25,000, provided anything in excess of 15 percent were contributed to a charitable organization, would be stricken by the proposal of the Senator from New Hampshire.

I disagree with that proposal.

First, I believe the limitation takes care of the concern about whatever kind of group one may speak before because the limitation is quite strict.

Second, an attempt to define and distinguish on the merits between the kinds of groups it may be permissible to speak to is quite difficult, although I must concede that we tackled that question on gifts.

In any event, we felt, after careful consideration in the committee, that the limitation took care of the problems of conflict or potential conflict.

On the second point, if one wishes to make contributions from an honoraria to charitable organizations, and many do—or conservation groups, as I do, as a matter of fact—I think that should be permitted.

The whole case does not rest upon the proposition of time, though that is quite obviously one element. Those who have businesses of their own are not required to divest and have to spend time looking after that business.

I believe the limitation adequately settles the problem. It would be unfortunate if we were to say that no Member could speak and make contributions to a nonprofit, church, or eleemosynary organization.

Mr. DURKIN. Mr. President, in response to the Senator from Wisconsin, I should point out the amendment prohibits not just speaking, but receiving money from speaking before any group which has a political action fund in connection with legislation. My position is we should be consistent. We have said Senators cannot receive gifts or cannot be guests at a dinner unless they eat at the Roy Rogers, if my understanding is correct. The limitation is $25 or $30 which does not go far in Washington. Of course, it goes a long way at home.

Receiving money for honoraria should be restricted. Many Members who serve in this Chamber feel there is nothing wrong and they have not been influenced or have not voted with a particular group or against a particular group on the basis of honoraria. I do not want that implication to carry.

What I am addressing the amendment to is the perception of the average citizen who calls my office and writes my office. It is their perception that the speaking fees and the votes go hand in hand, no matter what the group. If it is labor, I vote with labor when I think they are representing the average working man and woman in New Hampshire. If I think they are off on their own, I do not so vote, no matter whether I have spoken before them or not.

It is a shame that the individual conscience is not being allowed to make the decision. The whole rationale is that we are saying we do not trust the individual consciences of our Members.

We have to go beyond that and state in the ethics resolution that to accept speaking fees or money from any group that has an interest in Federal legislation, as defined in my amendment, is unethical. I think it has reached that degree. It has reached that in the state of affairs. This amendment is a prerequisite to restoring confidence in our elective process.

On the other rationale set forth, which I believe will be the point the Senator from Maine will be making this afternoon, the thrust is time, time away from the Chamber, time away from committees, time away from reading the mail from home. I do not think that time should be allowed even if the excess over the 15 percent will be given to a charity, though I strongly believe in charitable work. This is not an attack on charity but really is an attack on the public perception of any interconnection between speaking fees and prospective or retrospective voting patterns.

I gather the distinguished Senator from South Carolina, the acting floor manager for the other side, wants to comment.

Mr. THURMOND. Is the Senator through?

I yield 5 minutes to my good friend from Alabama at the present time.

Mr. ALLEN. I thank the Senator.

Mr. President, I believe this is a good amendment. I feel it ought to be adopted. In the first place, it maintains the 15-percent limit on outside income, which includes honoraria. It eliminates this great big fat loophole appearing on page 25, which allows a Senator to receive honoraria up to $25,000 if he immediately contributes that to a tax-exempt organization under section 501(c)(3) of the Internal Revenue Code. That section of the Code permits any number of organizations, puts them in the tax-exempt status.

The disinguished Senator from Wisconsin spoke of environmental groups to which he contributes. There are a whole lot of neo-political organizations that would be exempt from taxation. This would allow Senators to help subsidize that type of organization with their honoraria. I think that the same 15 percent limit should apply no matter what he does with the money.

There is nothing to prevent a Senator, if he wanted to, from donating this 15 percent that he gets to any organization that he wants to. But to add something to the 15 percent, I think, just leaves a great big loophole there.

Also, I do not know how many personal-type foundations might exist that would allow a Senator to funnel funds over to that type of exempt foundation, but it leaves a loophole there where the limit can be evaded. It is a substantial loophole, because it allows—I am not sure whether it is $25,000 in excess of the 15 percent or a total of $25,000; the amendment is not clear.

The second phase of the amendment is certainly good because it prevents a Senator from receiving honoraria from people who have an interest in legislation. People who are engaged in the business of trying to pass legislation in which Senator to speak and receive an honorarium. This amendment of the distinguished Senator from New Hampshire would eliminate that and it would confine honoraria to organizations or per-

sons or groups that do not have an interest in legislation. This amendment is in the interest of good government.

The attitude that I sensed in the Senate was that the amendment is not being taken seriously, but it is a good amendment, and it ought to be adopted. It will strengthen this code of ethics and put the official conduct of Senators on a much higher basis.

I hope the amendment will be adopted.

Mr. RIBICOFF. Will the Senator yield to me?

The PRESIDING OFFICER. Who yields time?

Mr. DURKIN. Mr. President, I think the situation——

Mr. NELSON addressed the Chair.

Mr. DURKIN. I had the floor, Mr. President. I yielded to Senator ALLEN.

The PRESIDING OFFICER. The time is under the control of the Senator from New Hampshire as the mover of the amendment and under that of the Senator from Wisconsin as the manager of the resolution.

Mr. NELSON. I yield to the Senator from South Carolina whatever time he desires.

Mr. DURKIN. Mr. President, I still have the floor.

Mr. NELSON. I beg the Senator's pardon. I thought he had given up the floor.

Mr. DURKIN. No.

Mr. RIBICOFF. Will the Senator yield on the time of the Senator from Wisconsin? I wish to clarify some of the comments made.

Mr. DURKIN. I would like to, but I indicated to the Senator from South Carolina that I would yield to him without losing the floor, then I shall yield to the Senator from Connecticut.

Mr. THURMOND. Mr. President, I thank the Senator from New Hampshire.

I favor the 15-percent limitation. I am going to stand by that. On the other hand, there may be some Senator who wishes to speak for his alma mater or wishes to speak in some other place or to discuss great public issues of the day and can find the time to fit it in without jeopardizing his work here in the Senate. In that case, if there is an honorarium available—I imagine he would do it if there is an horonorium available or not—but if it is available, he would have to give it to some charitable organization.

The other thing is, if there is a worthy organization that gets these proceeds, it seems to me we should not deny a Senator the right to speak for that worthy organization. Nearly every Senator here belongs to a church. There may be some orphanage connected with that church, or there may be some other worthwhile institution that he may wish to go out and speak to on weekends—when ordinarily, he would not—because of the worthiness of this particular organization.

There is really no conflict. He does not have to accept anything. His incentive is probably already not to accept too many or not any, because he is limited already to earning only $8,600. I do not think there is any conflict. I think it merely leaves a Senator a little flexibility if he wishes to help on his own time some organization that he feels is worthwhile, or if he wishes to discuss some great public issue of the day, and there is an honorarium available and he can designate to which charitable organization it will go.

Mr. BROOKE. Will the Senator yield for a question?

Mr. DURKIN. Mr. President, I did not hear the Senator from Massachusetts. What was his request?

Mr. BROOKE. I asked if the Senator would yield for a question.

Mr. DURKIN. I shall in just a minute. I think I must reply to the Senator from South Carolina. I promised to yield to the distinguished senior Senator from Connecticut. Then I shall be happy to yield, without losing my right to the floor, to the Senator from Massachusetts.

Mr. BROOKE. I thank the Senator.

Mr. DURKIN. I point out to my good friend from South Carolina that nothing in my amendment denies a Senator any right to speak to any group, charitable or whatever. Nothing in my amendment says he cannot designate that any fee be sent directly to a favorite charity. I am sure the distinguished Senator has many. The prohibition is that the Senator cannot receive it.

I think the Senator from South Carolina has raised an interesting point, but I do not think it is a valid point in this case, because if the urge to help charity is his primary motivating force and he wants to discuss the issues of the day, he can do that and the group can directly, without it coming through his hands whatsoever, be the incidental beneficiary of that action.

At this time, I yield to the Senator from Connecticut without losing my right to the floor.

Mr. RIBICOFF. I thank the senior Senator from New Hampshire. I just wanted to clarify what was done by the committee because of statements made, implying that it is possible for a Senator who makes such designation to receive a tax benefit.

We were very careful. If the Senator will look on page 25 of the substitute of Senate Resolution 110, he will find, beginning with line 11:

"(c) Notwithstanding the limitations under paragraph 1 or 2(b)(2), any Senator, officer, or employee may accept honoraria in excess of the amount allowed in paragraph 1 or 2(b)(2) but not in excess of $25,000, if he immediately donates such honoraria to an organization exempt from taxation under section 501(c)(3) of the Internal Revenue Code of 1954 and if no tax benefits accrue to such Senator, officer, or employee for such donation.

In the report, on page 38, we were very careful to nail it down with this language:

The Committee does not wish to discourage those Senators or officers and employees of the Senate who want to give speeches or make appearances and donate the honoraria to charity. The honoraria received in excess of the 15 percent limit and donated to a charity of the individual's choice will be reported as taxable income by that individual and also taken as a charitable deduction on the federal tax return. Thus, there would be no tax benefit to the individual. If no designation is made by the individual, and the payor of the honoraria makes such a designation, then the individual need not report the honoraria as taxable income. This is consistent with present Internal Revenue Service and Federal Election Commission regulations.

So whether we agree or not with the purpose of the $25,000 limitation for charity, it should be made clear that we nail down the fact that under no circumstances could the Senator or employee receive any tax benefits from any excess from $8,600 to $25,000.

Mr. DURKIN. I thank the Senator from Connecticut.

I appreciate what the committee has done as set forth on page 25 in the resolution and page 38 of the report.

What I am trying to do is go a little further and designate, that it can go if we want to designate it, but cannot receive it because I think that goes one step beyond.

It makes it a cleaner transaction in that conceivably if someone donated honoraria to his favorite charity, it could actually result in an additional tax liability and there would be no benefits other than the approval of the community and the people who receive it. But there could be additional tax liabilities.

This way, it addresses the question that a Senator should not be devoting that extra time, if time is the rationale for the limitation on earned income—that even though it is a very noteworthy and wonderful purpose, time is the rationale.

Then I think the excess being for charity can be handled by not having it go to the Senator and that it be designated.

I think it solves the Senators' problem and meets the thrust of what we are trying to do.

I believe the Senator from Massachusetts (Mr. BROOKE)——

Mr. BROOKE. I will withdraw my questions. I think the Senator has said it clearly.

I cannot conceive of anyone who does not have a direct interest in legislation before Congress. Everyone has some direct interest, and that was the only thing I wanted to stress.

But I withdraw my questions.

Mr. DURKIN. It is fairly clear as set forth in the amendment—registered lobbyists, having an interest in legislation which is before this body.

Mr. NELSON. Will the Senator yield?

The Senator from Wisconsin has heard the Senator is prepared to yield back the remainder of his time. If the Senator from New Hampshire is prepared to yield back the remainder of his time——

Mr. MUSKIE addressed the Chair.

Mr. DURKIN addressed the Chair.

Mr. MUSKIE. I wish to say something.

Mr. DURKIN. I will be glad to yield, but I think the Senator from New Hampshire has the floor.

I will be glad to yield to the Senator from Maine without losing my right to the floor.

Mr. NELSON. The Senator from Wisconsin will yield whatever time the Senator from Maine desires on the amendment.

Mr. MUSKIE addressed the Chair.

The PRESIDING OFFICER. The Senator from New Hampshire has the floor.

Mr. DURKIN. That is right.

The PRESIDING OFFICER. And has yielded time to the Senator from Maine.

Mr. MUSKIE. I do not need more than 2 minutes.

Mr. DURKIN. I am willing to yield to the Senator from Maine provided I do not lose my right to the floor.

The PRESIDING OFFICER. The time is under the control of the Senator from New Hampshire and the Senator from Wisconsin for 1 hour each on the pending amendment.

Mr. DURKIN. I do not care whose time. He can use mine. I have said all I believe need be said. It speaks for itself.

The PRESIDING OFFICER. The Senator from New Hampshire has yielded time to the Senator from Maine.

Mr. DURKIN. Five minutes. I am happy to yield 5 minutes without losing my right to the floor.

The PRESIDING OFFICER. Five minutes.

Mr. MUSKIE. Mr. President, I do not think I will take 5 minutes.

But I am concerned, I say to the Senator from New Hampshire in all candor, that this issue should have arisen at this time—in this form—for the very simple reason that implicit in his amendment is approval of the limitation on earned income which is contained in the committee resolution.

I find it very difficult to cast a vote when that assumption underlies it.

I would much prefer to get the question of the limitation on earned income decided before we begin laying the ground rules for the earned income which is permitted a Senator once that limitation question is decided.

I do not know how I will vote for the Senator's amendment if I am for removing that limit on earned income that a Senator is entitled to keep for his own purposes and the Senator's amendment forces me to consider the resolution in a form I am not yet prepared to conceive.

So for that reason, I am very unhappy that the Senator's amendment should have been offered at this point.

In the second place, under the limitation on honoraria that we have been living under, I have searched for a way and searched for a way to make speeches for lecture fees that I could turn over to charities in which I am interested, for example, my alma mater and scholarship program. With all its shortcomings, the committee resolution at least made provision for that.

I was never able to find a way under the tax code or under the ethics resolution that controlled this body to do that.

So not only was I not permitted to make lecture fees in the interests of my favorite charities, but I was not able to earn lecture fees for the benefit of other charities. The committee resolution provides for this very well, in my judgment, and I do not like to see that disturbed. The Senator's amendment forces me to disturb that.

With respect to the other part of the Senator's amendment, I have no problem with that, but that is a question we can easily settle at any time, once we settle the main question of how we deal with earned income.

So I think it is premature, No. 1. No. 2, it forces me to accept as an implication that we are going to be limited to 15 percent of our basic salary in terms of lecture fees, because that is implicit in his amendment. Third, it disturbs the best solution I have seen yet on this question:

If there is a limit on earned income, how do we earn above that to benefit charities in which we are interested?

Yet I am forced to choose between those desirable objectives and the other part of the Senator's amendment. If I say "No" to the amendment on the first round, it forces me to approve honoraria from suspect organizations.

It gives me no alternative but to be put in a bad light whichever way I choose to vote on the Senator's amendment, and I do not like it for that reason.

Mr. DURKIN. Mr. President, I might point out as to the concern of the Senator from Maine, if he wants to designate his honoraria to his alma mater, he can do it under my amendment as long as he is not the middleman.

Mr. MUSKIE. If the Senator will yield, if the Senator thinks there is that little difference between the committee report on that matter and his, why does he not eliminate it from his amendment and I will vote for the rest of his amendment? But he confuses a point that is meaningless. He is nit-pocking at the question of how to get lecture fees into the hands of desirable charities and is making it very difficult for us, those of us who are with him on the rest of his amendment, to support it.

Why muddy the waters? There are several ways, many of which I have not discovered, of getting legislation approved in this body.

But I certainly would not mix the two objectives which the Senator has mixed in his amendment, if I was interested in either one of them.

Mr. DURKIN. I do not want to argue with my good friend from the neighboring State of Maine, but I must point out that he can designate it so long as he is not the middle man.

Mr. President, I yield back the remainder of my time.

Mr. McCLURE. Mr. President, will the Senator yield for a question, before he yields back the remainder of his time?

Mr. DURKIN. I yield back the remainder of my time.

Mr. NELSON. Mr. President, the Senator from Wisconsin yields back the remainder of his time. I move to table the amendment, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the amendment of the Senator from New Hampshire. On this question the yeas and nays have been ordered, and the clerk will call the roll.

Mr. CRANSTON. I announce that the Senator from Maine (Mr. HATHAWAY), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Louisiana (Mr. JOHNSTON), the Senator from North Carolina (Mr. MORGAN), the Senator from New York (Mr. MOYNIHAN), the Senator from Georgia (Mr. NUNN), and the Senator from Georgia (Mr. TALMADGE) are necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL), the Senator from Rhode Island (Mr. PELL), and the Senator from New Jersey (Mr. WILLIAMS) are absent on offical business.

I also announce that the Senator from Nevada (Mr. CANNON) is absent due to the death of his mother.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), the Senator from North Carolina (Mr. MORGAN), and the Senator from Rhode Island (Mr. PELL) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Utah (Mr. GARN), the Senator from Michigan (Mr. GRIFFIN), the Senator from Utah (Mr. HATCH), the Senator from Illinois (Mr. PERCY), the Senator from Virginia (Mr. SCOTT), the Senator from Vermont (Mr. STAFFORD), the Senator from Texas (Mr. TOWER), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I further announce that, if present and voting, the Senator from Vermont (Mr. STAFFORD) would vote "yea."

The result was announced—yeas 65, nays 15, as follows:

[Rollcall Vote No. 63 Leg.]

YEAS—65

Abourezk	Eagleton	McGovern
Anderson	Eastland	Melcher
Baker	Ford	Metzenbaum
Bayh	Glenn	Muskie
Bellmon	Goldwater	Nelson
Bentsen	Hansen	Packwood
Brooke	Hatfield	Pearson
Byrd, Harry F., Jr.	Hayakawa	Proxmire
	Heinz	Ribicoff
Byrd, Robert C.	Huddleston	Riegle
Case	Inouye	Roth
Chafee	Jackson	Sasser
Chiles	Javits	Schmitt
Church	Kennedy	Schweiker
Clark	Laxalt	Sparkman
Cranston	Leahy	Stennis
Culver	Long	Stevens
Curtis	Lugar	Stevenson
Danforth	Magnuson	Stone
DeConcini	Mathias	Thurmond
Dole	Matsunaga	Wallop
Domenici	McClure	Young

NAYS—15

Allen	Durkin	McIntyre
Bartlett	Hart	Metcalf
Biden	Haskell	Randolph
Bumpers	Helms	Sarbanes
Burdick	McClellan	Zorinsky

NOT VOTING—20

Cannon	Humphrey	Scott
Garn	Johnston	Stafford
Gravel	Morgan	Talmadge
Griffin	Moynihan	Tower
Hatch	Nunn	Weicker
Hathaway	Pell	Williams
Hollings	Percy	

So the motion to table was agreed to.

Mr. THURMOND. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion was agreed to.

AMENDMENT NO. 93

Mr. MUSKIE. Mr. President, I call up my amendment No. 93 and ask the clerk to report.

The PRESIDING OFFICER (Mr. SARBANES). The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Maine (Mr. MUSKIE) proposes amendment No. 93.

Mr. MUSKIE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without object, it is so ordered. The amendment will be printed in full in the RECORD.

The amendment is as follows:

On page 24, beginning with line 13, strike out all through line 24 on page 26, and insert the following:

"RULE XLIV

"OUTSIDE INCOME

"1. During the period of service in a calendar year of a Senator, or of an officer or employee of the Senate compensated at a rate exceeding $35,000 a year and employed for more than ninety days in a calendar year (unless hired on a per diem basis), the aggregate amount of the outside income of such individual for such period shall not exceed 15 per centum of—

"(a) the aggregate amount of the salary of such an officer or employee disbursed by the Secretary of the Senate during such period; and

"(b) in the case of a Senator, the aggregate amount of base salary paid to Senators and disbursed by the Secretary of the Senate for that period.

"2. For the purpose of this rule, the term 'outside income' means all income (within the meaning of section 61 of the Internal Revenue Code of 1954), other than amounts disbursed by the Secretary of the Senate, reduced by the expenses incurred in the production of such income which are deductible for Federal income tax purposes. Such term includes, but is not limited to (1) income received as a result of personal services actually rendered; (2) income from family enterprises; (3) gains derived from dealings in property or investments; (4) interest; (5) rents; (6) dividends; (7) annuities; (8) income from discharge of indebtedness; (9) distributive shares of partnership income; (10) income from an interest in an estate or trust; and (11) any 'buy-out' arrangement from professional partnerships or businesses.

"3. Notwithstanding the limitations of paragraph 1, a Senator, officer, or employee may receive income in excess of the amount allowed by such paragraph if that excess income is—

"(a) necessary to pay Federal, State, or local income taxes;

"(b) received and expended for the purpose of influencing his nomination for election to, or his election to, public office; or

"(c) necessary to meet expenses forced upon him by extraordinary personal circumstances.

"RULE XLV

"ESTABLISHMENT OF TRUSTS

"1. A Senator, and an officer or employee of the Senate compensated at a rate exceeding $35,000 a year and employed for more than ninety days in a calendar year (unless hired on a per diem basis)—

"(a) who owns and controls property (other than a savings account) which is the source of income shall establish one or more trusts and transfer such property to one of such trusts; and

"(b) who receives income from any property which he does not own and control (including a trust of which he is not the grantor) shall establish a trust and transfer such income to such trust, or shall transfer such income to a trust established for purposes of subparagraph (a).

"2. If a Senator, officer or employee receives income in excess of the amount which may be retained under rule XLIV, he shall establish a trust and transfer such income to such trust, or shall transfer such income to a trust established for purposes of paragraph 1.

"3. For purposes of this rule, the term—

"(a) 'trust' means a trust (1) in which the management, investment and reinvestment of property constituting the corpus, and of the income therefrom, is solely at the discretion and under the control of the trustee, and (2) no distributions of income from which may be made to the grantor or any beneficiary except to the extent authorized under rule XLIV;

"(b) 'savings account' means an account in a financial institution upon which interest (as such term is used for Federal income tax purposes) is paid or credited, and, if an individual makes any withdrawal from a savings account during such year to the extent that the amount of such withdrawal does not exceed the amount of such interest;

"(c) 'dependent' has the meaning set forth in section 152 of the Internal Revenue Code of 1954; and

"(d) an individual shall be considered as owning and controlling any property or interest therein (including a savings account)—

"(1) which he owns jointly with his spouse or a dependent; or

"(2) which is owned and controlled by his spouse or a dependent, but only to the extent that such property (or the amount in a savings account) was acquired from such individual by gift or was acquired, directly or indirectly, with funds or other property provided by such individual.

"4. An individual to whom paragraph 1 applies shall comply with the provisions of such paragraph within 90 days after the date on which such provisions first apply to such individual."

Renumber proposed rules XLV through L (and cross references thereto) as XLVI through LI, respectively.

On page 54, line 17, before "shall" insert "and rule XLV of the Standing Rules of the Senate (as so amended), relating to Establishment of Trusts,".

Mr. MUSKIE. Mr. President, I discussed the matter of the timing on this amendment with the distinguished majority leader and the floor manager of the bill, the Senator from Wisconsin (Mr. NELSON), and we have agreed that I call this amendment up today—that we debate it, using time on the bill and not time on the amendment—that we resume consideration of the amendment when the Senate convenes on Monday.

It is conceivable that some time on Monday we may reach an agreement on a time to vote.

Mr. HART. Mr. President, can we have order in the Senate, please?

The PRESIDING OFFICER. The Senator will suspend. The Senate will be in order. Senators will please take their seats and retire from the aisles.

The Senator from Maine.

Mr. MUSKIE. Mr. President, what we agreed to was that we would discuss this amendment this evening, late this afternoon, for maybe an hour to an hour and a half—that the amendment would be the pending business on Monday when the Senate convenes at 1:15—that I would be recognized at that point to continue the debate—that on Monday we would consider whether or not we could reach agreement on a time to vote on the amendment, probably not before Tuesday or even Wednesday.

I hope that Senators will not be tempted then to put the debate behind them. I think it is important that we start today, that we have a meaningful debate, and I am not interested in any prolonged debate. I am interested only in a full exposure of the issue and all elements of it so that when Senators vote on it some time Tuesday or Wednesday they may do so having had a full discussion and, hopefully, a full understanding of what is at stake.

I believe that it is the essence of our agreement, but I will ask the distinguished majority leader.

Mr. ROBERT C. BYRD. I thank the distinguished Senator.

Yes, that is the essence of our understanding.

Mr. President, will the Senator yield to me for a unanimous-consent request only?

Mr. MUSKIE. Yes, I yield.

ORDER FOR RECESS UNTIL 1:15 P.M., MONDAY, MARCH 21, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until the hour of 1:15 p.m. on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR A PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS ON MONDAY; CONSIDERATION OF SENATE RESOLUTION 110; AND RECOGNITION OF SENATOR MUSKIE

Mr. ROBERT C. BYRD. Mr. President, at this time I ask unanimous consent that after the two leaders or their designees are recognized on Monday there be a period for the transaction of routine morning business not to extend beyond the hour of 2 p.m., with statements limited therein to 10 minutes each and, at 2 p.m., of course, the code of ethics resolution will then come back before the Senate; and I ask unanimous consent that at that time Mr. MUSKIE be recognized so that he might continue his statement in support of his amendment.

I have assured him that I will yield time from my time on the resolution as much as he wants within the time that I have.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I simply wish to clarify one point, if I may have the attention of the majority leader for a moment.

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. The arrangement, I think, is a very good arrangement; and I shall reiterate my understanding of it.

The pending business today will be one of the Muskie amendments.

Mr. ROBERT C. BYRD. That is correct.

Mr. BAKER. Which amendment is it?

Mr. MUSKIE. No. 93, and I shall describe it briefly in a moment. I will describe it now. It is the one that will apply the 15-percent limitation on outside income to all outside income.

Mr. BAKER. Earned and unearned?

Mr. MUSKIE. Yes.

Mr. BAKER. All right. That amendment will become the pending business, and time today and on Monday will be yielded by the Senator on his own account earned under the amendment according to the standing order.

Mr. ROBERT C. BYRD. He has 1 hour under the amendment.

Mr. BAKER. Additional time, if necessary, will be under the majority leader's time.

Mr. ROBERT C. BYRD. And will be yielded to him.

Mr. BAKER. Nothing in this arrangement diminishes the amount of time under the control of the minority leader?

Mr. ROBERT C. BYRD. I have heard none.

Mr. BAKER. Mr. President, there is no objection on our part to that. I think that is a good arrangement.

I shall address one other question to the majority leader. I know he anticipates things a little.

After the conclusion of the two Muskie amendments, I ask the majority leader what he would anticipate to be the business of the Senate following that?

Mr. DURKIN. Mr. President, I reserve my right to object to the agreement the leaders are propounding, but I shall wait until they get that settled.

Mr. BAKER. My question of the majority leader is whether he had any view of what might be the business following the two Muskie amendments.

Mr. ROBERT C. BYRD. There will be other amendments, I assume, that would be offered to the Muskie amendments.

Mr. BAKER. I hoped we might be able to establish a sequence of amendments. I have a request, for instance, for the Weicker amendment to follow the two Muskie amendments.

Mr. ROBERT C. BYRD. The Senator is correct. I will not forget that.

Mr. BAKER. Does the majority leader care to include that at this time?

Mr. ROBERT C. BYRD. Yes; I will be glad to include that at this time. I ask unanimous consent?

Mr. MUSKIE. May I suggest to the two leaders that it is conceivable that the pending amendment which I called up might be set aside for consideration of the other amendments on Monday because we have not yet reached agreement on a time to vote, and I rather doubt that we want to take all of Monday to debate this amendment. It is conceivable there might be other amendments that could be called up and discussed then. I am not trying to preempt all of Monday or all of Tuesday on this amendment.

Mr. BAKER. Mr. President, I am not trying to insist that the Weicker amendment follow only after both Muskie amendments have been considered, but rather attempting to establish precedence for the junior Senator from Connecticut. I hope the majority leader might then entertain a request for unanimous consent that after the first Muskie amendment, the Weicker amendment might become the pending business.

Mr. MUSKIE. Depending on how the debate flows, as long as we are trying to follow that, it might be useful at that point to consider the second Muskie amendment. I do not like to foreclose my options at this point. We are all trying, those who are for my amendment and those against it, to gage the timing of the vote to get maximum support. I do not like to foreclose my options. I am hoping the debate will influence Senators' judgment on the merits, and I wish to take advantage of my reading the best time to get a vote to maximize my support, as I am sure the majority leader and minority leader are doing also, and they are more expert at this than I am. I do not want to foreclose the timing of the second amendment. I might conceivably offer a substitute to the first amendment. It depends on timing and how the debate flows. I wish to keep those options open without intending to prolong the discussion of the amendment.

Mr. ROBERT C. BYRD. Why do we not, if I may suggest to the distinguished minority leader, simply try to protect the Senator from Connecticut the best we can in his desire to call up an amendment either after the first Muskie amendment or the second one. I think now that Mr. MUSKIE's amendment is laid before the Senate, of course it is the pending question. So depending on the outcome of that. I take it that the Senator from Maine would want to make a decision then as to whether or not he called up the second amendment immediately, and I would hope that we could help Mr. WEICKER some way. I think at this point, from the statement the Senator from Maine has made, it is difficult for us to assure Mr. WEICKER he would be recognized immediately after disposition of the first amendment because Mr. MUSKIE may wish to call up the second amendment.

Mr. BAKER. Mr. President, on that point I think the majority leader is correct. I think the circumstances are fluid enough so that we do not know what the sequence is and what elaboration of the two Muskie amendments there may be by parliamentary maneuver or substitutes of other amendments. It seems to me we might protect the junior Senator from Connecticut by agreeing that the Muskie amendments would not be temporarily laid aside in preference to amendments other than the Weicker amendment.

Mr. ROBERT C. BYRD. That is all right.

Mr. DURKIN. Mr. President, reserving the right to object, and it is sort of in the form of a parliamentary inquiry, I clearly have propounded what I thought to be a unanimous-consent request, that we would get time to consider other amendments I had at the desk and I did not hear any objection. The majority leader assured me that I would not be foreclosed. My only concern is I do not have the time, but, if we take up until Wednesday with Muskie amendments 1 and 2 and then the Weicker amendment, Mr. BIDEN and I want to come back with the amendment that was just tabled minus the limitation on charity. It seems like charity carried the field. So we are going to eliminate that and bring that amendment back. And I have the two amendments on conflict, an amendment restricting family business exemption, and the amendment requiring fair market value and true assets and liability statement with copies of tax returns. I want to make sure we do not have to consider amendments by the bushel as we get to the 48th and 49th hour.

Mr. ROBERT C. BYRD. I do not think the Senator need be concerned about it. I think he can be assured he will have an opportunity to call up his amendment.

Mr. DURKIN. Then I have no objection to the propounded agreement.

Mr. ROBERT C. BYRD. I thank the Senator.

The PRESIDING OFFICER (Mr. MELCHER). Is there objection?

Mr. BAKER. Mr. President, what is the unanimous-consent request?

The PRESIDING OFFICER. Will the majority leader restate the unanimous-consent request?

Mr. ROBERT C. BYRD. Yes. I ask unanimous consent that, following the recognition of the two leaders or their designees under the standing order on Monday, there be a period for the transaction of routine morning business not to extend beyond the hour of 2 p.m. with statements limited therein to 10 minutes each and that at 2 p.m., when the Senate resumes consideration of the pending measure at which time the pending question would be on the adoption of Mr MUSKIE's amendment, Mr. MUSKIE then again be recognized.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I would like to ask if the majority leader intends to make any request now with respect to the Weicker situation?

Mr. ROBERT C. BYRD. I think that based on our understanding I really would not know how to phrase such a request.

Mr. BAKER. I think, if the majority leader will yield then, in deference to the request the junior Senator from Connecticut made and which I discussed with the majority leader, I ought to put our colleagues on notice that in order to try to expedite the consideration of the Weicker amendment, following the Muskie series, I will object to any effort

to lay aside the Muskie amendments and temporarily take up some other measure.

Mr. ROBERT C. BYRD. Wait a minute. I did not include that in my request, but I had so intended and I think we had that understanding, that the Muskie amendments may not be laid aside for any amendment other than the Weicker amendment. I beg the Senator's pardon. I left that out of my request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I thank all Senators.

OFFICIAL CONDUCT AMENDMENTS OF 1977

The Senate continued with the consideration of the resolution (S. Res. 110) to establish a Code of Official Conduct for the Members, officers, and employees of the U.S. Senate; and for other purposes.

The PRESIDING OFFICER. The Senator from Maine is recognized.

Mr. MUSKIE. Mr. President, I wonder if we might have order before I begin this discussion.

The PRESIDING OFFICER. The Senate will be in order.

Mr. MUSKIE. Mr. President, at the outset I wish to address myself to something the distinguished majority leader said yesterday. I know that he is pressed with business off the floor as well as on, and I do not want to make this reference when he is not in the Chamber.

Mr. ROBERT C. BYRD. I am very glad to listen to my distinguished colleague.

Mr. MUSKIE. The Senator does not have to after the first 5 minutes, may I say to my good friend the majority leader.

But in a story that appeared in last night's Washington Star, entitled "Senate Loses Ethics Enthusiasm," there is this paragraph:

> Asked how he thought rejection of the income limitation, coming less than a month after the pay raise, would square with the American people, BYRD replied that in such a case the Senate would be saying, "We have had our cake; now we want to eat it, too."

The implication of that statement, which I find it very difficult to believe the Senator intended, is that unless we rubberstamp the committee resolution—every provision, every paragraph—we are soft on ethics. Or if we raise a question with respect to any provision on the basis of what we consider to be legitimate concerns, we are soft on ethics.

I raise this point, Mr. President, because I detect a reaction of Senators to this whole question something on the order of the panic generated by the reaction of the public to the pay raise—by the reaction of the public to what so many of them conceive to be a lack of congresional ethics—and that Senators are inclined to vote for anything with the name of a "code of ethics," whether it makes sense to them or not.

If we were to enact this legislation under the pressure of that kind of reaction, I say to the Senate we would be making not one mistake, but a lot of mistakes. There are many provisions in this code of ethics that ought to get the closest kind of scrutiny and examination. I doubt that even the members of the Ethics Committee have fully probed the full implications of every new restriction written into this code. I say that not in denigration of the abilities of the people who serve on the Committee on Ethics, but out of my own experience in writing legislation.

Every day I encounter, as a result of examination of this code by my staff, new and serious questions about restrictions that have been written into this proposal, and I urge that my colleagues do examine it closely, that they scrutinize it carefully. Then I urge that our leaders not—even by the remotest implication—refer to that kind of examination as reflecting anything but a commitment to a sound code of ethics.

With respect to my particular concern with a limitation on earned income, I was against such limitations before the pay raise. I would have been against them if they had been attached to the pay raise. And I am against them now, because I think they are wrong, for reasons that, with the cooperation of the majority leader, I am going to have ample time to discuss. But I do not think I have earned the reference to my concern as being "soft on ethics."

I am going to begin my discussion on this matter on a personal note, if I may, because I know of no better way to put the implications of the earned income limitations than in terms of my own experience.

When I was elected Governor of my State in 1954, I had a one-man law office. We struggled, my wife and I, to make a living. We got by—not much more, because I was a young lawyer just starting out.

A year before I ran for Governor, I had broken my back, been hospitalized for weeks, and been without an income for months. So when I was elected, I had thousands of dollars of medical and hospital bills, a law office which I had to decide to keep open or close, and I had to look forward to a salary of $10,000 a year as Governor of my State.

I closed my law office. The option was to do that—or take on some young lawyer and hopefully to stimulate business because of the fact that I was Governor—to attract business because of the fact that I was Governor, and build up a practice in that fashion. I chose not to do it, notwithstanding the bills and notwithstanding the limited salary.

I sold my home, because there was a Governor's mansion in Maine. I do not know how long the non-Indians are going to keep it, but there is a Governor's mansion in Maine. So I sold my home. It would have been hard to maintain it on the Governor's salary, given the ordinary pressures on a Governor's income, so I sold it. The equity brought me $5,000. It was not enough to pay my bills, if I had paid all my bills at that point, but I invested that money in mutual funds as the most ethical kind of investment that I could conceive of from a conflict of interest point of view.

Then I deliberately said to myself, "I have made these two decisions because there is a way for me to augment my income as Governor." There was fresh in my mind the experience of such public figures as Winston Churchill, Eleanor Roosevelt, and others like them who, in a very public way, traveled the lecture circuit, and I was well aware from my own reading of history that the lecture circuit—as a way of enlightening the public, of disseminating information and understanding on the issues—was as old as the Republic. It goes back to the old Redpath Lyceum of the early 19th century and the Chautauqua circuit of the latter part of the 19th century and the early part of this century, a lecture circuit that has been hailed by historians of that period—I will get into that later, because I have had it researched— as the most effective means ever devised for enlightening public opinion on the issues which ought to be of concern to the citizen in a free society.

So I said:

> MUSKIE, there is your answer. You can perform a public service, you can augment your income, and it will be clean, so you can stay in public life and be economically viable.

That was my decision, and I have been on the lecture circuit ever since. My salary as Governor never rose above $10,000. When I came down here to the Senate, my salary was $22,000. Then it rose to $30,000, and I say to you gentlemen that if it had not been for the lecture circuit, ED MUSKIE would not be here today. I would have quit long ago, because I would have had no choice; none whatsoever.

I read in the press comments attributed to aides of the distinguished floor manager that the purpose of this ethics code is to make it impossible for people to come to the Senate and get wealthy here. Well, did I get wealthy on the lecture circuit?

And those mutual funds. What happened? I sold them. What did I do with the proceeds? I paid my bills. What do I own? I bought a house here in Washington that I bought when I arrived here. I own a summer house in Maine so that my family will have a place to stay when we go back to my home State. That is the real estate I own. Both are heavily mortgaged. The bulk of my net worth statement is attributable to those two pieces of real estate.

Real estate values have increased. Inflation has driven them up higher. Both of those houses are worth much more than I paid for them, much more. But I cannot spend a penny of the increase, not a penny, unless I just go to the bank and borrow to reduce the equity, which I have already done for the last 2 years in order to pay bills.

Commensurate with the increase in the values of these houses because of inflation, the cost of maintaining them has increased.

I own a 1970 automobile and a 1968 automobile. I have not felt I could afford to buy another car since 1970.

I have the cash value of my life insurance, which is about $25,000; the cash value of my Senate retirement; a small savings account, and the furnishings of my house.

I think I have disclosed it all. I do not need long forms or an accountant. I have disclosed it all.

Now I come down to the year 1977. The committee report says I used my time as a Senator to become wealthy, to enrich myself, because I have gone on the lecture circuit. It says to me:

MUSKIE, you made a mistake down there. You thought you were avoiding the path of enrichment, that you were choosing the path that avoided that, but you were wrong. Unwittingly, you chose a path that caused you to violate the public interest. On the lecture circuit, you used time that you should have devoted to your public duties.

Mind you, nobody on the committee or committee staff has gone over my record to determine whether or not I neglected my duties. They have just said:

Because you are on the lecture circuit, *a fortiori* you used time that you should have devoted to your public duties.

What is the second judgment they made? That because I was on the lecture circuit, obviously I enriched myself and became wealthy.

What is the third judgment they made? That because I was on the lecture circuit, obviously I must have been involved in conflicts of interest.

They say these three consequences are endemic to the lecture circuit and if I took that route, if I relied on that source of income, I am guilty of neglecting my public duty, of exposing myself to conflicts of interest, and of enriching myself because of my office.

That is the judgment that this committee report makes with respect to my 22 years as Governor and as U.S. Senator. If it says, as it does, that all such activity in the future would have those unavoidable implications, then, obviously, all those implications are unavoidably to be drawn from those who practiced this in the past. How else do you judge it? How else?

There has been an attempt to confuse this. There was an editorial in the New York Times on March 17. Fortunately, I do not think the New York Times is the fount of all wisdom on every subject. They certainly demonstrate that here. Let me quote:

Just imagine the appearances if the ceiling is scrapped. A Senator now earns $57,500 a year. Under the proposed ceiling he could also earn up to 15 percent of that in outside activities, another $8,625. If the Senate eliminates that ceiling, as Senator MUSKIE proposes, it will, in effect, be proclaiming to the public that the new raise is not enough, not even $66,125 is enough. "We want more."

What a pitiful posture I find myself in; what a pitiful posture.

The gentleman who wrote the editorial did not even focus on the issue. What I have said is that if $66,125 is enough for some Senators, it ought to be enough for all Senators. I personally do not think income limitations are the answer to this problem. But if it is the committee's judgment, and if it is the Senate's judgment, that income limitations are the answer, then let us apply them across the board.

I have read everything I could find which has been said in public print by the sponsors of this resolution to find out why they did not do that. The reason is that it is too difficult to do.

What does that mean, may I ask? All it means is that no matter the source of income, once converted to assets that are in place—though by way of investments in securities, in real estate or in any other way—there is something repugnant to the thought of divesting people of it. There is no way of separating the income from the asset. I suppose that is what they mean.

But it is easy to divest someone on the lecture circuit. You just prohibit him from going on it. You divest him of his income just as surely, but it is so invisible, it is so clean. You have not forced anybody to sell assets or to give them away. It is so surgical.

It reminds me of the novel "Call of the Wild," which I have not read since I was a boy. Remember when the dog teams went through wolf country and one dog faltered? Rather than jeopardize the whole team they threw the weakened dog to the wolves, hoping that would appease the wolves and the team could get away, without jeopardizing any others.

Well, so it is with those of us on the lecture circuit. We are being thrown to the wolves. That is why all this exaggerated rhetoric such as I find in the New York Times.

Because we are so visible. Why are we so visible, may I ask? Because we are the only form of income which has been subject to any form of discipline for 10 years. We have had to report and disclose, and not in categories, I might say. Would not it be nice to report in categories of zero to $5,000? Then people would not know whether we had $500 for an honorarium or $5,000.

We had to report everything, and I had no reluctance to do so. But having reported, then we become the visible target, and since there were a few honoraria that carried an aura of conflict, the public record spread it out and tarnished all the others. But the conflicts in other forms of income that did not have to be disclosed—that did not have to be reported—did not become visible so they did not become targets.

But, having become visible, what is the committee's solution? The committee's solution is to punish us all, whether or not we ever accept an honorarium that involved a conflict of interest.

The ridiculous thing about this resolution is this: If I were to go to a college campus on the invitation of a student lecture group and were offered an honorarium of $1,500 to discuss the issues of the day, that is forbidden. But if I had used that $5,000 from the sale of my house, with the advice of all that expert opinion that is available around this town, to invest in speculative real estate, oil ventures, stocks of any kind of companies regulated by Congress or by executive agencies—if I got $50,000 a year from those kinds of investments—that is all right. But that $1,500 lecture to a college student group on the subject of any public issue you want to name, that is forbidden.

That may seem like justice to my colleagues. It does not to me and it never will. There has to be some kind of judgment on the part of the committee that lecture fees are so prone to conflicts, so much more prone to conflicts than any other form of outside income, that they need to be prohibited.

What is your evidence? Did you examine the confidential filings of Senators in the Comptroller General's office? Did you take testimony? Did you examine the holdings of Senators who have access to that source of income? On what basis do you make such a judgment?

I suggest there is not any such testimony, there have been no such hearings, there has been no such search. But just out of the blue, this form of income, made visible by an earlier form of discipline that the Senate refused to apply to unearned income at the time—making one visible, the other invisible—is now used as the basis for imposing an additional discipline, a divestiture discipline, if you will, upon this form of income.

You may think that is justice. I do not and never will.

Then it is argued that this takes time from the full-time job of a Senator, the lecture circuit. The committee did not even attempt to define what a full-time Senator is. There are 168 hours in every week. Do we owe that whole 168 hours to the Senate? Is it permissible to take one day, 24 hours, out of that week for my own personal purposes? Is it? If it is, is it any of the Senate's business how I use that one day, whether it is used for giving that college lecture I described a moment ago or playing golf, or spending the time with my family? Or maybe you might give me 2 days every other weekend.

Last year, I did 19 lectures. That is one every 19 days. Do you really believe that cut into the time I should be devoting to Senate duties? Nineteen days.

I shall tell you how I devoted time last year to my committees. In 1975, on Budget Committee meetings, I attended 44 of 48 meetings; in 1976, 28 of 33 meetings. Most of those I missed because I was attending other meetings of other committees.

The Environmental and Pollution Subcommittee: in 1975, 54 of 58 meetings; in 1976, 16 of 24 meetings.

The Intergovernmental Relations Subcommittee: in 1975, 18 of 19 meetings; in 1976, 10 of 11 meetings.

My voting attendance record for the 4 years: 90.4 percent as compared to a Senate average of 86 percent. During those 2 years, I was campaigning for reelection and spent 1 out of 3 days in my State doing that and attending to the public business there.

Have I been neglecting my duties? I am not going to try to judge anyone else's use of his time. I made 19 lectures; I did my duty. In addition to this, I monitored this floor for 2 solid years in connection with my duties as chairman of the Senate Committee on the Budget, and I think most of you are aware, in a general way at least, of the time I devoted to that responsibility. Now I am told that, because I was on the lecture circuit, I neglected my duties as a Senator.

As a matter of fact, gentlemen, I think it is part of the role of a Senator to discuss public issues in public and I do not think we should limit that role to the

people of our State. We are, after all, U.S. Senators. When I came here and was given my first subcommittee chairmanship, it was the Environmental Pollution Subcommittee. I decided that environmental issues needed a constituency. I conducted hearings all across this country over a 3-year period. I made speeches on the lecture circuit all across this country on environmental issues. I helped build a national constituency for environmental legislation, and I have been so credited in the press. Now, is that or is that not attending to the public business?

To have it said that every single speech on the lecture circuit is contrary to the public interest—either from a conflict-of-interest point of view or a time-consumed point of view—to me, is the kind of restriction that can destroy this institution as a political body. I think there are those not in this body who would like to do that.

In the 19th century—I have mentioned this before—the lecture circuit was already an established and honored forum for public speaking. Public figures like Henry Ward Beecher, Charles Dickens, and Ralph Waldo Emerson could command very high fees. Beecher, for example, made upward of $40,000 a year from lectures at his height. This was more than a century ago.

Daniel Webster is the first Senator whose name appears on available records. In 1837, he spoke to the Concord, Mass., Lyceum for a fee of $100. In the 1840's, Senator Webster lectured throughout New England for $100 an evening on the history of the Constitution.

Araham Lincoln, in 1859, while promoting his candidacy, earned $200 for his famous Cooper Union Address, which also earned him serious consideration for the Republican Presidential nomination.

Senator Charles Sumner also spoke widely before and after the Civil War. He earned between $100 and $300 a lecture in 1861 at various New England lyceums. After the war, he was a principal star of the James Redpath Lyceum Bureau, the first talent agency. By 1880, Sumner received $1,800 a lecture to supplement his Senate salary of $5,000 annually—1880.

Another popular Redpath speaker was Maine Senator James G. Blaine, advertised as "the silver tongued orator from Maine." The oratory declined since his time.

As the growing Chautauqua movement increased demand for speakers, even more Senators were pressed into service. Some of these were Senators Blanche Bruce of Mississippi and Frank Cannon of Utah, who each earned $500 to $800 per lecture.

The superstar of this period, however, was William Jennings Bryan, who promoted his Presidential candidacy and earned upward of $50,000 a year on the Chautauqua circuit. Bryan, in fact, continued to lecture at Chautauqua while he served as Wilson's Secretary of State, on his vacation time.

President Taft and Wilson's Vice President Thomas Marshall also lectured at Chautauqua while in office.

Around the turn of the century and after, Senators with causes to promote crowded the lecture circuit, prompting one journalist to note that "the Progressive Party was formed from a dozen Chautauqua speakers in Iowa and Kansas." Among the Senators managed by the Redpath Agency were George Norris of Nebraska—who ranked on the "star circuit"—Robert LaFollette of Wisconsin, Irvine Lenroot of Wisconsin, James Watson of Indiana, James Vardaman and Byron Harrison of Mississippi, Thomas Gore and Robert Owen of Oklahoma, and Frank Willis of Ohio.

Senator Jonathan Dolliver of Iowa was a popular speaker with the Wright Agency and for a fee of about $800 would lecture on "The Working Man of Nazareth," "A Poor Man's Government and a Poor Boy's Country," or "Public Virtue as a Question of Politics."

Other Senators of this era with other agencies or who booked themselves included Robert Taylor of Tennessee, Albert Cummins of Iowa, Norris Brown of Nebraska and Henry Allen of Kansas.

All the important issues of the 1910's and 1920's were debated on the Chautauqua circuit—labor rights, monopolies, women's suffrage, prohibition, the war in Europe, political corruption—and a stint on the circuit was considered necessary for any political career. For example, four of the six major Presidential candidates in 1924 were veteran Chautauqua speakers.

When the Chautauqua movement was at its peak, one leading historian noted that—

> It has done more toward keeping American public opinion informed, alert and unbiased than any other movement. The press has come to be regarded, like advertising, as warped by special interests. The pulpit is restricted as to subject matter and manner of treatment. The moving picture screen . . . offers possibilities as yet unknown for good or ill. But the Chautauqua platform has kept above suspicion as the greatest agency of popular education.

I learned of the Chautauqua circuit in the 1920's when I was a boy. I lived in a small town, 8,000 people or less. Every summer, the Chautauqua movement came to town, set up its tents, brought us entertainment, brought us speakers, brought us politicians, and everybody in town turned out.

The Chautauqua movement is gone with the incoming of radio and television. The nearest thing to it today is the college lecture circuit and some other smaller circuits around the periphery of that movement.

I happen to believe that when we go on the lecture circuit we perform a public service and a role that is not only consistent with our Senate duties, but even implicit in our role as U.S. Senators.

Can the lecture circuit be abused? Of course it can, and has been. But every form of outside effort can be abused. It carries the potential. Every source.

If it is thought that our public duties will be distorted because of conflict—and that this is so urgent that we ought to be completely anesthetized from any risk of such conduct, then let us form a professional Senator, a professional House, made up of people whose only income—whose only income—with no outside income of any kind—is the salary they draw from the Public Treasury.

I do not think we want that. We would give every Senator a stake in staying in office for life. He would have no outside source of income, no place to turn.

But if we want to professionalize the Senate, that certainly is an option. The committee does not do that. It says, "no."

It is not only this one in this code, but I have only spoken to this one. There are professionals who are dealt with even more stringently. Having given up my law office years ago, I guess I have no personal experience upon which to evaluate that judgment at the moment. There may be other Senators who have.

But I believe that is, basically, my case. I am sure there are other arguments that I have thought about over the last few days that escape me for the time being.

I feel very strongly about this, and I say once more that maybe I did make a mistake 22 years ago. But I do know this, that the only thing that has made it possible for me to stay in public life 22 years was my choice—and I think it was an honorable choice—of this source of income for all of that time.

With that, I close.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. JAVITS. Mr. President, I was one of the parties who drafted this code, and I should like to say a word to the Senator, in all fairness to him.

He has made a very moving speech and has spoken of matters of which I have a deep feeling, with great experience. There is one point I should like to emphasize to my colleagues.

This code has a conflict-of-interest section which is its heart. Senator MUSKIE could go the route he desires by simply leaving in that conflict-of-interest section, plus the disclosure section, plus the enforcement section. He could strike everything else; because if a Senator gets an honorarium or if he engages in practice or if he does any one of a thousand things, such as taking a gift for $15, not $14—we go into great specificity here—and he is guilty under the conflict-of-interest section—that is, he demeans the Senate or he demeans his office—if we left the code that way, the Committee on Ethics could bring charges and take action with the very same effect that it could if these specifications were left in the code.

Impliedly, in everything we discussed, we understood that. I draw the Senator's attention to it, as he will go on with this debate, and over the weekend he might think about this and address himself to it. My colleagues are here: Senator RIBICOFF, Senator NELSON, and Senator PACKWOOD. An enormous amount of effort and brainpower were expended in this matter. There was a feeling that for two reasons we had to be more specific and to implement, in connection

with this conflict-of-interest section, with the specificity which the Senator has found difficult to accept. I understand that completely, but the Senator should understand our dynamics, too.

The two reasons were as follows: one, the feeling that the public demanded that we have these specific restraints on ourselves; that if we left it simply to the general conflict-of-interest section, that would be considered a bailout for us; that our Committee on Ethics never would really do anything about it, and we would just about be back where we started from, which it was felt the public found objectionable, and that that was the reason for the low rating in the public opinion polls. That is one.

Second, we Members were entitled to some specific guidance in individual activities as to what would not represent the appearance of a conflict-of-interest within the conflict-of-interest sections, and that this was necessary for the purpose of administration and for the purpose of the Committee on Ethics.

That is the fundamental structure which underlies this approach. Therefore, I agree with the Senator from Maine that he will be posing to the Senate the fundamental question of principle which is involved, one, in full disclosure, plus a conflict-of-interest section, plus an enforcement section; and that would be, for men of honor, the best plan and would not demean us.

With all due respect to this 15-percent business, I felt demeaned. I have been here for more than 20 years, and I have heard speeches made about the fact that we get an honorarium for 15 minutes of talk to some group, or that we toss it off in 10 minutes, instead of going to Seattle or San Francisco or Minneapolis or Chicago.

In addition, I say to my colleagues—and this is true of many of us here—I can get $5,000 for a speech, whether I was or was not a Senator or whether I had been, even if I had never been a Senator, and there are many here like me. We have many former Governors in this Chamber.

This 15 percent was a demeaning thing to me, so much so that I sought to get the committee to make it $10,000, some round figure—10 speeches at $1,000 each—just so that it was a respectable relationship to the Senate of the United States, which is a very hard place to get to. You really have to be a person of some consequence in order to attain this post. Or, eliminate it altogether, have nothing, if that is the way Senators felt.

So I hope very much that, with the same thoughtfulness and the same seriousness which characterize the Senator from Maine (Mr. MUSKIE), and fully in accord with the tradition of the great Senators from his State whom he has named, the Senator will think over the dilemma with which this draft committee wrestled and will let us have the benefit of his thinking, based upon the explanation I have just made, which Senator NELSON or others may correct if they wish, as to the policy and principle which underlie what we sought to do in our work.

Mr. MUSKIE. If I may give the Senator from New York at least my initial reaction to that, it seems to me that the only area in which he really has been specific is this: The "Call of the Wild" figure of speech is very accurate. The weakest dog is thrown to the wolves, and by being specific with respect to him, it justifies the public relationship to everybody else. I do not buy that. Are we going to legislate in terms of our view or only the public perception?

I read a story in the Washington Post the other day, the headline of which said that the Senate is a rich man's club, that all of us are millionaires. Shall I pay my income taxes on the basis of the public perception of what my income is, or shall I continue to pay them on the basis of what it really is?

The PRESIDING OFFICER (Mr. DECONCINI). The 60 minutes of the Senator from Maine have expired.

Mr. NELSON. Mr. President, I yield from the bill whatever additional time the Senator desires.

Mr. MUSKIE. Are we going to respond to perceptions, or are we going to get down to realities?

The Senator has made a point that I forgot to make, and another point that is implicit in what he has said.

There is a limit on the individual lecture of a thousand dollars. Yet, it is argued that lectures take our time. Well, if the limit were twice that much, it would take half as much time. If it were three times that much, it would take a third as much time.

What connection, for heaven's sake, is there between the limit on individual honoraria if the forum is clean, if there is no potential conflict in the sponsorship? What conceivable connection is there between any legitimate public interest and that limitation?

I have here—I tried to get others but could not get them—the brochures of a talent agency, and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TALENT AGENCY BROCHURES

RALPH NADER

Internationally famous consumerist whose principle activities include auto safety, environmental problems and government officials. The dedicated, hard-working reformer is establishing student-based consumer action organizations on campuses across the US, working to involve as many people as possible in the process of upgrading the system.

JOE NAMATH

The brash and exciting "Broadway Joe" brings to the platform a program of anecdotes, observations and his own flamboyant presence. The New York Jets quarterback perhaps epitomizes the modern-day sports hero.

SEN. GAYLORD NELSON (D-WISCONSIN)

Environmentalist, consumerist, the national co-sponsor of the 1970 Earth Day which climaxed a 2-decade campaign to awaken America to ecological perils. The author of US auto and tire safety standards discusses our blind faith in science and technology and disregard for other forms of life.

ANAIS NIN

She gained international prominence for her four-volume *Diary*, a work now regaining in popularity to the extent that it is now used as a text in feminist studies. French-born dancer and author of several novels, she speaks on the personal liberation of women—creatively, sexually and psychologically.

SPENCER OLIVER

The "forgotten man" in the Watergate scandal—Executive Director of the State Democratic Chairmen whose phone at Watergate was the only one known to have been bugged, and who is the foundation of the Democrats' suit against the GOP. Relates his story with charges of collusion on the part of the Democratic heirarchy.

LORD TERENCE O'NEILL

Former Northern Ireland Prime Minister who was forced out of office by his own party when his efforts at peacekeeping were rejected by both factions in Londonderry. A moderate, he discusses the prospects for harmony in Ireland and relates the latest developments in the bloody turmoil he tried to prevent.

KELLEE PATTERSON

Actress and jazz vocalist, Miss Indiana in the 1971 Miss America contest, she has applied her training in Afro-American Studies and Sociology to working with the urban poor and young. Though her opinions may at times be surprising, she states, "I am Black, I am a woman and I am young, so my views will never be one-sided."

PAT PAULSEN

Deadpan political satirist who gained fame on the fondly-remembered Smothers Brothers show. His lecture is spiced with films and other visual aids, and covers, among other things, his own campaigns for the Presidency, which were based on "the premise that any boy can grow up to be President, or if he never grows up—Vice President."

ELLEN PECK

Childless by choice, author of *The Baby Trap*, she has spent years researching the effects of children on the emotional balances of marriage. Nationally syndicated columnist and frequent contributor to many popular magazines, she discusses population growth, sexuality, ecology and individual emotional problems.

REV. TROY PERRY

Ordained minister, homosexual, and author of *The Lord is My Shepherd—And He Knows I'm Gay*. Founder of the Metropolitan Church of Los Angeles, which openly welcomes the gay community, he is an exciting, thought-provoking orator and outspoken champion for the rights of this oppressed minority.

DR. LAURENCE PETER

Author of *The Peter Principle*, creator of "Heirarchiology," a science which maintains that "each employee tends to rise to his level of incompetence." Critics disagree as to whether his theory is an extension of or a parody of Darwinism, but do agree that it is brilliant on either count.

REV. CHANNING PHILLIPS

One of the most thoughtful and rational of the many voices crusading on behalf of Black power, he questions rather than lectures his audience on Black involvement and President of the Housing Development Corporation, he is an expert on urban problems, employment and education.

PIERRE ENDES-FRANCE

Stormy petrel of French politics for two decades, former Gaullist Premier, statesman, economist, author and practical philosopher,

he remains one of the most colorful and articulate political figures on either side of the Atlantic.

DR. EDGAR MITCHELL

Apollo 14 astronaut who conducted telepathy experiments from the moon. A researcher of psychic phenomena, head of the Institute for Noetic Science, his lecture conducts his audiences on a mental space flight to convey the in-space experience. He explores correlations between religious thought, science and parapsychology.

BILL MONROE

Washington editor of NBC's "Today" show, winner of the 1972 Peabody Award for excellence in journalism, his interviews with Washington personalities are credited with the success of his venture in morning TV reporting. Among the names on his conversational roster are: Agnew, Goldwater, Connally, McGovern, Kennedy, Nader and many more.

DR. ASHLEY MONTAGU

Anthropologist, author of *The Natural Superiority of Women,* his is that rare combination of both good-natured and straightforward intellectualism. His interests range across the broadest possible spectrum, encompassing science and religion, American values, evolution, modern art and education, and much more.

SEN. JOSEPH MONTOYA (D-New Mexico)

Member of the Senate Select Committee on Presidential Campaign Activities (the bipartisan so-called Watergate Committee). Prior to Watergate, he was distinguished in his work for the rights of Spanish-speaking Americans.

CHARLES MORGAN, JR.

Noted defense attorney, Southern region director of the American Civil Liberties Union, he characterizes the System as "Law Against the Order." Counsel in some of the celebrated cases of our time, including the draft evasion by Muhammed Ali, the court-martial of Capt. Howard Levy and the Georgia Legislature's attempt to unseat Rep. Julian Bond.

ROBIN MORGAN

Revolutionary poet and editor of *Sisterhood is Powerful,* an anthology of feminist writing. She attacks traditional assumptions about male roles, women and the inequities of society, and offers sometimes shocking solutions. She discusses "The Oppressed Majority" and presents dramatic readings of her feminist poetry.

WAYNE MORSE

Former U.S. Senator from Oregon, educator, arbitrator in labor disputes, he has been a pervasive and outspoken force in America for nearly 40 years. Opposed to the erosion of Congressional power begun during the early years of the Vietnam involvement, he fears a government of men rather than of law.

JAMES MOSELEY

A knowledgeable, articulate and well-documented presentation on Unidentified Flying Objects by America's foremost authority. He offers a revealing, sometimes surprising and even shocking program dealing with UFOs, supplemented by films, radar trackings, documented sightings by pilots, astronauts and astronomers, and even Biblical references.

ROGER MUDD

CBS Washington correspondent and anchorman, voice of the controversial "Selling of the Pentagon," he is a keen, perceptive journalist who has made Capitol Hill his beat for two decades. At the Democratic Convention, half amused and half appalled, he reported on his own name being placed in nomination for Vice-President.

TOM MURTON

Penologist who, in 1967, was appointed to reform Arkansas' prison farm system, and soon found himself ousted after his vigorous investigation uncovered the bodies of nine prisoners. A dedicated advocate of prison reform, he urges courage on the parts of administrators, politicians and the public to end the medieval punishment mentality.

LAURA NADER

Urging a major overhaul in the workings of U.S. justice, she contends that law, as presently practiced, isn't doing the job. A full professor of anthropology, she presents overwhelming documentation of her case in the true style of the Nader family, questioning the relationship of law to the rapidfire developments of the 20th century.

Mr. MUSKIE. Mr. President, who heads the list? Ralph Nader. Does anyone think he delivers lectures for $1,000 apiece? I have followed him on many campuses, with a feeling that I was on a much more stringent standard with respect to the size of the fee than he was. I do not know. But I have heard rumors about what he gets.

Apparently, he sees no conflict, and he is an opinion maker. He travels the circuit, influencing public opinion from his point of view, his values. As an opinion maker, does not the lecture circuit offer some possibilities of conflict for anybody, whether it is a Senator, who converts his opinions into votes, or a Ralph Nader or a John Gardner, who converts his opinion into pressure upon legislators? Is there a difference?

The lecture circuit includes people such as Bill Monroe and Roger Mudd, both newscasters, opinion makers. They are on the circuit. I do not know of any limitation upon the total income they can get or the amount they can get for an individual speech. Also on the list are Laura Nader; Pierre Mendes-France, the former President of France; Pat Paulsen; Rev. Channing Phillips; Lord Terence O'Neill, carrying on the old English tradition of coming over here and traveling the lecture circuit.

If you go to the booking agencies, you can find brochures like this. As a matter of fact, our good friend, Senator GAYLORD NELSON is on this brochure. [Laughter.]

Mr. NELSON. May I respond to the Senator?

Mr. MUSKIE. Of course.

Mr. NELSON. Not with my consent.

Mr. MUSKIE. What is that?

Mr. NELSON. Not with my consent.

Mr. MUSKIE. I do not know anything about that, but I know the Senator has made speeches around the country, whether or not he was on this brochure, and he was one of the originators of the Earth Day Movement. I know he promoted that by travels all across the country, and I applaud it. I was part of it. I did not think I was doing anything evil, and I do not think the Senator from Wisconsin was doing anything evil. I think he was performing a public good. I am not the one who says this is bad; it is the committee who says it is bad.

Mr. NELSON. I have never said it was bad. Where does the committee report say it is bad?

Mr. MUSKIE. Well, if it is not bad why is it so strictly limited?

Mr. NELSON. The Senator's charge was the committee report said it was bad. Where is that in the report?

Mr. MUSKIE. I say to the Senator, there is that old saying when something looks like a duck, walks like a duck, and talks like a duck, it has got to be a duck, and when you cut my income by two-thirds, because I am engaged in this lecture circuit, you must be making a judgment about its public value and about its relevance to the public interest.

If I shorten that——

Mr. NELSON. That is something quite different from what the Senator said.

Mr. MUSKIE. If I shorten that by saying that you are saying it is bad, well then prove me wrong; prove that what I am doing is bad, if you will.

Mr. NELSON. I might say to the Senator I do not know where the line is drawn, but this body drew a line on limitations twice, at $25,000, and at $15,000. So it is not a question of whether it is good or bad. I have never said that, but it is a question of where the line should be drawn, that is all.

Mr. MUSKIE. All right.

Mr. NELSON. But the Senate drew it twice.

Mr. MUSKIE. All right.

Now, I will take some of the blame for that. I did not raise the question those other times.

I panicked, as I think this committee panicked under the pressure of public emotion related to ethics. I did not think either of those limitations was right. The first one came at us out of a House-Senate conference on a totally unrelated matter, it came at us in the conference report, so those of us who raised questions about it had to raise them in terms of trying to defeat a conference report on an important bill. I do not remember what it was. I think it was the campaign reform legislation. So it came at us out from behind the barn, and I did not get up and challenge the campaign reform bill by raising that issue.

All right, I will accept the blame for that. But I do not consider that to have been a deliberate rational Senate decision following complete exposure of the issue, by any means.

Now, the limit last year raised it, suggesting not that the Senate thought the original limit was right but that the Senate thought that the original limit was wrong, and that the new limit—which was the product of more Senate consideration than the first one—is the one presently written into law. My second amendment would leave that new limit in force.

So if the Senator from Wisconsin is that much impressed by previous Senate judgments, maybe he will join me in my second amendment, and I do not gather that is the Senator's inclination.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. MUSKIE. That is not the Senator's inclination at all.

Yes, I yield.

Mr. NELSON. That was not the point I was making.

Mr. MUSKIE. I know, but when the Senator makes a point he has got to expect to get the reverse thrown at him.

Mr. NELSON. Well, all I would expect was a response to the point. That was a beautiful dance around the point.

The Senator asserted that we had said honoraria were bad.

Mr. MUSKIE. And you had.

Mr. NELSON. Then when I said where in the report do we say that, and the Senator from Maine said:

> Well, I am entitled to conclude from the report that with this limit you must assume it is bad.

My response was that this is not the issue. The Senate twice set a limit. I do not believe the Senate set the limit at $15,000 and $25,000, because they thought it was bad per se to give lectures for honoraria. That is my only point. I have never said on this floor or off the floor that they are bad per se, and the Senator has insisted that that is what my position is. That is not at all the position of the Senator from Wisconsin.

This Senator is just trying to correct the RECORD. It is unreasonable for the Senator to take the position that because the committee suggests an $8,600 limit, it means this Senator or the committee believes that it is bad per se, but when the Senate set it at $15,000 or $25,000 that did not mean it was bad per se, the limit must mean the same thing on each occasion.

Mr. MUSKIE. Well, using the Senator's logic, since I cannot find anything enshrined anywhere that tells me that $15,000 or $8,500 is some magic dividing line between what is good or bad——

Mr. DURKIN. Mr. President, may I cut in?

Mr. MUSKIE. Not at this moment—using the Senator's logic, I could argue that you could reduce it to $1,000 or $500 and you would not be making a judgment that it was bad.

How ridiculous can you be, Senator. I mean, you have imposed a discipline that has the effect of cutting out income from some of your colleagues in this body. And if you did not do it, because you thought it was in the public interest, you had no business doing it.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. MUSKIE. I will in a moment. You had no business doing it. You referred me to the committee report. I have looked at the committee report, and in the section dealing with this you do not even talk about conflict of interest. I do not know why.

I assumed this whole code of ethics had something to do with preventing conflicts of interest, but I did not find anything—maybe I overlooked it and the Senator will remind me if I did—but what I find instead is an attempt to convert this argument against lectures into an argument based on the time it takes, and on the enrichment argument that I touched on earlier. Those are the two. We ought not to allow a Senator to take lecture fees because it takes time.

Why did you not say you believed it was, because it has a potential conflict of interest? Because there are other forms of income that carry potential conflicts of interest. So you did not want to say this per se, because you could not prove it in terms of conflict of interest. You could not prove that every lecture fee is bad in terms of conflict of interest. But the result for us, Senator, is exactly the same as though you had said it was bad. If you do not like the word "bad," use your own euphemism; you choose it. It is bad to me.

I do not think a play on words is going to minimize the impact of this one-sided kind of discipline and the lack of justification for it.

I have yet to hear a justification for it. I would like to refer, if I might, to something that is attributed to one of your aides. It appeared in the Washington Post March 17:

> If a Senator comes to the body wealthy, there is not a great deal you can do about it. But if he comes without wealth and engages in personal services to become wealthy that is a different case.

Here I stand convicted as one who came without wealth and who engaged in personal services to become wealthy.

Mr. NELSON. Is that quote attributed to anybody?

Mr. MUSKIE. What is that?

Mr. NELSON. Is that a quote——

Mr. MUSKIE. No; it is not. It says, and I will read it:

> An aide to Senator GAYLORD NELSON, who chaired the Special Committee that drafted the proposed code, said yesterday that the Muskie proposal seemed to be gathering some support. He argued against it, however, saying—

And then the language that I have read.

Mr. NELSON. Will the Senator read it again?

Mr. MUSKIE. Yes; I will read it.

> If the Senator comes to the body wealthy, there is not a great deal you can do about it. But if he comes without wealth and engages in personal services to become wealthy, that is a different case.

So I am grouped presumably with those who came without wealth and engaged in personal services to become wealthy. That judgment is passed on me notwithstanding the fact that I fully disclosed my income and my net worth for the last 10 years. But, alas, I engaged in personal services to become wealthy and had to be disciplined, because there is not a great deal you can do about those who came wealthy.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. NELSON. Let me say I have no notion whether a member of my staff said it or not. But if one did it was a great piece of wisdom. I hope the Senator has a mind subtle enough to recognize that the statement is not an attack, but reflects an exquisite piece of irony. It is true if you come here rich there is not much one can do about it at all.

Mr. MUSKIE. I bring to the Senator's attention my amendment—I have forgotten that—my first amendment.

This provides, as I think the Senator knows, that a Senator with income-producing assets when he comes to the Senate must put them in trust so that he will not spend his time managing his assets. We would not want him to waste a second of time managing his assets. So he appoints a trustee and puts his assets in trust and he can collect income from the trust while he is in the Senate up to 15 percent of his basic Senate salary. He is not divested of income above that percentage, as the proposed limitation would divest me of my income. Rather, it goes into the body of the trust and is available to him when he gets through his Senate service. It might be a temptation to him to retire earlier than he might otherwise, which would give other young people a chance to come to the Senate. There is a technique.

I know what arguments the Senator makes against it:

> Oh, you cannot in effect divest people of assets. You know, it would not be constitutional.

And the Senator can bring up all kinds of examples of inequitable situations it would generate. But there is a way of doing something about it if the Senator means what he says—that we ought to eliminate income that carries a possibility of a conflict of interest.

Mr. NELSON. Will the Senator yield?

Mr. MUSKIE. I yield.

Mr. DURKIN. Will the Senator yield for a question?

Mr. NELSON. The Senator yielded to me just for a moment.

If that proposal were constitutional, which it may be, the Senator does not know * * *

Mr. MUSKIE. The Senator's proposal with respect to us may not be constitutional.

Mr. NELSON. If it were constitutional, and if it could pass and become the rule and not defeat the proposal, I would think very seriously about that.

Mr. MUSKIE. The Senator did not think that seriously about his restriction on my income. I think that is unconstitutional.

Mr. NELSON. It was not the intent of this Senator to bring it up, but three times now the Senator from Maine has complained about my cutting his income. May I suggest to the Senator from Maine that when he voted against the salary increase he was trying to cut mine? I do not shed many tears about those who stand on this floor and complain that we cannot have unlimited outside income and then will not even cast a vote to increase the salary in some orderly fashion for at least half the increased cost of living.

If the Senator had not voted that way, the Senator might have an argument of some merit. But having voted that way, I do not think there is much merit in the argument.

Mr. MUSKIE. I am glad to respond to the Senator. If I voted that way and carried the Senator with me he would be here with this today. He would be here with this limitation today.

Mr. NELSON. I do not understand the Senator's statement.

Mr. MUSKIE. Look, this proposal to limit income has been maturing out there in the outside world and in areas here. It would have been offered whether or not the pay raise was enacted.

The Senator himself has brought up two limitations that were proposed by the Senate, and this issue had nothing to do with my vote on the pay raise.

I am glad to explain that vote to the Senator. For him to suggest by implication that my vote on that was related to this is without any foundation whatsoever. But I happen to have run for office last year, and I have never found my people so concerned about the possibility that this body with the power to bring itself relief by way of income should do so at a time when so many of our people had no such power. I had to campaign from one end of my State to another constantly confronted by this issue, and I had to answer those people in the context of the circumstances in which I saw them living. I took this question on radio call-in shows. I took it in audiences. I had to form a judgment, not in January, but in October, whether I thought they had a legitimate complaint. I formed that judgment. I was not about to come here in February, a few months later, and vote differently on the pay raise increase than I told them in October I would. And I make no apologies to the Senator or any other Senator for that record, and what I did was unrelated to this.

But the second point I make—this also is unrelated—is that the pay raise taken with this proposed limitation means for me a reduction in income, not an increase. It means a reduction in addition to the reduction that I took when the earlier limit on earned income was approved by this body. So I will have taken two reductions in income in the period that the cost of living increased, as the Senator so eloquently pointed out a moment ago. I do not think it is incumbent upon the Senator from Wisconsin and me to debate the moral values which prompted the Senator to follow the course that he did and me to follow the course that I did. I voted against the pay raise for reasons that I thought were good from a public-interest point of view. I am opposing this earned income limit for reasons that I think reflect the basic inequity of what it does, because I think it runs counter to the public interest.

At this point I yield to my good friend from New Hampshire.

Mr. DURKIN. I thank the Senator from Maine. I wonder, in all sincerity and complete respect, if two giants in the Senate are not dancing around the real issue.

Mr. MUSKIE. It is conceivable.

Mr. DURKIN. Is not the real issue not so much how much you take, but is not the real issue whom you take it from? Is not the thing that upsets the American public the perception that we are taking money from those who have an interest in legislation that is before this body?

I wonder if what the limitation really is, is it not an effort to make it a little more palatable back home. Is not the real issue, and what we should be doing here, saying that it is unethical to take honoraria from those who have legislation before this body, those who are registered lobbyists, or those who have political action groups that are in the business of engineering legislation? If those were eliminated, would the problem not be solved?

Mr. PACKWOOD. Mr. President, will the Senator yield for a question?

Mr. DURKIN. In about 2 seconds. I am at a loss as to why the Senator from Maine could not embrace the amendment that was offered before, and I wonder now if the Senator from Maine, if we for the present dropped the whole question of the restriction, or giving the excess to charity, if the Senator would address the real problem, and the Senator from Wisconsin as well, and come out and say there is nothing wrong with following Ralph Nader to the University of New Hampshire and being paid $1,000 out of the student education fund. The students have no direct interest in legislation.

I say there is nothing wrong with going to Alabama and speaking before the Alabama Democratic State Committee during the Jefferson-Jackson Day dinner. I do not think anyone in this body or any cabdriver in America thinks that is wrong. What is perceived to be wrong is taking money from people who have an ax to grind.

Mr. PACKWOOD. Will the Senator yield for a question?

Mr. MUSKIE. Let me answer the Senator's question, and then I will yield to the Senator from Oregon.

I said during the debate on the Senator's amendment that if it did not have that first part in it, I would support it.

Mr. DURKIN. Do you want to add that to your amendment?

Mr. MUSKIE. I will be glad to let it stand on its own.

Mr. PACKWOOD. Mr. President, the Senator said the real issue is not how much we receive in outside income or honoraria, but whom we receive it from; is that right?

Mr. DURKIN. I think that is what the average person back home feels.

Mr. PACKWOOD. Then would the Senator from New Hampshire, if he were to introduce his amendment again, eliminate the 15-percent limitation and allow those on the lecture circuits to earn without limit as long as they do not receive it from the groups the Senator mentions?

Mr. DURKIN. I would not be disposed to do that, for the very reason I have previously suggested to the distinguished Senator from Maine that he incorporate it in his own amendment, and he says it is going to fly on its own weight.

Mr. MUSKIE. Mr. President, to eliminate some confusion, the amendment that is pending does not address the 15-percent limit. My other amendment does. It is inappropriate to attach the amendment the Senator is suggesting to the pending amendment. The suggestion of the Senator from Oregon is appropriate.

Mr. PACKWOOD. If I correctly understood what Senator DURKIN is saying, he objects to outside income coming from anybody with a political ax to grind, any labor organization, and so on.

Mr. DURKIN. Right; as does most of the American public.

Mr. PACKWOOD. Right; I agree with that, and would support it. We should not be receiving honorariums from them. I have always supported that viewpoint.

I have been struck by a seeming blind spot in the position of the Ethics Committee. The Ethics Committee says you can receive money from public-interest groups up to $8,700. If we eliminate any money from the public interest groups, as defined in the amendment of the Senator from New Hampshire, why not eliminate the $8,700 cap? If you can speak to a group that may be legitimate—a university student body, as the Senator mentioned, or the national prayer breakfast—I notice a speaker got $1,000 for speaking at the national prayer breakfast; who is the conflict with there? If the Senator will eliminate the cap, I will support his amendment.

Mr. DURKIN. My amendment was tabled resoundingly. Only myself and 14 other Indians were left on the plain, with no offense to the Senator from Maine, whose State has problems with Indians.

Mr. MUSKIE. You will have to attract the support of a few more Indians.

Mr. DURKIN. I ask unanimous consent, then, to call up my amendment in a modified fashion, without the charitable restriction in the first sentence, and we will see if it is adopted; then we will cross the next bridge.

Mr. PACKWOOD. Not without the cap?

Mr. DURKIN. No, one thing at a time. I have learned you have to walk before you try to run.

Mr. MUSKIE. I suggested that, and the Senator did not like that answer.

Mr. President, my amendment is pending, and I think my proposal should be considered.

Several Senators addressed the Chair.

Mr. DURKIN. Who has the floor, anyway?

Mr. MUSKIE. I have the floor, and my amendment is pending.

The PRESIDING OFFICER. The Senator from Wisconsin has control of the time. Does he yield?

Mr. MUSKIE. I have had the floor for quite a while.

Mr. NELSON. I would like a couple of minutes. We will be in the same discussion next week, and next week we can go into it in some depth, but I did not realize we would be here this late today.

Mr. DURKIN. Mr. President, will the Senator from Wisconsin yield for 30 seconds?

Mr. NELSON. Without losing my right to the floor, I yield the Senator 30 seconds.

Mr. DURKIN. I thank the Senator very much. In answer to the several questions propounded, if my amendment that has been resubmitted on behalf of myself and JOE BIDEN comes up and gets a vote again, I am willing to talk with the Senator, but until the conflict of sources is eliminated——

Mr. PACKWOOD. I am suggesting putting it in the same amendment, so we will have to vote on it as one.

Could I ask the Senator from Wisconsin to do just one thing? I am not even going to ask a question, but before he releases the floor for the night, would he state for the record, so that we have it to look at over the weekend, the reason—because Senator MUSKIE referred

to "bad," and "unethical," and "editorial shifts"—the reason why the Ad Hoc Ethics Committee did indeed put in the 15-percent limitation?

Mr. NELSON. Let me say, in response to the Senator from Oregon, that I have lost the audience with whom I was asked to have the dialog, so I do not wish to get into all the detail of the argument. However, this Senator has not made the argument about enrichment of any type. This Senator has not made a point or suggestion that anyone was in a conflict-of-interest position in making speeches for honoraria. This Senator has said, however, that it is clear from the public viewpoint that speaking to some audiences under some circumstances creates an appearance of conflict, and that in the public sector, appearances are as important as reality.

All of us are aware that public and private institutions in this country—and other countries around the world, too—are under substantial assault. There is a strong feeling, among many in the public, of deep disillusionment with many institutions—schools, corporations, labor unions, State governments, cities, the Federal Government—because people do not feel that the institutions are adequately addressing themselves to the problems that the country faces.

One reason for that, I suspect, is that institutions are imperfect, are not working as they ought to work; and can be improved. But, more importantly the problems confronted by contemporary society are more difficult, more intricate, than problems ever faced before in uncomplicated, rural, agricultural societies.

I say this by way of preface to my main point: That public confidence in public institutions is absolutely vital. It does not make any difference if some corporation with disreputable or questionable leadership manufactures a mousetrap. It does not make any difference what the public may think of that corporation and the corporation president, if they manufacture the best mousetrap at the best cost. The mousetrap will sell.

But we do not sell mousetraps in Congress, in the legislatures, in the city councils, in the county boards. We have just one capital asset—just the one and none other. That capital asset is confidence. When the public loses confidence in public institutions, there is nothing left. I am not suggesting that there is good reason for losing confidence. Nevertheless, the confidence is vital. That is a very fragile cloak that covers this institution, and we in government are obligated to take whatever actions we can to maintain it and restore it. Without that confidence, the difficult task of governing becomes impossible.

Mr. WALLOP. Will the Senator yield for a question?

Mr. NELSON. If the Senator does not mind, I would like to compete a few more remarks and then I will be glad to yield.

It is not a question of Senators enriching themselves. I have never said that. Senator MUSKIE, an old friend, an old personal, social friend, came to Wisconsin when I was a State senator seeking the Governorship. He came and spoke in my behalf. He came back and spoke for my reelection as Governor. He came back and spoke in my behalf for the Senate. There is no man in this institution for whom I have a higher respect. He has absolute integrity.

Senator MUSKIE commented in his remarks that he was not soft on ethics. No one I know has ever suggested that Senator MUSKIE is soft on ethics This is not an ethical question. We all have a tendency to get mixed up in our semantics and misuse words.

This is not an ethics code. An ethics code is a code that says what is right, what is good, and what is bad. It is the concept of morality. This has nothing to do with that at all.

In the resolution creating this committee, it refers to a code of conduct for Members, officers and employees of the Senate. The resolution proposes to establish a code of official conduct for the Members, officers, and employees of the U.S. Senate.

This Senator would hope henceforth we will talk about a code of conduct and not talk about ethics. This whole question of conduct is no different than the sanctions we pass all the time on speed limits, requirements to file tax returns, regulations on safety. We pass codes of conduct in Federal statutes, State statutes, city ordinances and county ordinances day in and day out. That is what this is: a code of conduct. It is not making a judgment, as the Senator from Maine feels, about right and wrong. When we changed the speed limit to 55 miles per hour, did we say it must have been immoral to have been driving 60 or 65 miles per hour in another era? Of course not.

We were saying that circumstances and conditions change, and other values or public interests may necessitate rules of conduct which were not before believed necessary. This is all we are saying with this code of conduct, and that public interest is the deep need to restore and maintain public confidence.

It has nothing to do with ethics or morality. It is a code of conduct to guide us.

One may disagree with all, part, some, or none of the proposed code. I have disagreement with some of it myself. It was hammered out as a compromise, as anyone who has participated in preparing legislation knows. It is not a code of ethics at all.

The Senator has never attacked these speeches for honoraria as a useless exercise. I think it is an important educational dialog for Senators and others to get around the country, on the campuses, before organizations and discuss the issues. I am for that. It has an educational value.

Nevertheless, the public does perceive there is potential for conflict. The public is concerned about having no limits on what one may earn outside in addition to his income. We have addressed ourselves to it in the best way we know how. If one decides that we are going to draw some line on outside earned income and not prohibit wealthy people from spending income that is unearned, that they may have inherited, or earned before they got here, any line drawn is arbitrary. There is no avoiding that. It was arbitrary when the Senate adopted $25,000. It was arbitrary when the Senate adopted $15,000. It is arbitrary in adopting 15 percent.

I feel there is nothing that can be done about the investment income of wealthy people. It is a cruel, unfair world which only made some people wealthy and it did not include me in that selection. There is nothing I can do about that.

But we can do something about earned income, which is different in some respects in that unearned income is passive income and earned income is not.

But that really is not my big point. It is just the general belief on the part of the public, in my judgment that, somehow or other, there ought to be some kind of limit on outside earned income. When one sets a limit, as the committee did, of $8,600, or thereabouts, at least it is a fairly limited amount of money and the dangers that the public may perceive conflict with that amount are substantially reduced, if not totally eliminated.

Senator MUSKIE stirred old memories in my heart when he talked about the Chautauqua circuit. I can remember the Chautauqua circuit, and I heard old Bob La Follette on the Chautauqua circuit, and many others. I can remember going with my dad one time to hear a speaker on the Chautauqua circuit, and I do not suppose that I remember the occasion that exactly happened there, because I was very young, and my dad used to like to take me in the Model T Ford with him.

I remember his repeating the story over the years that, at that Chautauqua circuit tent in Rice Lake, Wis., the speaker from St. Paul did not get there. So here is the whole crowd in this big tent in Rice Lake, with no speaker to listen to.

So, finally, the toastmaster turned and looked around, and he saw an old politician out in the audience who could speak at any time on any subject. So he called upon him.

He said, "We don't have our speaker. Would you come up here and give a speech?"

The old politician, who could speak at any length at any time on any subject, got up. He said, "I don't have a prepared text, I am just trying to think here. You know, this weekend is homecoming at my old alma mater out at Yale." He said, "It is spelled Y-a-l-e."

He said, "Let me use the letters that spell my alma mater's title to spell out subjects that I want to talk about."

He said, "Y stands for youth." He talked for 30 minutes about the wonders and delights of being a youth with no responsibilities.

Then he got to "A." He said "That stands for amity; friendliness between nations," and he talked for 30 or 40 minutes about that.

Then he got to "L." He paused. He thought, that stands for love. He talked for 30 minutes or so about his love affairs as a young man.

Finally, he got to "E." He thought for a moment and he said, "E stands for equality," and he launched into an

eloquent speech about the French Revolution and the founding of the idea of fraternity and equality, and he came across the ocean in a jump and took on the American Revolution and concluded the whole thing at the end of 3½ hours.

He said, "Now, are there any questions?"

An old gent in the rear of the room got up and the old politician said, "Do you have a question?"

The old gent said, "No." He said, "I don't have a question. I just have an observation to make."

The politician said, "What is it?"

The old gent said, "I am just pleased your alma mater wasn't the Massachusetts Institute of Technology."

[Laughter.]

Mr. WALLOP. Will the Senator yield for the question that I had?

Mr. NELSON. Yes, I yield.

Mr. WALLOP. I think the RECORD will show tomorrow, and I think it is one of the things that troubles me the most about this whole proposal, that the Senator said that appearance is as important as reality. Would the Senator really suggest that one who appeared moral and upright and ethical was as important as one who was?

Mr. NELSON. No, I would not. I would not suggest that. Perhaps I spoke with some imprecision if I left the Senator from Wyoming with that impression. What I meant to say and thought I was saying is that so far as public confidence is concerned——

Mr. WALLOP. Sir, that is what is the matter with us right now.

Mr. NELSON. Will the Senator let me finish?

What I was saying was that, so far as confidence of the public is concerned, appearances are as important as reality. I was not talking about the moral question of whether appearances are as important as realities, because obviously they are not.

Mr. WALLOP. But that is the whole problem right now, that we sit here and posture and, by passing a code of conduct or ethics, or whatever you choose to call it, we are telling the public that because we have passed this, we are entitled to a pay raise and we are honorable men, whether or not we are; whereas, we could, in fact, take this route of disclosure that the Senator from Maine is about to propose and that the Senator from New York spoke of earlier, that honorable men could, in fact, justify that in front of the public by their behavior and by their forthrightness and their openness, just with disclosure. But by this posture, we are reducing ourselves in the Senate. It is the first time I have been here that I almost felt ashamed of being in the Senate by reading this proposal as it came out in the report; that, for some reason or other, I have not—though I have spent a life and had the perception of my public as an ethical man—suddenly, because I arrived here, I have not the moral fiber to withstand the temptations.

That is what is the matter with all of this. We are posturing and we are not providing anything. We are just in an exercise in public perception.

Mr. NELSON. The Senator may speak in his own right on his time.

Mr. WALLOP. That is my comment, that we are posturing. We are saying, as the Senator said, that appearance is as important as reality.

Mr. DURKIN. Will the Senator from Wisconsin yield?

Mr. NELSON. Yes, I yield.

Mr. DURKIN. I thank the Senator.

Just to wrap up——

Mr. NELSON. I say to the Senator; I regret that, because of my remarks, I am now 40 minutes late in leaving. I am prepared to spend all the time anyone wishes next week on the floor.

Mr. DURKIN. I can finish up in the time the Senator is explaining, if he will.

Mr. NELSON. Two minutes to the Senator.

Mr. DURKIN. Ethics and honesty really cannot be legislated. I am going to try to be honest no matter what the code says or whether there is a code or not.

I am not saying honoraria are wrong. However, it all depends whether they influence our conduct on the floor or in committee. It is the public perception and it is the source, I think, that is of more concern to the public than the amount.

In response to the Senator from Oregon and others, I am making no deal, no offer of a deal. I am going to push my amendment with JOE BIDEN to eliminate any honoraria from political action groups, lobby groups, those that have any interest in legislation here. If it is adopted, then we shall look at all the other amendments closely, but there is no commitment, no deal whatsoever.

In concluding, I ask, would it not be a stronger code if we restricted the sources of honoraria, restricted those who are lobbying, have a political action group, and have an interest in legislation before this body? Would it not be a stronger code than one with just limits, even if we do not get to the limit question?

Mr. PACKWOOD. I respond to the Senator from New Hampshire that I fail to understand his reluctance to tie the two issues together of the source of the honoraria with an elimination of the amount. As long as we have to vote on the whole issue together. He does not seem to be troubled so much by the amount, and he says the public is not troubled by the amount so much as the source.

Mr. DURKIN. I think the amount can be a problem, too. I think there is definitely a problem. Before the limit was put on, I think some Senators were up to $85,000 or $95,000 a year. That is an awful lot of oratory, no matter what the group is. That is putting a lot of student groups to sleep.

Mr. PACKWOOD. Of those he mentioned, not one of those was defeated, those making $75,000 or $80,000.

Mr. DURKIN. I am not going to argue that. That is not my concern. The Senator from Oregon and Senator MUSKIE are carrying the ball. That is their issue, I do not want to take it away from them. My concern is on limiting the sources. I want to get an up-and-down vote on limiting the sources. That, I think, will take it one step at a time. I think the perception is as to the source and that is greater than with respect to the public concern, maybe, than the amount. I do not know about the amount. I leave that to the two people doing all the work on that; namely, the senior Senator from Maine and the Senator from Oregon.

Mr. President, everyone wants to go home. I am ready to say, "Good night."

ADDITIONAL STATEMENT SUBMITTED ON DISCLOSURE AND THE SENATE CODE OF ETHICS

Mr. CHURCH. Mr. President, I welcome this opportunity to comment on the proposed Senate Code of Official Conduct.

The need to revise the Senate's guidelines for official conduct is more compelling today than ever before. Public confidence in the integrity of public officials has eroded in recent years, and this truly represents a national tragedy. A report issued in September 1976 by the Public Agenda Foundation noted that trust in Government declined from 76 percent in 1964 to 33 percent in 1976. In addition, too many Americans believe that the tactics and morality of the "Watergate era" and other recent scandals represent the norm in the political and governmental process. Although the vast majority of those who seek office or serve in government are individuals of honesty and integrity, their good names and reputations have been tarnished by the misbehavior of a small minority.

As one who has long advocated regular and complete public financial disclosures. I particularly welcome the recommendations of the Special Committee on Official Conduct regarding disclosure of income, assets and other financial transactions. We as public officials have chosen to take on public duties; and we must open our financial records to public scrutiny. Such public disclosure is needed not because of the wrongdoing it may expose, but rather because it will hopefully lay to rest the current doubts of the American people whom we have been elected to serve.

A 1974 Harris poll revealed that 76 percent of Americans believed that "Government leaders were just out for their personal and financial gain." Public disclosure is the best means of policing avoidable conflicts of interest; and it will give all of us the firm ground of truth on which to stand against unfair charges and innuendo.

It was in May 1964 that I first inserted in the CONGRESSIONAL RECORD a voluntary disclosure of my income and assets. I expressed then the hope that Congress would soon enact legislation or adopt procedural rules making such a disclosure mandatory for all its Members.

I said then, that—

> When we insist, as we often do, that a man nominated to a Cabinet post must, as a condition to his confirmation, make a full disclosure of his business interests and private holdings, we in Congress ought to be willing to do likewise . . . I have kept hoping that this regrettable shortcoming of ours might be remedied.

Three years later no such corrective action had been taken, so I again filed a voluntary account, observing once more

that Congress "could help restore popular confidence by adopting a code of ethical standards, including a uniform rule, applicable to all Members, requiring the full disclosure of personal assets."

In 1969, I published and circulated another accounting of my income and holdings. In the interval, Congress had contrived for itself a curious form of partial disclosure which did more to distort than to reveal, and has, therefore, done more to arouse, than to allay public suspicion. I regarded this tell-part-but-not-all arrangement as a hoax on the public.

Nevertheless, it appeared to me that Congress was moving—albeit slowly and grudgingly—toward eventually adopting a tell-it-all principle. So I was moved to comment that:

> Prospects seem to be improving for legislation which will one day require all high officials of the Federal Government, both elected and appointed, to make periodic disclosure of their income and assets. I personally feel that the enactment of such a comprehensive disclosure statute, applicable to the Executive, Legislative, and Judicial Branches of the Government is long overdue.

Well, as it turned out, I was overly optimistic. Another 4 years elapsed, and Congress still had not passed a comprehensive disclosure statute. To its credit, the Senate adopted, as an addendum to its election reform bill, my amendment which would have required all Members of Congress, along with their opponents at election time, to make a complete disclosure of their income, business interests, and property holdings.

In 1974, some 10 years after my first voluntary accounting, I published a full and complete disclosure of my income and assets again. I did so in the continued expectation—and determination—that such a practice would yet be mandated by law for all elected officials and the top appointed Federal office holders.

In 1976 the Senate adopted an amendment to the Federal Election Campaign Act requiring all officers and employees of the United States earning a certain income and all candidates for Federal office, to file annually a public report of their net worth, assets, liabilities, and income. Unfortunately, this amendment was later deleted.

Also, last year the Senate passed the Watergate Reorganization and Reform Act which included requirements for public financial disclosures by the President and Vice President, candidates for Federal office, Members of Congress, and certain other officers and employees of the Government. Again, the House of Representatives failed to pass this bill.

In advocating full and complete disclosure, I want to acknowledge that many Members of Congress hold strong personal feelings against making public their private business affairs. They argue that they are as much entitled as any other citizen to own business interests, stocks, bonds, notes or mortgages, and that their personal dealings should not be regarded as the public's business.

I can sympathize with their argument, but it really misses the point. Naturally, Members of Congress need not, indeed should not, refrain from making private investments. But Representatives and Senators do differ from other citizens in one important respect: they make the laws that affect business; they write the taxes that corporations, as well as individuals, must pay. Since Members of Congress must regularly vote on legislation which reaches every segment of the economy, there is a very legitimate reason for making their private holdings a matter of public record.

Complete disclosure would allow the voter, or anyone having doubts to resolve, to compare the Member's voting record in office with his financial portfolio, and determine for himself whether the Member has voted his private pocketbook interest or the general public interest, in the discharge of his official duties.

Moreover, if periodic disclosures were to reveal an accumulation of wealth without satisfactory explanation, or income which is out of line with listed sources, the public would be alerted to possible misconduct in office, bearing further investigation.

This is a commonsense test, with respect to which I have no doubt that the good judgment of the people can be trusted. The fact that there are other Senators who feel as I do is borne out by the growing number who have adopted a similar practice.

Mr. President, the American people expect and deserve only the highest standards in the Senate. As the late President John F. Kennedy said in a 1961 message to Congress:

> No responsiibilty of Government is more fundamental than the responsibility of maintaining the highest standards of ethical behavior by those who conduct the public business. There can be no dissent from the principle that all officials must set with unwavering integrity, absolute impartiality, and complete devotion to the public interest. This principle must be followed not only in reality but in appearance. For the basis of effective government is public confidence, and that confidence is endangered when ethical standards falter or appear to falter.

Therefore, it is with a great deal of hope that I support the recommendations of the Special Committee on Official Conduct which includes provisions for full disclosure as part of a code of official conduct.

JOINT REFERRAL OF NOMINATION

Mr. ROBERT C. BYRD. Mr. President, I understand that this request has been cleared on both sides.

As in executive session, I ask unanimous consent that a presidential nomination received today relative to Frank Press, to be Director of the Office of Science and Technology Policy, be jointly referred to the Committees on Human Resources and Commerce, Science, and Transportation.

The PRESIDING OFFICER (Mr. HUDDLESTON). As in executive session, without objection, it is so ordered.

ORDER FOR COMMITTEE ON AGRICULTURE, NUTRITION AND FORESTRY TO HAVE UNTIL MIDNIGHT TO FILE A REPORT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Agriculture, Nutrition and Forestry may have until midnight to file a report on an original bill amending the Grain Standards Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS TO 1:15 P.M. ON MONDAY, MARCH 21, 1977

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 1:15 p.m. on Monday.

The motion was agreed to; and at 6:12 p.m., the Senate recessed until Monday, March 21, 1977, at 1:15 p.m.

NOMINATIONS

Executive nominations received by the Senate March 18, 1977:

DEPARTMENT OF STATE

Joseph D. Duffey, of the District of Columbia, to be an Assistant Secretary of State.

DEPARTMENT OF THE TREASURY

Roger C. Altman, of New York, to be an Assistant Secretary of the Treasury, vice Robert A. Gerard, resigned.

William J. Beckham, Jr., of Michigan, to be an Assistant Secretary of the Treasury, vice Warren F. Brecht, resigning.

DEPARTMENT OF AGRICULTURE

Malcolm Rupert Cutler, of Michigan, to be an Assistant Secretary of Agriculture, vice Robert W. Long, resigning.

COMMODITY CREDIT CORPORATION

Malcolm Rupert Cutler, of Michigan, to be a member of the board of directors of the Commodity Credit Corporation (new position).

DEPARTMENT OF COMMERCE

Sidney Harman, of New York, to be Under Secretary of Commerce, vice Edward O. Vetter, resigned.

NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION

Joan Buckler Claybrook, of Maryland, to be Administrator of the National Highway Traffic Safety Administration, vice John W. Snow, resigned.

OFFICE OF SCIENCE AND TECHNOLOGY POLICY

Frank Press, of Massachusetts, to be Director of the Office of Science and Technology Policy, vice H. Guyford Stever, resigned.

IN THE AIR FORCE

The following officer under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

To be general

Lt. Gen. John W. Roberts, [redacted] FR (major general, Regular Air Force), U.S. Air Force.

IN THE ARMY

The following-named officer under the provisions of title 10, United States Code, sec-

tion 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. John Rutherford McGiffert II, [redacted], U.S. Army.

IN THE MARINE CORPS

In accordance with the provisions of title 10, U.S. Code, section 5232, Maj. Gen. Andrew W. O'Donnell, U.S. Marine Corps having been designated, for commands and other "duties" determined by the President to be within the contemplation of said section, for appointment to the grade of lieutenant general while so serving.

The following-named (Naval Reserve Officer Training Corps) graduates for permanent appointment to the grade of second lieutenant in the Marine Corps, subject to the qualifications therefor as provided by law:

Bagnall, Burleigh H.	Lavinus, John P., III
Banghart, Denise M.	Lemyre, Richard J.
Bendele, Bruce P.	Lewis, Michael A.
Bonham, Harold E., Jr.	Lopez, Karl R.
Borsack, David S.	Mamzic, Curtis E.
Braun, Donald R.	Martin, William J., Jr.
Butler, Larry P.	McDonald, Douglas E.
Canright, Daniel E.	Mead, Patrick J.
Conrad, John C.	Monson, Maynard J.
Daniels, Melvin J.	Munisteri, Robert J.
Darland, Donald R.	Nelson, Michael J.
Davis, Steven T.	Nichols, James D.
Dunphy, James D.	O'Donogue, Patrick
Elliott, Frank M.	Olson, John B.
Fagot, Raymond J., Jr.	Panasuck, George M.
Ferral, Patrick J.	Pike, William B., Jr.
Fielder, Edwin E., Jr.	Poppe, Stephen C.
Finlon, Kenneth D.	Reckart, Richard L.
Forrey, Arthur A.	Rowley, Joseph J.
Gibson, Royce	Salter, David J.
Goodale, Gary M.	Sandrew, Lynette M.
Grenier, Mark H.	Sessis, Steve M.
Gumbel, John D.	Smeltzer, Philip A.
Hancock, Phil R.	Smith, Bertram C.
Hansen, Carl B.	Smith, Herchel C., III
Hawkins, Robert W.	Taylor, Robert W.
Heidkamp, Timothy J.	Todd, James F.
Holst, Lawrence E.	Tucker, Michael E.
Jeck, Clarence H.	Westmore, Montaque
Jones, Robert F.	Woodman, Michael D.
Joseph, Stephen E.	Zonar, James P.

The following-named (Navy enlisted scientific education program) graduates for permanent appointment to the grade of second lieutenant in the Marine Corps, subject to the qualifications therefor as provided by law:

Becker, Arlen R.	Inman, Kenneth A.
Comfort, Richard A., Jr.	McElwee, Adrian C.

SUPERIOR COURT OF THE DISTRICT OF COLUMBIA

The following-named persons to be associate judges of the Superior Court of the District of Columbia for terms of 15 years:

Gladys Kessler, of the District of Columbia, vice George W. Draper II, deceased.

Robert McCance Scott, of the District of Columbia, vice Richard R. Atkinson, retired.

Robert Alan Shuker, of the District of Columbia, vice Harry T. Alexander, retired.

Annice McBryde Wagner, of the District of Columbia, vice Theodore R. Newman, Jr., elevated.

Paul Rainey Webber III, of the District of Columbia, vice Milton D. Korman, term expiring.

IN THE AIR FORCE

The following Air National Guard of the United States officers for promotion in the Reserve of the Air Force under the provisions of Section 593(a), Title 10 of the United States Code, as amended:

LINE OF THE AIR FORCE

To be lieutenant colonel

Maj. Robert J. Aldrich, Jr., [redacted]
Maj. Pedro J. Aponte, [redacted]
Maj. Ray Barnes, [redacted]
Maj. Carl E. Batchelor, [redacted]
Maj. Taylor G. Benson, [redacted]
Maj. Ronald K. Blitie, [redacted]
Maj. Gary D. Blink, [redacted]
Maj. John T. Booth, [redacted]
Maj. Mack D. Carlisle, [redacted]
Maj. James D. Chapman, [redacted]
Maj. Elmer E. Cochran, Jr., [redacted]
Maj. Boris G. Evenoff, [redacted]
Maj. Raymond L. Germain, [redacted]
Maj. James W. Hart, Jr., [redacted]
Maj. Robert V. Havron, [redacted]
Maj. James J. Kaifas, [redacted]
Maj. Elgin J. Landry, [redacted]
Maj. Edwin W. Lewis, Jr., [redacted]
Maj. Robert C. Lilljedahl, [redacted]
Maj. Merle P. Martin, [redacted]
Maj. Rufus G. Martin, [redacted]
Maj. Raymond E. Moorman, [redacted]
Maj. James R. Oxford, [redacted]
Maj. George P. Petznick, [redacted]
Maj. Thomas B. Pryor III, [redacted]
Maj. Sherman H. Sawin, [redacted]
Maj. William L. Sawyer, [redacted]
Maj. Ross R. Scott, [redacted]
Maj. Jerald D. Slack, [redacted]
Maj. Willard E. Stockwell, [redacted]
Maj. Eugene F. Sullivan, Jr., [redacted]
Maj. Thomas S. Thomas, [redacted]
Maj. Malcolm M. Thompson, [redacted]
Maj. Charles I. Ward, [redacted]
Maj. Thomas R. Webb, [redacted]
Maj. Raymond D. Weber, [redacted]
Maj. Chistopher Winsor, [redacted]

CHAPLAINS CORPS

Maj. Kerry A. Meier, [redacted]
Maj. John J. O'Malley, [redacted]

IN THE ARMY

To the Senate of the United States:

The following-named distinguished military student for appointment in the Regular Army of the United States in the grade of second lieutenant under the provisions of title 10, United States Code, sections 2106, 3283, 3284, 3286, 3287, 3288, and 3290:

Milner Gary W., [redacted]

The following-named scholarship students for appointment in the Regular Army of the United States in the grade of second lieutenant, under the provisions of title 10, United States Code, sections 2107, 3283, 3284, 3286, 3287, 3288, and 3290:

Abbott, Charles R., [redacted]
Abercrombie, Charles O., [redacted]
Ahrens, David A., [redacted]
Alexander, Richard L., [redacted]
Allen, Charles B., [redacted]
Allen, Evelyn M., [redacted]
Allen, Gary W., [redacted]
Andrew, Jami M. A., [redacted]
Angell, Jesse L., [redacted]
Angulo, Samuel J., [redacted]
Apodaca, Miguel S., [redacted]
Arnold, Lisa J., [redacted]
Ashworth, Kenton L., II, [redacted]
Bagwell, William R., [redacted]
Bailey, Michael F., [redacted]
Bailey, Michael J., [redacted]
Baillie, John III, [redacted]
Baker, Terry L., [redacted]
Baldwin, Mary C., [redacted]
Ballantyne, John L., IV, [redacted]
Bartram, Dirk A., [redacted]
Bass, Roger S., II, [redacted]
Bayles, William J., [redacted]
Benavides, Richard A., [redacted]
Benko, Francis M., [redacted]
Bennett, David B., [redacted]
Bierwirth, James G., [redacted]
Biggers, Mark V., [redacted]
Bilodeau, Robert T., [redacted]
Blagojevich, Robert R., [redacted]
Blauvelt, Peter W., [redacted]
Blevins, Leonard C., [redacted]
Bloom, Edward M., [redacted]
Boatner, James G., Jr., [redacted]
Bode, Brian E., [redacted]
Boley, Timothy J., [redacted]
Bonville, John E., [redacted]
Bookert, Phillip, [redacted]
Boozer, Debra L., [redacted]
Bordwell, John H., Jr., [redacted]
Borg, Scott G., [redacted]
Boson, Michael L., [redacted]
Bott, James A., [redacted]
Bouchard, Ronald M., [redacted]
Boucher, Dennis M., [redacted]
Brase, William J., Jr., [redacted]
Breen, James J., [redacted]
Brescia, Robert, [redacted]
Brewer, Dewayne L., [redacted]
Breyfogle, William J., [redacted]
Bridge, Richard H., [redacted]
Briesacher, Jeffrey L., [redacted]
Bromberg, Howard P., [redacted]
Brooks, Curtis R., [redacted]
Brooks, Mark S., [redacted]
Broussard, Anthony W., [redacted]
Broussard, Isaac D., [redacted]
Brown, Dale E., [redacted]
Brown, Frederick R., [redacted]
Brown, Michael E., [redacted]

CONFIRMATIONS

Executive nominations confirmed by the Senate March 18, 1977:

DEPARTMENT OF LABOR

Arnold H. Packer, of Maryland, to be an Assistant Secretary of Labor.

Eula Bingham, of Ohio, to be an Assistant Secretary of Labor.

Francis X Burkhardt, of Maryland, to be an Assistant Secretary of Labor.

Alexis M. Herman, of Georgia, to be Director of the Women's Bureau, Department of Labor.

COUNCIL OF ECONOMIC ADVISERS

Lyle E. Gramley of Maryland, to be a Member of the Council of Economic Advisers.

William D. Nordhaus, of Connecticut, to be a member of the Council of Economic Advisers.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

TRIBUTE TO ALBERT J. CHRISTOPHER

HON. QUENTIN N. BURDICK

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1977

Mr. BURDICK. Mr. President, 7 years ago last fall I traveled to the town of Pembina, N. Dak., and joined numerous others gathered there to honor a man who quietly and effectively served his community and his State for almost half a century. The man we came to see, Albert J. Christopher, was at last retiring as the town's mayor—after having served in that position for 39 years. His patient and painstaking work for the people of Pembina during those years has become a record. It adds up to the longest consecutive term as mayor in any American municipality.

And yet, Mr. President, this man's interest in the needs of his community took him far beyond the community itself. During the 1950's and 1960's he served seven consecutive terms as a representatives from Pembina County in the State legislature. He also found the time and energy to be a State director of the North Dakota Water Users Association, president of the Pembina River Flood Control Association, president of the Economic Development Corp., and president of the Red River Watershed and Flood Control Association.

As much as he was concerned about the future, however, he was also struck by the immense challenges of the state's pioneer past, and by the strength and perseverance of the people who met those challenges. To recall those roots, and to give his community a sense of its own unique history, he helped found and later became a director of the Pembina State Museum. Eventually, he served as a director of the North Dakota State Historical Society.

This remarkable man, Mr. President, was a good friend of mine whose advice I sought and valued. A busy and successful businessman, he took his greatest satisfaction in getting to know the people of his community, in learning from them, and in helping them. In his quiet and unassuming way he was a true public servant for many, many years.

But now those years have ended. Albert Christopher died 2 weeks ago. To his wife, Pat, and to his family, I extend my sympathies. We will miss him, not merely for the practical things he accomplished, but for the spirit in which he set out to do them.

In England, in a church designed by the famous architect, Christopher Wren, there is an inscription which says:

If it's a monument you seek, just look around you.

I think that inscription can do double duty. I think it can apply to another Christopher—Albert Christopher—whose spirit of hard work and quiet achievement will live on around us for a long time.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

MEETINGS SCHEDULED

MARCH 21

9:00 a.m.
Agriculture, Nutrition, and Forestry
To consider the nomination of Carol Tucker Foreman, of the District of Columbia, to be an Assistant Secretary of Agriculture, and a Member of the Board of Directors of the Commodity Credit Corporation.

HOUSE OF REPRESENTATIVES—*Monday, March 21, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Trust in the Lord and do good.—Psalms, 37: 3.

Almighty God, our Father, whose grace is sufficient for all our needs, lift our spirits into harmony with Thy spirit and our wills into accord with Thy will that we may continue to walk the ways of life and liberty. Be Thou the refuge and strength of every Member of this House of Representatives and all who labor with them. Keep them loyal to the truth, eager to do right, faithful in daily duties, and ready to work for the highest good of our beloved country.

Bless the people of this dear land that they themselves may do what they call upon their leaders to do—to be persons of sound moral character, honest in all ways, kind in all deeds, seeking the best interests of all. Alive to moral values may we grow in Thy spirit and let goodness and greatness descend upon our land again. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of it clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 650. An act to provide temporary emergency assistance to wheat producers by permitting such producers to utilize a portion of their farm wheat acreage allotments for grazing purposes or for hay rather than for commercial production.

The message also announced that the Senate disagrees to the amendments of the House to the bill (S. 521) entitled "An act to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks," agreed to a conference requested by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. BURDICK, Mr. BENTSEN, Mr. ANDERSON, Mr. MCCLURE, and Mr. DOMENICI to be the conferees on the part of the Senate.

The message also announced that the Vice President, pursuant to Public Law 86-420, appointed Mr. BENTSEN (chairman), and Mr. MORGAN to attend, on the part of the Senate, the Mexico-United States Interparliamentary Conference, to be held in Guaymas, Mexico, May 27 to 31, 1977.

And that the Vice President, pursuant to Public Law 86-42, appointed Mr. METCALF, Mr. HATHAWAY, Mr. LEAHY, Mr. DURKIN, Mr. CURTIS, Mr. PEARSON, and Mr. STEVENS to attend, on the part of the Senate, the Canada-United States Interparliamentary Conference, to be held in Victoria, British Columbia, May 27 to 31, 1977.

INDIRA GANDHI AND SANJAY GANDHI DEFEATED: THEIR NEIGHBORS KNOW THEM

(Mr. KOCH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOCH. Mr. Speaker, Prime Minister Indira Gandhi of India was overwhelmingly defeated last week in her own home election district and her Congress Party, which has held power in India ever since India became an independent state, is trailing the opposition in numbers of seats in Parliament. Her son, Sanjay Gandhi, who became a symbol of the authorization rule that began in June 1975 when his mother declared emergency powers and ended constitutional government, was likewise defeated in his home election district. This is good news for the democratic countries of the world, because rarely does a country come back into the democratic column once authoritarian rule takes over.

Because public officeholders are so rarely defeated in the very election district in which their home is located, even when the larger constituency votes out their party, it is most dramatic that both Indira and Sanjay Gandhi lost in those very districts and that this dual defeat took place in India. What accounts for that? There is only one answer: Their neighbors know them.

Hopefully, India will again bear the title of the largest democracy in the world. When that occurs I will be one of those who will urge our financial support of that country, just as I urged an elimination of all U.S. Government financial support when authoritarian rule took over in India.

COMMUNICATIONS FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore (Mr. ROSTENKOWSKI) laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
March 17, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 4:12 p.m. on Thursday, March 17, 1977, and said to contain a message from the President on Foreign Assistance.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

FOREIGN ASSISTANCE—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–104)

The SPEAKER pro tempore (Mr. ROSTENKOWSKI) laid before the House the following message from the President of the United States; which was read and, without objection, referred to the Committee on International Relations and ordered to be printed:

To the Congress of the United States:

In the years since World War II, the United States has encouraged economic development throughout the world through a variety of economic assistance programs.

Most of our efforts have succeeded. Some have failed. Now we have the opportunity, as with many of our domestic programs, to learn from our experience, and to improve our policies in the future.

Members of my Administration are now testifying in support of our approach to foreign assistance. I am sending you this message to explain some of the principles behind our program—especially, to outline the lessons we have learned about foreign assistance and the goals we now hope to achieve.

The future of the United States will be affected by the ability of developing nations to overcome poverty, achieve healthy growth and provide more secure lives for their people. We wish to join with other nations in combining our efforts, knowledge, and resources to help poorer countries overcome the problems of hunger, disease, and illiteracy. We are seeking important improvements in our program, some of which reflect changes in emphasis and approach:

—We will ensure that lending agencies attach adequate self-help conditions to their loans so that borrowing nations will make effective use of the funds they receive.

—We will make certain that the Congress is able to exercise its legitimate responsibility to monitor the effectiveness of our aid programs.

—We will encourage other wealthy nations to contribute a greater share to the multilateral aid effort, and we will reduce our own share where it has been too high.

—In close cooperation with the Congress we have made sure that our concessional aid goes to those who need it most; we will continue this approach.

—We are now reforming the policies which have, on occasion, awarded liberal grants and loans to repressive regimes which violate human rights.

—We will root out mismanagement and inefficiency where they exist in our foreign assistance programs in order to guarantee that benefits will always be delivered to those for whom the programs were designed.

—We recognize that salaries and living styles of some employees have been too lavish, and we will insist that the international programs we support do more to control their administrative overhead.

—I will work closely with the Congress to see that our aid efforts are more closely correlated to international economic and political circumstances and talk frankly to American citizens about the economic, political, and security benefits we receive from our foreign assistance programs.

Close cooperation and support from the Congress is essential to the effectiveness of our efforts. In a few areas the program I have submitted requires a significant increase in funding—but I have asked for this only where I am sure that the increase will be worthwhile.

To achieve our goals of helping the people of the world toward economic self-sufficiency, relieving the victims of disasters, investing in a healthy world economy, and supporting the security of friendly nations, I ask your favorable consideration for the following:

—*Multilateral Development Assistance.* International financial institutions such as the World Bank group—in particular the International Development Association—and the Inter-American and Asian Development Banks are major sources of assistance loans to the world's poor nations. These institutions have been highly professional in their work. They help remove political considerations from development efforts, and they encourage developing countries to pursue sound domestic policies. They enable many donors to pool their efforts—including some of the oil-exporting nations. An initial, modest U.S. contribution to the African Development Bank will provide our encouragement to this promising regional effort.

We are asking $540 million in supplemental appropriations for fiscal year 1977 to fulfill past pledges to the international financial institutions, and $2.7 billion in new appropriations for fiscal year 1978. This is an increase (of approximately one-third) for an effort which has proved to be very effective. The largest single expenditure is for U.S. participation in the 5th replenishment of the International Development Association, which makes loans on favorable terms to the world's poorest nations.

The United Nations Development Program, which provides important technical assistance to the developing world, has also proven its effectiveness and worth. We are seeking an appropriation of $130 million for fiscal year 1978, a 30% increase over last year.

—*Bilateral Development Assistance.* Congress has played a major role in developing our bilateral programs, which provide direct American support for development programs in the poorer countries. Through these programs we have shared our expertise and our resources with other countries. Our bilateral programs are directed at the poorest people in these countries' populations; they emphasize food and nutrition, population and health, education and human resource development, and science and technology, including energy development.

We have certain expectations of the countries which we help. We have no intention of running their governments or their economies, but we expect them to mobilize their own resources in the effort to develop, to ensure that the poor share in the benefits, and to respect basic human rights.

I am asking the Congress to provide $1.3 billion for the bilateral development assistance program for fiscal year 1978. This is a 20% increase over the amount

provided for fiscal year 1977, which I believe is clearly worthwhile.

Last year, the Congress, on its own initiative, appropriated $5 million to help develop a comprehensive long-term recovery plan for the Sahel region, which had undergone a disastrous drought. As the first major U.S. contribution to this program, I am requesting $50 million for fiscal year 1978. We will cooperate with other interested nations in making further contributions to the Sahel development effort in the future.

—*The PL–480 Program.* The enormous vitality of U.S. agricultural production permits us to share a portion of our bounty in the form of food aid. Our PL–480 programs should not only help the poorer countries improve the quantity and quality of their nutrition, but also encourage self-help programs that will improve their capacity to feed their people in the future. And these programs let us offer relief from famine and privation in the wake of natural and man-made disasters. In fiscal year 1978, our food aid programs will distribute $1.4 billion in agricultural commodities.

—*Security Assistance Program.* Only where peace and security are assured can free nations devote their full energies to development. Our security assistance programs are keyed to these goals, and to advancing the security interests of the United States in cooperation with our friends and allies. Nearly two-thirds of the funds requested for security assistance will be for economic supporting programs. I have increased the amount proposed by the previous Administration for the Middle East; this will strengthen the economic underpinnings so essential to achievement of our goal of peace and stability in this vital region.

For fiscal year 1978 the major elements of my program on security assistance are:

Grant military aid—$284.6 million to eight countries, in most of which we also have U.S. military facilities essential to our global interests. This includes $224 million in programs plus $60.6 million in general and administrative costs, most of which will be reimbursed from other sources.

Grant military education—$35.7 million to train future military leaders.

Financing for foreign military sales—$708 million, which will finance $2.2 billion in loans to help foreign governments eventually to meet their essential security needs by themselves, instead of depending on U.S. handouts.

Security supporting assistance—$1.9 billion to finance programs for countries whose economic condition is a factor in our efforts to assure international security. The two areas where most of these funds will be used—Middle East, and depending on events, Southern Africa—testify to the significance of these programs.

These proposals are fully consistent with my wish to limit budget increases to essentials. My assistance program is part of an effort to combine support of our country's economic interests and security with compassion for the impoverished millions of fellow human beings who share the world with us.

I hope that the economic assistance program now before you will receive your careful, prompt, and sympathetic attention. It represents a vital step toward partnership in a peaceful and equitable world order.

JIMMY CARTER.

THE WHITE HOUSE, *March 17, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
March 17, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 4:12 p.m. on Thursday, March 17, 1977, and said to contain a message from the President on Maritime Oil Pollution.

With kind regards, I am

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

REPORT ON MARINE OIL POLLUTION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–105)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, without objection, referred to the Committee on Merchant Marine and Fisheries and to the Committee on Public Works and Transportation and ordered to be printed:

To the Congress of the United States:

The recent series of oil tanker accidents in and near American waters is a grave reminder of the risks associated with marine transportation of oil. Though we can never entirely eliminate these risks, we can reduce them. Today I am announcing a diverse but interrelated group of measures designed to do so.

These measures are both international and domestic. Pollution of the oceans by oil is a global problem requiring global solutions. I intend to communicate directly with the leaders of a number of major maritime nations to solicit their support for international action. Oil pollution is also a serious domestic problem requiring prompt and effective action by the federal government to reduce the danger to American lives, the American economy, and American beaches and shorelines, and the steps I am taking will do this.

The following measures are designed to achieve three objectives: First, to reduce oil pollution caused by tanker accidents and by routine operational discharges from all vessels; Second, to improve our ability to deal swiftly and effectively with oil spills when they do occur; and Third, to provide full and dependable compensation to victims of oil pollution damage.

These are the measures I recommend:

Ratification of the International Convention for the Prevention of Pollution from Ships. I am transmitting this far-reaching and comprehensive treaty to the Senate for its advice and consent. This Convention, by imposing segregated ballast requirements for new large oil tankers and placing stringent controls on all oil discharges from ships, represents an important multilateral step toward reducing the risk of marine oil pollution. In the near future, I will submit implementing legislation to the Congress.

Reform of ship construction and equipment standards. I am instructing the Secretary of Transportation to develop new rules for oil tanker standards within 60 days. These regulations will apply to all oil tankers over 20,000 deadweight tons, U.S. and foreign, which call at American ports. These regulations will include:

—Double bottoms on all new tankers;
—Segregated ballast on all tankers;
—Inert gas systems on all tankers;
—Backup radar systems, including collision avoidance equipment, on all tankers; and
—Improved emergency steering standards for all tankers.

These requirements will be fully effective within five years. Where technological improvements and alternatives can be shown to achieve the same degree of protection against pollution, the rules will allow their use.

Experience has shown that ship construction and equipment standards are effective only if backed by a strong enforcement program. Because the quality of inspections by some nations falls short of U.S. practice, I have instructed the Department of State and the Coast Guard to begin diplomatic efforts to improve the present international system of inspection and certification. In addition, I recommend the immediate scheduling of a special international conference for late 1977 to consider these construction and inspection measures.

Improvement of crew standards and training. I am instructing the Secretary of Transportation to take immediate steps to raise the licensing and qualification standards for American crews.

The international requirements for crew qualifications, which are far from strict, will be dealt with by a major international conference we will participate in next year. I am instructing the Secretary of Transportation to identify additional requirements which should be discussed, and if not included, may be imposed by the United States after 1978 on the crews of all ships calling at American ports.

Development of Tanker Boarding Program and U.S. Marine Safety Information System. Starting immediately, the Coast Guard will board and examine each foreign flag tanker calling at American ports at least once a year and more often if necessary. This examination will insure that the ship meets all safety and environmental protection regulations. Those ships which fail to do so may be denied access to U.S. ports or, in some cases, denied the right to leave until the deficiencies have been corrected. The in-

formation gathered by this boarding program will permit the Coast Guard to identify individual tankers having histories of poor maintenance, accidents, and pollution violations. We will also require that the names of tanker owners, major stockholders, and changes in vessel names be disclosed and included in this Marine Safety Information System.

Approval of Comprehensive Oil Pollution Liability and Compensation Legislation. I am transmitting appropriate legislation to establish a single, national standard of strict liability for oil spills. This legislation is designed to replace the present fragmented, overlapping systems of federal and state liability laws and compensation funds. It will also create a $200 million fund to clean up oil spills and compensate victims for oil pollution damages.

Improvement of federal ability to respond to oil pollution emergencies. I have directed the appropriate federal agencies, particularly the Coast Guard and the Environmental Protection Agency, in cooperation with state and local governments to improve our ability to contain and minimize the damaging effects of oil spills. The goal is an ability to respond within six hours to a spill of 100,000 tons.

Oil pollution of the oceans is a serious problem that calls for concentrated, energetic, and prompt attention. I believe these measures constitute an effective program to control it. My Administration pledges its best efforts, in cooperation with the international community, the Congress, and the public, to preserve the earth's oceans and their resources.

JIMMY CARTER.

THE WHITE HOUSE, *March 17, 1977.*

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER pro tempore laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
March 18, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 1:17 p.m. on Friday, March 18, 1977, and said to contain a Message from the President wherein he transmits to the Congress the Second Annual Report on mobile home standards as required by Section 626 of the National Mobile Home Construction and Safety Standards Act of 1974.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

SECOND ANNUAL REPORT ON MOBILE HOME STANDARDS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Banking, Finance and Urban Affairs:

To the Congress of the United States:

I herewith transmit the Second Annual Report on mobile home standards as required by Section 626 of the National Mobile Home Construction and Safety Standards Act of 1974.

JIMMY CARTER.

THE WHITE HOUSE, *March 18, 1977.*

EXTENSION OF LIBRARY SERVICES AND CONSTRUCTION ACT

Mr. BRADEMAS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3712) to amend the Library Services and Construction Act to extend the authorizations of appropriations contained in such act.

The Clerk read as follows:

H.R. 3712

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 4(a)(1) of the Library Services and Construction Act (20 U.S.C. 351b(a)(1)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: "$110,000,000 for the fiscal year ending September 30, 1978, $130,000,000 for the fiscal year ending September 30, 1979, and such sums as may be necessary for the fiscal years ending September 30, 1980, and September 30, 1981".

(b) Section 4(a)(2) of the Library Services and Construction Act (20 U.S.C. 351b(a)(2)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: ", and such sums as may be necessary for the fiscal years ending September 30, 1978, September 30, 1979, September 30, 1980, and September 30, 1981".

(c) Section 4(a)(3) of the Library Services and Construction Act (20 U.S.C. 351b(a)(3)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: "$15,000,000 for the fiscal year ending September 30, 1978, $20,000,000 for the fiscal year ending September 30, 1979, and such sums as may be necessary for the fiscal years ending September 30, 1980, and September 30, 1981".

(d) Section 4(a)(4) of the Library Services and Construction Act (20 U.S.C. 351b(a)(4)) is amended by striking out "and" immediately after "1975," and by inserting immediately before the period at the end thereof the following: "and the fiscal years ending September 30, 1978, September 30, 1979, September 30, 1980, and September 30, 1981".

SEC. 2. (a) The Act (20 U.S.C. 351 et seq.) is amended by inserting immediately after section 7 the following new section:

"ADMINISTRATIVE COSTS

"SEC. 8. The amount expended by any State, from an allotment received under this Act for any fiscal year, for administrative costs in connection with any program or activity carried out by such State under this Act shall be matched by such State from funds other than Federal funds.".

(b) Section 102(b) of the Act (20 U.S.C. 353(b)) is amended by inserting immediately after "Subject to" the following: "the provisions of section 8 and".

The SPEAKER pro tempore. Is a second demanded?

Mr. QUIE. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Indiana (Mr. BRADEMAS) will be recognized for 20 minutes, and the gentleman from Minnesota (Mr. QUIE) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Indiana (Mr. BRADEMAS).

Mr. BRADEMAS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the bill, H.R. 3712, extends the Library Services and Construction Act for 4 additional years, that is, through fiscal year 1981.

Mr. Speaker, few programs of Federal assistance have won such widespread support as has the Library Services and Construction Act.

Since the Federal Government began to assist public libraries in fiscal year 1957, under the then Library Services Act and, subsequently, the Library Services and Construction Act, the United States has gone a long way toward achieving the objective of providing modern library services for the people of our country.

The stimulation of Federal funds has helped strengthen library services at the local level as well as encourage more effective leadership on the part of State library agencies in providing library services.

The bill under consideration would continue this important support for an activity that is indispensable to a genuinely civilized society.

Let me, Mr. Speaker, describe briefly the purpose of the bill under consideration.

Title I of the Library Services and Construction Act provides funds for the acquisition of books, materials, and equipment as well as paying salaries and operating expenses.

Under title I, States also receive funds to extend library services to those whose access to them is limited, such as the poor, the handicapped, and people who live in remote areas.

This title also supplies support for metropolitan public libraries which function as regional or national resource centers.

Mr. Speaker, in testimony given before the subcommittee, a number of witnesses spoke of the severe financial crisis facing many of our Nation's city libraries, forcing urban public libraries to close branches, curtail book purchases and hours of operation, and discharge employees. The seriousness of this situation underscores, Mr. Speaker, the importance of title I and the support it can provide to metropolitan public libraries.

In addition, the title strengthens the capacity of State library agencies to provide library services.

H.R. 3712 authorizes title I expenditures of $110 million and $130 million for fiscal years 1978 and 1979, respectively.

Title II of the Library Services and Construction Act provides grants to the States for public library construction and alteration and remodeling of library buildings.

The bill under consideration recommends such sums as may be necessary for this title of the act.

I am well aware, Mr. Speaker, that this title of the act has not been funded

in recent years but the committee notes that a substantial backlog of public library construction projects has developed and considers the continuation of this provision of the act, therefore, to be necessary.

I now will say a word about title III of the act, also extended by H.R. 3712, and which encourages cooperation and coordination among libraries of all types.

Such cooperation is made possible by grants to the States for the planning, establishment, and maintenance of cooperative networks of libraries at the local, regional, or interstate level.

These networks are intended to provide for coordination of the resources of school, public, academic and special libraries as well as information centers.

H.R. 3712 provides authorizations for title III of $15 million and $20 million, respectively, for each of the next two fiscal years while authorizing such sums as may be necessary for fiscal years 1980 and 1981.

Let me now, Mr. Speaker, speak of title IV of the Library Services and Construction Act, under which grants are authorized to the States for the provision of library services to the elderly.

Title IV has not yet been funded but the committee, aware from the testimony that there is a genuine need for a program that is targeted on providing library services to older Americans, has extended this provision of the act, authorizing such sums as Congress may deem necessary.

There is, Mr. Speaker, a particular modification in the Library Services and Construction Act made by H.R. 3712 of which I want to say a word. I refer to that language in the bill which requires that the administrative moneys expended by the States in carrying out programs under the act be matched by the States from other than Federal funds.

The General Accounting Office has advised Congress that all States retain large percentages of title I funds at the State level for administration and support services or for statewide projects.

The committee believes that, with respect to the administrative expenses of the States in carrying out programs under the act, the prohibition against the use of Federal funds for matching purposes will encourage greater use of State funds for this purpose. State legislatures will in turn be encouraged to increase their own activities in overseeing the operations of State library agencies.

The committee was reluctant to impose a limit on all States that might work a hardship on some. However, it does expect the Federal administrators of the act to monitor State practices and to advise the committee if corrective legislation seems to be necessary. Administrative expenses in excess of 10 percent of program costs would appear to be unwarranted.

Mr. Speaker, on February 23, 1977, the Subcommittee on Select Education unanimously recommended the extension of the Library Services and Construction Act as reflected in H.R. 3712. The bill was thereafter reported to the House by voice vote of the Committee on Education and Labor on March 8.

The administration has also expressed its support of the bill and I insert at this point a letter received from the Secretary of Health, Education, and Welfare, Joseph A. Califano, Jr.:

MARCH 21, 1977.

Hon. JOHN BRADEMAS,
Chairman, Subcommitee on Select Education, Committee on Education and Labor, Washington, D.C.

DEAR MR. CHAIRMAN: I wish to share with you the Department's views on H.R. 3712, to extend and amend the Library Services and Construction Act.

We are in basic agreement with the bill as reported by your Subcommittee. Although the Administration sought only a one-year extension, in accordance with our across-the-board policy, we believe the bill as reported will not interfere with our general review of education programs. We may recommend amendments before expiration of the authority based on our review and the report of the 1979 White House Conference on Libraries and Information Services.

There may be areas of concern to the Department which are not specifically addressed by the Subcommittee bill. Since the Department has not yet fully formulated its policy, we will wait to make any additional recommendations until the bill is considered in the Senate.

The Office of Management and Budget has advised us that there is no objection to the submission of this report to the Congress.

Sincerely,

JOSEPH A. CALIFANO, Jr.

Mr. Speaker, at this point I would like to thank all of the members of the Committee on Education and Labor for their support of this bill. In particular, I would like to thank the distinguished chairman of the Education and Labor Committee (Mr. PERKINS) and the distinguished ranking minority member (Mr. QUIE) for their help in bringing this measure before you today. I also would like to thank the ranking member of the Subcommittee on Select Education (Mr. JEFFORDS) and all the members of the subcommittee for their efforts to see expeditious action on this bill

This show of bipartisan support demonstrates the commitment of our committee to the continued support of our public libraries.

Mr. Speaker, I urge this same demonstration of support for our public libraries by all the members of the House of Representatives today.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman from Kentucky (Mr. PERKINS), the distinguished chairman of the committee.

Mr. PERKINS. Mr. Speaker, I thank the distinguished chairman of the subcommittee, the gentleman from Indiana (Mr. BRADEMAS), for yielding.

Mr. Speaker, to my personal knowledge, the gentleman from Indiana (Mr. BRADEMAS) has persevered in this area for many, many years. I have watched this program grow tremendously under the leadership of the gentleman from Indiana.

As I understand the present legislation, Mr. Speaker, it is a simple extension that we passed last year, with one exception: We place a limitation on the Federal expenditures for administrative purposes in that the State must match the administrative expenses where Federal moneys are utilized. That is the only amendment that is different from the bill which the distinguished gentleman from Indiana (Mr. BRADEMAS) brought before the House last year and which died in the other body.

Mr. Speaker, H.R. 3712 provides for the needed extension of programs carried on under the Library Services and Construction Act—the direct descendant of the Library Services Act we enacted in 1956. That original legislation was approved with strong support on both sides of the aisle, and bipartisan cooperation has been the watchword since that time in consideration of legislation to amend and extend public library legislation.

In 1960, when we extended the act for 4 years, the political platforms of our great political parties contained planks and pledges dealing with the needs for libraries and library services. That was the first time both parties had gone on record in this matter.

Mr. Speaker, I want to take opportunity initially to compliment the distinguished chairman of our Select Subcommittee on Education (Mr. BRADEMAS) for the timeliness and substance of this legislation. A 4-year extension of the act as is proposed will continue these public library programs on a stable basis.

I also wish to compliment the ranking minority member of the committee (Mr. QUIE) and members of the committee on both sides of the aisle for their work and support of H.R. 3712. As I have indicated, the original public library legislation in 1956 received bipartisan support and I am pleased that today the bill we are considering has the same support.

When I first came to the Congress library services were virtually nonexistent in so many of our rural areas. In 1949, a bill which I sponsored to provide desperately needed Federal aid for rural library services failed in the House by only two votes. It then took 6 more years before we were able to secure final approval of the original Library Services Act which was limited to rural areas of the Nation. That act did not authorize assistance for the construction of library facilities.

The Committee on Education and Labor has been most attentive to this legislation through the years and to the needs to which it is addressed. Accordingly, a series of amendments have been enacted to broaden, improve, and extend the original act. The act was expanded to reach all areas of the country and funds were authorized to provide desperately needed assistance for the construction of public library facilities.

In 1966 we expanded the act to authorize services for the physically handicapped, to enable the States to provide library services in State institutions, and to foster many forms of cooperation among libraries. The act was last amended in 1970, and the present law will expire on September 30 of this year.

To give a specific example of how this legislation has helped in my own State of Kentucky, title I has provided assistance in the development of public libraries in 106 of Kentucky's 120 counties. It has enabled the establishment of serv-

ices for 70,000 eligible blind and physically handicapped citizens and provided for the extension of services to 5,007 persons in State institutions. Socially and economically disadvantaged persons have been assisted by this legislation. For example, last year $14,300 was used by the public library in Louisville, Ky., to reach over 50,000 senior citizens.

Under the construction title, 39 libraries in Kentucky have been established. In a recent survey of construction needs, it was found that 13 additional construction projects are needed now. Specifically, in the State of Kentucky alone there is a need today for more than $5 million in Federal moneys to assist in the construction of public libraries.

We now have a 21-year record of limited Federal assistance to libraries under this act with a solid record of benefits derived from the stimulation of Federal grants matched in State and local tax effort. And this has occurred without a hint of Federal control or stifling of intellectual freedom. There has been no compulsion or coercion of the Nation's 30,000 libraries. Indeed, this act has expanded freedom, not curtailed it. Some 17 million Americans have gained access to library services for the first time, and another 90 million men, women, and children have benefited from better public libraries.

Mr. Speaker, a moment ago I mentioned some of the accomplishments which occurred under this act in Kentucky. Much of this success has been due to the admirable and untiring efforts of State and local librarians. For so many years our State was guided in library matters by a good friend and very able individual—Margaret Willis. Her influence is still being felt. Now the libraries are under the able direction of Mrs. Barbara Williams, a former constituent of mine. I want to compliment all librarians in my home State, including those in public libraries, and in college and school libraries.

Despite our accomplishments, however, we are still far from meeting the needs identified in the existing Library Services Act and in fulfilling the promises of that act.

For example, it is estimated that 175,000,000 people, that is 83 percent of the total population, are receiving inadequate public library service. Close to 10 million receive no public library service at all. Ten percent of the counties in this country do not have public library service. Today, there are still 297 counties without any library service at all.

In addition, I would point out that inadequate library service is not a condition solely of urban areas. Rather it is a condition that is particularly prevalent in rural areas of our country. The passage of this legislation, and in particular the extenison of title I, will do much to initiate library services in areas where such services are not now available or where they are inadequate because of insufficient local resources.

The bill before us today is a simple extension and authorization of appropriations for the coming 4 years. It authorizes $110,000,000 for title I, Library Services, for fiscal year 1978, and $130,000,000 for fiscal year 1979. For title III, Interlibrary Cooperation, it authorizes $15,000,000 for fiscal year 1978 and $20,000,000 for fiscal year 1979. For library services under title I and Interlibrary Cooperation under title III of the act, the committee bill would authorize such sums as necessary for fiscal year 1980 and 1981.

For title II of the act, public library construction, and title IV, older readers services, the bill would authorize such sums as may be necessary for fiscal years 1978 through 1981.

We are hopeful that in due time we will have before us the recommendations of the White House Conference on Library and Information Services. Members will recall that the bill we enacted to authorize this conference (Public Law 93–568) requires that the conference be held not later than 1978. I am, of course, pleased that the supplemental appropriations bill approved by the House last week provided $3.5 million for the White House Conference.

The findings and recommendations of the White House Conference on Libraries, and especially of the State conference that will precede it, will provide us with an up to date evaluation from the grassroots of the needs of public libraries.

We do not need a White House conference, however, to tell us that those needs are great and growing. The cost of books, magazine subscriptions, and everything else that a library must obtain for its users has been rising rapidly. Postal fees are upward bound, and so is the cost of fuel and everything else needed to keep a library's doors open to the public. Some of the greatest libraries in the land are reducing their staff, limiting their purchases of new publications, curtailing their hours, and tragically even considering closing some of their facilities.

These are hard times, yes, and belts must be tightened. But it is unthinkable that we would retreat in our support of public libraries in a country where they were invented, any more than we would think of closing the doors of our schools. Both play their part in educating our people for self-government and for useful, productive, rewarding lives in freedom and dignity.

Our libraries and our schools and colleges are the very bedrock on which our democracy and our productivity and progress as a nation are founded.

Mr. Speaker, H.R. 3712 was reported from subcommittee and full committee unanimously. I do not believe there is cause for any Member of the House to vote against this legislation.

Accordingly, I ask for the unanimous approval of H.R. 3712 today by the full House.

Mr. BRADEMAS. Mr. Speaker, I thank the distinguished chairman of the subcommittee, the gentleman from Kentucky (Mr. PERKINS), for his gracious remarks; and I commend him for the vigorous support he has given to library services since he has been a Member of the House of Representatives.

Mr. QUIE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, people of this country need to know how to and why, and the library is where they tend to go when they want to find out.

Mr. Speaker, the expansion of public libraries, as brought about by this act, has been of enormous importance to everybody in the country, not only those who attend school, but those who just want to improve their own knowledge.

Therefore, Mr. Speaker, I rise in support of the motion of the gentleman from Indiana (Mr. BRADEMAS) to suspend the rules and pass H.R. 3712, a bill to amend and extend the Library Services and Construction Act.

Mr. Speaker, I commend the gentleman from Indiana (Mr. BRADEMAS) for the work that he has undertaken in devoting himself to making certain that we do have an excellent piece of legislation. I commend him, as the chairman of the committee, the gentleman from Kentucky (Mr. PERKINS), has done; and I urge the Members of the House to support this excellent piece of legislation which really extends and permits us to continue this outstanding work, which, as the gentleman from Kentucky (Mr. PERKINS) indicated, began with a rural library program, expanded to include urban libraries. I believe the measure includes the flexibility necessary to permit the specific needs of certain localities to be carried out that are over and above other local programs.

Mr. Speaker, LSCA and its predecessor, the Library Services Act, have been in existence since 1956, making this one of the oldest programs in the U.S. Office of Education. In that first year of operation, the appropriation was $2 million, and the emphasis was on the provision of services to rural areas with populations of under 10,000.

The history of the role of the Federal Government in the field of public libraries is one of the true success stories of Federal aid. In the 21 years that the law has been in existence, services have been expanded for approximately 90 million Americans and have been provided for the first time to another 17 million. Although LSCA and the previous Library Services Act have not funded all of that expansion, they have been almost entirely responsible for stimulating the expansion of library services.

Construction grants, authorized under title II, have resulted in the building of over 2,000 library buildings serving 64 million people. During the years when construction funds were available, $177 million in Federal funds, matched by $457 million in State and local funds, added enormously to the accessibility of libraries across the Nation.

Title III of the act, providing assistance for interlibrary cooperation, has added nearly 200 projects involving approximately 11,000 libraries across the country. Under this title, all types of libraries have been joined together to provide better service to library users. The assisted libraries have included not only public libraries but college libraries, university libraries, school libraries, and research libraries.

Title V of the act, added in 1973 by the older Americans amendments, has

regrettably never received funding. However, under this title, if funds are provided, grants would be available to States for the provision of library services for the elderly which would include both the purchase of special library materials and the provision of in-home visits by library personnel.

It can truly be said that the library services activities of the Federal Government have been among the real success stories of the efforts of Washington to provide expanded services to people across the country.

During the hearings in the Select Education Subcommittee, much testimony was heard from those who were concerned about the plight of the financing of libraries in our major cities. Although the committee shared those concerns, it was the general feeling that more adequate funding of the existing act, particularly titles I and III, would provide the additional funds needed in those urban areas. Title I, for instance, already includes a priority for strengthening metropolitan public libraries and, in addition, places an emphasis upon the establishment, expansion, and operation of programs to assist the physically handicapped, the disadvantaged, and people of limited English-speaking ability. Witnesses testifying during those hearings agreed that higher funding of the current act was an acceptable alternative to the addition of a new title to the law providing aid only for libraries in urban areas.

The committee was also concerned about the number of counties in the country still lacking any access to public library services. Information prepared for the Committee by the Office of Libraries and Learning Resources of the U.S. Office of Education shows that there are 297 counties still lacking any access to library services. Those counties are located in 19 States ranging from Alaska to Georgia. The States with the most counties which lack access to library services include Indiana with 42 counties; South Dakota, 44 counties; Missouri, 36 counties; North Dakota, 30 counties; and Minnesota with 24 counties.

It was the feeling of a number of members of the committee that although services may have been subject to some cutbacks in urban areas, for the most part the availability of libraries in those areas are still greater than that found in most of the rest of the Nation. It is for that reason and others that the committee chose not to adopt a separate targeted program for urban areas.

The only other issue of major concern to be brought to the committee's attention was the question of State use of funds for State administration. The current law places no limits upon State withholding for that purpose. As a consequence, the pattern across the country is quite varied. For example, 11 States withhold no funds for administration at the State level, and in fiscal 1976 six States withhold in excess of 10 percent of the funds which they received for State administration. Because of the unevenness of this pattern, as well as the need to place some limitation upon the practice of withholding funds, the committee adopted an amendment providing that any funds withheld by the State would have to be matched with an equal amount of State funds for administration. The committee felt that this would be a self-policing mechanism which would have the dual objective of keeping administrative costs low while, at the same time, providing for some oversight into the use of Federal funds by the State legislature.

I wish to make clear that the matching funds for administration must come from State sources. It cannot come from local library funds or from other Federal funds, such as general revenue sharing.

In my own State of Minnesota, figures provided by the Office of Education show that in 1976 the State withheld 1.4 percent of the State allotment or $13,554. Under the provision adopted by the committee, the State could continue to withhold that amount, provided State funds are available in matching quantity, or the State could increase or reduce that amount to whatever level it was willing to match.

Finally, it should be noted that the bill before us today is essentially identical to legislation which passed the House by a very decided majority some 13 months ago as H.R. 11223. The LSCA authorizing legislation expires September 30 so that if the Appropriations Committee is to be able to include funds for these programs in the regular fiscal 1978 Labor-HEW appropriations bill, it is essential that both the House and the other body act as soon as possible to pass this legislation, resolve any differences, and send the bill to the President for his signature. I am convinced of the value of the Library Services and Construction Act. I urge my colleagues to adopt the motion to suspend the rule and pass H.R. 3712 as reported by the Committee on Education and Labor.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Speaker, I thank the gentleman from Minnesota for yielding to me. I want to join with the gentleman from Minnesota (Mr. QUIE) in the remarks he has made. I also wish to commend the gentleman from Indiana (Mr. BRADEMAS) for bringing this bill before the House under suspension of the rules. I do not know of any finer legislation that we could have on the floor today than this bill. I have been involved on many occasions in the subcommittee handling HEW appropriations in seeking proper funding for library services and I have done this because I believe in it. As the gentleman from Minnesota has said, libraries open up many vistas to the American public.

No one can deny the fact that our Nation's public libraries are among the most valuable basic information resources, not only for the individual citizen, but also for authors of books and articles on current issues, government researchers, social scientists, and, significantly, journalists. Alongside the news media as a bulwark of information and ideas is an equally important institution most of us take for granted—the free public library.

As the Nation becomes more and more aware of the obligation to provide free access to information, many of our public libraries are reducing their hours, cutting back their collections, falling behind in the processing of materials, and even closing their doors. If there is, as many assert, a public right to know—as embodied in the Freedom of Information Act—then that right certainly should extend to access to the vital storehouse of information in our public libraries. The accelerating rate of financial distress of public libraries will undoubtedly have a substantial impact on the knowledge and education of our citizens—and consequently on their participation in our Government and our society.

Modern, well-supplied, easily accessible libraries are essential to the public's continuing right to learn. They offer everyone, from the richest to the poorest, equal access to information.

I urge my colleagues to support this necessary legislation which will assist States not only with moneys for construction of libraries, but with moneys to improve library services, to extend services to the poor, handicapped, and our elderly, and to strengthen State library agency services. Since the enactment of the Library Services and Construction Act, it has supported construction of over 2,000 libraries, but it has been noted that title II has not been funded in recent years, causing a substantial backlog in neded construction. In addition, funding for "older reader services" has been denied since the addition of title IV in 1973.

I cannot overemphasize the value of affording our older Americans extended library services under title IV. This group of individuals, along with the poor and handicapped, should be able to enjoy the benefits of access to books, periodicals, newspapers, and the other sources of information. Support of our public libraries is imperative for the preservation of our basic freedom to information and for the continuation of this valuable service to communities across the Nation.

I will be working in my Labor-HEW Subcommittee on Appropriations for adequate funding levels to implement these valuable and necessary library services programs authorized by this legislation.

Mr. QUIE. Mr. Speaker, I thank my colleague, the gentleman from Massachusetts (Mr. CONTE) on his remarks.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. QUIE. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, I want to observe to the gentleman from Minnesota that while the goal this bill seeks to achieve is a laudable one and one that I am certain has the support of most Members of the House, it seems to me that the procedure employed is part of a continuing design by the leadership to bring up legislation authorizing hundreds of millions of dollars under suspension of the rules and thus to prevent the right of any Member to offer amendments to reduce the amounts.

It seems to me that if we are going to continue this sort of a procedure, no matter how laudable the matters might be that we are then denying the rights of Members who might wish to offer amendments, or to make changes in such legislation.

So, Mr. Speaker, I would hope the leadership would reconsider this practice of placing bills of this nature under suspension of the rules.

Mr. MOAKLEY. Mr. Speaker, I rise to support an extension of the Library Services and Construction Act of 1977 (H.R. 3712). In the past, the LSCA has done a commendable job in extending and enhancing library services to the people of this Nation. Since 1957, the Library Services Act has provided Federal moneys to the States to aid them in the construction, renovation, equipping and stocking of libraries in both urban and rural areas.

We have before us a measure to extend the Library Service and Construction Act for 4 years and an authorization of $275 millions in fiscal years 1978 and 1979 for continued expansion and improvement of public library services. Funding for fiscal years 1980 and 1981 would not exceed the levels for the 2 previous years. It is urgent that we act swiftly to insure that this legislation is extended to provide for an uninterrupted flow of Federal moneys to the States for the purpose of library enhancement.

In fiscal year 1977, Massachusetts' libraries received over $1.5 million in Federal funds to assist the State in the construction, renovation and servicing of library facilities. The ending of what has been, in the past, an efficient, productive, and creative program could only spell disaster for libraries throughout this Nation.

Mr. GRASSLEY. Mr. Speaker, the legislation which we are considering today, namely H.R. 3712, warrants the support of each and every Member of the House. It would, in summary, amend the Library Services and Construction Act to authorize appropriations for fiscal year 1978 and subsequent years. A bill similar to this passed the House during the 94th Congress but failed to receive consideration in the Senate.

In visiting with constituents and librarians from the Third Congressional District of Iowa I am advised that legislation, such as this, is needed in order to maintain and improve library services for small cities, towns and rural areas alike. The value of bringing books and other library materials to the people cannot be overemphasized. Libraries contribute to an informed electorate and knowledgeable citizenry.

I am particularly pleased that title II of the Library Services and Construction Act will be funded under H.R. 3712. These funds will be put to good use in building and remodeling facilities which house books and other educational materials. In approving this legislation we will be following the trail blazed many years ago by Andrew Carnegie. Therefore, I would respectfully urge my colleagues to join me in voting in favor of the Library Services and Construction Act authorization.

Mr. ALEXANDER. Mr. Speaker, I rise in support of H.R. 3712, legislation that extends the Library Services and Construction Act for 4 additional years through fiscal year 1981.

Though the House passed legislation in February of last year to extend this act, the other body did not take similar action and the Library Services provision was extended for 1 year by the General Education Provisions Act. This vital educational program will expire unless it is reauthorized.

The bill before us today authorizes Federal support for public library services; public library construction; interlibrary cooperation at the local, regional, and interstate levels; and for library services for the elderly.

This legislation also adds a new requirement that expenditures by a State for administrative costs, from allocations received under this act, must be matched by the State from funds other than Federal moneys.

Since the enactment of the Library Services Act in 1956, approximately 17 million people have been provided public library services for the first time and another 90 million have received improved services.

As a member of the House Appropriations Committee, I will urge my colleagues to appropriate adequate construction funding under title II of this act to meet library needs across the Nation. There are 10 construction projects in Arkansas that could be started within 2 years if LSCA funds were available, 3 in my district. Arkansas does not use State money for the construction of library buildings. At least half of these projects could be started within 1 year and two projects could be started tomorrow if money were available.

I urge adoption of this bill.

Mr. BIAGGI. Madam Chairman, I rise in unqualified support of H.R. 3712, legislation to extend the Library Services and Construction Act. I am especially proud to be an original cosponsor of this legislation and feel its passage will represent a sound investment in the future learning opportunities of millions of Americans.

It was 20 years ago when the Federal Government first began to provide funds to assist public libraries. The first Library Services Act provided funds exclusively to rural library systems. In 1964, the act was amended to include urban library systems and was also expanded to include funds for library construction. All told, the result of the LSCA's 20-year history have been outstanding. More than 100 million Americans have received either first time or improved library services in this period, many, a result of the LSCA. The act is worthy of exactly the kind of extension being proposed in H.R. 3712.

I especially support titles I and IV of the bill. My support of title I is based on its ability to respond to the urgent needs of many beleaguered major urban library systems. Fiscal factors far beyond the control of many library administrators have caused many large urban systems to make drastic reductions in services, including the closing of major branches. This problem was especially highlighted during the hearings which the House Select Education Subcommittee held on the bill. We heard stories of major library systems curtailing purchases of new books, and making major reductions in hours of service.

This problem is especially acute in the city of New York. Numerous branch libraries throughout the five boroughs of the city have been forced to lay off hundreds of personnel, reduce hours and services in some cases have even closed. Even the famous main branch of the New York Public Library has felt the effects of the fiscal crunch in the form of reduced services and hours. These problems are very real and affect thousands of New Yorkers.

Title I of H.R. 3712 proposes a solution to this crisis in the form of Federal assistance especially targeted to troubled urban library systems. Funds under title I can be used to meet the overall operating expenses of metropolitan libraries including the purchase of materials and equipment, as well as the payment of salaries of library personnel. Title I also provides grant funds to States to allow them to expand and extend their library services to those whose present access to such services is limited, such as the poor and handicapped. Some $240 million is provided for this section for the next 2 years. It will certainly be an important commitment by the Federal Government to bolstering the library systems in our major systems which presently have been one of the prime casualties of the fiscal problems which many major cities face.

As a member of the House Select Committee on Aging I also warmly endorse title IV of this legislation. This section provides the States with grants to improve library services specifically for the elderly. Funds here can be used to purchase special library materials as well as to pay the salaries of those elderly who work on libraries. A very important feature of title IV is its providing of funds to allow for library personnel to make visits to homebound elderly. This section is consistent with the growing concern of this Nation toward the problem facing the millions of elderly who live alone. The ability of a shut-in elderly to receive a regular visit and be provided with a source of regular reading entertainment can be a tremendous value in reducing the feeling of isolation and loneliness affecting many homebound elderly. Finally, included in title IV are funds to provide for needed transportation services to those elderly interested in receiving library services.

I wish at this time to pay tribute to the distinguished chairman of the subcommittee, Mr. BRADEMAS. His leadership on behalf of this legislation was outstanding and his commitment to the improvement of library services is unquestioned. I urge the swift approval of my colleagues of this legislation today. It represents good fiscal and intellectual sense. Libraries are of tremendous importance to millions of Americans. The citizens of this Nation have participated in their local libraries and with the passage of this legislation we will be expanding the opportunities to participate to millions

more. Let us keep the doors of knowledge open to all our citizens. We can take an important step with the passage of H.R. 3712.

Mr. QUIE. Mr. Speaker, I have no further requests for time.

Mr. BRADEMAS. Mr. Speaker, I have no further requests for time.

GENERAL LEAVE

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill now under consideration, the Extension of Library Services and Construction Act.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Indiana (Mr. BRADEMAS) that the House suspend the rules and pass the bill H.R. 3712.

The question was taken.

Mr. QUIE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 368, nays 1, not voting 63, as follows:

Mr. Mikva with Mr. Rudd.
Mr. Breaux with Mr. Evans of Colorado.
Mr. Johnson of California with Mr. Pressler.
Mr. Sisk with Mr. Tucker.
Mr. Slack with Mr. Young of Alaska.
Mr. Ryan with Mr. Stump.

Mr. YATRON changed his vote from "yea" to "nay."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

DUTY-FREE TREATMENT FOR AIRCRAFT ENGINES IMPORTED AS TEMPORARY REPLACEMENTS FOR CERTAIN AIRCRAFT ENGINES UNDERGOING OVERHAUL

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 422) to amend the Tariff Schedules of the United States to provide duty-free treatment of any aircraft engine used as a temporary replacement for an aircraft engine being overhauled within the United States if duty was paid on such replacement engine during a previous importation, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I do so only for the purpose of allowing the gentleman from Ohio, the distinguished chairman of the subcommittee, to describe the bill.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 422 is to amend the Tariff Schedules of the United States to provide duty-free treatment of any aircraft engine used as a temporary replacement for an aircraft engine being overhauled within the United States if duty was paid on such replacement engine during a previous importation.

H.R. 422 was introduced by our colleague, Mr. HUGHES of New Jersey. The committee also considered an identical bill, H.R. 3051, introduced by our colleague, Mr. CORMAN of California.

Firms in the United States engaged in aircraft engine repair when repairing foreign-made aircraft engines, must provide a replacement engine to the aircraft owner or operator while the repair is taking place. Not only is the duty paid on the replacement engine when first imported, but each time the loaned engine is reimported in exchange for the original engine repaired by the U.S. firm, current law requires that a duty be assessed.

It is claimed that the requirement of successive duty payments on each reimportation of "loaner" aircraft engines after the duty has been paid on original importation serves no purpose and is a cost disincentive to U.S.-based firms who compete with overseas repair firms.

Section 1 of H.R. 422 would amend the Tariff Schedules of the United States—TSUS—by the inclusion of a new item, 801.20, which would provide for the duty-free entry of any aircraft engine or propeller or any part or accessory of either, previously imported, on which the duty was paid upon such previous importation. Such duty-free entry would be limited if the reimported duty paid article had not been advanced in value or improved in condition while abroad, if exported under loan, lease, or rent to an aircraft owner or operator as a temporary replacement for an aircraft engine being overhauled, repaired, rebuilt, or reconditioned in the United States, and if reimported by or for the account of the person who exported it from the United States.

Section 2 of H.R. 422 as reported would provide that section 1 of this bill would become effective on the date of enactment.

In the 94th Congress, a similar bill was reported favorably by the Committee on Ways and Means and approved by the House. However, it was not enacted into law prior to the adjournment of that Congress.

Public hearings were held by the Subcommittee on Trade of the Committee on Ways and Means on February 22, 1977, on duty-free entry and temporary duty suspension bills. During these hearings, favorable testimony and written comments were received on H.R. 422 and H.R. 3051. Favorable reports were also received from interested executive branch agencies. No objection to this legislation have been receievd by the Commitee from any source.

The committee was unanimous in reporting H.R. 422 as amended, and I urge its passage.

Mr. STEIGER. Mr. Speaker, I support H.R. 422, which provides duty-free treatment of any previously imported aircraft engine which is exported as a temporary replacement for an aircraft engine being overhauled within the United States. This exemption would apply only if duty was paid on the replacement engine when it was originally imported.

The duty-free treatment described in this bill is limited to those aircraft engines, propellers or parts thereof, that have not advanced in value or condition while abroad. A further limitation requires that the replacement engine be reimported by or for the person who exported it from the United States.

H.R. 422 is designed to assist the aircraft engine replacement and repair industry that in the past has borne the compounded cost of import duties each time a replacement engine was sent abroad for a brief time while repairs were being made on a previously installed engine. This has placed the industry at a competitive disadvantage with similar industries located outside the United States. The passage of this bill would improve the competitive status of U.S. industry and would be beneficial to job development in this industry. The annual customs revenue loss resulting from enactment of H.R. 422 is estimated to be $2.5 million.

Mr. Speaker, in its hearings this year and in the 94th Congress, the committee heard no objection to the elimination of duty in this instance, and reported the bill without dissent. I recommend passage by the House at this time.

Mr. Speaker, I urge support of the bill and withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 422

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subpart A of part 1 of schedule 8 of the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 801.10 the following new item:

" 801.20	Any aircraft engine or propeller, or any part or accessory of either, previously imported, with respect to which the duty was paid upon such previous importation, if (1) reimported without having been advanced in value or improved in condition by any process of manufacture or other means while abroad, after having been exported under loan, lease, or rent to an aircraft owner or operator as a temporary replacement for an aircraft engine being overhauled, repaired, rebuilt, or reconditioned in the United States, and (2) reimported by or for the account of the person who exported it from the United States	Free	Free ",

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after the date of the enactment of this Act.

Mr. VANIK. Mr. Speaker, I yield myself such time as I may consume.

Mr. HUGHES. Mr. Speaker, will the gentleman yield?

Mr. VANIK. I yield to my colleague, the gentleman from New Jersey (Mr. HUGHES).

Mr. HUGHES. I thank my colleague for yielding.

Mr. Speaker, I compliment the chairman and members of the Ways and Means Committee for their prompt action on H.R. 422, the duty-free treatment of replacement aircraft engines. This long-needed legislation would correct an inequity in the current Tariff Schedules to allow American businessmen to compete on equal terms in the world marketplace.

When repairing or overhauling foreign-made aircraft engines within the United States, maintenance firms must supply temporary replacement engines to keep their customers planes flying, for the overhaul may take several months. Under present law, duty is paid on these loaner engines when first imported and every time they are reimported in exchange for repaired engines. These successive duty payments serve no purpose except to act as a cost disincentive for servicing foreign engines. American industry and American workers are deprived of this business.

Upon enactment, H.R. 422 would amend the U.S. Tariff Schedules to provide duty-free reimportation of any aircraft engine or propeller or accessory part used as a temporary replacement for an engine being repaired or reconditioned in the United States. In all instances, duty must have been paid on its initial importation and the engine cannot have been increased in value or improved in condition while abroad.

Let me relate some figures that will clearly show the situation faced by domestic concerns. At present, there is an average 5-percent duty on imported engines. Three of the major foreign engines in common use are valued at $90,000, $105,000, and $500,000. The average repair estimates are $35,000, $60,000, and $125,000, respectively. The use of these engines as loaners to support overseas customers would require a payment of duty each time the loaner is reimported, which increases the costs by 5 percent of the value of the engine. These costs cannot be absorbed; they must be passed on to the customer. In this example, the new cost to overhaul would be $39,500, $62,250, and $150,000. These higher costs make domestic concerns noncompetitive, and they often are put in the position of not even attempting to attract such overseas business.

Two situations come to mind that may be of concern to Members. Foreign aircraft engines in service abroad are dealt with in this bill, because there is no problem with domestic built engines or foreign engines in use in this country. When an American manufacturer specifies a certain foreign engine for use in a particular airframe, the repair shop has no choice but to use this same engine as a loaner.

The second point is the estimate of a $2.5 million revenue loss. This loss is really a phantom, however, as the present customs duty effectively prices domestic maintenance shops out of the world market, so there is no real loss.

As explained in a letter from the materials director of one American overhaul shop—

> I feel that there is really no potential loss of revenue to the Customs Service because there is no revenue at the present time and there will be none under the present law.

This legislation should benefit both U.S. business and the economy. Presently our aircraft repair and overhaul centers must compete with Canada, Great Britain, Sweden, France, Brazil, Taiwan, and Australia for much of their business. Today, they work under the additional handicap of customs regulations which unnecessarily penalize their operations. Removal of this tariff burden will allow American industry to compete

even more successfully in this world market.

I strongly urge my colleagues to support the passage of H.R. 422.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DUTY-FREE ENTRY OF CARILLON BELLS FOR SMITH COLLEGE, NORTHAMPTON, MASS.

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 1404) for the relief of Smith College, Northampton, Mass.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. KASTENMEIER. Mr. Speaker, reserving the right to object, I shall not object. However, I take this time to ask the distinguished gentleman from Ohio (Mr. VANIK) about this bill in connection with the following:

As I understand it, the bill has in fact passed the House before, and it is not my intention to frustrate the benefit that Smith College may receive under this bill, nor to frustrate the legislative work which the gentleman from Massachusetts (Mr. CONTE) has done on its behalf.

However, in a similar fact situation 4 years ago, the University of Wisconsin had also applied under similar legislation, that is to say, having duty-free status for imported carillon bells, which is essentially the same situation here.

The Department of Commerce at that time objected, and following that objection the Congress did not in fact grant such preferred tax status. In the interest of tax equity—and I know the gentleman from Ohio is certainly interested in that—I would urge that the gentleman attempt to obtain from the Commerce Department a distinction, if any there exists, for the justification in the way of the treatment of the University of Wisconsin in that situation and in the instant case with Smith College.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. KASTENMEIER. I yield to the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. I thank the gentleman for yielding.

Mr. Speaker, I think the gentleman makes a very, very telling point. I think we ought to find out what the distinction is between the two cases. They seem identical. I certainly will carry through with the gentleman's request to determine from the Department of Commerce what distinction, if any, there is between the gift and the request of the University of Wisconsin as distinguished between the college in the instant case. I certainly will report back to the gentleman my findings and what I learn from the Department of Commerce.

Mr. KASTENMEIER. I thank the gentleman.

Mr. Speaker, I withdraw my reservation of objection.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I do so only to allow the distinguished chairman of the subcommittee to explain the bill.

Mr. VANIK. Mr. Speaker, H.R. 1404 was introduced by our colleague from Massachusetts, Mr. CONTE.

Section 1 of H.R. 1404 directs the Secretary of the Treasury to admit free of duty 33 carillon bells—including accompanying parts and accessories—for the use of Smith College, Northhampton, Mass.

Section 2 provides for a refund of duty if there has been a final liquidation of the entry of any article subject to the provisions of section 1.

The purpose of the duty-free provision of H.R. 1404 is to enable Smith College to purchase the bells necessary to complete its carillon. The Paccard Bell Foundry in France supplied the original bells. Furthermore, it is alleged that Paccard is the only source for the new bells since they must match those presently in place and since there are no domestic counterparts.

Under present law, the articles specified in the proposed bill are classified under item 725.36 TSUS and are assessed at the rate of duty of 7 percent ad valorem. The proposed legislation would permit the one-time entry of these items free of duty for use of Smith College, Northampton, Mass.

In the 94th Congress, a similar bill was reported favorably by the Committee on Ways and Means and approved by the House. However, it was not enacted into law prior to the adjournment of that Congress.

Public hearings were held by the Subcommittee on Trade of the Committee on Ways and Means on February 22, 1977 on duty-free entry and temporary duty suspension bills. During these hearings favorable testimony and written comments were received on H.R. 1404. Favorable reports were also received from interested executive branch agencies. No objections to this legislation have been received by the committee from any source.

The committee was unanimous in reporting the bill to the House and urges its passage.

Mr. STEIGER. Mr. Speaker, further reserving the right to object, may I simply say that I think the distinguished gentleman from Wisconsin (Mr. KASTENMEIER) has made a point which I hope the subcommittee will in fact look at carefully.

I would go one step further. The distinguished chairman of the subcommittee has indicated an interest—and I want to join with him in that interest—in seeing if there is not a better way for us to handle all of the bills that fall into this category. We are now, one bill at a time, dealing with some relatively limited areas, and it takes the time and the energy and the attention of Congress.

Mr. Speaker, I am not sure that we need to do that, and I hope, in looking at the situation of the carillon bells for Smith College, we can also take it one step further and see if we can begin to devise a better mechanism for handling these problems.

Mr. Speaker, I support H.R. 1404 providing for the duty-free entry of 33 carillon bells for the use of Smith College in Northampton, Mass.

Although there has been intermittent production of carillon bells in the United States, demand historically has far exceeded domestic production. Currently, only one facility, located in South Carolina, manufactures these bells. The availability of carillon bells in this country therefore continues to be very limited. This is especially true with regard to complete carillon sets containing a large number of bells like the ones required by Smith College.

The bells which are the subject of this legislation are made by the same French foundry which made the bells in the carillon to which they will be added. Since the additional bells must match those already in the carillon, this foundry is the only reliable source for the new bells.

No domestic producer has raised any objection to duty-free treatment of this importation on behalf of Smith College. The administration has issued reports which are, as well, without objection to this legislation. The one-time loss in customs revenue from enactment of H.R. 1404 would be approximately $2,250.

Mr. Speaker, the committee heard no opposition to H.R. 1404 nor did it hear opposition to its predecessor in the 94th Congress. Just as it did last Congress, the committee reports this bill unanimously. I recommend passage by the House at this time.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Speaker, I would first like to extend my appreciation and sincere thanks to Chairman ULLMAN and minority Member BARBER CONABLE, Congressman VANIK, Congressman STEIGER for reporting H.R. 1404 out of the Committee on Ways and Means early in this session of the 95th Congress. As some of my colleagues may recall, I introduced an identical bill for the relief of Smith College last Congress and it was passed by this body on May 17, 1976. But unfortunately, the other body did not act on passing the bill until mid-September and the conference committee did not complete action before adjournment.

I urge my colleagues to support H.R. 1404, which provides for the duty-free entry of carillon bells to be used at Smith College of Northampton, Mass.

Fifty-eight years ago the Carlile family of Massachusetts made a generous donation to Smith College in memory of Dorothea Carlile, who died as a freshman from an influenza epidemic. Their donation consisted of a set of 12 bells, called a chime. The bells were hung in 1919.

As anyone who has been to Northampton or the college can attest, the bells have been an integral part of Smith College's heritage since that time. The beautiful tones of the bells can be heard throughout the town.

In the 1950's the Carlile family replaced some of the bells and added others. That brought the total number of bells to 23, making the set a carillon rather than a chime. In 1975 new bells were

added again and the remaining original 9 were removed, bringing the total number in the carillon to 47.

The 33 new bells, weighing a total of 9 tons, arrived at Smith College in the summer of 1975. They were cast by the Paccard Fonderie de Cloches in Annecy, France, and are valued at approximately $31,950. The bronze bells are all inscribed to the memory of Miss Carlile with the years of her birth and death.

As you might guess, it was necessary to get bells that would both fit the system at the college and which could be tuned to match the original bells. The Paccard foundry was the only one which could replace the original bells; there are no domestic counterparts.

Sets of tuned bells are classifiable under the provisions of item 725.36 of the Tariff Schedules of the United States, with duty at the rate of 7 percent ad valorem. But since the bells which Smith College received could not have been obtained in the United States, the college is seeking relief from payment of the duty. That is the purpose of this bill, H.R. 1404. The one-time loss in customs revenue is estimated at $2,550 based on the dutiable value of the bells of $31,950.

It is my understanding that the Departments of Labor, Commerce, and the Treasury have no objection to waiving the duty on Smith College's carillon bells. There is no domestic industry to be protected by the imposition of such duty, nor any industry to be harmed if the duty is not paid.

Mr. Speaker, like most institutions of higher education, Smith College has had to tighten its financial belt in recent years. I do not believe the college should have to pay the duty on its carillon, and I respectfully request my colleagues to vote for passage of this bill.

Mr. STEIGER. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 1404

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury shall admit free of duty thirty-three carillon bells (including all accompanying parts and accessories) for the use of Smith College, Northampton, Massachusetts, such bells being provided by the Paccard Fonderie de Cloches, Annecy, France.

SEC. 2. If the liquidation of the entry for consumption of any article subject to the provisions of the first section of this Act has become final, such entry shall be reliquidated and the appropriate refund of duty shall be made.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CONTINUATION OF TEMPORARY DUTY SUSPENSION ON IMPORTATION OF CERTAIN HORSES

Mr. VANIK. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3259) to continue to suspend for a temporary period the import duty on certain horses.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. STEIGER. Mr. Speaker, reserving the right to object, I do so only for the purpose of giving the distinguished chairman of the subcommittee, the gentleman from Ohio (Mr. VANIK), a chance to explain the bill.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. I yield to the gentleman from Ohio.

Mr. VANIK. Mr. Speaker, the purpose of H.R. 3259 is to extend the duty suspension on imports of horses to the close of June 30, 1978.

Under item 903.50 and 903.51 of the tariff schedules, horses, other than for immediate slaughter, were temporarily free of duty until June 30, 1976. In the 94th Congress, a similar bill was reported favorably by the Committee on Ways and Means and approved by the House. However, it was not enacted into law prior to the adjournment of that Congress.

The duty on horses was originally suspended in recognition of the fact that the present tariff structure for horses operates discriminatorily among different breeds. For example, horses may be imported free of duty for breeding purposes under tariff item 100.01. This rule applies, however, only if they are certified by the Department of Agriculture as being of a recognized breed and duly registered on a book of record recognized by the Secretary of Agriculture for that breed. Since the American quarter horse does not qualify under these criteria, importers of such horses for breeding purposes are required to pay duty, usually under item 100.75 at 3 percent ad valorem, while other breeds may be entered duty free.

Insofar as is known at this time, there has been no change in the basic condition under which there is differential duty status among certain breeds of horses. Enactment of H.R. 3259 would continue the suspension of this discriminatory treatment to June 30, 1978, and would permit the liquidation or reliquidation of any entry made after June 30, 1976, and before the enactment of the bill as though such entry had been made on the date of enactment of the bill.

Public hearings were held by the Subcommittee on Trade of the Committee on Ways and Means on February 22, 1977, on duty-free entry and temporary duty suspension bills. During these hearings favorable testimony and written comments were received on H.R. 3259. Favorable reports were also received from interested executive branch agencies. No objections to this legislation have been received by the committee from any source.

The bill was amended to make the bill and any permissible liquidation or reliquidation of an entry prior to the date of enactment of the bill effective as of the date of enactment rather than July 1, 1976.

This bill was unanimously ordered reported by the committee as amended and the committee recommends its passage by the House.

Mr. KEMP. Mr. Speaker, will the gentleman yield?

Mr. STEIGER. Mr. Speaker, further reserving the right to object, I yield to the author of the bill, the distinguished gentleman from New York (Mr. KEMP).

Mr. KEMP. Mr. Speaker, I wish to thank the Committee on Ways and Means and my colleagues Mr. VANIK and Mr. STEIGER and the Subcommittee on Trade for favorably reporting this bill.

H.R. 3259, as reported, would continue the temporary suspension of import duties on certain horses entering the country, a suspension signed into public law on October 26, 1974, Public Law 93-484, as if it had not expired last year. This bill also incorporates a liquidation or reliquidation provision. I introduced this bill on February 8, 1977.

Let me review briefly the history associated with this issue.

Until Public Law 93-484 was enacted, a tariff was imposed upon horses entering the United States at a rate of $2.75 per head for horses not valued over $150 and at a rate of 3-percent ad valorem for horses valued over $150. The tariff posed substantial problems, both for importers of horses and for the U.S. Customs Service. The Customs officers at the various points of entry were faced with the burden of making a determination as to the value of a horse, when in fact acknowledged experts differ as to the worth of a particular horse. The Customs officers were not and are not specialists in determining the value of off-spring in bloodlines. Foals sired by the same stallions and from the same mares are often sold at public auction—the only way of accurately determining the fair market value of a particular horse—at substantially different prices. Because of this lack of expertise, quite understandable in my opinion, the valuations of horses for tariff purposes became inconsistent and, in many owners and importers, unfair.

A second problem created by the tariff arose when a temporary import bond had to be posted on a horse imported and subsequently claimed in a claiming race. A claiming race is a race wherein a claiming price is placed on the race and any horse in the race can be purchased or claimed for that price. Since the owner of the horse is obligated to sell the horse for the claiming amount, an owner obviously will not enter a horse that has a substantially greater value than the claiming price, for, in general, the owner really does not want his horse claimed.

When an imported horse runs in a claiming race, it can be purchased even though the owner did not wish to sell it. The owner might merely have misjudged the value of the horse. When an imported horse is claimed, the importer, who is subject to the foreiture of the bond plus a penalty, is no longer the owner of the horse and cannot, therefore, return the horse to the country of origin within the 1-year period in order to avoid the forfeiture and penalty.

A third problem arises in connection with horses imported for breeding pur-

poses when those horses are not recognize by our Department of Agriculture as being purebred and registered in a book of record recognized by the Department. This discriminates against such breeds as the American quarter horse—which does not qualify under this exception and upon which duty must be paid when these horses are imported into our country.

In reporting H.R. 13631 to the floor and recommending its passage in the 93d Congress—this was the bill which became Public Law 93-484—the Committee on Ways and Means recognized something else too. Traditionally, a tariff is imposed to protect a domestic industry. In this instance—as has been pointed out in the statements of the American Horse Council, our country's principal spokesman for the industry—the industry is in favor of eliminating the tariff. The industry has also made two additional points worth repeating. First, the revenue produced is negligible, and probably does not even cover the costs of administering the regulations. Second, the countries from which the majority of horses are imported into the United States do not impose a tariff on horses exported from this country. Recognizing these points as valid, the committee recommended the temporary suspension, and it became law.

During the last Congress, the committee recommended an extension of the suspension through June 30, 1978. That legislation passed the House. The Senate passed it following its consideration of the Tax Reform Act of 1976, but if incorporated a nongermane amendment on professional sports, offered by Senator BROOKE of Massachusetts. A conference committee was appointed but could not meet in the closing hours of the session. The reasons for last year's delay on the Senate side do not exist this session, and I hope, therefore, we can obtain a speedy passage of this legislation.

I am very grateful, as I indicated a moment ago, for favorable consideration of this bill by the committee. I had hoped the committee would report the bill with a 4-year continuation of the suspension, beginning last July 1 and running through June 30, 1980. Given the nature of the legislative process, the expiration date contained in the bill now before us—June 30, 1978—is already on top of us. Unless the Senate Committee on Finance amends the date, extending it the additional 2 years to June 30, 1978, and that is agreed to by the House, additional legislation will have to be introduced, comments solicited from the departments and agencies, hearings held, testimony presented, and subcommittee, committee and floor action required.

In light of what will be a very crowded agenda before the House Committee on Ways and Means and the Senate Committee on Finance over the next 2 years—particularly a major substantive tax reform bill, and the social security trust fund, not to mention legislation arising from the multinational and bilateral trade negotiations—it just seems easier to me to take care of this all at once.

I urge the enactment of this legislation.

Mr. STEIGER. Mr. Speaker, I thank the gentleman from New York (Mr. KEMP) for his comments.

Mr. Speaker, I support H.R. 3259 continuing for 2 years the temporary suspension of import duty on certain horses. Under the provisions of this bill, suspension of duty on horses imported for purposes other than for immediate slaughter would be extended until June 30, 1978.

The horses involved here generally are of two types—those brought in for racing purposes, mostly from Canada, and the American quarterhorse. Currently, certain breeds approved by the Secretary of Agriculture can enter the country duty-free. These include thoroughbreds and other breeds of racing horses but do not include quarterhorses. The bill would continue the existing suspension on quarterhorses as well as on all other racing horses not already free of duty. The temporary nature of the bill is designed with a view to future negotiation of similar tariff treatment from Canada.

Past suspension of duty in the above instance has resulted in a custom revenue loss of approximately $200,000 each year. No additional loss is expected from the extension contained in H.R. 3259.

Mr. Speaker, the committee heard no objection to enactment during hearings this year and during hearings on the identical matter last Congress. The committee has favorably reported this legislation just as it did in the last Congress.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 3259

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That items 903.50 and 903.51 of subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) are amended by striking out the words "On or before 6-30-76" in the last column and inserting in lieu thereof the words "on or before 6-30-78".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after July 1, 1976.

SEC. 3. Upon request therefor filed with the customs officer concerned on or before the ninetieth day after the date of enactment of this Act, any entry to which the amendment made by the first section of this Act applies shall, notwithstanding the provisions of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry had been made on June 30, 1976.

With the following committee amendment:

Strike out all after the enacting clause and insert the following:

That items 903.50 and 903.51 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) are each amended by striking out "6/30/76" and inserting in lieu thereof "6/30/78".

SEC. 2. (a) The amendments made by the first section of this Act shall apply to articles entered, or withdrawn from warehouse, for consumption on or after the date of enactment of this Act.

(b) Upon request therefor filed with the customs officer concerned on or before the 90th day after the date of enactment of this Act, the entry or wtihdrawal of any article—

(1) which was made after June 30, 1976, and before the date of the enactment of this Act, and

(2) with respect to which there would have been no duty if any amendment made by the first section of this Act applied to such entry or withdrawal,

shall, notwithstanding the provision of section 514 of the Tariff Act of 1930 or any other provision of law, be liquidated or reliquidated as though such entry or withdrawal had been made on the enactment of this Act.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. VANIK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the three bills just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

EMERGENCY UNEMPLOYMENT COMPENSATION EXTENSION ACT OF 1977

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 411 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 411

Resolved, That upon the adoption of this resolution it shall be in order to move, section 401(b)(1) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4800) to extend the Emergency Unemployment Compensation Act of 1974 for an additional year, to revise the trigger provisions in such Act, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Ways and Means, the bill shall be considered as having been read for amendment. No amendments shall be in order to said bill except amendments offered by direction of the Committee on Ways and Means, and said amendments shall not be subject to amendment. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA) for the minority, pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 411 provides for the consideration of the bill (H.R. 4800) to extend the Emergency Unemployment Compensation Act of 1974 for an additional year, to revise the trigger provisions in such act, and for other purposes.

It is a 2-hour closed rule which will permit only amendments offered by direction of the Committee on Ways and Means. The rule also waives a point of order under section 401(b)(1) of the Congressional Budget Act of 1974 which would otherwise lie against consideration of the bill.

Within the meaning of the Budget Act, this program is an "entitlement" and this section of the act prohibits consideration in the House of any bill containing entitlement authortiy which would become effective before the beginning of the fiscal year which begins during the calendar year in which the bill is reported.

Since funding under this bill will be effective during fiscal year 1977, a waiver is necessary if the bill is to be considered. The principal function of this provision is to protect the right of the Committee on Budget to review all proposed entitlement authority in conjunction with the appropriate concurrent resolutions on the budget.

In acting on proposed waiver of this and similar provisions of the Budget Act, the Committee on Rules has always been guided by the opinion of the Committee on Budget as to whether a waiver will interfere with the jurisdiction these provisions were intended to safeguard.

The distinguished chairman of the Committee on Budget, the gentleman from Connecticut (Mr. GIAIMO), authorized by vote of his committee, has indicated that he does not oppose a waiver. I would insert the text of his letter at this point in the RECORD:

COMMITTEE ON THE BUDGET,
Washington, D.C., March 8, 1977.

Hon. JAMES C. CORMAN,
Chairman, Subcommittee on Public Assistance and Unemployment Compensation, Committee on Ways and Means, U.S. House of Representatives, Washington, D.C.

DEAR JIM: This is in response to your inquiry as to whether I am authorized to support a Budget Act waiver to permit consideration of H.R. 3723, a bill to extend the Federal Supplemental Benefits program. My comments are directed to the bill as reported from Subcommittee with a further amendment, expected in full Committee, to modify the benefit trigger to an insured unemployment rate of five percent or greater.

The bill as reported and with the modification indicated would fall within the scope of my authority to support waivers for matters assumed in the Third Budget Resolution for FY 1977. Although the bill is not identical in all respects to the measure assumed in the third budget resolution, it substantially corresponds to our assumptions.

You should know, however, that since the bill approved by your Subcommittee exceeds the estimated cost for the Federal Supplemental Benefits Program in the third budget resolution, the total amount of new entitlement authority available to the Committee on Ways and Means would be effectively diminished by the amount of the difference. This may mean that some other entitlement program within the jurisdiction of your Committee will be subject to referral to the Appropriations Committee.

Thank you for your cooperation in this matter. If you have further questions, please do not hesitate to contact me.

Sincerely yours,

ROBERT N. GIAIMO,
Chairman.

There has been no controversy over the waiver in the Committees on Budget, Ways and Means, nor Rules. I am aware of none on the floor.

While this is not entirely true of the closed rule provision, I am prepared to defend the report I have presented from the Committee on Rules on the basis of urgency.

Last year the Committee on Ways and Means reported a number of bills concerned with unemployment compensation. The House has shown substantial resistance to considering such matters under closed rules. Because of this and because I do not personally approve particularly of closed rules, I am somewhat reluctant to present the proposal to consider the bill (H.R. 4800) under this procedure. But I am convinced that the situation warrants such an approach.

If the package—in the form of this rule—is defeated, the statutory authority for paying Federal supplemental benefits to 568,000 American workers in 32 States will expire in 10 days. If the House and the other body have both acted by that time and are nearing final action on this measure, there is hope that the administration would have the authority to extend the program for 3 weeks. But, if the House blocks action by rejecting this rule, it is unlikely that such an extension would be possible.

In the absence of any substantial studies, what happens at such a point is largely speculative.

There is no denying that there are some people on unemployment who have not made the maximum effort to find employent and would locate positions as a result of the expiration of benefits. I personally doubt that the numbers are as large as some would have us believe.

On the other extreme, there are people who are unable to find employment, who are willing to collect under an insurance program like unemployment compensation, but who would not accept public assistance. I have constituents in this category I have spoken with; all Members do. I hesitate to think what happens to them.

But the overwhelming majority will simply transfer from unemployment to public assistance rolls. There are a number of grounds on which such a trend must be viewed as dangerous. Public assistance programs are, by nature, maintenance programs whereas unemployment compensation programs are administered by offices whose function is to put people to work; such a transfer breaks or reduces contact with job placement, counseling, and training personnel at local employment service offices.

Public assistance programs are geared toward need rather than prior earnings. Unemployment benefits are, in virtually all States, limited to half the workers' average prior earnings and that maximum in turn is subject to a ceiling. This system, in most cases, provides adequate incentive to seek employment. For most workers public assistance payments will be lower. But, there are in no way related to prior earnings, so some marginally employed workers and large families will be shifted to programs which pay more for not working than they can earn.

Unemployment compensation provides some incentives to work while public assistance often presents counter-incentives. A UC beneficiary who is offered a week's work can simply take it. If his pay is lower than his benefit, he still gets the difference; if its more, he still can resume UC the following week with no penalty. A welfare recipient, on the other hand, may find the total of his wages and reduced benefit lower than if he had not worked at all. If it is high enough, he may be dropped from the rolls and forced to face the slow, cumbersome process of reapplying. There are substantial economic and administrative pressures on public assistance recipients not to accept temporary or part-time employment.

I am confident that most Members share my determination that FSB not be permitted to lapse and I would hope that all Members understand that this is the issue on which they will be voting when I move the previous question on this resolution.

To provide some indication of the local impact of this bill, I would insert at this point in the RECORD a table. The following table includes the 50 States, the District of Columbia and the Commonwealth of Puerto Rico. It indicates the most recently available data on rate of unemployment, number of weeks of FSB triggered by that rate, and the total number of current recipients under the program. States with unemployment rates below 5 percent do not receive FSB although the regular 26 weeks and 13 weeks of extended benefits are paid. States with rates of unemployment between 5 percent and 5.99 percent qualify for 13 weeks of FSB for a combined total of 52 weeks. States with unemployment rates in excess of 6 percent qualify for 26 weeks of FSB for a combined total of 65 weeks.

The table follows:

TABLE OF UNEMPLOYMENT AND FSB BENEFITS BY STATE

State	Unemployment rate (percent)	Number of weeks of FSB benefits	Number of FSB recipients
Alabama	6.55	26	5,104
Alaska	12.13	26	1,209
Arizona	4.83	0	373
Arkansas	7.03	26	4,497
California	6.47	26	86,224
Colorado	3.43	0	164
Connecticut	7.17	26	24,314
Delaware	6.39	26	2,456
District of Columbia	3.44	0	0
Florida	4.35	0	4,078
Georgia	4.68	0	134
Hawaii	5.21	13	2,603
Idaho	6.66	26	881
Illinois	6.36	26	43,265
Indiana	3.94	0	223
Iowa	4.24	0	31
Kansas	3.89	0	39
Kentucky	6.24	26	6,134
Louisiana	4.42	0	122
Maine	9.17	26	3,589
Maryland	5.45	13	1,290
Massachusetts	6.44	26	25,534
Michigan	7.64	26	57,534
Minnesota	5.42	13	115

State	Unemployment rate (percent)	Number of weeks of FSB benefits	Number of FSB recipients
Mississippi	4.84	0	31
Missouri	5.81	13	9,489
Montana	6.63	26	732
Nebraska	3.33	0	8
Nevada	7.06	26	3,446
New Hampshire	4.00	0	177
New Jersey	8.80	26	53,192
New Mexico	5.11	13	93
New York	7.36	26	111,566
North Carolina	5.44	13	2,612
North Dakota	5.67	13	9
Ohio	4.77	0	230
Oklahoma	4.03	0	170
Oregon	7.18	26	7,517

West Virginia	7.98	26	1,665
Wisconsin	5.29	13	174
Wyoming	2.92	0	0
Puerto Rico	19.65	26	22,839
Total, FSB recipients			567,474

Mr. Speaker, I feel I should make clear that, in view of the emergency nature of this legislation, all the major questions of revision and reform of the unemployment compensation system pending from the last Congress have been postponed for later action.

This bill does not address benefit standards, coverage of household and agricultural workers, coverage of illegal aliens, rate base or any of the other questions which killed the major unemployment compensation bill in the last Congress. These are tough questions which will have to be faced in this Congress.

But the measure made in order by this rule is a simple extension of the FSB program including some technical amendments. Only two of these present issues of controversy.

I believe the floor procedure recommended by the Committee on Rules is a fair one and I urge the adoption of the rule so that we may proceed to act quickly on the bill (H.R. 4800).

Mr. LATTA. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 411 provides for a closed rule. If I can recall a little history, last year on May 17, 1976, a similar closed rule was brought to the floor on the unemployment compensation bill, H.R. 10210, and the rule was voted down by a record vote of 125 yeas to 219 noes.

I might say, Mr. Speaker, that if this closed rule prevails, the only amendments that will be permitted to this very important piece of legislation are those amendments proposed by the Committee on Ways and and Means.

The rule waives points of order against the bill for the failure to comply with section 401(b)(1) of the Congressional Budget Act of 1974. This section prohibits consideration of new entitlements which become effective before the first day of the fiscal year, beginning during the calendar year in which the bill is reported. The unemployment compensation title of this bill applies to weeks of unemployment ending after March 31, 1977. Since these entitlements take effect before October 1, 1977, the waiver is necessary.

Finally, Mr. Speaker, the rule also provides for a motion to recommit with or without instructions. Hopefully if we have to pass this gag rule we will have an opportunity to make some meaningful amendments in the motion to recommit.

Mr. CORMAN. Mr. Speaker, will the gentleman yield?

Mr. LATTA. I would be happy to yield to the gentleman from California.

Mr. CORMAN. Mr. Speaker, I would point out to the gentleman that when H.R. 10210 was before the House last year the rule was defeated in large measure because it was a peculiar rule that did not permit recommital with instructions. I am not certain that members of the Committee on Ways and Means understood when the Committee on Rules sent that rule out what was provided. This rule is different in that it does provide for protection of the minorities rights for a motion to recommit with or without instructions.

Mr. LATTA. I think the gentleman from California, when he takes a look at my remarks, will see that I mentioned that the rule did provide for a motion to recommit with or without instructions.

Mr. Speaker, I yield 3 minutes to the gentleman from Minnesota (Mr. FRENZEL).

Mr. FRENZEL. Mr. Speaker, we have again today the ludicrous sight of the Committee on Rules bringing to the House of Representatives another important bill affecting the people's representatives and especially the taxpayers themselves, under a closed rule. We cannot offer the amendments that many of us would like to offer, and we cannot debate those amendments. All we can do is to vote up or down on this very important bill which is supposed to be threatening one of our great national priorities, unemployment compensation.

Mr. Speaker, this is a travesty of the legislative process, and of the representative process to bring forward time after time important bills under closed rules. This is an outrage and I greatly object to this.

Mr. STEIGER. Mr. Speaker, will the gentleman yield?

Mr. FRENZEL. I am happy to yield to the gentleman from Wisconsin (Mr. STEIGER).

Mr. STEIGER. Mr. Speaker, I appreciate very much my distinguished colleague, the gentleman from Minnesota (Mr. FRENZEL), yielding this time to me, and I want to second his remarks that this is an outrage. The concept of a closed rule on an unemployment compensation bill after we had finally gotten last year to the floor of the House, kicking and screaming, a rule that would allow us to offer certain kinds of amendments and to have them voted on. This is a very important bill and there are issues in this bill that some would perhaps like to change. Take, for example, the Pennsylvania delegation. They, I believe, would like to make it for 65 weeks instead of for 52 weeks.

There is also the issue of Federal financing versus a payroll tax.

There is the issue of suitability of work.

There are other serious issues that this House ought to have a chance to express its will upon.

Mr. Speaker, I hope this rule is defeated so that we can have a chance to open it up and have some chance to determine what the policy is going to be on this important issue.

I commend the gentleman from Minnesota (Mr. FRENZEL) for his very good statement.

Mr. FRENZEL. I thank the gentleman for his statement.

Mr. LATTA. Mr. Speaker, I yield myself 1 minute.

Mr. Speaker, in case this rule is voted down, I will offer a resolution for a completely open rule. Mr. Speaker, I have no requests for time and reserve the remainder of my time.

Mr. MOAKLEY. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the principal purpose of this bill is to extend for 1 year a program which provides compensation to one-half million unemployed workers. That program expires March 31. If both the House and Senate have acted by that date, and final action seems likely, the administration may be able to extend the program for 3 weeks. If the rule is defeated, then it seems quite unlikely that any further benefits can be paid. We are presented with an emergency situation which, in my opinion, Mr. Speaker, justifies the closed-rule procedure.

I would point out that this program will expire in 1 year if this bill is passed, so the program must either die or be presented once again to this Congress. I am not authorized to speak for the Committee on Rules on this matter, but I would state that my position as a member of the Committee on Rules who does not generally favor the closed-rule procedure, and I would assure the gentleman that he will have my support in opposing any routine or blanket protection of the Committee on Ways and Means from full House review of legislation in the future.

At this time I should like to yield 2 minutes to he gentleman from California (Mr. CORMAN).

Mr. CORMAN. I just want to point out to the House that I can understand why my colleagues, the gentleman from Minnesota (Mr. FRENZEL) and the gentleman from Wisconsin (Mr. STEIGER) are leery about a closed rule. They stood shoulder to shoulder with me last year on H.R. 1010 when the closed rule was defeated. This is a very different rule from the rule given to H.R. 10210. It does protect the right of the minority to have a motion to recommit with instructions. I hope that the House would give us a closed rule. I hope that we do not see this program terminate the first of April. If that happens we will probably start it up again the first of May and incur several million dollars in administrative costs necessary to reinstitute the program. I urge the adoption of the closed rule.

Mr. LATTA. Mr. Speaker, I yield 1 additional minute to the gentleman from Minnesota (Mr. FRENZEL).

Mr. FRENZEL. Mr. Speaker, I rise again to thank the beneficent majority for allowing the minority the opportunity to have a motion to recommit with instructions. But I would remind my colleagues that the gentleman from Wisconsin was correct when he said there are too many potential amendments to carefully structure any recommital motion other than a total substitute, which, of course, is very difficult to explain, and almost impossible to pass.

There are a large number of items in dispute: the length of the extension, the proper phaseout period, the shifting of the cost burden from corporations to the general taxpayers for this program, the additional deferments to States who should now be beginning to pay back money to the Federal trust funds. There is a wide range of possibilities on which amendments would be offered were it not for the noxious closed rule. Therefore just allowing us to make a motion to recommit is no great generosity.

Mr. MOAKLEY. Mr. Speaker, I move the previous question on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. LATTA. Mr. Speaker, I object to the vote on the ground that quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 213, nays 164, not voting 55, as follows:

Mr. Mann with Mr. Jones of North Carolina.
Mr. Johnson of California with Mr. Hubbard.
Mr. Slack with Mr. Aspin.
Mr. Foley with Mr. Eckhardt.
Mr. McKay with Mr. Metcalfe.
Mr. Udall with Mr. Patterson of California.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. CORMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4800) to extend the Emergency Unemployment Compensation Act of 1974 for an additional year, to revise the trigger provisions in such Act, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. CORMAN).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 4800, with Miss JORDAN in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from California (Mr. CORMAN) will be recognized for 1 hour, and the gentleman from Michigan (Mr. VANDER JAGT) will be recognized for 1 hour.

The Chair recognizes the gentleman from California (Mr. CORMAN).

Mr. CORMAN. Madam Chairman, I yield myself time as I may consume.

Madam Chairman, H.R. 4800 extends the Federal supplemental benefits—FSB—program for 1 year, until March 31, 1978.

It provides for the payment of up to 13 additional weeks of unemployment compensation to unemployed workers who exhaust regular and extended benefits. These additional benefits can be paid in States and local labor market areas with insured unemployment rates of 5 percent or higher. Under this bill a combined maximum of 52 weeks of regular, extended, and Federal supplemental unemployment compensation benefits will be payable in States and local areas with high unemployment.

The additional weeks of unemployment compensation provided by this extension of the FSB program will be financed directly out of Federal general revenues. Under present law, FSB is financed out of Federal general revenue loans to the Federal unemployment trust fund.

H.R. 4800 requires the States to deny FSB payments to individuals who refuse offers of suitable work or who are not actively engaged in seeking work. If the State agency determines that an individual's prospects for obtaining work in his or her customary occupation are poor, the determination of whether any work is suitable will be made without regard to whether the work involves lower pay or lesser skills than the individual's customary occupation. To be disqualified for FSB, however, the individual would have to refuse a job that paid the minimum wage and paid wages equal to 120 percent of his weekly unemployment compensation benefit.

The bill also delays for 2 additional years, until January 1, 1980, the provisions in Federal law which provide for the automatic recoupment of outstanding Federal unemployment insurance loans to States.

The Federal supplemental benefits program was enacted in December 1974. This program was in response to the sharp increase in the unemployment rate and the large number of workers who were expected in the coming months to exhaust their regular and extended benefits before obtaining suitable employment. Initially FSB contained both National and State triggers to initiate and terminate the additional unemployment compensation benefits. It provided up to a maximum of 13 additional weeks of unemployment compensation benefits—or a combined maximum of 52 weeks of regular, extended and Federal supplemental benefits—in all States when the national insured unemployment rate was 4.5 percent or higher and, if the national insured unemployment rate dropped below 4.5 percent, the 13 weeks of FSB could be paid in States with insured unemployment of 4 percent or higher. As a part of the Tax Reduction Act of 1975 Congress increased from 13 to 26 the maximum number of weeks provided under the FSB program. This increased the combined maximum to 65 weeks of regular, extended, and Federal supplemental benefits.

Public Law 94–45, enacted in June 1975, extended FSB until March 31, 1977. It extended through December 1975 the payment of up to 26 weeks of FSB on the basis of National or State triggers. Beginning January 1, 1976, the national trigger was eliminated and FSB were made payable on the basis of State insured unemployment rates.

Under current law, in States with insured unemployment rates of 6 percent or more, FSB provides a maximum of

26 additional weeks of unemployment compensation—up to a combined maximum of 65 weeks of regular, extended, and Federal supplemental benefits—to unemployed workers covered under the permanent State and Federal unemployment compensation programs. In States with insured unemployment rates between 5 percent and 5.9 percent, FSB provides a maximum of 13 additional weeks of unemployment compensation—up to a combined maximum of 52 weeks—to unemployed workers who exhaust their regular and extended benefits.

As of February 19, 1977, 32 States met the trigger requirements to pay FSB. Eight States has insured unemployment rates between 5 and 5.9 percent, making a maximum of 13 weeks of FSB payable. In 24 States the insured unemployment rate was 6 percent or higher, allowing the payment of up to 26 weeks of FSB to unemployed workers who exhaust their regular and extended benefits. Currently over 500,000 claimants are receiving FSB payments.

Throughout most of last year there was a consistent decrease in the number of States "triggered on" to FSB. In recent weeks, for the first time in almost a year, additional States have not "triggered off." In fact, several have been added. It is expected that over 30 States will be "triggered on" to either 13 or 26 weeks of FSB as of March 31, 1977, when the program expires, and that there will be in excess of 500,000 individuals collecting FSB who will be abruptly terminated.

H.R. 4800 extends the FSB program for one year and limits to 13 the maximum number of additional weeks of unemployment compensation payable to unemployed workers who exhaust regular and extended benefits. The combined maximum would be 52 weeks of regular, extended, and Federal supplemental benefits. FSB would be payable to unemployed workers in States with insured unemployment rates of 5 percent or higher or whose last place of employment is in a local "labor market area"—generally SMSA's of 250,000 population—with an insured unemployment rate of 5 percent or higher.

The State trigger system has been effective in terms of directing FSB payments to unemployed workers in those States with the highest unemployment rates. The State trigger mechanism, however, has excluded from the FSB program some local areas with high unemployment that are within States that do not meet the State trigger requirements.

H.R. 4800 makes FSB payable on the basis of local "labor market area" unemployment levels as well as State unemployment rates in order to provide additional benefits in high unemployment areas that are presently excluded from the FSB program. This will make the FSB program more effective in terms of directing additional weeks of unemployment compensation to those parts of the country with the most severe unemployment problems, and it will make the program more equitable in terms of providing the same assistance to workers facing similar difficulties in obtaining jobs.

H.R. 4800 provides for direct Federal general revenue financing of any FSB paid for weeks of unemployment ending after March 31, 1977.

Under current law, FSB is financed by employer paid Federal payroll taxes—FUTA—which are paid into the Federal unemployment insurance trust fund. Part of the money from the FUTA tax revenue is credited to the extended unemployment compensation account in the unemployment trust fund. This account is used to pay the Federal share of extended benefits and all of FSB. It has been necessary to supply repayable advances from general revenue to the extended unemployment account in fiscal years 1972, 1973, and 1975 through the present. The debt is currently $8.1 billion, of which $5.3 billion is attributable to FSB.

The shift to direct general revenue financing of FSB provided in this bill reflects the view that after a person has exhausted regular and extended benefits the reason for his unemployment can no longer be attributed to his previous employers. Therefore, the financing of any additional unemployment compensation benefits should be shifted from employer-paid payroll taxes to general revenues.

Section 104 of H.R. 4800 would disqualify a FSB claimant from benefits if he or she refused to accept an offer of or referral to "suitable work" or failed to actively engage in seeking suitable work. The period of disqualification would continue until the individual had worked for at least 4 weeks and earned at least 4 times his or her weekly unemployment compensation benefit amount.

Once a State agency determines that an individual's prospects for obtaining work in his or her customary occupation are poor, the determination of whether work is suitable work for the individual is to be made without regard to whether the work involves lower pay or lesser skills than the individual's customary occupation. However, an individual would not be disqualified from FSB for refusing to take a job not offered in writing or not listed with the State employment service, or paying wages less than the minimum wage, or paying wages less than 120 percent of the individual's weekly unemployment compensation benefit, plus any supplemental unemployment benefits—SUB—to which he or she might be entitled because of agreements with previous employers.

It is intended that when an individual applies for FSB the State agency will determine whether the individual may reasonably expect to be reemployed in his or her customary occupation during the period that the individual's benefits will be payable. If the individual may not reasonably expect to be so reemployed then the individual would be required to accept other employment or suffer a disqualification from benefits, provided the work in question satisfied the criteria set forth in the bill. If the individual lacks the training to perform the work in question it may nonetheless be suitable if the employer involved is willing to train the individual, on the job or otherwise, to perform the work.

All State laws now provide for the disqualification of an individual who refuses to accept suitable work. These provisions vary substantially from State to State and were enacted to govern the operation of the permanent unemployment compensation system. The requirements of this section would not override the provisions and practices of State programs as they pertain to benefits under the regular and extended unemployment compensation programs, but would broaden the grounds for disqualification under the Federal supplemental benefits program.

The bill also requires an individual to actively engage in seeking work or be disqualified from benefits. To satisfy this provision an individual would have to engage in a systematic and sustained effort to obtain work. Also, tangible evidence is required to substantiate the claimant's job search activities. The tangible evidence required is some reliable and satisfactory evidence other than merely the statement of the claimant.

It is intended that each FSB recipient actively search for employment opportunity and substantiate his or her activity to the State agency. This is a more stringent requirement than that imposed by most State laws. It requires that FSB recipients be treated differently than beneficiaries of regular and extended benefits because of the duration of their unemployment and their inability to obtain reemployment in their customary occupations.

Section 105 of the bill would establish new statutory authority and procedures pertaining to the treatment of fraud and erroneous payments under the FSB program. It would provide that any individual who obtains FSB by means of a false statement or failure to disclose information, or causes another to do so will be disqualified for FSB in accordance with the corresponding fraud provisions of the State unemployment insurance law. The section also requires repayment of FSB overpayments. Repayment may be waived when an overpayment was received without fault of the individual and such repayment would be contrary to equity and good conscience. States would be required to offset such overpayments against future assistance or benefits payable under any other Federal unemployment compensation or allowance programs.

Section 201 of H.R. 4800 would delay for 2 additional years, until January 1, 1980, the provisions in Federal law which provide for the recoupment of outstanding Federal unemployment insurance loans to States. The recoupment operates through an automatic increase in the Federal unemployment tax paid by employers in States with outstanding loans.

As of February 15, 1977, 22 States had borrowed a total of $3.8 billion from the Federal Government to enable them to continue paying unemployment compensation benefits.

Under permanent law, if all Federal

advances to a State are not repaid within 2 years, the Federal unemployment taxes paid by the covered employers within that State are automatically increased by 0.3 percent per year until the total loan has been repaid. Public Law 94–45 delayed these automatic recoupment provisions until January 1, 1978. In order to qualify for the delay in the automatic tax increase, a State has to take actions aimed at restoring solvency to its unemployment insurance fund, such as increasing the State unemployment tax rate or taxable wage base, or changing the experience rating system.

The States that have been forced to borrow Federal funds are generally those that have been hardest hit by unemployment in recent years. In most cases, these States are still faced with higher than normal levels of unemployment. It is the committee's position that the present suspension of the recoupment provisions be extended two more years in order to delay the increase in employer payroll taxes which would impose an additional burden on State economies still suffering from high joblessness. Furthermore, the additional 2-year delay would provide Congress with time to consider any recommendations pertaining to State and Federal unemployment insurance financing that might be forthcoming from the National Commission on Unemployment Compensation established by Public Law 94–566.

In title III technical and clarifying changes are made in the Unemployment Compensation Amendments of 1976 (Public Law 94–566) to resolve problems with the language as adopted. This section also delays for 6 months the due dates for the interim and final reports of the National Commission on Unemployment Compensation.

FSB has been a necessary program. It has fulfilled the objective of providing additional unemployment compensation during a period when it has taken unemployed workers substantially longer to find work. The additional weeks of unemployment compensation provided by this program have made it possible for thousands of workers to sustain themselves and their families during the past several years.

Even though the economy has shown definite signs of improving, it has not improved enough to justify a complete termination of the FSB program. Total unemployment is still in excess of 7 percent, and over 7 million unemployed workers are searching and competing for existing jobs. The conditions which led Congress to enact the FSB program are still sufficiently severe to warrant its continuation for another year with the modifications provided in this bill.

I urge the members to support the extension of the FSB program as provided in the bill before them. I include in the RECORD following my remarks these tables: First, the Congressional Budget Office cost estimates for H.R. 4800; second, States by EB–FSB trigger rates and FSB status—week ending February 19, 1977; third, SMSA's projected to be on FSB in fiscal year 1977 and 1978; and, fourth, advances to States from Federal unemployment account.

[1] Actual loans received, $437,000,000; less repayment of reduced employer credits ($12,800,000); from trust fund account ($26,000,000); total, $398,200,000.

Note: Balance remaining in Federal Unemployment Account $191,900,000.

Mr. BURLISON of Missouri. Madam Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from Missouri.

Mr. BURLISON of Missouri. Madam Chairman, the gentleman from California agrees with me, I am sure, that in the legislation last year there was provided a National Commission of Unemployment Compensation which was to make certain investigations and reviews and then report back to the Congress.

Can the gentleman from California (Mr. CORMAN) enlighten us as to what has happened with respect to that Commission, whether it has been appointed, and if so, who the members of the Commission are?

Mr. CORMAN. Let me say to the gentleman that I will tell all I know. Just prior to his leaving office, President Ford nominated his 7 members. The legislation, however, required that the members be nominated by the President, the President pro tempore of the Senate, and the Speaker of the House, and that the Commission members should be appointed after consultation among these three individuals. Consultation was necessary because the statute required that there be balance among labor, management, and the public. Apparently President Ford made his nominations without sufficient consultation with the Speaker and President pro tempore. There is some question as to whether or not the Ford appointments will remain. At the moment, I understand President Carter is conferring with the Speaker and with Senator EASTLAND of the other body and the matter will soon be resolved. It would be extremely difficult to balance the Commission in the face of President Ford's appointees, if they all stayed.

Incidentally, this bill provides an extension of time within which the commission must report back. Now that we have the rule, the amendment of the gentleman from Ohio (Mr. GRADISON) will have a chance to get adopted.

Mr. BURLISON of Missouri. Madam Chairman, if the gentleman will yield further, will that delay be a period of 6 months?

Mr. CORMAN. I believe it is 6 months, yes.

Mr. BURLISON of Missouri. I presume from what the gentleman has said, the explanation for the delay is the difficulty and the problem the gentleman cited with respect to appointing the members of the Commission; is that correct?

Mr. CORMAN. Yes; that is correct. As a matter of fact, when we passed H.R. 10210 we had hoped that that Commission might get underway very soon, but that did not happen.

Mr. BURLISON of Missouri. Madam Chairman, if the gentleman will yield further, the gentleman will recall that the Member has expressed grave concern about the alleged abuse and fraud that is prevalent in the unemployment compensation program.

The gentleman also will recall that when this Commission was created in the law last year I offered an amendment, approved by the Congress, which specifically required the Commission to look into fraud and abuse.

I would emphasize that with this delay of 6 months for the Commission to report that that will give it more time also to look into these important factors.

I just want the record to reflect my continued concern, and I am sure the concern of many Members of the House.

Mr. CORMAN. I thank the gentleman. The gentleman made a substantial contribution to the legislation last year.

I suspect so far as total numbers are concerned, the abuses are exaggerated, but there undoubtedly are some cases and they certainly should be detected and punished.

Mr. SMITH of Iowa. Madam Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Suppose, for example, a plant in Davenport, Iowa, lays off two individuals. One lives in Iowa, and one lives at the other end of the bridge in Illinois. Illinois has more than 6 percent unemployed, according to the alleged statistics. Iowa has less than 5 percent.

As I understand it, the man in Illinois gets paid extended benefits, but the man in Iowa does not. Is that right?

Mr. CORMAN. The gentleman has correctly stated the law.

Mr. SMITH of Iowa. Does that seem fair?

Mr. CORMAN. No, sir. The problem is that geography is never fair. If we are to adopt any program which attempts to focus in on areas of high unemployment rather than making it a national program, then we do have those harsh, borderline cases. We try to ease that somewhat by triggering in large cities that are in States of low unemployment. The gentleman cites a case that I could not defend.

Mr. SMITH of Iowa. Is not a person that is unemployed, whether he has five neighbors unemployed or six, just as badly off?

Mr. CORMAN. Yes, sir. The Congress has decided, so far as this supplemental benefit program is concerned, that it should be paid only in those areas of high unemployment. But, it is correct that if one is unemployed and unable to find work after 39 weeks, he is still unemployed regardless of where he happens to live or the unemployment rate in his State.

Mr. STEIGER. Madam Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Madam Chairman, I thank my colleague for yielding to me.

I am concerned over the colloquy which just took place between the distinguished gentleman from Missouri (Mr. BURLISON) and the gentleman from California. The longer we go without establishing the commission, the worse the situation gets. The gentleman from Missouri might wish to talk to the distinguished Speaker of the House and urge him to make his appointements, because those three are not yet named. The President pro tem has made the appointments on behalf of the other body, and the President of the United States made appointments.

The 6-month delay in the interim report and the final report is clearly necessary. I do not think there is any doubt about it. I guess that all I can do is express my own hope that whatever is done, it be done quickly. The work of the commission is absolutely essential if we are to take a good look at this program.

Mr. CORMAN. I thank the gentleman, and he certainly did make a substantial contribution to H.R. 10210.

But, the gentleman from Missouri might not want to urge the Speaker to make those appointments at this moment. We might want to see if we can get better balance by having some of the people appointed by President Ford withdraw. But I hope, Madam Chairman, that the Speaker and the President pro tem of the Senate will make their appointments so that the commission can begin its very important work.

Mr. LEDERER. Madam Chairman, will the gentleman yield?

Mr. CORMAN. I yield to the gentleman from Pennsylvania.

Mr. LEDERER. Madam Chairman, I thank the gentleman from Colorado (Mr. CORMAN) for yielding me this time.

I would like to say a few words on H.R. 4800, Emergency Unemployment Compensation Act of 1977. Since we have adopted a closed rule, I am somewhat limited in what I can do to a bill I feel does not adequately respond to the needs of our unemployed Americans.

H.R. 4800 calls for a 1-year extension of a 52-week program for States where the insured unemployment rate exceeds 5 percent. Since the Subcommittee on Unemployment Compensation began hearings on this program in February. I have fought for a reasonable extension of the program in light of our current No. 1 problem, unemployment. Madam Chairman, many of my constituents will be hit very hard by the reduction in the current program as envisioned in H.R. 4800. However, I realize the mood of the Congress makes any 65-week program impossible. Therefore, Madam Chairman, I would like to address another section of H.R. 4800 which I feel is ill-conceived; that is, the suitable work clause.

Under H.R. 4800, a recipient of FSB benefits could be cutoff if he fails to accept a job paying 120 percent of the benefits he is receiving under FSB. What this means is that any man or woman, regardless of their previous position, will be forced to accept a full time lower paying job or run the risk of losing their only means of survival—FSB benefits. Forced into this unwanted job, they do not have the time or opportunity to look for a job in their own field or previous pay scale.

Madam Chairman, when H.R. 4800 passes this House, we are going to create a situation where large portions of our

fellow citizens will be forced into underemployment situations or on to the welfare roles. I hardly think this is in keeping with the promise of this Congress and this administration to get our Nation back on its feet. I intend to vote for H.R. 4800, simply because unless we pass some program before March 31, 1977, many more Americans will be forced into utter poverty.

Madam Chairman, my hope is that unemployment agencies all over the country are more compassionate in their implementation of H.R. 4800, especially the suitable work clause, than we have been in writing this law.

Mr. VANDER JAGT. Madam Chairman, I yield myself such time as I may consume.

Madam Chairman, I rise in support of H.R. 4800, the Emergency Unemployment Compensation Act of 1977. I confess that my support is not of the wildly enthusiastic variety, but it is solid support, nevertheless.

The distinguished and able chairman of the subcommittee has, as usual, accurately outlined the provisions of the bill, the changes it would incorporate into law, and the need for this legislation.

In summary, the bill would—

Extend the Federal supplemenal benefits program until March 31, 1978;

Provide for the payment of 13 weeks of unemployment compensation to unemployed workers who have exhausted their regular and extended benefits in State and local "labor market areas" with high unemployment rates;

Deny FSB payments to individuals who refuse offers of suitable work or who are not actively seeking work; and

Grant the Secretary of Labor authority to defer for 2 additional years, until January 1, 1980, the automatic reduction of employer payroll tax credits in those States which are indebted to the Federal unemployment compensation trust fund.

One of the reasons that my support is not wildly enthusiastic is that the subcommittee heard testimony which indicated that as we moved into extended unemployment some individuals with a rather tenuous relationship to the work force, in the first place, were really taking advantage of the system. This is very much to the detriment, I think, of our taxpayers and of the individuals themselves. On the other hand, there is significant evidence that there are a substantial number of people receiving these benefits who desperately need them. They are heads of households; they have worked their entire lives, and they have lost their jobs through no fault of their own or through no fault of the company for which they worked, but because of national problems beyond their control or the employer's control.

Since it is, in a sense, the national situation which has created their problem, I think the Federal Government has some responsibility to try to alleviate that problem. That is why I am so encouraged about the change in the financing of the program. For the first time in this legislation, the 13 weeks beyond the 39 weeks will be financed from several revenues of the Federal Government. There is a recognition, I think, that when we move beyond the 39 weeks we are no longer talking about an insurance program but, rather, moving into the area of welfare. Therefore, we redeem the integrity and the original foundation of the unemployment insurance concept by moving to finance FSB not from the insurance fund but from general revenues.

I had hoped that the Committee on Ways and Means would have gone further and retroactively financed FSB from general revenues. The rationale supporting prospective general revenue financing applies with equal force to post-FSB costs. Retroactive action in this area would have taken a $2 billion debt off the backs of private employers, but efforts in this direction were defeated in both the subcommittee and the full committee. The bill would have been stronger had we taken a wiser course.

There is another change in this legislation which I think is very good and a very important principle established for the first time in this program. There is a requirement that, in order to receive the benefits, the recipient is required to accept a job, if it is offered him, even if the skills are less or the pay is less than he was receiving in his previous job. This provision results from amendments offered by Messrs. KETCHUM, BAFALIS, and FISHER. I think it establishes a very important principle in the Federal supplemental benefits program.

The provision works like this: When an individual who has exhausted both his regular and extended unemployment compensation benefits applies for FSB the State agency must determine whether he can reasonably expect to be reemployed in his customary occupation during the period he would be eligible to receive FSB benefits. If the unemployment compensation office determines that an individual's prospects for obtaining work in his customary occupation are poor, then the determination of whether any particular job is "suitable" is to be made without regard to whether it involves lesser skills or lower pay than the individual's customary occupation. In order for a claimant to be disqualified from benefits for refusing an offer of suitable work the job in question would have to have been offered to him in writing or listed with the State-employment service. Additionally, the job would have to pay at least the minimum wage or 120 percent of the claimant's unemployment compensation weekly benefit amount plus any SUB—supplemental unemployment benefits—to which he might be entitled because of agreements with previous employers. These exceptions were enacted to prevent an individual from being placed in a position where he is financially worse off working than he would have been had he remained on unemployment compensation. It is the intent of the bill that individuals who are able to obtain work ought to be required to work rather than accept unemployment compensation benefits for extended periods of time.

The bill also requires each individual receiving FSB to actively engage in an effort to obtain work and provide tangible evidence of his efforts in this regard to the State agency. It is required that some physical evidence of each applicant's efforts be supplied by the applicant each week. This will enable the State agency to determine, on a case-by-case basis, whether each individual is, in fact actively engaged in seeking work.

This provision is far more stringent than current State practice. It was adopted with the view that once an individual has been unemployed for some period of time longer than that covered by the regular and extended benefits unemployment compensation programs, that individual ought to be treated in a manner differently from that provided under the regular program.

What constitutes tangible evidence of a systematic and sustained effort to obtain employment is of course a matter which will vary from case to case. However, it is the intent of the bill that some physical evidence be provided by the claimant in order to support his contention that he has sought work. A list of telephone numbers and employers called, the dates and times they were visited and similar documentation is required.

The bill also clarifies a provision of existing law which pertains to the denial of benefits to teachers during the summer months. Present law requires the denial of benefits to teachers during periods between academic years for those teachers who have a contract to return to work in the next year or who have reasonable assurance that they will be reemployed in the fall. The bill would expand the denial provision to include periods of time between academic terms as well as years in an effort to clarify the intent of legislation adopted last year. Under the bill teachers will not be able to obtain benefits in periods between terms as well as periods between years.

Lastly, I would like to comment on the provisions of the bill which would provide the Secretary of Labor with authority to defer for 2 additional years, until January 1980, the provisions of Federal law which automatically increase employer payroll taxes in States which have been indebted to the Federal unemployment trust fund for more than 2 years. As the law is now written if advances to a State from the Federal unemployment compensation trust fund have not been repaid within 2 years the unemployment tax imposed on employers by the Federal Government in that State automatically increases by three-tenths of 1 percent per year until all outstanding loans have been repaid.

Congress granted the Secretary of Labor authority to defer the automatic recoupment provision until January 1, 1978, in Public Law 94-45; this bill simply extends that period until January 1, 1980. I hasten to point out that the extension does not automatically defer tax increases. Deferral can only be granted by the Secretary of Labor upon a determination that the State involved has taken appropriate action to bring its unemployment trust fund into balance. This is a reasonable approach to the problem.

It would be very unwise to impose additional tax burdens on employers in those States which have been hardest hit by the recession. This additional deferral authority is warranted.

In conclusion, let me once again ask adoption of H.R. 4800, the Emergency Unemployment Compensation Extension Act of 1977.

Mr. CORMAN. Madam Chairman, I yield 6 minutes to the gentleman from Missouri (Mr. GEPHARDT).

Mr. GEPHARDT. Madam Chairman, I rise in many capacities to urge your approval of the Federal supplemental benefits program as provided in the Emergency Unemployment Compensation Act of 1977 (H.R. 4800).

As an elected representative of the people, I endorse section 101 which would extend the Federal supplemental benefits—or FSB—program for 1 year, until March 31, 1978. Fifty years after the Great Depression we still have the heart-rending problem of unemployment. The United States and other Western democracies have built elaborate income support systems of which unemployment compensation is the most significant. And, with the Wall Street Journal's blessing, I am happy to report that for once our system works (Wall Street Journal, March 7, 1977).

My colleagues on the Ways and Means Committee know, however, that I come to this endorsement reluctantly. The enactment of the FSB program in December 1974 was in response to the sharp increase in the unemployment rate and the large number of workers who were expected in the coming months to exhaust their regular benefits before obtaining suitable employment. I fear its extension to 65 weeks in 1975 and 1976, however, spurred unemployment. A recent study conducted by Prof. Martin Feldstein of Harvard concludes that as much as 2 full percentage points of our unemployment figure is induced simply by the availability of a generous unemployment compensation program. A system abused should have a short fuse, not a long one.

One should not confuse unemployment statistics with unemployment compensation. The latter is not a solution to the causes of unemployment, rather it is a treatment for its system. The solutions we should strive for demand further study. What is and should be the relationship between unemployment compensation and other, less successful income-support systems, such as welfare, food stamps, medicare, and social security? My distinguished colleague from California assures me that this study will begin during the extension period. Contrary to some beliefs, FSB is not an easy answer to a hard problem. But with this assurance I hope your endorsement is made easier as was mine.

In making up my mind on this matter, I also kept in mind the economic stimulus package that the President with the help of the Congress is trying to enact. By 1978, we hope to reduce unemployment closer to 6 percent. Extending the FSB program for 1 year would appear to complement these efforts. It has been said:

> A strong economy is not just our chief hope of achieving full employment in this country, it is our only hope (Financier: Commentary, March 1977).

As an observer of human behavior, which we all are, I likewise endorse section 102's limitation of emergency benefits to 52 weeks. The former standard of 65 weeks was not wholly unreasonable in that it subsidized longer searches for the right job. A large factor in the high unemployment rate is the inability to match job seekers and job openings, rather than lagging employment demand.

Our problem today is a bit different. A Bureau of Labor Statistics study finds that 32 percent of the unemployed have turned down a job offer. Hence, I say a 52-week search for the right job is long enough. Such a reduction is likewise the right direction for the FSB program to go and I urge you to follow.

Section 102 also serves a need that other programs, like local public works, are trying to meet. That is the need for targeting benefits to high unemployment areas. Under H.R. 4800, FSB would be payable to unemployed workers in States with insured unemployed rates of 5 percent or higher or whose last place of employment is in a "local labor market area." This is defined as a standard metropolitan statistical area of 250,000 population or more, with a total unemployment rate of 7 percent or higher. The former State trigger system excluded from the FSB program some local areas with high unemployment that are within States that do not meet the trigger requirements. Directing unemployment benefits to such local pockets is a valid concept about which rational men and women should not disagree.

As a concerned taxpayer, I do not come easily to an endorsement of section 103. Financing emergency unemployment compensation benefits from the Federal general revenue after March 31, 1977, is another hard step to take. Under current law, FSB is financed by employer-paid Federal payroll taxes—FUCA—which are paid into the Federal unemployment insurance trust fund. Since 1972, however, it has been necessary to supply repayable advances from the general revenue because employers have not been able to keep up with payments as Federal supplemental benefits have increased. A current $5.3 billion debt is attributable to FSB.

The subcommittee believes that after a person has exhausted regular and extended benefits, the reason for his unemployment can no longer be attributed to his previous employers. I tend to agree. The problems of long-term unemployment, whether economic or personal, are perhaps bevond the scope of an employer-financed insurance program. The FSB debt must be paid—but future payments, while we study the overall problem, should be shared by all. Compromising the general revenue issue in the manner provided by section 103, in my opinion, serves both corporate interest and the public interest. When it comes to economic growth and full employment, these interests are identical.

In setting up my office as a freshman Congressman, I have become an employer of sorts. The most difficult aspect of this task is finding the right person for the right job. As I said earlier, our problem today is not employment demand. We must find suitable work for the new entrants to our labor market, who comprise 1 percent of our 7.3 percent unemployed. Similarly we must work to find suitable work for the 2 percent reentrants, and the 2.3 percent who have been permanently discharged.

For those who do not actively seek employment or who turn down job offers, another test must be found. As a legislator, I believe that test is in section 104. Therein, we will disqualify an FSB claimant from benefits if he or she refused to accept an offer of suitable work or failed to be "actively engaged in seeking work."

We define suitable work to include "any work for which the individual is reasonably fitted by training and experience" and, if the individual lacks the required skills and training, any work where the necessary training goes along with the job. But suitable work need not be the perfect job. Therefore, the test will be applied without regard to whether the work involves lower pay or lesser skills than the individual's customary occupation. Sometimes a man must be prepared to give it all up, as Rudyard Kipling advised in his poem "If," and build his life over again.

My final role in addressing this issue is as a member of Government. Part of my desire to become a Congressman was to serve as a liaison between St. Louis' local government and Washington. My home State says show me how such intergovernmental cooperation works. A good example is section 201. This delays for 2 additional years the provisions in the Federal law which provide for the recoupment of outstanding unemployment insurance loans to the States. As of February 15, 22 States had borrowed a total of $3.8 billion from the Federal Government. If not repaid, payroll taxes would automatically increase. Those same States, however, have been hardest hit by unemployment in recent years. Such unemployment continues. Therefore, I support the 2-year delay, which will in turn allow Congress time to consider any recommendations as to such financing that may be forthcoming from the National Commission on Unemployment Compensation established in the 94th Congress.

Some have argued that this delay is unfair to those States that have structured their economy to meet the required Federal unemployment insurance payments. This may be true. But as a Missourian, whose State has no deficit, I believe the delay is the equitable approach our Nation of States should take.

In conclusion, I like to think about this bill in the way Franklin D. Roosevelt felt about unemployment insurance when he said:

> The bill has another advantage in establishing a suitable relation of the National Government to unemployment insurance. Under our system of government the task of caring for the unemployed falls primarily on the States. If a State cannot bear the burden, the United States must be prepared to do so and to collect revenue for that purpose (March 1934).

He also once said that, when the States have done their utmost in this regard, it is time for the Federal Government to add its contribution to those of the employers and the States (May 1933). I trust you will feel the same.

Mr. VANDER JAGT. Madam Chair-

man, I yield 5 minutes to the gentleman from Ohio (Mr. GRADISON).

Mr. GRADISON. Madam Chairman, I thank the gentleman for yielding.

Madam Chairman, I would like to continue the point just raised by my colleague, the gentleman from Missouri (Mr. GEPHARDT), and talk a little bit about what situation we are likely to be in a year from now when this 1-year extension expires.

I think many of us on the full committee and on the subcommittee have been concerned that we might not have the kind of information we would like to have on many of these issues which relate to unemployment compensation, and I hope that we can have more complete information by the time a future extension comes before us, about a year off.

Madam Chairman, it was evident both in the subcommittee and in the full committee, as well as during consideration of this matter by the Committee on Rules, that, to a large extent, the disagreements were not just philosophic, but also had to do with the facts.

What happens if we have an extension of 65 weeks of benefits as compared with 52 weeks or 39 weeks? What happens when benefits are exhausted? Do those whose benefits are exhausted go on public assistance? What will happen to those individuals covered today when the maximum benefit period declines from 65 weeks to 52 weeks, which this bill will provide?

What effects will the new work suitability test really have once it is put into effect? Are benefits too high or too low? To what extent do the present benefits under the present system affect both the rate and duration of unemployment?

Madam Chairman, in June of 1975 Congress mandated the Secretary of Labor to develop a comprehensive report on the Federal supplemental benefits program. The report was to address several important issues as well as to develop information regarding the employment, economic, and demographic characteristics of individuals receiving FSB payments.

The report also was to address the needs of long-term unemployed relating to job counseling, testing, referral, and placement services as well as an examination of the other benefits for which individuals receiving FSB would be eligible.

As a result of this mandate, the Department of Labor recently submitted a report to the Congress entitled, "A Study of Recipients of Federal Supplemental Benefits and Special Unemployment Assistance." The report is exceptionally useful and provides a good deal of significant information with regard to the characteristics of Federal supplemental benefits recipients and their needs. However, in my view, the report simply does not go far enough.

Madam Chairman, I urge the Department of Labor to take the steps necessary to follow up on its earlier report and to obtain additional information concerning those individuals who have exhausted their benefits under the FSB program. I urge the Department to do this with an eye toward determining what happens to these exhaustees. How is their labor market participation affected?

Also, we need more information about job disincentives both across the board and for various subsets of the universe of individuals affected by the program.

This information probably can be obtained through additional interviews with some or all of the individuals who were interviewed in connection with the original Department of Labor report.

Madam Chairman, I sincerely hope that the distinguished chairman of the Subcommittee on Public Assistance and Unemployment Compensation, the gentleman from California (Mr. CORMAN) will consider joining with me, and I believe with the gentleman from Missouri who spoke just before me, in urging the Department of Labor to continue its efforts with regard to further studies which might be helpful to all of us a year from now.

Mr. CORMAN. Madam Chairman, will the gentleman yield?

Mr. GRADISON. I yield to the gentleman from California.

Mr. CORMAN. I certainly join the gentleman in urging the Department of Labor to continue that study and trying to get answers to the questions which the gentleman has raised. It is extremely difficult for us to identify the characteristics of the people whose regular benefits are exhausted, and what happens to people after their final supplemental benefits are exhausted.

Undoubtedly the best way to get at this is to continue the studies which the Department of Labor has already started.

I thank the gentleman from Ohio for calling this to the attention of the Department of Labor and to our attention.

Mr. GRADISON. Madam Chairman, I thank the gentleman.

Mr. VANDER JAGT. Madam Chairman, I yield 7 minutes to the gentleman from Minnesota (Mr. FRENZEL).

Mr. FRENZEL. Madam Chairman, there are going to be very few votes against H.R. 4800 today, but my own vote will be one of them.

But, lest other Members dismiss my opposition to unwarranted extension of Federal supplemental benefits as excessively negative, they ought to be reminded that the Unemployment Compensation Subcommittee of the Ways and Means Committee last year decided not to extend FSB. That is why the bill now is called an emergency bill. Since that decision, the economy has continued to improve and employment has continued to increase. There is less justification for extending FSB now. It is time for Congress to stop programs designed, and poorly designed at that, for the depths of a recession. Nevertheless, like other forms of congressional largesse, FSB will not fade away. Several speakers have already alluded to further extensions.

Incidentally, although the first 13 weeks of FSB—which we are extending today—were granted through the regular legislative process, the second 13 weeks—which we are repealing—were granted as a result of a Senate nongermane amendment to the Tax Reduction Act of 1975. Thus do we carefully write unemployment compensation law.

FSB, because it adds what is generally conceded to be a wefare aspect to unemployment compensation, has distorted both the intent and operation of the system. The concept of the basic unemployment compensation system is a good one. It provides temporary assistance to people who have had attachment to the labor market and who are actively seeking work. But FSB, in giving benefits up to 65 weeks—which can be "earned" by minimal labor market attachment of two quarters or less—provides a strong disincentive to work. Rather, it is an incentive to remain unemployed.

Extension of FSB will help some unemployed people, who could also be helped through other programs, but it will inevitably help to keep unemployment high. In that sense, FSB is a self-fulfilling prophecy. According to the Department of Labor, from its monthly telephone survey which polls American households, there are about 7 million Americans seeking full or part time work. About half of these people have been laid off. This group nearly always is recalled or finds work, usually in a short period of time. The average duration of unemployment is, of course, an average of many short durations and a few very long ones.

The other half of the people unemployed are those who have quit jobs, new entrants, and reentrants. Since the laid-off group is usually recalled, this second group is the one to which the FSB program is mainly directed.

The program operates under State laws. Therefore, State suitability of work provisions have applied. Disqualifications from benefits for refusing suitable work are very infrequent and occur mostly when employers protest unemployment compensation claims for employees they have recalled but who have not come back, or for people who have quit. The suitability of work provisions in this bill will have no significant effect on encouraging people to return to work because the FSB claimant is typically not a person who is being reoffered a job. Since most job offerings are not listed with the Employment Service, and because employers are no longer liable for benefits, no person will, nor agency can, raise the challenge that a claimant has refused suitable work. The provision in this bill is a nice try, but it will not put many people back to work. Whatever small effect it has will be grossly outweighed by the work disincentive created by the offer of extra weeks of compensation.

One of the bad effects of FSB is that it diverts our attention from the real need to attack structural unemployment. We are simply covering problems under a pile of money rather than attempting to solve them. We could have begun solid work on unemplopment, apprenticeship, and training programs. Instead we are giving people a good excuse not to go to work. A favorite phrase in my State is, "Why should I go to work for $25 a week." That's the difference between unemployment compensation benefits and take home wages for a typical claimant. Unemployment compensation benefits are

not taxable and claimants are relieved of the expenses of union dues, commutation costs, and so forth.

The cost and financing of the program alone are enough to demand the termination of FSB at this time. In 1975, $2.27 billion was paid out for FSB. In 1976, the cost jumped to approximately $2.83 billion. H.R. 4800 would cost taxpayers $588 million, in the remaining part of fiscal year 1977 and $530 million in fiscal 1978, thus totaling over $1 billion.

Until now, the FSB benefits have been paid out of unemployment trust funds with the obligation that States must repay these funds. H.R. 4800 makes FSB benefits payable from the Federal Treasury—from our $75 billion deficit. This throws the unemployment compensation burden on the general taxpayers. They will pay it twice; first, in FSB benefits, then in interest on Federal borrowing and inflation.

The assumption of the costs by general taxpayers replaces the normal unemployment obligations of employers. So H.R. 4800 has the ironic effect of having middle-income taxpayers bail out our large corporations from their normal liabilities. In addition to the corporate bailout, taxpayer financing makes this a genuine welfare plan.

H.R. 4800 also allows States to defer payments on previous borrowings from the trust funds. This feature, and the general taxpayer financing, give the States the hope—false, I hope—that the Federal Government will also bail out past debts. If this bill does not shatter the experience rating concept, this hope certainly does.

We have a chance today to get rid of a disincentive to employment. At the same time we could prevent making the general taxpayers bail out our corporations. We will not accept this opportunity, and that will be a pretty good example of why we have not done a very good job in handling a problem most Americans believe is one of our national priorities.

Mr. CORMAN. Madam Chairman, I yield myself 1 minute to respond to a couple of points just raised.

First of all, the covered unemployment rate at the present time is higher than it was when this program was initiated in December 1974. I agree with the gentleman we would be better off if we required employers to list all jobs with the employment service. The subcommittee recommended that, but the minority and full committee successfully had it stricken from the bill.

If the people in the gentleman's district are saying, "Why should I work for $25 a week?" say, why, indeed?

Madam Chairman, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. MICHAEL O. MYERS).

Mr. MICHAEL O. MYERS. Madam Chairman, today the House will consider H.R. 4800, the Emergency Unemployment Compensation Act of 1977. Although I will cast my vote in support of this legislation, I do not feel that H.R. 4800 adequately addresses the plight of our Nation's unemployment. This bill is at best a halfway measure that attempts to placate and not to constructively ease the financial conditions of the unemployed worker.

The economic situation in this country has not substantially improved since the Federal supplemental benefits—FSB—program was established in 1974. In February, the unemployment rate nationwide stood at 7.5 percent. In real terms that is 7.1 million Americans who cannot find work. Of that number, 63 percent are eligible to receive and are now receiving unemployment insurance benefits. These figures do not support any idea that the employment situation in this Nation is improving. In my State of Pennsylvania alone there are over 452,000 persons who are unemployed. Almost three-fourths of that group are receiving unemployment compensation of some type. Yet, this bill that we are considering today will decrease by one-half—from 26 to 13—the number of weeks of additional benefits available to these individuals.

Additionally, at the time of enactment of this legislation, the unemployed worker who has already received 52 weeks of benefits will be cut off without notice from further financial assistance. For many of these people unemployment compensation is their only means of support. As of April 1, how will they make their mortgage payments or car payments; how, may I ask, will they buy food for themselves and their dependents? In essence, we will be pulling the rug out from under these citizens. Their only available course of action will be to apply for welfare.

It seems to be the climate of this Congress to consider the FSB program as synonymous with welfare. This is a great injustice to the industrious American worker who has been laid off not through any fault or incompetence of his own, but because of the serious economic situation that faces this Nation.

The rationale used by the administration and others for decreasing the FSB program is that some 600,000 public service jobs will be made available. However, when one considers that only 60,000 jobs will be allotted per month and that they will have to be doled out among all 50 States, the impact is substantially diffused. Even if 1 entire month's allotment were given to the Commonwealth of Pennsylvania, it could be considered as no more than a drop in the bucket toward improving the situation. It is a serious misconception to consider that 600,000 jobs spread out over the 50 States will go any distance toward eliminating the high unemployment rate and thereby eliminate the need for a full unemployment compensation program.

There is another area of this legislation that seriously disturbs me. It is the "suitability of work" clause. Under this provision, should a State unemployment compensation office determine that the chances are poor for an eligible claimant to obtain work in his usual job, then that individual would be required to accept work regardless of whether it pays lower wages or requires lesser skills than his normal occupation. This clause has the potential to entrap many workers in jobs that do not fit their educational background, their technical skills, or their career goals. Once a highly skilled carpenter, for example, has been forced to accept a job as an unskilled janitor or garbage collector, it will become increasingly more difficult for him to seek and to obtain employment in his normal line of work. This problem is even more prevalent in white-collar jobs, As I am sure you can realize, if a college-educated worker is forced to accept a position as a file clerk, he would find it most difficult to ever be considered for a job in an executive position. Once a person has become "stereotyped" into a job beneath his educational or technical experience, it becomes almost impossible for that person to ever climb above that position. The most disturbing factor of this provision is that it has the potential to waste a great deal of this Nation's most valued resource, our citizens, in positions for which they are definitely overqualified.

There is no one, I am sure, who will deny that our Nation is today faced with one of its most serious crises in the form of recession accompanied by spiraling inflation. Also, we know that Government spending must be curtailed at some point. But it should not be done by abandoning our unemployed at a time when they need our assistance the most. Let us not forget that the persons we are discussing have in the past made major contributions not only to the gross national product of this country but also to the Federal Government tax coffers. They deserve from us far better treatment than what we are giving them today.

Mr. CORMAN. Madam Chairman, I yield 7 minutes to the gentleman from Virginia (Mr. FISHER).

Mr. FISHER. Madam Chairman, I would like to speak in favor of H.R. 4800, the Emergency Unemployment Compensation Extension Act of 1977. The bill extends the Federal supplemental benefits—FSB—program of unemployment compensation for 1 more year, permits the benefits to be paid in local areas of high unemployment as well as States, and prohibits the payment of FSB to individuals who refuse suitable work or fail to actively seek work. The bill provides for the payment of a maximum of 13 weeks of FSB for a combined maximum of 52 weeks of various unemployment benefits. This extension of FSB will be financed out of general revenues rather than employer-paid Federal unemployment taxes.

I support this extension of FSB benefits, although I am sorry that it is necessary. The economy has improved since the FSB program was first passed in 1974, but the national unemployment rate is still over 7 percent. In many States and local labor markets all across the country there are hundreds of thousands of workers who have been unemployed long enough to have exhausted their regular and extended unemployment compensation benefits—usually a maximum of 39 weeks. If the economic conditions are such that these workers still cannot find suitable work, as is now the case for most of them, then the Federal Government has an obligation to continue to provide the partial replacement of wages offered by the FSB pro-

gram. Unless this bill is passed some half a million individuals, it is estimated, will be cut off from receiving benefits, and cut off suddenly.

Under present law a worker can be disqualified from unemployment compensation benefits if he or she refuses suitable work. The provisions governing the suitability of work vary from State to State. I have become concerned that, especially in areas of persistent, high unemployment, the suitability of work requirement may actually be operating in a way that inhibits return to work. When an individual is unemployed because his line of work is becoming obsolete or because the factory where he worked has closed down permanently or relocated, then his chances of being recalled to his old job or finding a new job similar to the one he lost are not very strong. If that worker is to be reemployed he will very likely have to change his expectations. He cannot expect a job just like his old one and may well have to take one rather different. Yet the existing suitability of work provision in unemployment compensation laws does not encourage this and in fact permits a worker to decline jobs that differ in certain respects from his previous employment.

The bill reported by the Ways and Means Committee has a new suitability of work provision. The new provision states that suitable work for an individual may have lower pay or require less skills than the worker's customary occupation. This provision would be applied in cases where the State unemployment agency determines that the individual's chances were poor for obtaining work in his customary occupation. Furthermore, the new provision applies only to FSB. Thus a worker would first have 39 weeks to seek work in his customary occupation before he would be required to accept work that might be less desirable. Other protections for the worker include provisions that the suitable work must pay at least as much as the minimum wage or at least as much as the unemployment compensation benefit—plus 20 percent for work expenses, taxes, and so on—plus any supplemental unemployment benefit which the previous employer may be paying. If a worker refuses a suitable job, defined in this way, which was either listed with the State Employment Service or offered in writing by an employer, then he would be disqualified from the FSB program.

I strongly favor the new suitability of work provision. During the debates on the economic stimulus measures recently passed by this House I indicated that part of its benefit would be psychological, that it would get people to thinking positively about spending, hiring, and investing, and so on. I think that this new suitability of work provision is in the same category. The sooner that unemployed workers begin looking for and accepting many different kinds of jobs rather than relying on long-continued unemployment compensation benefits the better the outlook for them and the economy.

Another important element of H.R. 4800 is the change to Federal financing of the 13-week FSB program after March 31, 1977. This bill considers that the worker who has been receiving some form of unemployment compensation for 39 weeks should then be required to accept work meeting less stringent suitability standards because, in many cases, his prospects of returning to his former or a similar job are poor. Similarly, this bill considers that the benefits to be paid after 39 weeks, the FSB payments, are different from the earlier benefits. The workers' unemployment thereafter can more plausibly be attributed to general economic conditions and not solely to the particular business situation of his former employers. For this reason the benefits should be financed by general revenues rather than by the tax on employers.

I think this is a good bill. It breaks new ground with the suitability of work provisions and I look forward to good results. I hope that the 1-year extension of FSB combined with the new economic stimulus measures will be sufficient and that a year from now there will be no need for such a long period of unemployment compensation benefits. I urge my colleagues to join me in supporting this bill.

Mrs. FENWICK. Madam Chairman, will the gentleman yield?

Mr. FISHER. Yes, indeed.

Mrs. FENWICK. Madam Chairman, I have a question of the gentleman, or the chairman of the committee. A most curious case arose in my district. I wonder if this was proper under the bill. A worker was let go only because the worker was discovered to be working without a green card; in other words, had come in on a visitor's permit, had not told the employer that this was illegal and that she had no green card and, therefore, would have to be let go.

The CHAIRMAN. The time of the gentleman from Virginia has again expired.

Mr. CORMAN. Madam Chairman, I yield 1 additional minute to the gentleman from Virginia.

Mrs. FENWICK. Madam Chairman, if the gentleman will yield, the employer got in touch with me and said he was required to pay unemployment. Is this proper?

Mr. CORMAN. Madam Chairman, will the gentleman yield?

Mr. FISHER. I yield to the gentleman from California.

Mr. CORMAN. Madam Chairman, if one does not have a green card, he or she should not be eligible for work. And if a person is not eligible for work, he cannot be available for employment and, therefore, should not be able to draw unemployment compensation.

Mrs. FENWICK. The woman had been getting unemployment and the State unemployment people said that it was all right.

Mr. CORMAN. The State should be requiring her to be actively seeking employment and available for work. As you describe the situation, she could not be fulfilling those requirements and therefore, should not be given unemployment benefits.

Mrs. FENWICK. She has come back and the Immigration Department allowed her in and she got a green card.

Mr. CORMAN. If she has worked in covered employment, is presently legally in the country under the immigration laws, and is actively seeking employment, she could be eligible.

Mrs. FENWICK. She has refused to return to the job. It is an extraordinary story.

The CHAIRMAN. The time of the gentleman from Virginia has again expired.

Mr. CORMAN. Madam Chairman, I yield myself 1 minute and I yield to the gentlewoman from New Jersey to conclude her question.

Mrs. FENWICK. Madam Chairman, this woman arrived and was working, as I say, when it was discovered, she had been there about a year. When it was discovered that she had no green card, they had to let her go. Then she disappeared, apparently went back home, came in again. The Immigration Department gave her a visa and she got a green card. Then she applied for unemployment compensation and the employer said, "Look, I want you back."

She said, "I can't come, because I have five children and I can't leave them in Brooklyn."

So she is getting unemployment compensation.

Mr. CORMAN. She lives in a different community from the place she is applying?

Mrs. FENWICK. She apparently is.

Mr. CORMAN. But she did not live in a different community from where she worked?

Mrs. FENWICK. She used to live in Brooklyn, but went home at the day's end.

Mr. CORMAN. Where did she live then?

Mrs. FENWICK. She lived in New Jersey.

Mr. CORMAN. She should be required under State law to seek and accept offers of suitable work. If she refuses suitable employment, she should be disqualified. Of course, the work requirements are administered by States.

Mrs. FENWICK. What can be done about it?

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. CORMAN. Madam Chairman, I yield myself 1 additional minute.

Mr. STEIGER. Madam Chairman, will the gentleman from California yield?

Mr. CORMAN. I would be glad to yield to the gentleman from Wisconsin for an answer.

Mr. STEIGER. Madam Chairman, the distinguished gentlewoman from New Jersey raised the very same issue, as the Members will remember, last year. In fact, the gentlewoman asked the subcommittee about this specific case last October.

My understanding was that we were going to refer the specifics of this case to the Study Commission.

The question the gentlewoman has raised is a very interesting one. I think it ought to be examined. The problem is that we do not have a Study Commis-

sion; so the answer to the question as to what to do is being held in abeyance until we give the Study Commission a chance to look at it.

Mr. CORMAN. Madam Chairman, I thank the gentleman for his answer.

Mr. VANDER JAGT. Madam Chairman, I yield 5 minutes to the gentleman from Wisconsin (Mr. STEIGER).

Mr. STEIGER. Madam Chairman, I rise to oppose enactment of this measure. It is probably the most misguided piece of unemployment compensation legislation to come before the House during my service here. I have two basic problems with the bill that is before us.

First of all, last year the Subcommittee on Unemployment Compensation—since abolished by the Committee on Ways and Means, much to my regret—indicated that the program should be allowed to expire. I think there was good reason for that then, and I think we should not now extend it. The deadline is here, and once again we are being asked to extend the termination date. I think it is unreasonable and unnecessary.

There are some who contend—and I disagree with them—that those who are now receiving FSB will be caught unprepared at the end of this month if we let it terminate. I think that, again, is without substance. The subcommitee's action last year was a clear indication of congressional intent to terminate this program.

There are a number of problems with the bill before us, and I must say that I exceedingly regret that I find myself in the position of opposing the gentleman from California and the distinguished gentleman from Michigan regarding this particular bill. I worked to have FSB created. I believe it was appropriate at the time, but I believe there comes a time in the life of every Federal program, including this one, when one must begin to analyze whether, in fact, the program deserves to be continued. I think this program does not deserve to be continued. Economic circumstance do not give any indication that there is justification for extending the program.

There is a second problem; it has to do with whether we want to be giving, in effect, a signal to the States. There are some 22 States which have at this point borrowed about $4 billion from the Federal Government as a result of their own inability to finance unemployment compensation benefits. There has been discussion over the past year to the effect that the Federal Government will, at some point, forgive that indebtedness. I strongly oppose any such action; I think it would be grossly unfair to States, such as Wisconsin, which have taken steps to raise their own revenues. Financing FSB with general revenues is a clear signal to those 22 States and to other States which might be in debt that we will not seriously attempt to recoup these losses.

There is a particular provision in the bill very dear to the heart of my friend from Michigan (Mr. VANDER JAGT). It would defer for another 2 years the repayment of the outstanding debts owed by the States to the Federal Government through reductions in employer payroll tax credits. I think that the provision is wrong, and I am distressed to see us undertake this effort in spite of the fact that I realize there is some political support for it on the part of Members of this House. It is a clear signal to those States now in debt to the Federal Government that they do not have to worry too much or too soon about paying their debts. I find this to be exceedingly unwise.

Thus, Madam Chairman, for these and other reasons I think that the bill is a bad bill. I think it ought not to be adopted and ought not to be passed.

I am most disturbed, may I say, that I have yet to hear from the chairman of the subcommittee, or even my ranking member, any clear indication that this is it. It will not surprise me in the slightest if we are back discussing this very program and calling for another emergency extention into March 1979.

At that point, what we ought to do is go back retroactively and pick up the full burden for this program. We should put it on the general taxpayers instead of putting it on the backs of the employers. I would vote for that concept as a way of shifting the burden, but I have yet to hear from my distinguished, able, and very innovative and creative chairman. Just as sure as I am standing here, we are going to be back again with another emergency at the end of this year, saying, "Let's extend FSB again." Mark my words.

Mr. CORMAN. Madam Chairman, will the gentleman yield?

Mr. STEIGER. Yes, I will be happy to yield to the gentleman from California (Mr. CORMAN) if I have any time left.

Mr. CORMAN. I thank the gentleman for yielding.

The gentleman seemed to be asking my view about extension. I would say it would depend almost entirely on the rate of unemployment in March 1978.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. VANDER JAGT. Madam Chairman, I yield 2 additional minutes to the gentleman from Wisconsin (Mr. STEIGER).

Mr. CORMAN. Madam Chairman, will the gentleman yield further?

Mr. STEIGER I yield to the gentleman from California (Mr. CORMAN).

Mr. CORMAN. Madam Chairman, I sincerely hope and expect that the covered unemployment rate will be well below 5 percent of the Nation and will be below 5 percent in almost all of the States. Therefore, we will not need to extend FSB.

I would also hope that we might have devised some kind of Federal public assistance program which addresses the needs of the exhaustees who have serious family obligations, no assets, and no opportunity to work; so that we will not continue to use unemployment insurance as we have tended to, to fill the gaps of a very inadequate Federal public assistance program.

Mr. STEIGER. I thank the gentleman very much for his comments. May I say that he has made a valiant effort to give an answer, but his remarks do not answer my question. What the gentleman is saying, and I understand that, is that perhaps circumstances will justify yet another extension. I think at some point, frankly, we have to do what I thought we had done last year, which was to put everybody on notice that it was not going to happen. Having failed to do that, it will not surprise me to see yet another effort to extend this program.

Mr. CORMAN. Madam Chairman, I yield such time as he may consume to the gentleman from Indiana (Mr. BENJAMIN).

Mr. BENJAMIN. Madam Chairman, I rise in support of H.R. 4800 with reservations as demonstrated by my voting against the rule which foreclosed all amendments except Committee amendments on this bill.

I do want to thank the distinguished gentleman from California (Mr. CORMAN) for his work and that of his subcommittee in bringing this legislation to the floor, the major part of which I strongly advocate and support.

However, the measure falls short in at least two instances.

First, it appears, by the changes proposed to the 1974 act in this bill, that the unemployed worker who has already received 52 weeks of benefits will be cut off from further financial assistance without notice although they are assured, in some instances, of 65 weeks under present law.

Because the present law is governed by State insured unemployment rate figures, the Gary-Hammond-East Chicago area of northwest Indiana has not received Federal supplemental benefits since April 1976. Therefore, the scheme of local market area trigger or qualification is far superior to any National or State eligibility factor in recognizing the pockets of unemployment.

On the other hand, the "insured unemployment rate" factor leaves much to be desired. For instance, Report No. 95–82, accompanying this bill, indicates on page 5 that Indiana is not eligible as a State because its trigger rate as of February 19, 1977, is 3.85 percent.

On page 15 of the report, the only local market area in Indiana purportedly eligible under the provisions of this bill for Federal supplemental benefits is Evansville. My contact with the Department of Labor also indicates that the Fort Wayne area of Indiana may also be eligible.

I have no qualm with the eligibility of Evansville and Fort Wayne, or even that of neighboring Chicago which is found to be eligible while Gary-Hammond-East Chicago, a part of the same metropolitan area, is not. To expand on this, the Gary-Hammond-East Chicago area has a labor force of 273,300 according to the Department of Labor. By the same source, it has 19,000 unemployed to which I parenthetically add that 19,000 is a very conservative and inaccurate figure being based on the national survey. Regardless, this means a raw unemployment rate of 6.9 percent, seasonably adjusted to 6.3 percent.

Meanwhile, the Fort Wayne area has a 5.5 percent unemployment rate, seasonably adjusted to 4.9 percent. Likewise, Evansville has a 6.2 percent unemploy-

ment rate, seasonably adjusted to 5.3 percent.

On this minute examination, the inequities in Indiana, if not nationwide, are readily apparent.

Earlier, Mr. CORMAN, in a response to Mr. SMITH of Iowa, discussed a similarly defenseless shortcoming of this bill.

The funding of the 1974 act was provided by repayable advances from Federal general revenues to the extended unemployment account in the Federal unemployment insurance trust fund. Under this funding mechanism, there was some justification for the use of the insured unemployment rate as a trigger.

However, under the provisions of this bill. the funding is the general revenue funding for FSB weeks ending after March 31, 1977. The taxpayers or the Nation will provide $588 million in fiscal 1977 and $526 million in fiscal 1978. Some of those taxpayers are from the Gary-Hammond-East Chicago area whose brethren, and family members, form the ranks of unemployed in that area who will get no relief under the provisions of this bill.

Finally, what relevance does the insured unemployment rate have in this bill? Whether the unemployed person is trying to gain admission to the labor market, is returning to the labor market or is being eased out of a job because of existing economics, the competition is for the same job by all of these persons.

My request is that this bill be considered further to maintain Federal supplemental benefits at a maximum of 65 weeks and that the trigger be the unemployment rate of the labor market area and not the insured unemployment rate which is truly inequitable and unfair in its present form.

While I will vote for this bill, it is with reluctance because of the aforementioned shortcomings.

Mr. CORMAN. Madam Chairman, I yield 5 minutes to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Madam Chairman, there are many good reasons why this bill should not be passed in its present form, not the least of which is that it is a public assistance bill masquerading under the title of unemployment insurance.

On the whole our unemployment compensation system has worked well since its institution in 1935, during the Great Depression. Employers as well as employees supported the system because it provided relief for those temporarily thrown out of work because of the general state of the economy.

When we first enacted the Federal supplemental benefits program in December 1974, we were told that it was only a "temporary" program. Now, this legislation would extend it through March of 1978 and there may be a few doubting that there will be no attempt to continue it at that time, but I am not among those.

Most recipients of unemployment insurance draw benefits for about 15 weeks before they get their old job back or find a new job. But by allowing people to draw benefits for 1 year we are discouraging people from looking for work. This has been confirmed by many studies, including the works of Harvard economist Martin Feldstein. Professor Feldstein has pointed out that the untaxed payments of recipients in many States replace almost all of their lost wages and in some instances, exceed their previous pay.

During the 94th Congress the Unemployment Compensation Subcommittee of Ways and Means, of which I was a member, decided that the FSB program should be discontinued on March 31, 1977.

The "targeting" provisions in the bill aggravate another inequity. By providing for extended payments in standard metropolitan statistical areas of more than 250,000 and high unemployment we exclude those SMSA's in Texas—Laredo, McAllen, Sherman-Denison—which have high jobless rates but not enough population to qualify.

In addition, the Congressional Budget Office estimates that the cost of area trigger program will add $228 million to the budget over the next 2 fiscal years. Overall, it adds some $588 million in 1977, and nearly the same amount in 1978.

I urge you to put a stop to the dangerous road that the unemployment compensation program has been heading, and vote against the bill.

Mr. VANDER JAGT. Madam Chairman, I yield 7 minutes to the gentleman from California (Mr. KETCHUM).

Mr. KETCHUM. Madam Chairman, it seems as if we are debating this bill with the very same Members who were present in the subcommittee when we debated it there. I do not see very many other Members here.

I would like to concur with the statement of my friend, the gentleman from Texas (Mr. PICKLE), that what we really are talking about is a welfare program. We might call it a middle-class welfare program, if you will. Most people who work for a living object strenuously to welfare payments, as well they might, until they need them. When they do need them they must be sugar-coated with another name, such as an emergency unemployment program. Nonetheless, it is the same type of program. So it is in fact a middle-class welfare program of a sort.

I was also interested in the remarks of my friend, the gentleman from Wisconsin (Mr. STEIGER), who said that he had helped create this program and now felt that it should be phased out. I would only wish that my friend, the gentleman from Wisconsin, felt that strongly about the Occupational Safety and Health Act, of which he was also a parent.

Madam Chairman, I have opposed this bill for the past year or so and find myself now in the position of supporting it nominally for what I consider to be a reason that is at least reasonably good. We have found ourselves over this past winter, as an example, with rather abnormally high unemployment, not created by employers and certainly not created by employees. We are going to find ourselves in the western United States encumbered by the very same problem as unemployment reaches rather unacceptable highs due to the drought situation which we find ourselves in. So we come to the consideration of a bill that attempts to solve, at least on a spot basis, those areas of abnormal unemployment.

Madam Chairman, with the bill constructed as it is, I think that I can support it, at least for the 1-year period.

I think the gentleman from New York (Mr. RANGEL) in his attempt to spot these areas of unemployment did us a favor. Instead of going to a national trigger, he went to an area trigger based upon metropolitan statistical reporting areas.

Madam Chairman, I am not saying, nor did anyone on the committee say, that this is the be-all-and-end-all and the complete answer. The point is that this has not been tried this way before, and perhaps it would be beneficial. If we find that it is not, then it can be changed.

Madam Chairman, there was one gratuitous remark addressed to the committee by my friend and colleague, the gentleman from California (Mr. CORMAN), the chairman of the committee, that deals with reporting, that is, being required to report job availability to the Employment Service.

Quite frankly, there is no reason at all that employers should be required to report to the Employment Service. The gentleman from California (Mr. CORMAN) indicated that the minority thrust this provision into the bill. I need not point out to the Members of this body that the Committee on Ways and Means consists of 25 majority members and 12 minority members. Therefore, it is hardly possible for the minority to thrust anything on anyone.

Madam Chairman, the point is that the Employment Service has had such a dismal record all over the United States that employers simply do not use them because what they get from the Employment Service usually is people who are really not the most desirable.

Consequently, Madam Chairman, the gentleman from Wisconsin (Mr. STEIGER) offered an amendment in committee to allow for either/or—either a written offer of a job or the job being offered through the Employment Service.

I think that perhaps answers that problem when we reach the suitability of work provision.

We do not touch this suitability of work provision as it applies to the insured portion of unemployment in the first 39 weeks. We do feel, however, that after the 39-week period, if we are indeed going to fund it, the very least we can ask anyone to do is to take a job that is offered which will pay at least as much as the benefits the individual would have received from unemployment compensation.

That figure, Madam Chairman, comes to 120 percent of benefits. That is a most generous figure, Madam Chairman, and 109.6 percent would have been an adequate figure. We went to 120 percent to take care of any of those contingencies that might arise which we had not addressed.

Therefore, I think that what we have

before us is about the most reasonable attempt to solve a pressing problem.

There is objection to the Federal payment rather than to dumping this burden onto the employers. I would not hesitate to point out to the body, however, that when we have an earthquake or a flood and now a drought, all of the people of the United States participate in meeting that disaster. That is, in essence, what we are asking here: When these unemployment figures reach unacceptable levels, the Federal Government; that is, all of us, participate in meeting that disaster.

I think, Madam Chairman and Members of the House, that we have a bill that we can support to extend this program for 1 year. At the end of this year, we will know whether the suitability of work provision worked, whether the Federal payment provision worked, and whether or not our unemployment figures have dropped to any appreciable degree.

If none of it works, I will find myself, hopefully, standing in this well asking for a "no" vote. At this time vote "aye."

Mr. CORMAN. Madam Chairman, I yield myself 1 minute.

Madam Chairman, I do not know what the condition of the economy will be in a year from today. I hope unemployment will be considerably lower than it is now. I hope we have seen the last of FSB because in a year from now we will no longer need it. I also hope that between now and next year we come up with a more adequate and equitable Federal public assistance program so that we do not have to use unemployment compensation for, as the gentleman from California (Mr. KETCHUM) very accurately stated, a middle income public assistance program.

Madam Chairman, I urge an aye vote on the bill H.R. 4800.

Madam Chairman, I sincerely thank the gentleman from Michigan (Mr. VANDER JAGT) for the contribution he has made to H.R. 4800 as well as the other members of the subcommittee.

Mr. COTTER. Madam Chairman, I rise in support of H.R. 4800, the Emergency Unemployment Compensation Act of 1977.

I will not take the time of the Members to review each of the provisions of the bill since it was done by the gentleman from California (Mr. CORMAN).

I do, however, want to call the attention of my colleagues to section 201 that delays the 0.3 percent penalty until January 1, 1980, for those States that have been forced to borrow from the Federal Treausry to pay their unemployment compensation payments.

My State of Connecticut and other States which are enjoying the delay in the penalty tax are taking steps to put their unemployment compensation funds in a better financial position. To force these States to accept a penalty tax in 1978 would put an additional burden on those States which are experiencing the highest unemployment rates in the United States.

Under the current law, and under the current 2-year extension of section 201, the Secretary of Labor must make a determination that the State "took appropriate action to substantially accomplish the purposes of restoring the State's unemployment account in the unemployment trust fund * * *."

Those States which are receiving the delay under current law must take appropriate action similar to that taken by Connecticut which last year raised its tax base to $6,200. But to reimpose a penalty tax in 1978 makes no economic sense.

Madam Chairman, I would be remiss if I did not acknowledge the efforts of my colleague from Michigan (Mr. BRODHEAD) a member of the subcommittee who provided invaluable assistance in securing this additional 2-year delay.

The delay will enable the National Commission on Unemployment Compensation to report back on this problem by July 1, 1979.

I include my remarks before the Subcommittee on Unemployment Compensation on this issue at this point in the RECORD, and I urge my colleagues to support H.R. 4800.

TESTIMONY OF HON. WILLIAM R. COTTER, BEFORE THE SUBCOMMITTEE ON PUBLIC ASSISTANCE AND UNEMPLOYMENT COMPENSATION OF THE HOUSE WAYS AND MEANS COMMITTEE

Mr. Chairman, members of the subcommittee: I would not take the subcommittee's time unless I felt the problem of depleted State unemployment compensation funds deserved your attention as you prepare an extension of the Federal supplemental benefits program.

A total of 23 states have been forced to take out loans from the Federal treasury as the demands of high unemployment exhausted their U.C. funds. The failure of these states to recover fully from years of recession is the major reason for their present indebtedness.

Under the terms of the Federal U.C. loans, the states involved have three years to repay the debt, or face an annual employer penalty tax of three-tenths of one percent. For each year the debt remained unpaid, an additional three-tenths of one percent would be added to the penalty.

In 1975, Congress realized that implementation of this tax would impose an additional burden on state economies still suffering from high joblessness. The tax, in fact, would put state employers at a competitive disadvantage and hurt their efforts to restore the jobs lost during the recession. Such a result would make it more difficult for the states involved to reduce their unemployment compensation debt.

Realizing this problem, Congress voted to delay imposition of the penalty tax until January 1, 1978, provided that the States demonstrated an active effort to finance their U.C. funds.

Now, as the new deadline approaches, the problem remains unsolved.

In addition to Puerto Rico and the District of Columbia, 11 States face the penalty tax if the deadline is allowed to pass. These States are: Alabama, Connecticut, Delaware, Illinois, Maine, Massachusetts, Michigan, Minnesota, New Jersey, Pennsylvania and Rhode Island. Six other States, which took out loans in 1976, conceivably could be penalized after their three-year grace period has elapsed.

All of the economic models I have seen show there will be no significant relief for the unemployment compensation burden of these States until the 1980's. I therefore ask this subcommittee to consider an extension of the penalty tax suspension until January 1, 1980. (The suspension provision can be found in Sec. 110(a) of Public Law 94–45 and Sec. 3302(c)(3) of the internal revenue code.)

Such an extension will give Congress the opportunity to review the findings of the national commission on unemployment compensation, which is required to report to Congress by January, 1979, with a plan to overhaul the entire U.C. system.

Thank you very much for allowing me to take a few minutes of your time. With your permission, Mr. Chairman, I would like to insert a more complete analysis of the problem along with my testimony into the hearing record.

INSERT TO TESTIMONY OF HON. WILLIAM R. COTTER, FEBRUARY 22, 1977

Title IX of the Social Security Act authorizes loans to help states pay unemployment compensation when their unemployment compensation funds have been depleted.

As the subcommittee knows, taxable payroll tends to be low when demand for benefits is highest. Therefore, if there were no u. c. loan provision in the Internal Revenue Code, adverse economic conditions could create a situation in which the need for benefits outstripped the state's revenue resources.

The basic law (Sec. 3302(c) of the Internal Revenue Code of 1954) provides not only for loan repayments, but also for penalties to be imposed if repayment is delayed after a specified time period. The penalty, an increase in federal unemployment taxes for employers, is effective if the state has not made full repayment by November 10 of the year which begins on the second January 1 following the date the loan was made.

The law levies an unemployment tax of 3.4 per cent on employers and then forgives 2.7 per cent if the state has an approved unemployment compensation law. Because all states have such a law, the effective federal tax is 0.7 per cent. Revenue from this tax is used to pay both the federal and state administrative costs for the program, to create the loan fund and to finance the federal share of the additional benefits paid in periods of high unemployment.

Section 3302(c) provides that when a state has not repaid its loan within the specified period, the federal employer tax for that state will be increased by 0.3 per cent and that additional increases of the same amount will be added for each subsequent year the loan remains unpaid.

This provision should be unnecessary when high unemployment is a temporary problem. The state should be able to get on its feet quickly and repay the loan without a significant drain on its resources. In 1975, however, Congress recognized that the states still in debt to the federal Treasury were facing a continuing unemployment problem. With high joblessness, their u. c. funds were still depleted and their businesses too pressured to absorb an additional federal tax.

A temporary provision therefore was added to the Emergency Compensation and Special Unemployment Assistance Act of 1975 (P.L. 94–45) to postpone the penalty tax until January 1, 1978, but only in those states where the Secretary of Labor found "appropriate action with respect to the financing of its unemployment programs so as substantially to accomplish the purpose of restoring the state's unemployment account in the Unemployment Trust Fund and permitting the

repayment within a reasonable time of any advances."

The Secretary this year made determinations for three states: Connecticut, Vermont and Washington. Vermont and Washington could not qualify for the penalty tax suspension, and employers in the two states were required to pay the 0.3 per cent levy. Next year. Connecticut and the 12 jurisdictions that took out loans in 1975 wil face the tax. The 12 jurisdictions are: Alabama, Delaware, the District of Columbia, Illinois, Maine, Massachusetts, Michigan, Minnestota, New Jersey, Pennsylvania, Puerto Rico and Rhode Island.

Six additional states took out loans in 1976. The enclosed table (prepared by the Department of Labor) shows the loans made to states through January 15, 1977.

The available evidence suggests that all of these states, even with extraordinary effort, would be unable to repay their loans fully within the next few years. Accordingly, an extension of the present provisions for suspension of the penalty tax may be appropriate. The extension would not apply automatically to all states whose loans remain unpaid, but only to those who can demonstrate that they are doing their best to retire the debt as quickly as possible.

In these states, any increase in the unemployment tax paid by employers might hinder economic recovery.

ADVANCES TO STATES FROM FEDERAL UNEMPLOYMENT ACCOUNT

[In millions of dollars per calendar year]

States	1972	1973	1974	1975	1976	1977 through Jan. 15, 1977	Total
Connecticut	31.8	21.7	8.5	190.2	111.0	24.0	[1] 387.2
Washington		40.7	3.4	50.0	55.3		149.4
Vermont			5.3	23.0	9.2	2.0	39.5
New Jersey				352.2	145.0	15.3	512.5
Rhode Island				45.8	20.0		65.8
Massachusetts				140.0	125.0		265.0
Michigan				326.0	245.0		571.0
Puerto Rico				35.0	22.0	10.0	67.0
Minnesota				47.0	76.0		123.0
Maine				2.4	12.5		14.0

[1] Actual loans received, $426,000,000, less repayment through reduced employer credits, $12,800,000, total, $413,200,000.

Mr. WEISS. Mr. Chairman, although I am voting in favor of H.R. 4800, the Emergency Unemployment Compensation Extension Act extending the Federal supplemental benefits—FSB—program, I am deeply disappointed in the bill as it was reported to the House floor today and would have preferred, instead, the passage of H.R. 2235.

H.R. 4800 extends the FSB program, but makes several key revisions in the FSB program. I am opposed to two of the revisions made by this bill. H.R. 2235, on the other hand, would simply have extended the FSB program in its present form.

I would have been inclined to vote in opposition to this bill, if the present FSB program did not expire in the next 10 days.

H.R. 4800 could have been changed to conform with the H.R. 2235 approach through the amending process, but the House decided in an earlier vote today to consider this bill under a rule prohibiting any amendments from individual Members on the floor. I supported an effort to open the bill to floor amendments by voting against the previous question, but unfortunately that effort failed.

Two important revisions are made by H.R. 4800: a reduction in the number of weeks available under the FSB program 26 weeks to 13 weeks and the imposition of overly stringent requirements for acceptance of employment under the so-called suitable work provision. This latter provision requires an individual to take practically any job offer whether or not he is qualified for other employment.

The first revision contains disadvantages to both State governments and unemployed individuals who cannot locate long-term employment. Under the present FSB program, States with unemployment rates of 5 percent or above have been eligible to participate in the FSB program. In these States—over 30—26 additional weeks of unemployment compensation payments are made available to supplement State unemployment programs, when the regular and extended State payments run out—a period of 39 weeks. The FSB program helps ease the financial burden of many States that otherwise could not offer supplemental payments to their extended unemployed individuals. For those individuals who are experiencing difficulty in locating lasting employment, the FSB program since 1974 has assured them that a total of 65 weeks of unemployment compensation would be available.

This reduction in the number of weeks of FSB payments is inappropriate with unemployment hovering over 7 percent nationwide. Many Americans will continue to need the kind of assistance that the FSB program has provided. The prolonged and severe winter cnly accentuates the importance of this point. Passage of H.R. 4800 will mean that only 52 weeks will be available for individuals under the FSB program.

Unemployment in my own State—New York—is over 8 percent. Even though the nationwide rate has declined somewhat, the severity of the recession is still apparent. The Congressional Budget Offce has predicted a national unemployment rate of 6.8 percent at the end of the year. Obviously long-term unemployment will be as much a problem then as it is now. And this is not just a story of statistics; rather it is a gloomy outlook on the status of millions of human beings living in our country.

H.R. 2235, the bill I would have preferred to be under consideration today, could have counteracted those deficiencies in H.R. 4800 which I have pointed to above. This bill, which I cosponsored with Mr. YATRON of Pennsylvania and other Members would simply have extended the FSB program in its existing form—thus maintaining the availability of 65 weeks of FSB and State payments.

In spite of my objections, however, it is unlikely that the kind of solution offered by H.R. 2235, could be enacted in the next 10 days. The alternative to the program contained in H.R. 4800, then, is no program at all. I believe we must assure the large numbers of unemployed that we still care and I cast my vote in favor of this legislation for that purpose.

Mr. MICHEL. Madam Chairman, there are two items I want to make mention of in connection with this bill.

The first has to do with that section of the bill providing for the denial of Federal supplementary benefits of individuals who refuse offers of suitable work.

There is no question but that action needs to be taken in this area, and I congratulate the committee on taking a couple of steps. The fact that we have language in the bill on the subject, including the establishment of standards defining "suitability of work," certainly ought to lead to a tightening up of the administration at the State level, particularly in those States with loose definitions of suitable work.

This said, however, I think the committee could have and should have gone further. For instance, the application of the suitability standard is made dependent upon the State making a determination that an individual's prospects for obtaining work in his or her customary occupation are poor. After 39 weeks, there is really very little doubt but that those prospects are in fact poor. The bill should have simply made the suitable work refusal mandatory in all cases, rather than creating a loophole for inequities by making it dependent upon a State decision.

Additionally, by including in the definition of suitable work a requirement that the job offered must pay wages equal to 120 percent of the FSB claimant's weekly unemployment benefit, we are treating individuals in States with high benefit levels much more generously than those in States with lower levels. In some States, the benefits now range upward of $7,000 or $8,000 a year, which means that the job would have to pay nearly $10,000. In other States, the benefit levels are less than $5,000 yearly, and the benefit levels do not always reflect

differing costs of living. We would have been better off using just the minimum wage criteria.

At some point along the line, we should go further and apply this tighter suitability of work standard to those receiving unemployment benefits in excess of 26 weeks, or perhaps 15 weeks. An individual certainly ought to be given time to find work in his field, but 39 weeks is excessively long. If there are jobs available, they ought to be filled. Unemployment compensation was meant neither to provide a long-term paid vacation nor to provide employers with a permanent source of ready-trained employees. It was designed solely to provide a basic source of income to those who are laid off until they are able to find other work.

With one of the new eligibility requirements for public service jobs being that an individual must have been receiving unemployment benefits for 15 or more weeks, we may need to tighten suitability standards in order to insure that such eligible individuals actually take public service jobs if they are offered to them. There is reason for concern in this regard in view of a survey of FSB beneficiaries conducted for the Labor Department which showed that only 11 percent would be willing to take a public service job paying the minimum wage, and just 31 percent would be willing to take such a job paying $4 an hour.

The other matter pertaining to the bill I wanted to mention has to do with the payment of benefits to teachers over the summer months or between terms. This, of course, has been prohibited, but apparently the language prohibiting such payment does not specifically mention vacation periods, and in my State of Illinois at least, a number of teachers took advantage of that loophole and applied for and received benefits over the Christmas vacation period.

The Labor Department takes the position that since the law does not deal with this matter, State law applies. It seems to me this is a rather narrow interpretation by the Department, but it is, nevertheless, what we are faced with.

I am sure it was never our intent to permit the payment of benefits over the Christmas or Easter vacations, and had this bill not come before us under a closed rule, I would have offered an amendment to close this loophole. Perhaps this can be done in the Senate, and then accepted in conference.

Madam Chairman, I wish to include at this point a letter from Mr. Weatherford of the Department of Labor concerning the eligibility of teachers and other school employees for payments under the special unemployment assistance program:

U.S. DEPARTMENT OF LABOR, EMPLOYMENT AND TRAINING ADMINISTRATION,
Washington, D.C., January 14, 1977.

Mr. ALAN ROTHENBERG,
Assistant Minority Counsel, Committee on Ways and Means, U.S. House of Representatives, Washington, D.C.

DEAR MR. ROTHENBERG: This responds to your letter of December 30, 1976, concerning the eligibility of teachers and other school employees for payments, during the Christmas recess, under the special unemployment assistance (SUA) program.

The newspaper article "Teachers Can Collect for Christmas Layoff", while essentially correct, is somewhat misleading. The "Unemployment Compensation Amendments of 1976", referred to in the newspaper article, did extend the program initiated in December 1974 until December 31, 1977, with final payments to June 30, 1978.

The legislation signed into law on October 20, 1976, did not deal with the ability of professional school employees to secure benefits during vacation breaks. Prior legislation did prohibit payment of benefits under the SUA program to professional employees in the instructional, research and administrative capacity if, after being employed in one school year or term, the individual has a contract (written, oral or implied) to be employed in the next year. This exclusion is not applicable to shutdowns, etc., occuring during the academic year.

The new legislation provides that hourly or nonprofessional employees are not only ineligible between the academic years but also between terms within the academic year.

The position of the U.S. Department of Labor, in administering the SUA program, has been that unemployed school employees when not subject to Federal restrictions should be treated the same as all other unemployed workers eligible to receive benefits under the regular State program. Therefore, since other workers can qualify for benefits during short periods of unemployment, we feel that school employees, who meet the State eligibility conditions, should also be able to qualify for benefits.

The program is a temporary measure designed to provide some financial assistance to individuals not normally covered under regular State or Federal unemployment compensation laws. This program was made possible by the Emergency Jobs and Unemployment Assistance Act of 1974, Public Law 93–567, which provided up to 26 weeks of benefits for eligible claimants. The Emergency Compensation and the Special Unemployment Assistance Extension Act of 1975, Public Law 94–45, dated June 30, 1975, increased the entitlement of SUA payable from a maximum of 26 weeks to 39 weeks, and extended the program for another year to December 31, 1976. Effective October 20, 1976, the President signed into law the Unemployment Compensation Amendments of 1976, Public Law 94–566. This legislation extended the period for filing new SUA claims to December 31, 1977, with payments continuing through June 30, 1978, after which the program will be absorbed through the extension of coverage to these workers under the regular State program.

In order to qualify for SUA, an unemployed individual must not be eligible for compensation under any State or Federal unemployment compensation law, and have had in the most recent base period, prior to filing an initial claim, sufficient employment and wages to meet the employment and wage requirement of the applicable State unemployment compensation law. In addition, an unemployed individual to be eligible for SUA must be able to work, available for work, and seeking work, within the meaning of, or as required by, the applicable State unemployment compensation law and not subject to disqualification under that law.

Although the SUA program is federally funded, the administration of it is under the jurisdiction of the individual States who act as agents for the Secretary of Labor. The States apply their own laws in administering the program (except where contrary to Federal requirements) and, therefore, all determinations for claims filed against Illinois employment would be subject to Illinois State law. Any appeal based upon disagreement with a determination must be subjected to the appellate process of Illinois law.

If I can be of further assistance to you, please let me know.

Sincerely,
LAWRENCE E. WEATHERFORD, Jr.,
Administrator, Unemployment Insurance Service.

Mr. RANGEL. Madam Chairman, I rise to speak in favor of H.R. 4800, the Emergency Unemployment Compensation Act of 1977. While unemployment has decreased from its recession high, it still remains a major problem. The economy has undergone a minor rejuvenation over the past year, but we are far from our prerecession levels of employment. In fact, economic indicators of the past few months give us little prospect of a sustained recovery which would result in a healthy economy and accompanying unemployment.

For that reason, I believe that it is necessary to extend the Federal supplemental benefits, FSB, program for 1 additional year until March 31, 1978.

However, contrary to the wishes of the vast majority of the committee, but in conjunction with the President's desires and corresponding Budget Committee restraints, the period of FSB will only be 13 weeks instead of the 26 weeks under current laws which many unemployed workers are sorely depending upon. Normally, unemployment benefits are for 39 weeks, 26 of which are totally State financed and 13 weeks of which are financed equally by the State and Federal Government. Under the current law, FSB is provided from the 40th through the 52d week to those unemployed who live in States where the insured unemployment rate is above 5 percent, and from the 53d through the 65th week in those States where the insured unemployment rate is over 6 percent.

It is the President's judgment that the economy will improve substantially enough as to preclude the necessity of providing 65 weeks of coverage, but rather that 52 weeks will be adequate. I could not disagree more. Unemployment still remains over 7 percent with over 7 million workers searching and competing for nonexistent jobs. Since we have yet to commit ourselves to full employment legislation, I think it is premature for us to reduce total benefits. We are about to inflict a severe burden on those workers who are in their 53d to 65th week of benefits for they would be cut off as of March 31, 1977. For those workers nearing the end of their 52 weeks of benefits, an equally harsh reality is in store for them. These people deserve better than to be surreptitiously cut off from what they rightly believe to be their just compensation, especially when we have failed to provide them with employment. While many members of the committee wished to challenge the Budget Committee's decision not to provide funds for the 53d through the 65th week of FSB, it was decided that such a move might cause the whole FSB program to lapse as of March 31, 1977. This would have caused greater havoc and suffering than reducing the term for benefits as the President had requested.

The bill does however provide relief to the States in the form of an additional 2-year moratorium on the recoupment of outstanding Federal unemploy-

ment insurance loans to the States. Due to the abnormally high level of unemployment during the past few years, many States have drained their trust funds through which unemployment benefits were originally intended to be paid. This resulted in extensive borrowing from the Federal Government by 20 States. Because of the abnormally high level of unemployment benefit recipients in these States, the funds remain depleted.

Normally, recoupment procedures would require an automatic increase of 0.3 percent per year in the 0.7 percent employer Federal unemployment insurance tax until the borrowed sum is repaid. However, since unemployment remains at such a high level it was felt that the infliction of this tax on employers would only dampen their desire to rehire or hire workers. The States affected by this provision are: Alabama, Arkansas, Connecticut, Delaware, Hawaii, Illinois, Maryland, Maine, Massachusetts, Michigan, Minnesota, Montana, New Jersey, New York, Nevada, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington. Additionally, the District of Columbia and Puerto Rico would be affected by this provision.

A newly enacted provision, which I feel will enhance the equity of the FSB program, is a refinement in the "triggering on" mechanism of the program. Under the current law, the insured unemployment rate must be 5 percent or more, for FSB benefits to begin. When the insured rate drops below 5 percent the whole State is triggered off. However, many States have large pockets of chronic unemployment and these areas are excluded under the current system. In an effort to address this problem, the committee adopted a new concept based upon standard metropolitan statistical areas—SMSA's—of over 250,000 people. When the insured rate in a State drops below 5 percent, then the Bureau of Labor Statistics will be directed to determine whether these SMSA's have an insured rate of unemployment over 5 percent. Such a finding would trigger on FSB for that area.

It is projected that 10 SMSA's, in four States, would be triggered on by this provision in fiscal 1977. They are Florida: Miami and Tampa; Indiana: Evansville; Georgia: Atlanta and Augusta; and Ohio: Akron, Canton, Toledo, Lorraine, and Youngstown. Additionally, in fiscal 1978 the following areas are projected to benefit from this provision: Delaware: Wilmington; Hawaii: Honolulu; Illinois: Chicago and Rockford, and Kentucky: Louisville.

We have also determined that as of April 1, 1977, FSB will be financed out of general revenues. It was felt that after an unemployed worker had exhausted his permanent benefits, the reason for his unemployment could no longer be attributed to his employer and therefore, the fiscal burden should be shifted from the employer to general revenues.

Finally, we did agree on one provision which significantly changes the conceptual format of unemployment insurance benefits. After 39 weeks of benefits, no longer will an unemployed worker be left with his dignity and be allowed to reject a job which is not closely related to his field and which does not pay a similar wage to his previous employment. Rather, he will be forced to accept any job offered which pays more than: the minimum wage; 120 percent of unemployment benefits; and 120 percent of unemployment benefits plus any contractual supplementation he may be entitled to from his previous employer. This provision is a major reversal for the American labor movement. No longer does a worker's training entitle him to reject labor which is alien to him or which pays significantly less than he previously was earning. We are locking workers into jobs for which they are unsuited and thus denying them the opportunity to seek employment commensurate with their skills and background. I fear we are setting a poor precedent in enacting such an archaic provision.

While I believe that this legislation does have some reprehensible provisions, I am also persuaded that there are redeeming qualities to what we are considering today. In any event, I am confident that any deficiences which may be within H.R. 4800 are compensated for by the importance of continuing the Federal supplemental benefits program for another year. Therefore, I urge all my colleagues to join in voting for quick passage of this legislation.

Mr. CORMAN. Madam Chairman, I have no further requests for time.

The bill reads as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Emergency Unemployment Compensation Extension Act of 1977".

TITLE I—AMENDMENTS TO THE EMERGENCY UNEMPLOYMENT COMPENSATION PROGRAM

SEC. 101. EXTENSION OF PROGRAM.

(a) GENERAL RULE.—Paragraph (2) of section 102(f) of the Emergency Unemployment Compensation Act of 1974 is amended by striking out "March 31, 1977" and inserting in lieu thereof "March 31, 1978".

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to weeks of unemployment ending after March 31, 1977.

SEC. 102. PAYMENT OF EMERGENCY BENEFITS ON THE BASIS OF STATE OR AREA TRIGGERS AND 52-WEEK DURATION OF BENEFITS.

(a) AREA EMERGENCY BENEFIT PERIODS.—

(1) Subparagraph (A) of section 102(c)(3) of the Emergency Unemployment Compensation Act of 1974 is amended—

(A) by striking out "any State" each place it appears and inserting in lieu thereof "any area of a State";

(B) by striking out "a State 'emergency on' indicator" and inserting in lieu thereof "an area 'emergency on' indicator"; and

(C) by striking out "a State Emergency off' indicator" and inserting in lieu thereof "an area 'emergency off' indicator".

(2) Subparagraph (B) of such section 102(c)(3) is amended to read as follows:

"(B) For purposes of subparagraph (A), in the case of any area of a State—

"(i) There is an area 'emergency on' indicator for any week—

"(I) if there is a State or National 'on' indicator for such week (as determined under subsections (d) and (e) of section 203 of the Federal-State Extended Unemployment Compensation Act of 1970), and

"(II) if the rate of insured unemployment in such area for the period consisting of the most recent 3 calendar months ending before such week equaled or exceeded 5 per centum, or if the rate of insured unemployment in the State for the period consisting of such week and the immediately preceding 12 weeks equaled or exceeded 5 per centum.

"(ii) There is an area 'emergency off' indicator for any week—

"(I) if there is a State and National 'off' indicator for such week (as determined under subsections (d) and (e) of section 203 of the Federal-State Extended Unemployment Compensation Act of 1970), or

"(ii) if the rate of insured unemployment in such area for the period consisting of the most recent 3 calendar months ending before such week is less than 5 per centum, and if the rate of insured unemployment in the State for the period consisting of such week and the immediately preceding 12 weeks is less than 5 per centum.".

(b) 52-WEEK DURATION PERIOD FOR EMERGENCY BENEFITS.—Subsection (e) of section 102 of such Act is amended—

(1) by striking out paragraphs (2) and (3) and inserting in lieu thereof the following:

"(2) The amount established in such account for any individual shall be qual to the lesser of—

"(A) 50 per centum of the total amount of regular compensation (including dependents' allowances) payable to him with respect to the benefit (as determined under the State law) on the basis of which he most recently received regular compensation; or

"(B) 13 times his average weekly benefit amount (as determined for purposes of section 202(b)(1)(C) of the Federal-State Extended Unemployment Compensation Act of 1970) for his benefit year.";

(2) by redesignating paragraph (4) as paragraph (3); and

(3) by striking out "amounts determined under paragraphs (2) and (3) with respect to any individual shall each" in paragraph (3) (as so designated) and inserting in lieu thereof "amount determined under paragraph (2) with respect to any individual shall".

(c) DEFINITION OF AREA.—Section 105 of such Act is amended—

(1) by striking out paragraph (5) and redesignating paragraphs (6), (7), and (8) as paragraphs (7), (8), and (9), respectively; and

(2) by inserting after paragraph (4) the following new paragraphs:

"(5) the term 'area' means, with respect to any State—

"(A) a labor market area or part of a labor market area which is located within such State, and

"(B) all other parts of such State which are not located within any labor market area;

"(6) the term 'labor market area' means any area (determined without regard to paragraph (5)) designated by the Secretary as being a contiguous population center with a population of at least 250,000 individuals;".

(d) SPECIAL RULE WHERE BENEFITS ARE NOT IN EFFECT IN AN ENTIRE STATE.—Section 105 of such Act is amended by inserting "(a)" after "SEC. 105." and by adding at the end thereof the following new subsection:

"(b) For purposes of this Act, to the extent that an emergency benefit period is not in effect in all areas of a State, the determination of an individual's period of eligibility or additional eligibility period or of whether there is an emergency benefit period applicable to the individual shall be made by reference to the area in which the individual was last employed during the base period for the benefit year with respect to which such individual most recently received regular compensation."

(e) TECHNICAL AMENDMENTS.—

(1) Paragraph (4) of section 105(a) of such Act (as amended by subsection (d)) is amended by striking out "a State" and inserting in lieu thereof "any area of a State".

(2) Paragraph (2) of section 102(b) of such Act is amended—

(A) by striking out "section 105(2)" and inserting in lieu thereof "section 105(a)(2)"; and

(B) by striking out "section 105(4)" and inserting in lieu thereof "section 105(a)(4)".

(f) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as provided in paragraph (2), the amendments made by this section shall take effect with the week beginning on April 24, 1977. If for the last week beginning before April 24, 1977, there is an emergency benefit period in effect in a State, any emergency benefit period in effect in any area of such State for the week beginning on April 24, 1977, shall for purposes of section 102(c)(3)(A)(ii) of the Emergency Unemployment Compensation Act of 1974, be treated as a continuation of the emergency benefit period which was in effect in such State for the last week beginning before April 24, 1977.

(2) SUBSECTION (b).—The amendments made by subsection (b) shall apply to weeks of unemployment ending after March 31, 1977.

SEC. 103. FINANCING OF EMERGENCY UNEMPLOYMENT COMPENSATION FROM GENERAL FUNDS.

(a) GENERAL RULE.—Section 104 of the Emergency Unemployment Compensation Act of 1974 is amended to read as follows:

"FINANCING PROVISIONS

"SEC. 104. (a) The Secretary shall from time to time certify to the Secretary of the Treasury for payment to each State the sums payable to such State under this Act. The Secretary of the Treasury, prior to audit or settlement by the General Accounting Office, shall make payments to the State, in accordance with such certification, by transfers of funds appropriated pursuant to the authorization provided by subsection (b) to the account of such State in the Unemployment Trust Fund.

"(b) There are authorized to be appropriated, without fiscal year limitation from the general fund of the Treasury such sums as may be necessary to carry out the purposes of this Act."

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to payments to States to the extent that such payments are attributable to emergency compensation paid to individuals for weeks of unemployment ending after March 31, 1977.

SEC. 104. DENIAL OF EMERGENCY COMPENSATION TO INDIVIDUALS WHO REFUSE OFFERS OF SUITABLE WOBK OR WHO ARE NOT ACTIVELY SEEKING WORK.

(a) GENERAL RULE.—Section 102 of the Emergency Unemployment Compensation Act of 1974 is amended by adding at the end thereof the following new subsection:

"(h)(1) Except as provided in paragraph (3), emergency compensation shall not be payable for any week to any individual otherwise eligible to receive such compensation if during such week such individual—

"(A) fails to accept any offer of suitable work or to apply for any suitable work to which he was referred by the State agency, or

"(B) fails to actively engage in seeking work.

"(2) If any individual is ineligible for emergency compensation for any week by reason of a failure described in subparagraph (A) or (B) of paragraph (1), the individual shall be ineligible to receive emergency compensation for any week which begins during a period which—

"(A) begins with the week following the week in which such failure occurs, and

"(B) does not end until such individual has been employed during at least 4 weeks which begin after such failure and the total of the remuneration earned by the indivdual for being so employed is not less than the product of 4 multiplied by the individual's average weekly benefit amount (as determined for purposes of section 202(b)(1)(C) of the Federal-State Extended Unemployment Compensation Act of 1970) for his benefit year.

"(3) Emergency compensation shall not be denied under paragraph (1) to any individual for any week by reason of a failure to accept an offer of, or apply for, suitable work—

"(A) if the average weekly remuneration payable to such individual for the position does not exceed the sum of—

"(i) 120 percent of the individual's average weekly benefit amount (as determined for purposes of section 202(b)(1)(C) of the Federal-State Extended Unemployment Compensation Act of 1970) for his benefit year, plus

"(ii) the amount (if any) of supplemental unemployment compensation benefits (as defined in section 501(c)(17)(D) of the Internal Revenue Code of 1954) payable to such individual for such week;

"(B) if the position was not offered to such individual in writing or was not listed with the State employment service;

"(C) if such failure would not result in a denial of compensation under the provisions of the applicable State law to the extent that such provisions are not inconsistent with the provisions of paragraph (4); or

"(D) the position pays wages less than the higher of—

"(i) the minimum wage provided by section 6(a)(1) of the Fair Labor Standards Act of 1938, without regard to any exemption; or

"(ii) any applicable State or local minimum wage.

"(4) For purposes of this subsection—

"(A) The term 'suitable work' means, with respect to any individual—

"(i) any work for which the individual is reasonably fitted by training and experience; and

"(ii) any work for which an individual lacks the required skills and training if, in connection with the job, the individual is provided with the necessary training to perform the work.

If the State agency determines that an individual's prospects for obtaining work in his customary occupation are poor, the determination of whether any work is suitable work for the individual shall be made without regard to whether the work involves lower pay or lesser skills than the individual's customary occupation.

"(B) An individual shall be treated as actively engaged in seeking work during any week if—

"(i) the individual has engaged in a systematic and sustained effort to obtain work during such week, and

"(ii) the individual provides tangible evidence to the State agency that he has engaged in such an effort during such week."

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to weeks of unemployment beginning after the date of the enactment of this Act.

SEC. 105. RECOVERY OF OVERPAYMENTS.

(a) GENERAL RULE.—Section 105 of the Emergency Unemployment Compensation Act of 1974 is amended by adding at the end thereof the following new subsection:

"(c)(1) If an individual knowingly has made, or caused to be made by another, a false statement or representation of a material fact, or knowingly has failed, or caused another to fail, to disclose a material fact, and as a result of such false statement or representation or of such nondisclosure such individual has received an amount of emergency compensation under this Act to which he was not entitled, such individual—

"(A) shall be ineligible for further emergency compensation under this Act in accordance with the provisions of the applicable State unemployment compensation law relating to fraud in connection with a claim for unemployment compensation; and

"(B) shall be subject to prosecution under section 1001 of title 18, United States Code.

"(2)(A) In the case of individuals who have received amounts of emergency compensation under this Act to which they were not entitled, the State is authorized to require such individuals to repay the amounts of such emergency compensation to the State agency, except that the State agency may waive such repayment if it determines that—

"(i) the payment of such emergency compensation was without fault on the part of any such individual, and

"(ii) such repayment would be contrary to equity and good conscience.

"(B) The State agency may recover the amount to be repaid, or any part thereof, by deductions from any emergency compensation payable to such individual under this Act or from any unemployment compensation payable to such individual under any Federal unemployment compensation law administered by the State agency or under any other Federal law administered by the State agency which provides for the payment of any assistance or allowance with respect to any week of unemployment, during the three-year period after the date such individuals received the payment of the emergency compensation to which they were not entitled, except that no single deduction may exceed 50 per centum of the weekly benefit amount from which such deduction is made.

"(C) No repayment shall be required, and no deduction shall be made, until a determination has been made, notice thereof and an opportunity for a fair hearing has been given to the individual, and the determination has become final.

"(3) Any determination by a State agency under paragraph (1) or (2) shall be subject to review in the same manner and to the same extent as determinations under the State unemployment compensation law, and only in that manner and to that extent."

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall take effect on the date of the enactment of this Act.

SEC. 106. MODIFICATION OF AGREEMENTS.

The Secretary of Labor shall, at the earliest practicable date after the date of the enactment of this Act, propose to each State with which he has in effect an agreement under section 102 of the Emergency Unemployment Compensation Act of 1974 a modification of such agreement designed to provide for the payment of emergency compensation under such Act in accordance with the amendments made by this title. Notwithstanding any other provision of law, if any State fails or refuses, within the 3-week period beginning on the date the Secretary of Labor proposes such a modification to such State, to enter into such a modification of such agreement, the Secretary of Labor shall terminate such agreement effective with the end of the last week which ends on or before the last day of such 3-week period.

TITLE II—REPAYMENT OF STATE LOANS

SEC. 201. REPAYMENT OF STATE LOANS.

(a) GENERAL RULE.—The last sentence of section 3302(c)(2) of the Internal Revenue Code of 1954 (relating to reduction in credits against unemployment tax) is amended by striking out "January 1, 1978" each place it appears and inserting in lieu thereof "January 1, 1980".

(b) STATE REQUIREMENTS.—The amendment made by subsection (a) shall not apply in the case of any State unless the Secretary of Labor finds that such State meets the re-

quirements of section 110(b) of the Emergency Compensation and Special Unemployment Assistance Extension Act of 1975.

TITLE III—TECHNICAL AMENDMENTS TO UNEMPLOYMENT COMPENSATION AMENDMENTS OF 1976

SEC. 301. DELAY IN EFFECTIVE DATES WHERE STATE LEGISLATURE DOES NOT MEET IN 1977.

(a) COVERAGE OF CERTAIN SERVICE PERFORMED FOR NONPROFIT ORGANIZATIONS AND FOR STATE AND LOCAL GOVERNMENTS.—Subsection (a) of section 115 of the Unemployment Compensation Amendments of 1976 is amended to read as follows:

"(d) EFFECTIVE DATE.—

"(1) Except as provided in paragraph (2), the amendments made by this section shall apply with respect to certifications of States for 1978 and subsequent years; except that—

"(A) the amendments made by subsections (a) and (b) shall only apply with respect to services performed after December 31, 1977; and

"(B) the amendments made by subsection (c) shall only apply with respect to weeks of unemployment which begin after December 31, 1977.

"(2) In the case of any State the legislature of which does not meet in a regular session which closes during the calendar year 1977, the amendments made by subsection (c) shall only apply with respect to weeks of unemployment which begin after December 31, 1978 (or if earlier, the date provided by State law)."

(b) PREGNANCY DISQUALIFICATIONS.—Subsection (c) of section 312 of the Unemployment Compensation Amendments of 1976 is amended to read as follows:

"(c) EFFECTIVE DATE.—

"(1) Except as provided in paragraph (2), the amendments made by this section shall apply with respect to certifications of States for 1978 and subsequent years.

"(2) In the case of any State the legislature of which does not meet in a regualr session which closes during the calendar year 1977, the amendments made by this section shall apply with respect to the certification of such State for 1979 and subsequent years."

(c) ELECTION OF LOCAL GOVERNMENTS TO USE REIMBURSEMENT METHOD.—Subsection (c) of section 506 of the Unemployment Compensation Amendments of 1976 is amended to read as follows:

"(c) EFFECTIVE DATE.—

"(1) Except as provided in paragraph (2), the amendments made by this section shall apply with respect to certifications of States for 1978 and subsequent years, but only with respect to services performed after December 31, 1977.

"(2) In the case of any State the legislature of which does not meet in a regular session which closes during the calendar year 1977, the amendments made by this section shall apply with respect to the certification of such State for 1979 and subsequent years, but only with respect to services performed after December 31, 1978."

(d) EFFECTIVE DATE.—The amendments made by this section shall take effect on October 20, 1976.

SEC. 302. CLARIFYING AMENDMENTS.

(a) ILLEGAL ALIENS.—Subparagraph (A) of section 3304(a)(14) of the Internal Revenue Code of 1954 (relating to denial of unemployment compensation to illegal aliens) is amended by striking out "or otherwise" and inserting ", is lawfully present for purposes of performing such services, or".

(b) REIMBURSEMENT METHOD OF FINANCING FOR LOCAL GOVERNMENTS.—Paragraph (2) of section 3309(a) of such Code (relating to State law requirements) is amended by striking out "or group or organizations" and inserting in lieu thereof "or group of governmental entities or other organizations".

(c) DISQUALIFICATION OF TEACHERS.—Clause (i) of section 3304(a)(6)(A) of such Code is amended—

(1) by striking out "instructional research" and inserting in lieu thereof "instructional, research"; and

(2) by striking out "two successive academic years" and inserting in lieu thereof "two successive academic years or terms".

(d) EFFECTIVE DATE.—The amendments made by this section shall take effect on October 20, 1976.

SEC. 303. DELAY IN REPORTING DATES FOR NATIONAL COMMISSION ON UNEMPLOYMENT COMPENSATION.

(a) INTERIM REPORT.—Subsection (f) of section 411 of the Unemployment Compensation Amendments of 1976 (relating to interim report of National Commission on Unemployment Compensation) is amended by striking out "March 31, 1978" and inserting in lieu thereof "September 30, 1978".

(b) FINAL REPORT.—Subsection (g) of such section 411 (relating to final report) is amended by striking out "January 1, 1979" and inserting in lieu thereof "July 1, 1979".

The CHAIRMAN. Pursuant to the rule, the bill is considered as having been read for amendment. No amendments except those offered by direction of the Committee on Ways and Means are in order and said amendments shall not be subject to amendment.

Are there any committee amendments?

Mr. CORMAN. Madam Chairman, there are no committee amendments.

The CHAIRMAN. There being no committee amendments, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Miss JORDAN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4800), to extend the Emergency Unemployment Compensation Act of 1974 for an additional year, to revise the trigger provisions in such act, and for other purposes, pursuant to House Resolution 411, she reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. FRENZEL

Mr. FRENZEL. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. FRENZEL. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. FRENZEL moves to recommit the bill H.R. 4800 to the Committee on Ways and Means.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

The question was taken and the Speaker announced that the ayes appeared to have it.

Mr. FRENZEL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 327, nays 63, not voting 42, as follows:

[Roll No. 87]

Hawkins	Roncalio	Zablocki

The Clerk announced the following pairs:

Mr. Florio with Mr. Teague.
Mr. Hawkins with Mr. Sikes.
Mr. Ireland with Mr. Montgomery.
Mr. Skelton with Mr. Breaux.
Mr. Badillo with Mr. Stump.
Mrs. Burke of California with Mr. Skubitz.
Mrs. Chisholm with Mr. Abdnor.
Mr. Clay with Mr. Chappell.
Mr. Giaimo with Mr. Young of Alaska.
Mr. Ryan with Mr. Rudd.
Mr. Staggers with Mr. Jeffords.
Mr. Slack with Mr. Jones of North Carolina.
Mr. Roncalio with Mr. Duncan of Oregon.
Mr. Zablocki with Mr. Tucker.
Mr. McFall with Mr. Pressler.
Mr. Mann with Mr. Pursell.
Mr. Johnson of California with Mr. Hubbard.
Mr. Eckhardt with Mr. Erlenborn.
Mr. Evans of Colorado with Mr. Udall.
Mr. Charles H. Wilson of California with Mr. Johnson of Colorado.

Messrs. McKAY and FOUNTAIN changed their vote from "nay" to "yea."

Messrs. HAMMERSCHMIDT, ROBERT W. DANIELS, JR., and MARRIOTT changed their vote from "yea" to "nay."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AUTHORIZING THE CLERK TO MAKE CORRECTION IN ENGROSSMENT OF H.R. 4800

Mr. CORMAN. Mr. Speaker, I ask unanimous consent that the Clerk, in engrossing H.R. 4800, may make the following clerical correction:

On page 10, line 14, strike the word "or" and insert in lieu thereof the word "and".

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

GENERAL LEAVE

Mr. CORMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include therein extraneous matter on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

PERMISSION TO FILE REPORT ON HOUSE RESOLUTION 393

Mr. DENT. Mr. Speaker, I ask unanimous consent that the Committee on House Administration may have until midnight tonight to file a report on House Resolution 393.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

IMPROVEMENTS IN COMMON SITUS PICKETING BILL

(Mr. ALLEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ALLEN. Mr. Speaker, it is the overwhelming consensus of congressional leaders with whom I have talked that a common situs picketing bill, in some form, will almost certainly be passed by the House within a matter of a few days.

In an effort to be helpful and constructive in drafting a bill, which, if it becomes law, will be evenhanded and fair to both sides in any labor-management dispute, I have written and will offer an amendment, in the nature of a substitute to H.R. 4250, which I believe will be far more acceptable to all parties concerned.

The main purpose of the amendment I shall offer is to provide the machinery and procedure to assist in bringing about an amicable settlement of such disputes, wherever possible, before they result in needless and costly strikes, lockouts, and construction site picketing, in which the economy, the public, and both sides to the dispute usually lose—and no one really wins.

This substitute amendment, which I have inserted in the CONGRESSIONAL RECORD and which appears on page H1288 of Thursday, March 17, 1977, contains:

First. A provision establishing in the Department of Labor a 25-member Construction Industry Collective Bargaining Committee to be appointed by the President, made up of ten members each from labor and management groups in the construction industry, three public interest members, and the Secretary of Labor and the Director of the Federal Mediation and Conciliation Service, designed to function in addition to the requirements of the National Labor Relations Act as a more viable structure for collective bargaining in the construction industry.

Second, A prohibition against any labor organization "picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is the removal or exclusion from the site of any employee on the ground of sex, race, creed, color, or national origin or because of the membership or nonmembership of any employee in any labor organization."

Third. A prohibition against any labor organization striking or picketing a construction site "to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, specifying, installing or otherwise dealing in the products or systems of any other producer, processor, or manufacturer."

Fourth. A prohibition against "picketing, threatening to picket, or causing to be picketed, any employer where an object thereof is to cause or attempt to cause an employer to discriminate against any employee—or to exclude any labor organization on the ground that such labor organization is not affiliated with a national or international labor organization * * *."

Fifth. A requirement that a labor organization "shall provide prior written notice of intent to strike, picket, or to refuse to perform services of not less than 10 days to all unions and the employers and the general contractor at the site, and to any national or international organization" with which the union is affiliated, "and to the Construction Industry Collective Bargaining Committee; provided, that at any time after the expiration of 10 days from the transmittal of such notice the labor organization may engage in activities permitted"—under the act—only "if the national or international labor organization—gives notice in writing authorizing such action, provided the Construction Industry Collective Bargaining Committee under the provisions of title II hereof does not disapprove and notify the labor organization of its disapproval prior to the expiration of said 10 days, in which event such strike, picketing or refusal to perform services shall be postponed at least 30 days to give time to the parties involved to reconcile their differences or dispute by collective bargaining, with such assistance as the Federal Mediation and Conciliation Service of the Department of Labor may provide."

Sixth. A prohibition against striking

or picketing at the site of construction "of a building, structure, or other work involving residential structures of three residential levels or less constructed by an employer who in the last taxable year had a gross volume of construction business of $9,500,000 or less, adjusted annually as determined by the Secretary of Labor based upon the revisions of the Price Index for New One Family Houses prepared by the Bureau of the Census."

Seventh. A provision that when there is a collective bargaining agreement covering employees of the construction industry, there must be a 60-day notice given by either party prior to any termination or modification of such agreement.

Eighth. A prohibition on strikes and lockouts during the 60 days after notice is given, during which period the contract shall remain in full force and effect.

Ninth. A provision that when the committee receives notice and a written request for assistance from any party to a dispute, it shall be mandatory for the committee to take jurisdiction. Jurisdiction is discretionary with the committee in the absence of such request.

Tenth. Provisions establishing standards for the exercise of the committee's jurisdiction, primarily designed to promote voluntary settlement of disputes, directing the committee to request the participation in negotiations of appropriate national organizations of both labor and management, and directing the committee to meet with interested parties and such appropriate organizations as may be set up under the act.

Eleventh. A prohibition on any new collective bargaining agreement during the time of the committee's jurisdiction unless the national labor organization has agreed to it in writing.

Twelfth. A prohibition against strikes and lockouts during the period when the committee has taken jurisdiction over any dispute between a national construction labor organization—or its subordinate affiliate—and an employer or association of employers.

Thirteenth. A prohibition against the committee's modification of an existing or proposed collective bargaining agreement.

AMERICAN AGRICULTURE DAY

(Mr. FOLEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FOLEY. Mr. Speaker, I take this opportunity to inform the Members of the House that today, Monday, March 21, 1977, is "American Agriculture Day."

It is a day set aside to honor agriculture and agricultural producers. It is a day set aside to help all Americans understand the value of American agriculture. It is a day to help us all realize that we are dependent on farmers and ranchers for the food we eat and the fiber we wear and thereby help bring about a more positive attitude toward agriculture and agricultural producers.

Nowhere in the world, and at no other time in history, have a people had available food and fiber in such quality and abundance for such a relatively small share of their daily earnings, as is enjoyed now by the American public.

Today only about 5 percent of our people farm the land. One American farmer feeds 53 people—three times as many as 20 years ago.

What is important is that Americans realize that this has come about and will continue to be true only so long as the farmer and rancher have the incentive to produce in the quantities we need to meet both our domestic and export requirements.

We currently are exporting the production of 1 in 4 acres harvested in the United States. This is highly important in achieving a balance of payments in foreign trade, enabling us to import the petroleum products and the countless other things we use which come from abroad. So we must make sure the American producer has sufficient incentives and profits to remain in production, notwithstanding the risk of financial loss because of droughts, and floods, insects and other natural disasters over which he has little or no control.

Because Americans have for so long taken for granted their good fortune as the world's best clothed and fed people most have failed to credit the farmer for his contribution to our national welfare.

We need to improve communications between the consumer and the farmer. As a step in that direction, the first "American Agriculture Day," was designated just 3 years ago. It is fitting that a day be marked to honor agriculture and those related with it, just as we long have set aside annually a "Labor Day," to honor those who toil in our industries.

On this fourth such "American Agriculture Day," the distinguished actor and Arizona farmer and rancher, John Wayne, is serving as honorary chairman of the occasion. We should all as public officials do what we can to bring about a closer understanding between all Americans as either consumers or producers, or both.

I am happy to observe, incidentally, that we now have in the White House, in President Carter, a man who has a farm background and knows firsthand the efforts and contributions made by American farmers and ranchers to our country's prosperity and further well being.

Mr. BLOUIN. Mr. Speaker, throughout the country today, in schoolrooms, community centers, State legislatures and countless other places, Americans have planned a wide variety of programs to mark "American Agriculture Day."

It is fitting, I think, that we in the House of Representatives take a few moments to mark that special occasion as well.

I have the privilege of representing the Second Congressional District of Iowa, a State with a rich and diverse agricultural heritage.

According to the latest statistics 34.2 million of Iowa's total 35.8 million acres of land are devoted to farming. That is over 92 percent of the State's total land area. Iowa's 131,000 farms, which averaged about 261 acres in size, harvested 7.5 percent of the Nation's total agricultural harvest in 1976. The value of that harvest crop totaled over $4.6 billion—the third highest State total in the Nation last year.

When I say I am from Iowa, people in Washington often reply by saying something like: "My wife has relatives in Ohio," or "I've always wanted to vacation in Oregon." They seem to have a little difficulty grasping the fact that Iowa is a State of its own, or exactly where it is located.

I suspect that many of these individuals, with the best of intentions, have no idea of the very vital contribution which Iowa makes to the Nation's economy or, more particularly, of the vital role which Iowa's farm families play in the Nation's agricultural economy.

American Agricuture Day is a good time to set the record straight on behalf of Iowa's 215,000 farmers and I would like to take just a few moments to do that because I believe that Iowa's farm families deserve all the credit they can get for a job well done.

For example, I am afraid few people realize that Iowa ranks first in the Nation in the production of hogs, second in the production of corn, soybeans, oats and cattle, fifth in the production of beef cows, seventh in the production of milk cows, eighth in the production of milk and turkeys, eleventh in the production of eggs and twelfth in the production of sheep.

As of January 1, 1977, there were 14.2 million head of hogs, 7.6 million head of cattle, 1.9 million head of beef cows, 392,000 head of milk cows, and 318,000 head of stock sheep being raised on Iowa farms.

Last year, Iowa's 1.1 billion bushel corn crop represented 18.5 percent of the Nation's total corn harvest. The State's 204 million bushel soybean harvest represented 16.2 percent of the total American soybean crop in 1976 and its 87 million bushel oat harvest represented 15.5 percent of the Nation's total oat harvest. Iowa crops exported to foreign countries totaled $1.7 billion and represented almost 8 percent of the Nation's total farm export in 1976.

I know many people, especially in large, metropolitan areas, have little idea of the sacrifice, dedication, and hard work which family farmers invest each year in producing an agricultural harvest which is unequalled by any nation on Earth and unparalleled in the history of the world. Iowa's farmers are no exception. In 1975—the latest statistics available—the average gross income for Iowa farms was $52,126. That seems high until you discover that over 80 percent of that income was consumed by expenses. In point of fact, the realized net income for the average Iowa farm was a very modest $10,294.

Unfortunately, statistics alone do not capture the essence of family farming in Iowa or any other State. At best, they indicate how important family farms are to Iowa and to the Nation as a whole.

For farm families, agriculture is more than a business. It is a lifestyle which requires and which expresses a very precious concern about the land, the mystery of nature, and the ability of men and women to work hand-in-hand with nature to produce the food on which we all depend.

The Nation's family farmers have made us the richest and best-fed Nation on Earth, but more than that, they have retained when many of us have forgotten the values and attitudes which constitute the core of the American character and the essence of our American heritage.

GENERAL LEAVE

Mr. JENKINS. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks and to include extraneous material on the 1-minute speech today of the gentleman from Washington (Mr. FOLEY), relative to "Agriculture Day."

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

VETERANS' PROGRAMS SHOULD BE ADMINISTERED BY VETERANS' ADMINISTRATION

(Mr. ROBERTS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROBERTS. Mr. Speaker, a few days ago it was brought to my attention that the Secretary of Health, Education, and Welfare was "calling for an all-out HEW effort to ask the general public how welfare reform should be achieved."

In Secretary Califano's statement of issues for public hearings on the issue of welfare reform and in press releases issued by all HEW Regional Offices the public was informed that veterans' compensation and pension benefits were included under HEW's definition of welfare.

There follows a copy of my letter to Secretary Califano that will be of interest to all Members of the House who share my view that veterans' programs should be administered by the Veterans' Administration and not the Department of Health, Education, and Welfare, or any other Department of the Federal Government.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 17, 1977.

Hon. JOSEPH A. CALIFANO, JR.,
Secretary, Department of Health, Education, and Welfare, Washington, D.C.

DEAR MR. SECRETARY: Your statement of issues for public hearing pertaining to welfare reform has been brought to my attention and it comes as a considerable shock that your invitation for public comments on ways to bring about welfare reform includes two longstanding veterans' programs.

Your inclusion of these two programs leaves the inescapable conclusion that you have assumed jurisdiction over the administration of two veterans' programs, namely, compensation and pension, which have long been administered by the Veterans Administration.

It comes as no surprise to those of us who have been deeply involved in veterans' affairs for so many years that your Agency is once again seeking to extend its empire to control programs administered by the Veterans Administration. Veterans' organizations spokesmen have continuously warned this Committee and the Congress that the goal of social welfare planners always will be to take over the Veterans' Administration programs. Apparently, this urge has reared its ugly head once more.

Your announcement states:

"Welfare reform covers two different types of aid. Social insurance is one, and it includes Social Security, veterans' compensation, Medicare, unemployment benefits, workmen's compensation. and others. Income assistance, the second, includes Aid to Families with Dependent Children, Supplemental Security income, food stamps, housing assistance, general assistance, and pensions for veterans."

Your announcement further states:

"Social insurance benefits are often contingent on prior employment, whereas the primary determinant for income assistance is financial need."

It is obvious that your advisers are not aware of the eligibility criteria for veterans' compensation. The benefit has no bearing whatsoever on one's prior employment nor is the benefit contingent on how much is paid into an employment program. In other words, Mr. Secretary, eligibility for veterans' compensation is not determined by past employment and payment into some employment insurance program.

Of course, a veteran in receipt of compensation is being paid for loss of earning capacity as a result of a service-connected disability. There are more than 2.239 million such veterans receiving benefits today for injuries received during active duty—many occurring in combat. There are more than 200,000 totally and permanently disabled due to service-connected disabilities. These people were employed in the service of their country as members of the United States Armed Forces.

If the President is desirous of obtaining information about compensation and pension programs, he should seek such information from the Administrator of Veterans Affairs. The President recently named a new Administrator who served his country with honor and distinction, having been severely wounded during a tour of duty in Vietnam. Max Cleland, the new Administrator, heads the largest independent agency of the Government, employing 226,000 people with regional offices located in every State throughout the Nation. I would advise the President to contact him as he is quite capable of handling such an assignment.

I'm sure the Administrator would tell the President that veterans' compensation is not predicated on previous employment but is based on disability incurred as a result of military service. He would also be quick to suggest that veterans' pension, although based on need, is not a welfare program but a supplement provided to assist the veteran for service to his country during a period of war or great national peril. These benefits were authorized by Congress in grateful appreciation and recognition for the veteran's contribution to our national interest in the hour of need.

Any attempt to comingle veterans' compensation and pension programs with other general welfare and social programs administered by the Department of Health, Education and Welfare not only goes against long held, established tradition and principles, but serves to sow confusion and despair among the Nation's 20 million veterans, their families and survivors.

Perhaps your announcement was a misinterpretation of the President's request. I should hope so. I don't think this is the first step by the Administration to transfer the programs now being administered by the Veterans Administration to the Department of Health, Education and Welfare, although many think so. Therefore, I would appreciate your letting me know the substance of the President's request in this regard and whether or not it was the President's intention that you and your Department assume jurisdiction over these veterans' programs.

Since I have already personally expressed my opposition to any such attempt in a letter to the President dated February 7, 1977, I look forward to hearing from you as soon as possible.

Sincerely,

RAY ROBERTS,
Chairman.

SKUBITZ OSHA BILL

(Mr. SKUBITZ asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SKUBITZ. Mr. Speaker, tomorrow I am introducing, along with 100 cosponsors, legislation to amend the Occupational Safety and Health Act of 1970. This legislation would exempt from OSHA rules and regulations all business and farming operations which have 10 or fewer employees. It would also provide that an individual would have to work for a period of 30 consecutive days before he could be counted as an employee under the OSHA Act. Additionally, the bill provides that so long as an employer was not guilty of a willful or serious violation and had employed no less than 11 nor more than 25 employees—the employer would only receive a warning for any first-instance violation. Finally, this bill provides that no civil penalty can be assessed after an investigation or inspection so long as the employer was issued 10 or fewer first-instance, nonserious violations.

Mr. Speaker, I am very pleased by the large number of my colleagues who are joining with me in introducing this legislation. As of today, this bill has garnered a wider degree of support than any other OSHA bill thus far introduced in the 95th Congress. I am also proud of the significant nonpartisan support of this bill. I am also happy to be able to point out that support for this bill extends far beyond the membership of this body. A number of national organizations, with memberships totaling millions of people, have endorsed my bill.

Mr. Speaker, I am offering for the RECORD—five letters which I have received from four national organizations in support of this legislation:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, D.C., March 4, 1977.

Hon. JOE SKUBITZ,
House of Representatives, Washington, D.C.

DEAR JOE: Thanks for asking NFIB to comment on the new OSHA legislation that you plan to introduce shortly. OSHA remains one of the most pressing problems facing the American small business community today and it is time for Congress to take positive action to alleviate its plight.

The bill that you intend to introduce which would exempt small firms with ten or fewer employees from OSHA and businesses

with 25 or fewer employees from first instance citations and fines, except in the case of serious or willful violations, is in keeping with the traditional position of NFIB and its 490,000 member firms on this issue. Exemption of small firms from OSHA rules and regulations has received overwhelming support from NFIB members in the past and first instance citations without an opportunity to correct violations have always been a sore point with small businessmen across the country.

Your bill along with an effective on-site consultation program and the end of OSHA posting requirements will go a long way towards correcting the arbitrary nature of this onerous law.

Sincerely,

JAMES D. "MIKE" MCKEVITT.

AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION,
Washington, D.C., March 1, 1977.

Hon. JOE SKUBITZ,
House of Representatives,
Rayburn Building,
Washington, D.C.

DEAR JOE: Recently your office was in touch with my associate, Ron Michieli, regarding the beef cattle industry's views on your proposed legislation to amend OSHA.

It is my understanding that this measure, as it is now drafted, would serve to eliminate a great portion of America's agricultural and small business community from burdensome Federal regulations. ANCA's policy supports this legislation, just as we supported your bill last year providing for a one-year agri- which would exempt small firms with ten or fewer workers.

We appreciate the opportunity to review and offer comments in support of this type of legislation.

Cordially,

C. W. MCMILLAN,
Executive Vice President.

NATIONAL COUNCIL OF FARMER COOPERATIVES,
Washington, D.C., March 8, 1977.

Re Proposed OSHA Amendments.

Hon. JOE SKUBITZ,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. SKUBITZ: The National Council of Farmer Cooperatives supports your efforts to rationalize the Occupational Safety and Health Act.

We have reviewed the draft legislation furnished us by Mr. Jim Rinker of your staff, and we believe its enactment would significantly improve OSHA. Small farmer cooperatives have found the detailed compliance and reporting requirements extremely burdensome. The exemption for businesses with less than 10 employees which you propose is the answer to the problem of finding needed relief for small cooperatives.

Furthermore, your limitations on the use of civil penalties for technical violations of OSHA regulations by medium-sized and large businesses are meaningful curbs on picayune inspections. Such legislative direction will let everyone know that OSHA's resources are to be aimed at eliminating serious occupational hazards.

We believe Congress should adopt these amendments to the Occupational Safety and Health Act, and you can count on our support in this endeavor.

Sincerely,

DONALD A. FREDERICK,
Assistant General Counsel.

AMERICAN FARM BUREAU FEDERATION,
Washington, D.C., March 10, 1977.

Hon. JOE SKUBITZ,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. SKUBITZ: We appreciate the opportunity to review the legislation you propose to introduce in the House of Representatives to amend the Occupational Safety and Health Act.

As we understand it, this legislation would prohibit OSHA inspections at establishments that have employed ten or fewer employees during the preceding 30 days. It would further prohibit citations for first instance violations of a nonserious nature by any employer with 25 or fewer employees. Further, any place of employment that is subject to inspection but is found to have ten or fewer nonserious violations shall not receive a citation.

As you are aware, Farm Bureau policy calls for the repeal of the Occupational Safety and Health Act. We shall work toward this objective and hope that you will support our efforts.

Until this policy can be achieved, the American Farm Bureau Federation is pleased to support your legislative proposal as a positive and helpful step toward curtailing OSHA's excesses in the enforcement field.

Sincerely,

JOHN C. DATT,
Director, Washington Office.

NATIONAL ASSOCIATION OF WHEAT GROWERS,
Washington, D.C., March 7, 1977.

Hon. JOE SKUBITZ,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN SKUBITZ: The National Association of Wheat Growers wishes to indicate support for your proposal to amend the Occupations Safety and Health Act of 1970 to exempt farm and business employers with 10 or fewer employees from provisions of the Act. We are also in agreement that an individual should work for 30 consecutive days before he could be counted as an employee, and we enclose other proposals you have authored dealing with civil penalties and non-serious first violations.

As you are well-aware, wheat producers and others engaged in agricultural production have had their operations repeatedly impaired by needless and unworkable regulations promulgated by the Occupational Safety and Health Administration. Our members have consistently found OSHA directives and proposals to be completely out-of-touch with conditions at the family farm level, and many orders have imposed economic burdens which we do not feel can be justified on farming operations of this size.

We have hoped over the year that OSHA administration would improve and that opportunities would be made for direct input from the farm sector which would lead to better understanding and rule-making on the part of OSHA. This hope, however, has proved groundless, and the small degree of relief the farm sector has received was gained only through the avalanche of public opinion and strong Congressional criticism.

We are hopeful that your proposals can be enacted quickly and prior to expiration of the current funding limitation on OSHA activities.

Sincerely,

JERRY REES,
Executive Vice President.

Mr. Speaker, as many of my colleagues will recall, I successfully offered an amendment to the Labor-HEW Appropriations bill during the 94th Congress which exempts from OSHA rules and regulations those small farms where 10 or fewer persons are employed. This restriction will, of course, expire at the end of this current fiscal year. Therefore, it is imperative that a permanent exemption for small farms and businesses, as this bill would provide, be enacted as quickly as possible.

I sincerely believe that one of the strongest points which should be considered in weighing my bill is that it recognizes that there are industries which should and can be regulated—but that there are others, such as the small business and farming operations, which cannot be equitably regulated under the present OSHA Act—and therefore should be exempt from that Act. I sincerely hope the Congress considers my bill at the earliest possible date.

ANDERSON SUPPORTS EXPANSION OF REDWOOD NATIONAL PARK IN CALIFORNIA

(Mr. ANDERSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON of California. Mr. Speaker, the House Subcommittee on National Parks and Insular Affairs, chaired by my colleague in the California delegation—Congressman PHIL BURTON—began hearings today on his bill to add 74,000 acres to the existing Redwood National Park in northern California.

Because of the damage already caused to the park by logging, erosion, and increased stream sedimentation, I commend this work, and will support the measure on the floor of the House.

RELATIONSHIP BETWEEN CUBA, AFRICA, AND SOVIET UNION SHOULD BE UNDERSTOOD BEFORE CURRENT RESTRICTIONS ARE RELAXED

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. YOUNG) is recognized for 10 minutes.

Mr. YOUNG of Florida. Mr. Speaker, on Thursday, I spoke before this House about the administration's program to relax United States relations with Cuba. On Friday, the first step in a change of relationship between our two countries took place when the travel ban to Cuba was lifted.

I am increasingly alarmed by news reports of Cuba's and specifically Fidel Castro's active involvement in Africa, and I want to be certain that my colleagues are not missing any reports of this activity.

There is absolutely no doubt that Fidel Castro is making an extensive tour of the African countries, meeting with leaders of those countries, right now. Yesterday the Washington Post reported on his visit to Tanzania, and of planned meetings today with Zambian President Kenneth Kaunda in Lusaka. Kaunda has reportedly called for the repatriation of Cuban troops in Angola, which Castro is also scheduled to visit on this trip.

The French press has reported that Cuba and Ethiopia have issued a joint communique calling on progressive forces in the Red Sea region to coordinate their struggle. At the end of a 3-day visit to Ethiopia, Castro took a side trip into Somalia, and is reported to have engaged in shuttle diplomacy aimed at a federation of those two states along with South

Yemen and the French Territory of Afars.

On March 3, the Washington Post reported that Cuban advisers and technicians have been trickling into Uganda to help President Idi Amin train his army, and enforce his economy. The Cubans in Uganda are reported to be black and dressed in civilian clothes, and have made an effort to remain inconspicuous. "Idi Amin spends 25 percent of his nation's gross national product on military hardware and has asked other nations of the world to help train his 20,000-man, Soviet-equipped army, for what he sees as imminent invasion from either Tanzania, Kenya, the United States, Britain, Israel, South Africa, or the Sudan," the Post reported, adding, "Western observers saw the arrival of the Cubans in Uganda as part of the Soviet Union's attempt to exert more influence with the help of Cuba in east Africa." Soviet President Nikoli Podgorny is scheduled to visit Tanzania, Mozambique and Zambia later this month.

On March 16, the Washington Post reported that Zaire now claims that some 5,000 "mercenaries" have crossed the Angola border into Zaire, and Zaire's news agency reported that these "mercenaries were led by other mercenaries who come from across the Atlantic and who enjoy the support of third countries that seek ideological conquests" which was interpreted to mean Kantangese, led by Cubans, supported by the Soviet Union.

An unnamed State Department spokesman was quoted by UPI reporter Jim Anderson as stating that, "if anything, the Cubans are widening their involvement in Africa. Since the fall of the Portuguese in Angola, the Katangese have been fighting on the side of the Angola MPLA, which is directly supported and led by the Cubans. This should give you a pretty good idea of where the direction is coming from." U.S. intelligence estimates Cuba has had more than 10,000 troops stationed in Angola since last year's civil war.

I would apologize for using unsubstantiated press reports and the words of unnamed State Department spokesmen in reporting these activities to my colleagues, except for the fact that these seem to be the only reports that are available. No comprehensive report to Congress or the American people of the full extent of Cuba's involvement in Africa's complex and very serious problems has been forthcoming, from our State Department or from the administration.

It is my opinion that a comprehensive study of Fidel Castro's relationships with the leaders of all of the African nations and with the Soviet Union is very necessary, and that Congress should be informed quickly, accurately, and officially of all reported involvements between his country and other countries by the State Department, especially if those involvements are of a hostile nature.

I feel even more strongly that absolutely no restrictions currently enforced by our Government, particularly those concerned with hijacking, the 200-mile fishing limit, and renewed diplomatic relations between Cuba and the United States, should be relaxed or renegotiated until we understand completely the complex and very active relationship between Cuba, Africa, and the Soviet Union.

MEDICARE COVERAGE OF SERVICES FURNISHED OUTSIDE THE UNITED STATES

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. ROSTENKOWSKI) is recognized for 15 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, I am today introducing a bill designed to deal with the problem of extending medicare coverage to health care services furnished to beneficiaries living or traveling outside the United States.

Under present law, medicare coverage is provided, with a few limited exceptions, only for hospital and medical services rendered within the United States. These exceptions cover only cases in which the beneficiary needs emergency hospital services while traveling in Canada between the 48 States and Alaska, or needs hospital services, because of a medical problem that arose while traveling or residing within the United States near the border, and a Canadian or Mexican hospital is more accessible than the nearest U.S. hospital. This limitation on medicare coverage was originally included in the law, because of the substantial administrative problems involved in verifying the medical necessity for services furnished outside the United States, establishing the qualifications of medical practitioners and institutions in other countries, and determining the appropriate amount of payment to make for services furnished in foreign countries.

Extensive study of these problems by the Congress over several years has failed to yield any wholly satisfactory solution. However, considerations of equity dictate that we continue to search for an approach that offers a reasonably workable arrangement for assuring medicare coverage for beneficiaries who may be traveling or living outside the United States. Although the approach adopted in this bill does not fully overcome the kinds of administrative problems that have impeded congressional action in the past—indeed, it presents special administrative problems of its own—it does offer the possibility of some action, limited though it may be, to eliminate inequity in many cases.

The approach incorporated in the bill involves the negotiation of reciprocal agreements with those countries willing to enter into such agreements under which provision would be made for payment on behalf of entitled medicare beneficiaries for covered hospital and medical services.

Such agreements would have to specify the classes of individuals entitled to benefits under the programs of the countries involved, the services that are covered by those programs, the payments to be made by such programs to or on behalf of entitled individuals for such services, and such other provisions with respect to the effective implementation of a reciprocal arrangement as the President deems appropriate. However, no agreement negotiated under the provisions of this bill may authorize any individual entitled under the program of another country to receive benefits in the United States on a reciprocal basis in excess of those provided for medicare beneficiaries in the United States; nor may such an agreement provide entitlement to benefits in the United States for an individual who does not meet the medicare requirements with respect to age or medical condition.

Pending the conclusion of an agreement with a foreign country, the bill authorizes the Secretary of Health, Education, and Welfare to enter into an interim arrangement with a hospital in that country which is accredited by the Joint Commission on Accreditation of Hospitals, or such other hospitals as the Secretary finds meet health and safety standards equivalent to those required under medicare for hospitals in the United States and which are accredited by that foreign country, under which payment may be made for inpatient hospital services furnished to medicare beneficiaries.

One major advantage that can be claimed for this approach to covering services outside the United States is that it provides the flexibility that may be needed to take into account the unique circumstances surrounding the provision of health care services in other countries.

Late last year I introduced a similar bill for the express purpose of eliciting public discussion and comment on its merits. I must confess, however, that it did not receive the kind of critical scrutiny it warrants, partly, I believe, because it was presented so late in the session. I am, therefore, reintroducing the bill at this time, not in the belief that it represents the only or best answer we can produce, but in the expectation that it will now receive the careful attention it deserves. I am particularly interested in receiving the administration's analysis of this approach and any suggestions the administration may have for either improving the bill or designing a more effective alternative.

I would hope that a careful reexamination of the issue of coverage for services outside the United States will enable us to responsibly modify this restrictive provision of the medicare law.

INCREASING OUR NATIONAL PRODUCTIVITY

The SPEAKER. Under a previous order of the House the gentleman from New York (Mr. LAFALCE) is recognized for 5 minutes.

Mr. LAFALCE. Mr. Speaker, I am today introducing legislation that would create far-ranging programs to stimulate increases in productivity and quality of working life in the sectors of our economy that most need this type of stimulus. The Nation's small business community represents over 96 percent

of the total number of businesses in the United States. At the same time, its resources compared to those of larger firms are very limited, and they most often do not possess the research or managerial capability that enable them to markedly increase their companies' productivity. The same is often true of the smaller end of the public sector—State and local governments.

Small enterprise and State and local governments have productivity problems that are a great deal different from those experienced by larger industries or the Federal Government. Instead of creating some new bureaucracy to help satisfy the needs of smaller companies and local governments, my legislation would make use of an existing and vital public center—the National Center for Productivity and Quality of Working Life.

The purpose of H.R. 5283 is to "foster, encourage, and aid public and nonprofit institutions organized on a local, county, State, or regional basis, to develop programs and provide services for assisting small businesses and State and local governments to improve productivity and the quality of working life." Under the provisions of the legislation, the National Center shall in essence become an independent agency with grant authority so that it can contract with various public or nonprofit agencies to develop necessary programs to help these sectors of our economy.

The scope of the program would be modest. We would be making use of a center which already exists, so the only major increase in cost to the Federal Government would be the amount we are willing to spend in contracts to stimulate productivity increases at the small business and local government levels. Of the main body of research that has been done on productivity gains, precious little is devoted to these areas. By focusing this type of attention on these critical yet heretofore unexplored sectors of the economy for productivity increases, we can make great strides in improving business from the standpoint of the small company manager to that of the employee. I urge my colleagues to consider this approach in renewing the Federal commitment to bolstering private and public sector productivity as well as stimulating improved working environments.

HIGHER SUGAR PRICES MIGHT CHANGE THE BOTTOMLESS CUP INTO THE EMPTY CUP

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, when asked to tighten his belt the American consumer usually comes through. How many ways though must the public sacrifice so one industry or another can make a profit?

Several years ago we suffered through a gasoline shortage which allowed prices to double never to return to a low. This winter we shivered while dutifully reducing our natural gas usage only to discover that the shortage may have been a ploy to hike prices.

Last month I spoke out against the outrageous increase in coffee prices. Coffee "shortages" have allowed prices to soar this week to a wholesale high of $4.13 per pound. The consumer has reduced his intake of coffee according to the latest statistics with no impact on the market price—of coffee that is. Because of increased demand, the London auction price of tea has doubled since March 1.

The final blow has not yet struck. Coinciding with the news of the Food and Drug Administration intent to ban the use of saccharin, the only remaining artificial sugar substitute, we await the President's decision to effectively raise the price of sugar.

It may be argued that Americans indulge themselves too much with "junk" foods including coffee, tea, and sugar. It also might be argued that Americans must learn to change their wasteful habits and conserve. These arguments, however, are really not at issue when deciding the merits of attempting to aid the ailing domestic sugar industry while charging the American consumer an additional quarter of a billion dollars at least per year. The attempt to raise sugar prices cannot even be justified by environmental shortages as in the case of gas or coffee.

What is the situation? The domestic sugar industry is not able to compete with lower price imported sugar. The International Trade Commission voted early this month that indeed that fact is true and they recommended on March 14 that the President protect the domestic industry. A solution to the problem has been proposed by Secretary of Agriculture, Bob Bergland, which would begin by lowering the quota of imported sugar. This solution might have repercussions on other international trade agreements while not insuring benefits for American sugar cane and beet growers. It is true that if the import quota, now 7 million tons, were reduced to 4.3 million tons and if the internal demand remained constant at 4.7 million tons, the domestic sugar producer would probably reap the benefits.

However, the situation is not that cut and dried. An Agriculture Department task force report was quoted in the March 4 issue of the Washington Star. The report reveals that producers of a highly concentrated corn syrup, HFCS, have been making rapid gains in yearly production and consumption. The report also warns Secretary Bergland that—

> Efforts to support market prices [of sugar] . . . will make corn sweeteners even more competitive with sucrose to the detriment of the total market for sugar.

During the sugar price highs of 1974 sales of HFCS almost tripled. Today with the extremely low cost of natural sugar the corn syrup has 10 percent of the domestic "nutritive sweetener" market. This amount probably would increase if corn syrup became more economical than sugar.

The sugar producers will not lose monetarily though according to Secretary Bergland's second proposal. They will be compensated at a rate of 13½ cents per pound of raw sugar, approximately 2½ cents above the current market price. One fact is certain, no matter which industry gains under Secretary Bergland's plan it will be the American consumer who will pay.

President Carter has until the middle of May to make his decision on the proposals; if he says nothing they will automatically take effect.

If in the balances of a free market place sugar growers are losing weight, they should be encouraged to begin production of a more profitable crop and not expect to be pampered and subsidized, to be literally transfused with consumer's rapidly depleting funds.

When Congress decided 3 years ago to let the Sugar Act expire, because the consumer was paying a ridiculous 70 cents or more for every pound of sugar, the sugar producers were reporting record high profits. Perhaps that is the situation they want to recreate. Perhaps they could really discover more economical methods of growing sugar. Or perhaps they would be better off producing a more profitable crop. But surely this spiralling effect of dumping every American industry's setback on the consumer must end.

LEGISLATION TO ESTABLISH A MENTAL HEALTH CLINIC AT FORT DE RUSSY

The SPEAKER. Under a previous order of the House, the gentleman from Hawaii (Mr. AKAKA) is recognized for 5 minutes.

Mr. AKAKA. Mr. Speaker, I am introducing today a bill which would allow the State of Hawaii to establish a mental health clinic at Fort De Russy, an Army base in Waikiki, Hawaii. Adequate mental health care is a greatly needed service in the Waikiki area. Expectations abound of the paradise found in Hawaii that attracts an increasing number of visitors and new residents to the Waikiki area. Sadly, however, the realities do not fulfill the expectations. Highly urbanized and densely populated, Waikiki suffers from the problems commonly attributed to such areas. Mental stress on the inhabitants is just one of these problems.

The Department of Health of the State of Hawaii has operated a mental health clinic in Waikiki for the past 4 years. Serving the Waikiki community, the clinic has benefited not only the residents of Hawaii, but many visitors as well. In fact, 80 percent of the patients who used the services of the clinic were born and reared in States other than Hawaii. While the clinic performs a badly needed service, cramped quarters in a dilapidated cottage limits the potential of the clinic. High rental costs in Waikiki exclude alternative facilities.

Fort De Russy, easily accessible—in the heart of Waikiki—would provide an ideal location for a new mental health clinic. The Department of the Army is willing to allocate space for a mental health clinic at their De Russy location.

The bill I am introducing today would authorize the use of such facilities to allow the State of Hawaii, through the Queens Medical Center, to continue in its selfless mission of helping mankind.

I hope that the measure that I have

introduced today will meet with the approval of the appropriate House committees, the full Houses of Congress, and the President. The future of the facilities lies in your hands. I look to you for support in such a small but important request. Mr. Speaker, I include the text of this bill in the RECORD.

H.R. 5232

A bill to authorize the Secretary of the Army to make available to the State of Hawaii or through it to the Queen's Medical Center physical facilities not needed by the Army at Fort DeRussy, Hawaii, for the purpose of establishing a mental health clinic in such facilities

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Secretary of the Army is authorized to make available to the State of Hawaii or through it to the Queen's Medical Center such physical facilities at Fort DeRussy, Hawaii, as he determines are not needed by the Army and which are adequate for the purpose of permitting the State of Hawaii or through it the Queen's Medical Center to establish and operate a mental health clinic for the residents of Hawaii.

(b) The physical facilities made available by the Secretary of the Army under authority of subsection (a) shall be made available without charge to the State of Hawaii or through it to the Queen's Medical Center but shall be subject to such terms and conditions as the Secretary determines necessary to protect the interests of the United States.

THE $730 MILLION COMMERCE DEPARTMENT LOAN GUARANTEE: WHY BURMAH OIL?

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, recently there has been much discussion of the growing volume of U.S. bank loans to developing countries. Much of the lending represents direct loans to governments to finance balance-of-payments deficits. Some developing countries have called for a debt moratorium on loans from official sources. If there is no debt relief on the $100 billion owed by developing countries to official sources, will they be able to repay the $75 billion owed to private banks, of which approximately $50 billion is owed to U.S. banks?

Balance-of-payments deficits resulting from higher prices for oil are a central issue in international economic policy, involving the size of the debts that have been incurred, the means of financing them, and the ability of countries to repay these debts. The focus on the debts of lesser developed countires has obscured the fact that substantial balance-of-payments loans have also been made to developed countries, as well, and that they have been made by commercial banks as well as by official institutions. The economic and political implications of these loans are no less important than are those relating to loans to developing nations.

The foreign loans of U.S. banks seem far more important now than they did in previous years. The fact that the foreign assets of U.S. banks rose $80.4 billion from December 1974 to October 1976 while their domestic assets rose only $43 billion during the same period, raises questions as to the impact of foreign lending on the domestic economy. A number of bankers and economists have discounted this concern, arguing that it merely reflects the role of U.S. banks in recycling OPEC surplus funds to deficit countries.

But this reasoning does not deal adequately with the problem of U.S. bank exposure. Nor does it answer the question: how much will U.S. economic and foreign policy be shaped by the need to shoulder responsibility for the economic and political well-being of other governments in order to assure that they can repay debts to the U.S. banking system?

This is an important and complicated subject. For the moment, I present a case history to illustrate the political and economic implications of foreign loans of U.S. banks. The case involves the recent $730 million loan guarantee approved by former Commerce Secretary Elliot L. Richardson for General Dynamics Corp. to build seven liquified natural gas tankers for lease to the Burmah Oil Co. of Great Britain to transport natural gas from Indonesia to Japan.

Some of the background of the loan guarantee was explained in articles in the Washington Post on January 17 and 24, 1977. These articles note that the guarantee was issued under title XI of the Merchant Marine Act of 1936, which authorizes guarantees for private construction loans for U.S.-flag vessels whose owners and operators are U.S. citizens. The original purpose of the statute was to enlarge the merchant fleet and permit ships to be taken over by the U.S. Government in a national emergency. Since General Dynamics had a contract to build the ships for Burmah, which is not a U.S. company, a dummy corporation, owned by U.S. citizens, was concocted to lease the tankers and then lease them in turn to Burmah in order to keep the arrangement within the letter of the law.

The Post articles also state that Burmah paid a questionable commission of $3 million to Tongsun Park, the South Korean businessman, for his assistance in canceling an oil-charter contract with Japan lines in 1975. A December 10, 1976, article in the Wall Street Journal notes that Burmah also assigned part of its profits on the gas hauling contract for which the General Dynamics' tankers are to be used, under an agreement made in 1973, to undisclosed participants. These agreements included a 20-percent cut to a Hong Kong company which was reputed to be a front for Indonesian interests. The Journal reported that Secretary Richardson's aides were in the process of gathering sworn affidavits that all the agreements with secret participants had been eliminated.

As chairman of President Ford's task force reviewing the overseas payments issue, Mr. Richardson's approval of the loan guarantees might be construed as ignoring possible wrongdoing by foreign companies, while suggesting higher ethical standards for U.S. companies and a greater degree of disclosure. The Securities and Exchange Commission is currently looking into Burmah's foreign payments. SEC Chairman Hills has suggested that the U.S. Government "wield its 'economic authority' to retaliate against foreign businesses that compete unfairly against Americans by paying bribes." Clearly, the Department of Commerce did not wield its economic authority in this case. In fact, Mr. Richardson prejudged the SEC investigation of Burmah. The Journal reports that he told those who questioned the guarantee on those grounds that there was no evidence that the company's $3 million commission to Mr. Park was part of a bribery scheme.

Why was it so urgent that this loan guarantee be made? During a period when major U.S. corporations such as W. T. Grant and a number of real estate investment trusts have experienced severe financial difficulties and the New York crisis is still fresh in our minds, it seems remarkable that a foreign oil corporation should be the beneficiary of this intervention. One would have thought that the oil cartel was at the bottom of the list of favored philanthropies. The Washington Post articles state that intervention by the British Government on behalf of the Burmah Oil Co. was anticipated if the request for a loan guarantee was not approved because of fear of the consequences of a possible bankruptcy of Burmah Oil on Britain's shaky economy. The January 17 Post article also says the incoming Carter administration agreed that it would be better for Secretary Richardson to make the decision, since there would not be time for the new administration to analyze the situation itself.

One justification offered for the loan guarantee was that it would alleviate General Dynamics' financial difficulties and save the jobs of 5,000 workers. The shipyard is the major employer in Quincy, Mass., and massive layoffs could cause unprecedented local hardships. Obviously, none of us is opposed to assisting large-scale shipbuilding in New England. The industry is depressed and so is the area. The prospect of continued employment for 5,000 workers can only be applauded by the new administration, the Congress, and the public.

Nevertheless, the less-than-straightforward nature of the arrangement—the creation of a dummy corporation and the discounting of the SEC investigation—suggests that there was as much concern for maintaining the financial viability of Burmah Oil Co., as that of General Dynamics. The fact that the British Government was prepared to intervene supports this thesis. But in order to explain the interest of the British Government in the case, it is necessary to provide an outline of Burmah's recent financial history.

The banking involvement of Burmah Oil became a subject of interest when the company obtained a $420 million loan from Chase Manhattan Bank in January 1974. At the beginning of 1974, Burmah Oil was apparently a staid, old British company whose principal assets included interests in other oil companies—a 21.5-percent share in British Petroleum and a 2-percent share in Royal Dutch Shell. Its principal business was the operation of a large fleet of

tankers. In the halcyon days of 1973, Burmah decided to expand and become a global oil producer. It borrowed from Chase Manhattan and its London affiliate, Orion Bank Ltd., to buy the Signal Oil & Gas Co., in Houston. It also borrowed from Citibank and Crocker National Bank to finance leases and development in the Gulf of Mexico. Through Signal Oil, it then acquired oil rights in the North Sea. By the end of 1974, its debt to foreign banks had risen to $650 million and its total debt to $1.3 billion.

But even as early as the midsummer of 1974, Burmah Oil began to run into difficulties. That year's collapse of the tanker market as a result of excess capacity reduced the company's earnings from this source to less than $1 million during the last half of the year. This was only a fraction of what was needed to pay the interest on its debts, and its new acquisitions were not as yet producing adequate income to offset the decline in tanker earnings. The company had to rely on dividends from its BP and Royal Dutch Shell holdings both to service its debt and for working balances. The market value of these holdings had fallen sharply in the collapse of the London stock market in the fall of 1974. Prices of these stocks, which had been worth $1.1 billion in January 1974, dropped to less than $500 million by December.

In providing the $420 million for the Signal Oil acquisition, Chase Manhattan appears to have made an inadequate assessment of the credit risk. A February 15, 1975, article in Forbes magazine stated that its loan agreement said nothing about collateral requirements. The only security requirements for the loan was that the BP and Shell stock remain unemcumbered. When the price of the stock began to fall and it became clear that Burmah would not be able to meet its loan payments, Chase extended its loans and raised the rate, adding about $10 million to the company's annual interest costs.

To prevent foreclosure by the U.S, banks and a forced sale of the BP stock at depressed prices, the Bank of England intervened and undertook to guarantee the loan, insisting on an agreement which pledged the BP stock as collateral for its guarantee. The loan was extended under these terms for a year. The Royal Bank of Canada called in a loan it had made to Burmah for which it—unlike other creditors—had required specific collateral. The collateral—the Canadian holdings which Burmah had bought in 1974—was sold and yielded barely enough to pay off Royal Bank. The U.S. banks had only an unsalable tanker fleet and Signal Oil & Gas Co., Houston, as collateral for their loan, and the Houston Co's, worth and salability were not easy to ascertain.

In mid-January 1975, the Bank of England bought the BP shares from Burmah for $430 million. This was enough to pay off the Chase loan, but it was apparently not fully repaid, since a portion of the proceeds from the BP stock was needed to keep the company solvent during 1975. Burmah's losses on tanker operations were substantial throughout the year; it no longer enjoyed dividend income from the BP shares; and its U.S. holdings were not generating enough income to offset losses. In April 1975, Burmah announced it would sell Signal Oil & Gas Co. to pay off the remainder of the $650 million in loans guaranteed by the Bank of England.

Signal Oil was finally sold on June 30, 1976, to R. J. Reynolds for $520 million, enough to pay off Burmah's debt to foreign bank creditors. The sale did not include Burmah's North Sea Oil rights which had been acquired through Signal. These rights had been transferred to the parent company at the time it entered into the agreement for the loan guarantees with the Bank of England. In return for those guarantees, Burmah had also promised to allow the British Government to acquire 51 percent of its North Sea oil rights. The significance of these maneuvers was to assure a substantial degree of British control and income from the North Sea oil fields. Thus the Bank of England, in guaranteeing Burmah's loans, not only saved the company from bankruptcy but protected vital British oil interests as well.

The Bank of England loan guarantees also greatly benefited several large U.S. banks which had outstanding loans to Burmah Oil. In the banking climate of late 1974 to early 1975, this protection was critical. There had been a crisis of confidence following the failures of Franklin National Bank and the Herstatt Bank in Germany, and a precipitous $8 billion decline in interbank deposits in U.S. bank branches overseas, only half of which were replenished by OPEC deposits. Problems with real estate investment trusts and large companies such as W. T. Grant and others, were developing on the home front, together with a major recession and a sharp decline in business borrowing. There had not been a more dangerous moment in the history of American banking since 1933. A default on Chase Manhattan's $430 million could have been catastrophic. The action of the Bank of England in guaranteeing Burmah's borrowings had, therefore, worldwide implications. It was an effective and reassuring counterpart to the Federal Reserve's bailout of Franklin.

Burmah Oil Co., which is now the beneficiary of a $730 million loan guarantee from the United States, was near bankruptcy 2 years ago, and until 6 months ago was dependent on loan guarantees from the Bank of England for its survival. The company now has a contract to haul liquified natural gas from Indonesia to Japan which will assure future earnings. That contract is linked to loan agreements with the Export-Import Bank of Japan involving both insurance and segregation of revenues. The Japanese loan was made in 1973 and was structured in a way to assure production of the natural gas which Japan needs. Therefore, the company which has the contract to haul the gas would appear to be a good credit risk—unless other problems offset the gains it might realize on the gas hauling contract.

And there are other problems. While the security interest in favor of Japan's $1.3 billion loan to Indonesia makes the Burmah contract a desirable prize, it has caused problems for about 50 U.S. banks who are members of syndicates which have also loaned Indonesia over $1 billion. The agreements under which these loans were made prohibit agreements with other lenders which would give their loan preferred status. Morgan Guaranty, the lead bank in a $850 million syndicated loan, has asked the other participating banks to waive their rights in what amounts to a technical default by Indonesia on the loan because of the agreements with the Export-Import Bank of Japan. It has also asked the banks to agree not to accelerate repayment on the loans, since this could jeopardize the already massive total of outstanding loans to Indonesia—$10.2 billion at yearend 1976 by Morgan's estimates—and also some $1 billion of new credits needed by Indonesia in 1977. Some of these new credits are needed just to pay interest and principal on Indonesia's outstanding debt.

The security interest manifest in the Japanese loan agreement is not, however, the only reason that U.S. bank loans to Indonesia are in technical default. There are also several disputed tanker agreements involving $1 billion of overdue payments presumably owed by Pertamina, the Indonesian oil company. In July 1976, Citicorp notified members of a syndicate it had led that it considered an event of default had occurred because shipowners claiming overdue payments had attempted to attach Pertamina accounts in New York banks and were taking legal steps in the New York courts to obtain payment.

Morgan Guaranty properly views Indonesia's problems as legal, not financial, and notes that there has been no delay in payments of interest or principal on its bank loans. But Pertamina, the state-owned oil company, did default on two syndicated loans amounting to $100 million in April 1975. It was at that time that the size of its debt, said to be $3 billion by the Indonesian Government, was discovered, following an audit, to be in excess of $10 billion. Control over Pertamina's affairs was then assumed by the Indonesian Government which began a bailout and restructuring of the company. Morgan Guaranty and nine other banks made a $300 million loan to the Bank of Indonesia to assist in those efforts.

Essentially what happened was that Pertamina's debts were assumed by the Indonesian Government, which then borrowed substantial new credits from U.S. banks in 1975 and 1976 to pay interest and principal on Pertamina's old debts and to wind-down or complete its projects. The Indonesian Government has also attempted to renegotiate tanker leases entered into by Pertamina which involve $1 billion in alleged overdue payments. Burmah Oil Company owns a 50-percent interest in six tankers chartered to Pertamina and a suit involving overdue payments on these leases is still pending.

The events recounted here in detail

may be summarized as follows: Burmah Oil, a minor member of the oil cartel, borrowed $650 million from U.S. banks to expand its operations. Because of losses on tanker operations, it could not repay those loans. The Bank of England bailed out Burmah by guaranteeing its loans and buying its most valuable asset, a significant share in BP Oil Company, in which the British Government already owned a controlling share. The British Government also entered into a partnership agreement with Burmah by getting an option from the company to purchase 51 percent of Burmah's North Sea oil rights. Burmah sold the U.S. oil company it bought with U.S. bank loans and repaid these debts. All would appear to be well.

But Burmah has a contract to haul natural gas from Indonesia to Japan, and it needs the income from this contract to remain solvent and to continue to develop its North Sea oil holdings, since its oil tankers operations are not producing adequate earnings. It paid Tongsun Park $3 million to terminate contracts to haul oil to Japan because it was suffering heavy losses on the operations, and is presently suing the Indonesian Government for back payments on tanker contracts with Pertamina, the Indonesian oil company.

Indonesia's foreign debts exceed $10 billion, and over 20 percent of these debts are owned to U.S. banks. Burmah's contracts with Indonesia have involved it indirectly with that country's relations with U.S. banks. Indonesia needs to borrow more money not only to continue its development projects, but to enable it to continue to pay principal and interest on outstanding loans.

While Burmah's gas hauling contract looks like an excellent asset, it requires sophisticated new tankers. Burmah contracted with General Dynamics to build the tankers, but General Dynamics found it could not obtain bank loans to begin construction without a loan guarantee. The Commerce Department provided the guarantee. Had it not done so, it was believed by many that Great Britain, whose public sector is also substantially indebted to private U.S. banks, would have intervened to assist Burmah Oil.

It could be argued that the Commerce Department's action is somewhat akin to returning the favor for the Bank of England's loan guarantees in 1975. But the British Government has more current concerns as well. The sale of oil from the North Sea fields is viewed as the principal source of future foreign exchange revenues needed by Great Britian to repay its debts to U.S. banks as well as to official institutions, the U.S. Treasury and other governments. Its partnership with Burmah in the North Sea venture gives the British Government direct access to those future revenues. But Burmah must remain financially viable in order to produce the oil. Its contracts to carry natural gas from Indonesia to Japan will provide needed income for the company to continue the North Sea operations. But neither Burmah nor the British Government can afford the cost of the constructing the tankers needed to fulfill the contract, nor would U.S. banks provide the funds to General Dynamics for the purpose without U.S. Government guarantees.

The tankers which General Dynamics will build will not be leased to a U.S. shipping company, as was intended by the Merchant Marine Act of 1936. Nor will these tankers supply critically needed natural gas to the United States. The loan guarantee does help a U.S. shipbuilder, and U.S. banks also benefit from risk-free guaranteed loans. But should not the guarantee be used to benefit U.S. gas consumers and shipping companies as well?

The function of the Commerce Department's loan guaranteee may be to enable Burmah to repay its obligations so that its collapse would not bring on the collapse of General Dynamics with serious consequences for the U.S. economy. Or its function may be to preserve Burmah Oil so that its shares of the North Sea oil holdings will not be acquired by companies beyond the influence of the British Government. The loan guarantee might also enable Burmah to settle its suit with the Indonesian Government and thus remove one of the roadblocks jeopardizing that Government's enormous debt to the banking systems of almost all major developed countries. Any one or all three of these possibilities may be at issue.

Certainly, the anticipated intervention of the British Government, and Secretary Richardson's willingness to permit the creation of a dummy corporation, and to overlook the SEC's investigation of Burmah's $3 million payment to Tongsun Park, indicate that issues of this magnitude must be involved. But we do not really know. What we do know is that the largest loan guarantee in the history of the United States has been extended with very little public knowledge or discussion of the facts involved.

On February 28, 1977, I wrote Commerce Secretary Kreps and raised a number of questions regarding the loan guarantee to General Dynamics. I include my letter to Secretary Kreps in the RECORD:

COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C., February 28, 1977.

Hon. JUANITA M. KREPS,
Secretary, Department of Commerce Building, Washington, D.C.

DEAR SECRETARY KREPS: As you know, on January 19 former Commerce Secretary Elliot L. Richardson approved a $730 million loan guarantee for seven liquefied natural gas tankers. The tankers are being built by General Dynamics Corp. for lease to Burmah Oil Company of England to transport liquefied natural gas from Indonesia to Japan.

The account of the loan-guarantee approval in the Washington Post of January 20 states that the Department of Commerce and the Justice Department had taken into account "allegations that the transaction is not structured appropriately to meet required criteria in the applicable statutes," and were satisfied that "no violations of law were involved." This and a previous Washington Post article of January 17 state, however, that it was necessary to create a new U.S. corporation to lease the tankers from General Dynamics which would in turn lease them to the British company in order to meet the requirements of Title XI of the Merchant Marine Act of 1936 that ships be owned and chartered by U.S. corporations.

Press accounts also reveal that the Securities and Exchange Commission is investigating Burmah in connection with an alleged payment of $3 million to Tongsun Park for negotiating a settlement of an oil tanker dispute between Burmah and Japan Lines involving the transportation of oil from Indonesia to Japan, and that the British government was expected to intervene with the U.S. government if Secretary Richardson had not approved the loan guarantees. In view of the controversial nature of this case and the size of the loan guarantee, it would be useful to have a more complete statement of the facts so that Congress can exercise its proper oversight functions.

The Washington Post states that $4 billion in loans have been guaranteed previously under Title XI. I would like to know the names, dates and amounts of these previous guarantees. I would also like to know the names of bankers providing loans guaranteed under Title XI during the last 5 years and the dates, amounts and names of companies to whom the loans were made.

In the General Dynamics case, I would like to know who initiated the request for the guarantees and to have copies of the correspondence relating to that request. I would also like to know the names of the banks and/or other lenders who will provide the funds to General Dynamics. Was information regarding the amounts or status of other loans by these institutions to either General Dynamics or Burmah Oil Company volunteered to, or requested by, the Commerce Department? If so, please provide a break-down of all outstanding credits to these companies by banks which will provide funds under the loan guarantee approved by Secretary Richardson. Finally, what are the criteria of the Commerce Department in determining the appropriate size of individual loan guarantees and the aggregate amount of all guarantees outstanding?

It is my hope that you will be able to provide this and any other relevant information at your earliest convenience. It will not only assist the appropriate Committees of Congress in assessing the current usefulness and proper limits of Title XI of the Merchant Marine Act of 1936, but will enable Congress to evaluate the merits of other loan guarantees if and when they arise. The information is of particular interest to this Committee which not only has oversight responsibilities for other loan guarantee programs, but also oversees the banking system which benefits as much from such programs as do the recipients of the credits.

Questions concerning the appropriateness of loan guarantees by the Federal government were raised by the previous administration after this Committee reported out legislation providing for loan guarantees for New York City. That legislation was subsequently altered to provide for a direct government loan to avoid a Presidential veto. In view of the approval by the Commerce Department of a loan guarantee three times the size of any previous commitment to a single corporation, it seems appropriate to initiate wider public discussion of the function of Federal loan guarantee programs. Such a discussion would provide useful guidelines for both the Congress and Executive departments in dealing with individual cases or programs. Your views on the subject would be most welcome.

Sincerely,

HENRY S. REUSS,
Chairman.

LEGISLATION URGING CONGRESS TO DETERMINE FUTURE TELECOMMUNICATIONS POLICY OF THIS NATION

The SPEAKER. Under a previous order of the House, the gentleman from In-

diana (Mr. SHARP), is recognized for 5 minutes.

Mr. SHARP. Mr. Speaker, Congress has before it a number of bills relating to telecommunications matters. They result largely from recent Federal regulatory decisions which have raised questions about some of the principles of communications common carrier regulation. The Federal Communications Commission, through a series of decisions, is allowing new companies to provide certain long distance telecommunications services to compete with established carriers, in the belief that such competition will best serve the public interest. Other decisions have assumed Federal jurisdiction over the terms and conditions for connecting nontelephone company equipment to telephone company facilities. One of the major issues yet to be resolved, however, is the impact of these decisions on the cost and efficiency of all telecommunications service.

Opponents of the FCC's policies are concerned that the new approach will upset nationwide pricing practices that they believe have made possible the provision of low cost service to the average American telephone user. Their studies show that continuation of the new policies will result in higher rates for most residential users. Proponents feel that the FCC's competition policies will best serve the public interest, however, and they point to studies showing that there are now no subsidies flowing to residential users.

This issue, and other similar questions raised by the debate over these matters in Congress, must be resolved in order to effectively determine the proper direction of our Nation's telecommunications policy. Both those who support the FCC's decisions and those who are opposed believe the issue should be resolved in a timely fashion.

There is general agreement that telephone service in the United States is superior, both in terms of cost and quality. Before any new interpretations of our national policy are sanctioned it is essential that the impact of those interpretations on the telephone users throughout the country be understood and accepted.

With these considerations in mind I have today introduced a resolution, along with three of my colleagues in the House. The resolution urges that Congress expeditiously determine the future telecommunications policy of this Nation. It further requests a delay in the implementation of further new regulatory policies until such a determination can be made.

MONTHLY LIST OF GAO REPORTS

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. BROOKS) is recognized for 10 minutes.

Mr. BROOKS. Mr. Speaker, the monthly list of GAO reports includes summaries of reports which were prepared by the staff of the General Accounting Office. The January 1977 list includes:

COMMUNITY AND REGIONAL DEVELOPMENT

Major Changes Are Needed in the New Leased-Housing Program. CED-77-19, January 28.

LETTER REPORTS

What should the Department of Housing and Urban Development do to protect new home buyers from builders who will not or cannot correct warranted defects? CED-77-20, January 5.

How to ease the burden imposed by Farmers Home Administration requirements that annual audits be made of association borrowers indebted to FHA. B-114873, May 31, 1973.

Information on a sewer project in Adena, Ohio, financed by the Farmers Home Administration. B-173465, February 22, 1972.

Different methods of disbursing Federal loans and grants by the Farmers Home Administration. B-114873, January 14, 1969.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

Concerted effort needed to improve Indian education. CED-77-24, January 17.

GENERAL GOVERNMENT

Federal supervision of State and national banks. OCG-77-1, January 31.

Highlights of a study of Federal supervision of State and national banks. OCG-77-1A, January 31.

Audit of procurement system of the State of Oregon: A case study. ———, January 10.

Settlement of contractor claims for construction of a Federal building in Hawaii. LCD-77-311, January 12.

Pros and Cons of Linking Postage Rates to the Consumer Price Index. GGD-77-13, January 11.

Summaries of Conclusions and Recommendation on the Operations of Civil Departments and Agencies. HRD-77-33, January 17.

Financial Status of Major Acquisitions, June 30, 1976. PSAD-77-62, January 18.

Safeguarding Taxpayer Information—An Evaluation of the Proposed Computerized Tax Administration System. LCD-76-115, January 17.

Financial Disclosure System for Department of Agriculture. FPCD-77-17, January 31.

An Improved Financial Disclosure System. FPCD-77-14, January 26.

The Food and Drug Administration's Financial Disclosure System for Special Government Employees: Progress and Problems. FPCD-76-99, January 24.

LETTER REPORTS

GAO comments on proposed legislation to set up sunset and zero-base budget reviews of Federal programs. PAD-77-28, December 23.

Recommendations for improving HEW's procedures for recovering overpayments of salaries. FGMSD-76-96, January 5.

Extent of illegal lobbying activities on behalf of the Equal Rights Amendment by the National Commission on the Observance of International Women's Year. HRD-77-26, January 31.

Some Small Business Administration offices are not making required determinations of the effects of late delinquency notices before purchasing delinquent guaranteed loans. CED-77-26, January 26.

Audit of the Marriott Corporation's records for food service operations at the Congressional Visitors Reception Area during the Bicentennial. GGD-77-10, December 14, 1976.

Quality of mail service in Louisiana. GGD-76-110, October 29, 1976.

GENERAL SCIENCE, SPACE AND TECHNOLOGY

Improved Reporting Needed on National Aeronautics and Space Administration Projects. PSAD-77-54, January 7.

HEALTH

Improprieties in Time and Attendance Practices at Medical Facilities. FGMSD-76-79, January 14.

More Civil Service Supervision Needed to Control Health Insurance Costs for Federal Employees. HRD-76-174, January 14.

Returning the Mentally Disabled to the Community: Government Needs to Do More. HRD-76-152, January 7; Summary Report, HRD-76-152A, January 7.

INTERNATIONAL AFFAIRS

Improvements and New Legislation Needed in AID's Contracting for Consultants and Advisors. ID-76-82, December 27, 1976.

United States Participation in INTERPOL, the International Criminal Police Organization. ID-76-77, December 27, 1976.

NATIONAL DEFENSE

Summaries of Conclusions and Recommendations on Department of Defense Operations. PSAD-77-1, January 13.

Comparison of the Shipboard Intermediate Range Combat System with the Acquisition Plan Recommended by the Commission on Government Procurement. PSAD-77-49, January 24.

Comparison of the NAVSTAR Program with the Acquisition Plan Recommended by the Commission on Government Procurement. PSAD-77-50, January 24.

Comparison of the Pershing II Program with the Acquisition Plan Recommended by the Commission on Government Procurement. PSAD-77-51, January 24.

Problems in Supporting Weapons Systems Produced by Other Countries. LCD-76-450, January 4.

The Clemency Program of 1974. FPCD-76-64, January 7.

Millions Being Spent to Apprehend Military Deserters Most of Whom are Discharged as Unqualified for Retention. FPCD-77-16, January 31.

Defense Inactive Item Program Could Be More Effective. LCD-77-204, January 26.

Actions Needed to Strengthen the New Defense Internal Audit Service. FGMSD-77-11, January 27.

Upward Mobility Using Job Restructuring. FPCD-77-9, January 7.

Upward Mobility Using Job Restructuring. FPCD-77-8, January 10.

LETTER REPORTS

Allegations concerning activities of employees of the New York region of the Defense Contract Administration Services. PSAD-77-59, January 13.

The Army's program to modernize its food service operations: need to expedite tests of the central food preparation concept. LCD-77-403, January 24.

Income from renting inadequate family housing to military personnel does not cover expenses. CED-77-35, January 31.

GAO analysis of the Navy's estimates of savings and costs associated with the relocation of the Navy International Logistics Control Office from Bayonne, New Jersey, to Philadelphia. LCD-77-310, December 23, 1976.

NATURAL RESOURCES, ENVIRONMENT, AND ENERGY

Safety and Transportation Safeguards at Rocky Flats Nuclear Weapons Plant. EMD-77-9A, January 11.

Problems and Progress in Regulating Ocean Dumping of Sewage Sludge and Industrial Wastes. CED-77-18, January 21.

An Evaluation of the Federal Power Commission's Rulemaking on Utilities' Construction Work in Progress. EMD-77-7, December 2, 1976.

National Energy Policy: An Agenda for Analysis. EMD-77-16, January 27.

Improvements Needed in the Federal En-

hanced Oil and Gas Recovery Research, Development, and Demonstration Program. EMD–77–3, January 28.

Survey of Publications on Exploration, Development, and Delivery of Alaskan Oil to Market. EMD–77–11, January 14.

Tennessee Valley Authority: Information on Certain Contracting and Personnel Management Activities. CED–77–4, December 29, 1976.

Delays in Constructing Waste Treatment Facilities After Award of Construction Grants—Improvements Made. CED–77–1, November 10, 1976.

Evaluation of a Proposal to Harvest and Rehabilitate Beetle-Infested Areas in Three Oregon National Forests. CED–77–15, December 27, 1976.

LETTER REPORTS

Comparison of Administration policy and GAO assessment of U.S. and international controls over the peaceful uses of nuclear energy. ID–77–7, January 6.

Continued progress in improving fuel economy of new automobiles depends on how well Federal emissions and safety standards can be balanced with fuel economy standards. EMD–77–13, January 13.

How the National Science Foundation awarded and administered a grant to George Washington University for energy policy research. HRD–77–38, January 25.

Is the organization of the Nuclear Regulatory Commission in compliance with the intent of the Energy Reorganization Act of 1974? RED–76–3, July 18, 1975.

REVENUE SHARING AND GENERAL PURPOSE FISCAL ASSISTANCE

Most Federal Assistance to New York City Unlikely To Be Affected by City-Initiated Budget Cuts. PAD–77–27, January 21.

The Monthly List of GAO Reports and/or copies of the full texts are available from the U.S. General Accounting Office, room 4522, 441 G Street NW., Washington, D.C. 20548. Phone (202) 275–6241.

Summaries of significant legal decisions and advisory opinions of the Comptroller General issued in January 1977 are also available as follows:

Solicitation Inconsistent with Delegation of Procurement Authority. B–186855, January 3.

Technical Finding on Computer Security Requires Reopening Negotiations. B–186858, January 14.

Uniformity Needed Between Military and Civilian Contracting Regulations. B–187168, January 12.

Claim Denied for Proposal Preparation Costs. B–186248, December 30.

Temporary Lodging at Family Residence. B–187129, January 4.

Compensation of Members of Regional Fishery Management Councils. B–187905, January 3.

COMMITTEE ORDER NO. 31—CLERK-HIRE ALLOWANCE

The SPEAKER. Under a previous order of the House, the gentleman from New Jersey (Mr. THOMPSON) is recognized for 5 minutes.

Mr. THOMPSON. Mr. Speaker, the Committee on House Administration, pursuant to its authority under Public Law 92–184 and Public Law 94–440, has issued committee order No. 31 which is effective April 1, 1977.

Committee order No. 31 ties the maximum annual rate of compensation which may be paid from the clerk-hire allowance to executive schedule level V.

The order follows:

COMMITTEE ORDER NO. 31

Resolved, That effective April 1, 1977, until otherwise provided by order of the Committee on House Administration, each Member, Delegate or Resident Commissioner of the House of Representatives may compensate employees from the clerk-hire allowance at a per annum rate equivalent to, and not to exceed, the highest per annum rate of basic pay, as in effect from time to time, authorized for Level V of the Executive Schedule (5 U.S.C. 5316).

OVERSIGHT HEARING ON FOREIGN MEDICAL GRADUATES

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. EILBERG) is recognized for 5 minutes.

Mr. EILBERG. Mr. Speaker, this is to announce that the Subcommittee on Immigration, Citizenship, and International Law of the House Committee on the Judiciary has scheduled 1 day of public oversight hearings to review title VI of Public Law 94–484, the Health Professions Educational Assistance Act of 1976.

There are numerous questions surrounding the implementation of this law and the primary purpose of the hearing is instructional in nature. In other words, the subcommittee intends to review what actions have been or will be taken by the executive branch to implement those provisions of Public Law 94–484 that relate to the admission of foreign medical graduates into this country as immigrants and nonimmigrants.

Testimony will be received from Mr. Christopher Chapman, Deputy Assistant Secretary for Educational and Cultural Affairs, Department of State; Dr. James Dickson, Acting Assistant Secretary for Health, Department of Health, Education, and Welfare; and Dr. Ray Casterline, Executive Director, Educational Commission for Foreign Medical Graduates.

The hearing will be held in room 2237 and commence at 9:30 a.m. on Thursday, March 24, 1977.

THE PLUTONIUM LICENSING CONTROL ACT

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. BINGHAM), is recognized for 30 minutes.

Mr. BINGHAM. Mr. Speaker, I am today introducing the Plutonium Licensing Control Act. This is a very simple and straightforward bill designed to put the United States on record as rejecting the development of a plutonium economy in which we would be dependent upon plutonium fuel as a principal source of energy. Under this bill no license could be issued by the Nuclear Regulatory Commission to reprocess the spent nuclear fuel from nuclear power reactors or to operate a nuclear reactor using plutonium fuel.

Plutonium is the most toxic manmade substance; microgram quantities can cause cancer in humans. Plutonium does not occur in nature, but rather is a by-product of the nuclear fission process. Less than 20 pounds of this material, once extracted—reprocessed—from the radioactive spent nuclear fuel rods, can be quite easily fabricated into a crude, but terribly potent, nuclear weapon. Thus using a plutonium warhead about the size of a grapefruit, an irresponsible nation or terrorist organization could—employing technical know-how obtainable in any university physics library—detonate a device with an explosive capacity equivalent to that of the bomb we dropped on Hiroshima.

The greatest danger of reprocessing is that it causes the spread of the capability to explode nuclear weapons. As was written by David Lilienthal, first Chairman of the Atomic Energy Commission, in a New York Times editorial last year:

> The world should be made aware that any nation that sets out to extract plutonium from the ashes of an ostensibly innocent electric atomic reactor is on its way to making bombs. No one should be deceived that its purposes are peaceful.

The danger was stated in a similar fashion in a recent report by the Arms Control and Disarmament Agency—ACOA:

> If (plutonium) were made available in a form usable for explosives, then many nations or technically competent terrorist organizations could marshal the manufacturing techniques and know-how to build their own nuclear bombs.
>
> If this should happen, the world would become a much more dangerous place to live.

And then Secretary of State Henry Kissinger put the problem more succinctly in testimony before Congress last year:

> The greatest single danger of unrestrained nuclear proliferation resides in the spread under national control of reprocessing facilities.

If plutonium is kept in the radioactive nuclear fuel assembly, the threat that it will be used for nuclear weapons can be greatly reduced. This is the safest place for plutonium—in the radioactive fuel rods which are extremely difficult to handle and which must be stored in isolation from the environment after use in power generating fission reactors. It is the breaking open of these spent fuel rods at reprocessing plants in order to extract plutonium which can offer nations nuclear weapons capability and it is this reprocessing which the legislation I am introducing today would expressly prohibit.

The separation of plutonium from spent fuel rods in commercial reprocessing facilities requires an extremely complex and expensive technological effort and the plutonium yielded serves only two purposes: Fueling futuristic breeder reactors and making bombs.

Proposed commercial reprocessing facilities which might be built in the United States in the next decade bear $1 to $1.5 billion price tags. Both previous attempts to build commercial reprocessing facilities in the United States—in West Valley, N.Y. and Morris, Ill.—today stand as radioactive white elephants, inoperable and unusable. The West Valley plant, constructed by the Getty Oil Co., through its subsidiary Nuclear Fuel Services, left as its special legacy more than 600,000 gallons of radioactive liquid wastes—some of which are leaking—which Getty has recently turned over to New York State. The most recent cost estimate put on cleanup operations, a price which will ultimately be paid by State and National taxpayers, is $540 million; but the figure is expected to rise closer to $1 billion before the massive efforts to decontaminate the area are completed. A third plant presently under construction in Barnwell, S.C. is less than half completed. Building at Barnwell has come to a virtual halt because of spiraling costs and increasing uncertainty over the plant's licensability and the security of the plutonium its owners, Allied Chemical, Gulf and Royal Dutch Shell, would extract.

During the 1960's, a time when the proliferation risks of reprocessing were not fully assessed and comprehended, certain elements of the U.S. nuclear industry looked to plutonium-based fuels as an inevitable step in nuclear power development. But today it is clear to most dispassionate analysts that even if you ignore the tremendous danger which reprocessing poses to human civilization the economics of reprocessing are in serious doubt. Study after study has showed that the cost of reprocessing nearly match, and in some cases, outweigh, the economic benefits of using plutonium as a fuel. An example is a recent thorough analysis of reprocessing economics conducted by ACDA which concludes that, even if you ignore proliferation dangers, it costs more to separate plutonium for use in nuclear reactors than it is worth as a fuel. Such findings have led to the following conclusions by industry advocates:

It looks, in fact, as if a long deferral of commercial reprocessing would cost little domestically—*Wall Street Journal*, June 25, 1976.

The energy industry should no longer regard reprocessing of used nuclear fuel to produce plutonium as a necessary and inevitable step—President Ford, October 28, 1976.

Reprocessing is not, after all, the holy grail of our nuclear program—Electric World, November 15, 1976.

Another argument advanced by the handful of oil companies which have pushed for Federal subsidies to get into the nuclear fuel business is that reprocessing is the best way to deal with the critical problem of handling radioactive nuclear wastes. Yet it is now clear that reprocessing does not offer a significant reduction in the total volume of wastes. Reprocessing serves only to shift, at enormous expense, the levels of radioactivity contained in the wastes which we must, at any rate, isolate from the environment for periods ranging from hundreds of years to tens of thousands of years. These companies—which express great concern about the accumulation of nuclear waste—might be better advised to save billions of dollars capital by investing in less expensive, but more urgently needed temporary and permanent spent fuel storage facilities of nuclear fuel plants.

Proponents of reprocessing have long maintained that we need the small quantities of uranium extracted at reprocessing plants to fuel our current generation of light water reactors and that it will soon be necessary to use the plutonium to fuel the breeder reactor, which theoretically can produce more fuel than it consumes. The basis for this argument—and for the presumed need for developing breeders and reprocessing technology—was the assumption that the United States will soon run out of uranium. However, it is now apparent that this argument is incorrect—as has been stated by former head of the Federal Energy Administration, John Sawhill.

The U.S. has sufficient uranium reserves to last well into the next century. For this reason we are in the position to defer the decision on plutonium recycling . . . in order to influence foreign suppliers to do the same.

As far as the breeder is concerned, there is serious doubt that this program will—or should—ever get off the ground. President Carter has made large cuts in this year's breeder research and development funding and shares the widespread concern that the breeder poses—in the words of his March 3 letter to me—"a potential security risk." At any rate it is apparent from all ERDA estimates that even if we continue to pour the lion's share of our Federal R. & D. dollars into the breeder, it will supply a maximum of only 3.1 percent of our energy needs by the year 2000—less than our terribly underfunded solar energy program can provide. And recent statements from the former Chairman of the AEC, Presidential Energy Adviser James Schlesinger, who was once a staunch advocate of the breeder, question whether the breeder is practical at all; he says:

The breeder may be an idea whose time has come and gone.

Mr. Speaker, I believe it is clear that by placing a moratorium upon reprocessing in the United States by passing this legislation we would not be giving up any significant energy potential which might serve us in this century. By prohibiting commercial reprocessing at this time, we would certainly not preclude future reconsideration of its merits. What we would achieve would be a major step forward in this Nation's effort to control traffic in nuclear weapons-grade material. We would not in any way cripple our present nuclear program, but rather would greatly increase the amount of funds available for vital alternative energy research, development, and commercialization projects which thus far have not received even one-tenth the largesse which has been bestowed upon nuclear technologies, especially reprocessing and the breeder.

Perhaps the most critical reason why we should take the bold step this year to declare that the United States will not permit commercial reprocessing in this country is the fact that the cornerstone of any truly effective program designed to halt nuclear weapons will have to be an effort to get other nations to forego reprocessing. For once nations develop reprocessing capabilities of their own, they are only days away from exploding a nuclear device if they so choose. One of the major efforts of both the Ford and the Carter administration has been to prevent, through intense diplomatic efforts, the spread of reprocessing facilities to such nonnuclear weapons states as Taiwan, Brazil, Pakistan, and South Korea. How can we expect these nations to forego reprocessing if we tolerate it ourselves? How can we impress upon fellow supplier nations—such as France, West Germany, and Great Britain—the urgency of placing a prohibition on reprocessing if we are continuing to move toward commercialization of this technology at home?

Many nations already suspect that our motives in asking them to forego these reprocessing plant sales are selfish; they point to our continued development of reprocessing and breeder technologies at home as a hypocritical example of the United States lecturing other nations to forego lucrative sales while preparing to take the same steps ourselves. It is imperative that we put ourselves squarely on the record as opposing the development of reprocessing plants at home, as well as anywhere in the world.

It is important to understand that it does not matter a great deal who does the reprocessing, that internationalization of reprocessing does not make it harmless. The danger remains that once the plutonium is separated from the spent fuel it is suitable for ready fabrication into weapons. With nuclear industry proposals afoot to construct as many as 20 such plants in the United States over the next half century, there will be huge amounts of plutonium produced and no way of perfectly controlling it. If a tiny fraction of this material were obtained by a belligerent nation or a terrorist group, in the words of the Second Club of Rome Report:

The lives of millions could easily be beholden to a single reckless and daring individual.

This constant threat of terrorist use of atomic weapons would justify use of daraconian security measures, utterly destructive of civil liberties. In a plutonium economy, extensive surveillance groups or even religious sects—such as the Hanafi Muslim group who, numbering but a dozen, this month managed to hold our Capital City at bay—would be necessary.

A recent analysis of this particular danger, entitled "Policing Plutonium: The Civil Liberties Fallout" and published in the Harvard Civil Rights/Civil Liberties Law Review, concluded that once plutonium is missing, tactics ranging from breaking and entering to torture might well be justified in view of the fact that tens of hundreds of thousands of lives would be at stake. The article stated:

It is virtually impossible to construct a compelling affirmative case for plutonium recycling in the face of the civil liberties objections . . . it is surely within reason to

demand that all other energy sources be proven unworkable or unacceptable and to demand significant long term reduction in the consumption of energy before implementing an energy program with such dire effects upon law and liberty.

It is apparent that there are no such things as safeguards when it comes to monitoring and protecting plutonium once it has been extracted from spent fuel assemblies. After 2 years of study by the House International Relations Committee, we concluded that any international safeguards system is unworkable when plutonium is used as a fuel; as was stated in the committee report on the Export Administration Act:

Safeguards which are adequate and effective when applied to nuclear reactors are inadequate and ineffective when applied to nuclear reprocessing facilities.

Furthermore it is clear that already we cannot keep track of the plutonium under our control that has been used for experimental and military purposes. A study conducted by the General Accounting Office last year for a Small Business Subcommittee chaired by Representative DINGELL found that at ERDA facilities alone, tens of tons of sensitive nuclear materials including plutonium from facilities used to fabricate fuel rods for the experimental breeder reactors, were missing and unaccounted for. ERDA's response to the report was, in essence "it is stuck in the pipes." But the question remains even if none of this material was diverted for clandestine purposes, how do we know where it is? There is nothing to prevent a terrorist group from claiming they have just a fraction of diverted plutonium and from thus holding an entire city for ransom.

These are the types of horrifying scenarios we can realistically construct when we talk of going the plutonium fuel route. To proceed with reprocessing at this time is to make a Faustian bargain with ourselves and future generations: in return for a supposedly renewable energy source, we will require an eternal vigilance of a degree virtually unknown in the history of human civilization and we will be taking an unacceptable risk of worldwide conflagration.

The time to put a stop to the development of a plutonium economy is now. There are only two reprocessing plants in the whole world which are presently suitable for commercial operation. Both of these are in stable nuclear weapons states, France and Britain, which can be looked to for maximum restraint in their treatment of this sensitive technology. Here at home, we have been vigorously studying the physical properties and potential uses of plutonium for more than 30 years and have seen at least three ill-advised attempts to commercialize reprocessing technology end in disastrous failure. So we are not yet committed by any means to commercialization of plutonium facilities, though we have poured billions of dollars of private capital and Federal research and development funds into breeder reactor and plutonium reprocessing technology. We can continue to study plutonium—there is nothing in the bill I am introducing today which would prohibit continued plutonium research once the legislation has passed. And, of course, the Congress is free to reverse its decision anytime. But the key point is that we should start today that, given the great deal we do already know about plutonium reprocessing, the United States will not license facilities for its commercial use.

Mr. Speaker, I would stress that we do not need to reprocess plutonium now. We can continue to utilize nuclear-generated electricity for at least several more decades—well into the next century—without reprocessing. This bill in no way is designed to undermine cautious development of the present generation of nuclear reactors which can serve us well if only we maintain great vigilance. What the legislation does achieve quite simply is to put this Nation on record in opposition to the development of a permanent plutonium economy, a development which could very well spell the end of our society as we know it.

The bill I am introducing today can begin what should be a national, indeed, international debate over the virtues and the risks of the plutonium economy. It has the firm support of the new foreign policy lobby, New Directions. The public interest group's distinguished board of directors, headed by former Governor of Delaware and head of President Ford's Council on Environmental Quality, Russell Peterson, has made passage of this legislation New Directions' top priority in this Congress. The bill will be circulated for cosponsorship in the next 2 weeks and is expected to have the unified support of several major environmental and public interest groups.

Mr. Speaker, in closing I would like to take note of the persuasive conclusions of a 14-month study of all aspects of nuclear energy use sponsored by the Ford Foundation which was released today. The foundation gathered an extremely distinguished panel of experts—including Deputy Undersecretary of State Joseph S. Nye and Secretary of Defense Harold Brown—and excluding all individuals, however intelligent and articulate, who were generally considered to have hardened pronuclear or antinuclear opinions. In the published volume which resulted from this exhaustive study, there is the following conclusion regarding plutonium recycling:

CONCLUSION

There is no compelling national interest to be served by reprocessing. There appears to be little, if any, economic incentive and it is unlikely that reprocessing and recycle could proceed without subsidy. The noneconomic benefits of reprocessing are small: fuel supply for LWRs would be little enhanced; present experience with reprocessing or plutonium stockpiles has little present value since the introduction of breeders is sufficiently far in the future and uncertain; and contemporary waste management risks with reprocessing are likely larger than possible reductions in long-term hazards from disposal. Health hazards and new accident risks argue against reprocessing. But the most severe risks from reprocessing and recycle are the increased opportunities for the proliferation of national weapons capabilities and the terrorist danger associated with plutonium in the fuel cycle.

In these circumstances, we believe that reprocessing should be deferred indefinitely by the United States and no effort should be made to subsidize the completion or operation of existing facilities. The United States should work to reduce the cost and improve the availability of alternatives to reprocessing worldwide and seek to restrain separation and use of plutonium.

Mr. Speaker, at this time I insert the full text of the legislation I am introducing today in the RECORD:

H.R. 5234

A bill to amend the Atomic Energy Act of 1954 to prohibit licensing of commercial nuclear fuel reprocessing facilities and plutonium-fueled reactors

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Plutonium Licensing Control Act of 1977".

SEC. 2. Section 103 of the Atomic Energy Act of 1954 is amended by adding at the end thereof the following new subsection:

"e. No license shall be issued to any person to—

"(1) own or operate any nuclear power reactor fueled in whole or in part with recovered plutonium, or

"(2) process spent nuclear reactor fuel in order to recover plutonium; *provided,* that such prohibition shall not apply to any activities necessary to the conduct of the United States military defense programs."

SEC. 3. Section 11 of the Atomic Energy Act of 1954 is amended by adding at the end thereof the following new subsections:

"dd. The term 'nuclear power reactor' means any commercial nuclear reactor operated for the purpose of generating electricity (whether owned by government or private sources or both) and any such demonstration by prototype reactor, but does not include any such reactor operated solely for basic research and experimental purposes.

"ee. The term 'plutonium' means pure plutonium, plutonium oxide and any other plutonium compound.

"ff. The term 'spent nuclear reactor fuel' means any material which forms part of a used fuel assembly for a nuclear experimental, power or production reactor."

PERSONAL EXPLANATION

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, because of a previous commitment in my district, I was unable to be present for some of the votes last Wednesday and in particular on three amendments to the supplemental appropriation for fiscal year 1977. I would like to state my position on the amendments offered by Mr. OBEY, Mr. YOUNG of Florida, and Mr. JOHN T. MYERS.

Mr. OBEY offered an amendment to restore the $200 million from the Community Services Administration's program. In the full committee, I voted for the program, which will provide for the payment of fuel bills of the elderly poor and the impoverished, and I would have continued my support by voting for it on the floor. This program will assist the thousands of poorer families and older Americans who have suffered this winter and found it impossible to pay their utility bills without sacrificing other essentials such as food, rent, and medical services. The substitution for Mr. OBEY'S amendment by Mr. ANDERSON of Illinois, reduces any inequities that may have occurred in the original amendment. It provides for payments to those who have

already given up essential services and needs to pay their fuel bills. This substitution makes it clear that this is a humanitarian gesture, designed as a short-term measure to aid those who cannot pay their inflated fuel bills, and not as the start of a new program which would encourage people to forgo payments of their bills.

I also agreed with the action the House took last Wednesday in rejecting the Young amendment. This amendment would have deleted the $55 million for the International Development Association. The United States is already 2 years behind in its payments to the IDA, and although there have been a number of criticisms of the IDA, I believe the Carter administration deserves time to make its impact at the World Bank and IDA, before we renege on our multilateral commitments.

Lastly, I am deeply concerned with the approval of Mr. JOHN T. MYERS of Indiana's amendment to prevent funds from being used for President Carter's amnesty program. The passage of this legislation seems to be a deliberate attempt to mullify the President's constitutional right to issue pardons. Through his pardon of Vietnam draft evaders, Mr. Carter has been attempting to heal the wounds and strife left by the war. This amendment only revives the terrible conflicts we hoped had passed.

There are 9,000 convicted draft evaders whose records must be purged before they can continue a normal existence in the United States. My original hope had been for a declaration of amnesty for both Selective Service and military offenders. Now the House has voted for—unwisely in my opinion—an amendment that may prevent these young men from benefiting from their Presidential pardons. I hope it will not have that effect, for if it does, it will be an unwarranted and perhaps unconstitutional limitation on Presidential power. I urge the Senate to reject this amendment. Had I been present I would have voted for the Obey amendment and against the Young and Myers amendments. On the final passage of the bill I would have voted for the bill.

VIETNAM AND OPPRESSION

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, the Presidential Commission on Persons Missing or Unaccounted For in Southeast Asia has achieved some results because of its visit to Vietnam; it has opened a dialog with that country's government and has brought back the remains of 12 of our servicemen who died during the war.

I am one of those who believes that we ought to establish normal relations with the Vietnam Government, notwithstanding that it is totalitarian and oppressive, and I condemn it for its repression. I likewise deplore the totalitarian govments that rule most of the nations in the world today, running the gamut from U.S.S.R., China and Cuba to the Republic of South Africa, Uruguay and Chile. Nevertheless, while we must continue to condemn the gross infringements on human rights perpetrated by those governments against their own people, reality requires that we maintain diplomatic relations with those countries. But we should not assist them either economically or militarily in their repression.

President Carter has made it clear that he holds dear the principle of human rights and condemns repression, and he has been courageous in speaking out on this subject. I along with many others applaud President Carter for taking his strong position which contrasts dramatically with the silence on that subject by former President Ford and his administration.

I have stated repeatedly that my opposition to American involvement in Vietnam was predicated on the principle that we ought not to be involved in a civil war, particularly where both parties to that civil war were oppressive and authoritarian governments as were the North and South Vietnam regimes. I deplore the statements of those on the radical left who denounce the repression in countries with right wing governments such as the Republic of South Africa, Uruguay, and Chile, but who refuse to see or deplore similar repression in countries having left wing authoritarian governments such as the U.S.S.R., China, Cuba and Vietnam.

There are efforts now being made to obtain economic and, perhaps, military assistance for the Vietnam regime. I oppose such aid, although I do support our entering into normal diplomatic relations with that country. I urge those who have two standards of conduct for governments, one for the left and one for the right to read the New York Times editorial of today which I am appending. Oppression and the need to resist it, and never to defend it, nor to make excuses for its existence, is everyone's business. Persons of conscience have a duty to denounce repression in all its froms. The New York Times editorial follows:

"LIBERATION" COMES TO VIETNAM

In the swell of opposition to the war in Vietnam during the decade before America's withdrawal, there was always a minority, small but vehement, that looked to the Communists as saviors of that unhappy land. They carried Vietcong flags in peace demonstrations, hailed Ho Chi Minh as the George Washington of his country, and invariably spoke of the North Vietnamese as liberators.

One organ of this celebration was The New York Review of Books, and so it comes as a surprise—a welcome one—to find reprinted in a recent issue an article from the French journal L'Express by André Gelinas, a French-Canadian Catholic priest and Chinese scholar who settled in Vietnam in 1948, and was expelled in July 1976, 15 months after the North Vietnamese troops arrived in Saigon.

The picture that Father Gelinas paints of South Vietnam since its "liberation" is one of widespread misery, constant surveillance, incessant propaganda, endless indoctrinations, arbitrary arrest, executions, imprisonments, and exile to remote areas. He describes a society where an arrogant bureaucracy reaches into every corner of life, where books are burned, citizens are denounced, and informers thrive.

Father Gelinas observes that "the methods, the doctrine and very weight of the police and bureaucratic apparatus" in the South now "are entirely Russian." That seems right. At least, it is in accord with Hannah Arendt's observation, based largely on the experience of Stalinism, that "terror is the essence of totalitarian domination." In the list of countries that are today suffocating the rights of their citizens, Vietnam must rank high.

To be sure, this finding, however repugnant does not make a case in favor of the American intervention in Vietnam. The men we supported were scarcely true-blue democrats. Nor should it impede the ongoing efforts by the Administration to establish relations with Hanoi. There are good reasons for coming to diplomatic terms with regimes that do not share American values, and the United States owes a special debt to the Vietnamese people. But for those who opposed the war, Father Gelinas's report contains bitter and inescapable ironies.

The British magazine Spectator has drawn an interesting parallel between our war against the Vietcong and the British war against the Boers: "The pro-Boers and the pro-Vietcong were wrong about the 'enemy' but right about the war. The Boers were idealized as gallant underdog nationalists, which, like the NLF [the National Liberation Front], they were, but which view overlooked the fact that they were fighting as well to keep their hands on the wealth of the Rand and to continue oppressing the blacks, as the NLF was fighting to institute a mindless totalitarian dictatorship."

The Vietnam experience was always more complex than ideologues of either side could allow. America may have played a villain's role there, but the heroes of that tragedy were never easy to discern.

SHEEN AWARD TO DR. ZOLLINGER

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, an Ohio State University surgeon and reident of my 12th Congressional District, Robert M. Zollinger, will receive the prestigious Sheen Award of the American Medical Association, given annually to the outstanding doctor of medical science in the United States.

Dr. Zollinger has gained international recognition as a surgeon, medical researcher, and author of important medical texts. His career serves as an example for young people considering the health care professions, for Dr. Zollinger has contributed in an important way to his community as well as the Nation.

So that my colleagues can become familiar with the achievements of this distinguished physician, I include the following excellent article from the Columbus Dispatch:

DR. ZOLLINGER TO RECEIVE SHEEN AWARD FROM AMA

(By Mary McGarey)

Dr. Robert M. Zollinger, emeritus professor of surgery at Ohio State University and former department chairman, will receive the Sheen Award of the American Medical Association (AMA) June 19 during its annual convention in San Franciscio.

The $10,000 award has been presented each year since 1968 to a physician selected for a single achievement or for an accumulated career of excellence in medicine.

It was established in a trust fund set up by Thomas G. Sheen, Atlantic City business man, in memory of his brother, Dr. Rodman E. Sheen, a pioneer radiologist. Sheen di-

rected that it be given annually, upon recommendation of the AMA, to "the outstanding doctor of medical science in the United States."

The first recipient, another Ohioan, was Dr. Irvine E. Page, eminent Cleveland heart specialist. Among other Sheen honorees have been such famous medical names as Drs. Robert E. Gross, Charles B. Huggins, Paul Dudley White and Howard A. Rusk.

A native of Millersport, Ohio, and a graduate of the OSU College of Medicine, Zollinger is internationally known as surgeon and surgical researcher, educator, author and editor, and a leader in national and international surgical groups.

A member of the OSU surgical department since 1946 and chairman from 1947 until his retirement in 1974, Zollinger has authored or co-authored more than 280 publications. One is The Atlas of Surgical Operations, originally published in collaboration with the late Dr. Elliott Cutler and more recently with his son, Robert, professor of surgery at Case Western Reserve University.

He also wrote Textbook of Surgery in collaboration with Dr. Warren Cole.

A partial account of Zollinger's professional leadership includes presidencies of the American College of Surgeons, the Society of University Surgeons, the American Surgical Association, and the Central Surgical Society; editor-in-chief of the American Journal of Surgery, and executive vice-presidency of the Pan American Medical Association.

One of his most exclusive affiliations is with the Robert M. Zollinger Club, formed in 1955 by his former residents and associates, a number of whom now head surgical departments at major U.S. medical schools.

Zollinger has served as member and chairman of the Metropolitan Park Board of Franklin County, is an active board member of the American Horticulture Society; and is an accredited, rose judge and past president of the American Rose Society.

He and Mrs. Zollinger live at 83 S. Columbia Ave., Bexley.

JUST WHO AMONG THE MEMBERS OF THIS HOUSE ARE TRULY CONCERNED WITH HUMAN RIGHTS?

(Mr. KETCHUM asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. KETCHUM. Mr. Speaker, last week the House passed legislation to halt the importationn of Rhodesian chrome into the United States. During the debate on the measure, the issue of human rights was raised again and again. In an effort to assure the consistent application of this principle in the conduct of our Nation's foreign policy, an amendment was offered that sought to prohibit the importation of chrome from any country not in compliance with the human rights provisions of the United Nations Charter. Although the bill passed, the amendment was rejected.

The very next day, I received in my office a Dear Colleague letter—which I will now enter into the RECORD—soliciting cosponsors for a resolution expressing congressional support for the Carter administration's position on human rights. The letter was endorsed by 35 Members. Thirty-two of these individuals were present to vote on the above-mentioned amendment, yet, interestingly enough, only two were sufficiently concerned with human rights to support its consistent application. Mr. Speaker, I pose the question—just who among the Members of this House are truly concerned with human rights?

The letter follows:

U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., March 11, 1977.

DEAR COLLEAGUE: Last week I introduced H. Con. Res. 137. The resolution is an expression of congresisonal support for the human rights stance taken by the Carter Administration. It reaffirms the U.S. commitment to obtaining compliance with the Helsinki Accords and it urges the President to advance the cause of human rights in other countries outside of Eastern Europe such as Chile, South Korea, Iran, Uganda, Argentina, and the Philippines.

The resolution has 34 co-sponsors who are listed below. I will be reintroducing my human rights resolution on Wednesday, March 16th. If you want to be a co-sponsor, please call Bill Goold (5-3401) before next Wednesday morning.

Sincerely yours,

DON J. PEASE,
Member of Congress.

Congressman Zablocki, Congressman Fraser, Congressman Breckinridge, Congressman Metcalfe, Congressman Harrington, Congressman Eilberg, Congressman Hawkins, Congressman Moakley, Congressman Beilenson, Congressman Long (of Maryland), Congressman Udall.

Congressman Rose, Congressman Bedell, Congressman Glickman, Congressman Solarz, Congresswoman Mikulski, Congressman Vento, Congresswoman Spellman, Congressman Corman, Congressman Rosenthal, Congressman Dodd, Congressman Pattison (of New York).

Congressman Richmond, Congressman Roe, Congressman Ottinger, Congressman Fithian, Congressman Jenrette, Congressman Blouin, Congressman Patterson, Congressman Downey, Congressman Carney, Congressman Panetta, Congressman Kostmayer, Congressman Walgren.

SILVER ANNIVERSARY OF THE CIVIL RESERVE AIR FLEET

(Mr. PRICE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE. Mr. Speaker, March 20, 1977, marked the silver anniversary of the Civil Reserve Air Fleet. I have long been a strong supporter of the Civil Reserve Air Fleet and on January 27, 1977, I introduced H.R. 2637, which would authorize the Secretary of the Air Force to enter into contracts with commercial air carriers for incorporation of suitable cargo features into new widebody aircraft and modification of existing passenger aircraft to be used for national defense purposes in the event of war or national emergency.

Using commercial aircraft in time of emergency is not a new concept. The idea of a Civil Reserve Air Fleet capable of forming a partnership with the military in time of need was formulated 25 years ago. Its past missions include the impressive, emergency resupply under hostile fire of Phnom Penh, Cambodia, and evacuation of thousands of South Vietnam refugee families in imminent danger from advancing North Vietnamese forces. While past Civil Reserve Air Fleet accomplishments have been phenomenal, it is vitally important that we look to the future to insure that this remains a healthy and viable program.

Now composed of over 300 aircraft belonging to 21 U.S. carriers, the Civil Reserve Air Fleet is dedicated to augmenting the Department of Defense during emergency conditions. Such an arrangement constitutes the basis for a real civilian/military partnership—reducing our dependence on organic military airlift and its attendant cost during peacetime while providing a significant capability to respond during conflict.

It is only appropriate that this partnership be honored now, when the Civil Reserve Air Fleet is marking its silver anniversary. At this time, I would like to insert in the RECORD an editorial from Aviation Week and Space Technology regarding the white paper blueprint for the future of cargo airlift, developed by Gen. Paul K. Carlton, commander in chief, Military Airlift Command.

Mr. Speaker, General Carlton is a man of vision, and his proposals for a total airlift system provide fresh, new concepts which I commend to my colleagues. I urge that we honor the silver anniversary of the Civil Reserve Air Fleet by supporting H.R. 2637 and the increased funding that the new administration has proposed for this uniquely cost-effective contribution to national security.

The editorial follows:

A TOTAL AIRLIFT SYSTEM

Future airlift requirements are closely related to the world economy, and therefore, international economic developments bear watching. Traditional indicators point to continued inflation and budgetary and financial constraints for both the civil and the military sectors. The prices of raw materials, including petroleum, may continue to rise thereby increasing the costs of end products. Any reduction in the prices of airlift services relative to other prices will result in an increase in traffic of the civil carriers. Therefore, one way to bolster the economic strength of the civil aviation sector is to adopt policies which serve to reduce the costs and relative prices of air transportation. At the same time, increases in domestic and international economic growth will also increase the air cargo market.

Strategic airlift, as a blend of the civil and military sectors, provides an opportunity to achieve economies in air transportation. MAC and the airlines should work together with the aircraft manufacturers to design a large, efficient, "uncompromised" air freighter (termed the C–XX by the military) suited to both civil and military operations. Should this be achieved, the resulting large-volume production of such aircraft would yield lower aircraft prices which, in turn, would benefit the airlines by permitting lower prices for commercial air freight services, thereby increasing traffic. In addition, the improved service quality provided by an "uncompromised" air freighter would increase traffic even more.

MAC would also benefit from being able to purchase its next generation of strategic aircraft at lower prices. Furthermore, it would benefit from having essentially the same aircraft operated by the airlines and committed to CRAF [civil reserve air fleet] for emergency expansion. The commonality in aircraft would also promote standby expansion capability by providing civilian crews familiar with MAC aircraft and by providing stocks of spare parts that could be used interchangeably among military and civil aircraft.

Indeed, some of the existing imbalances of aircraft, equipment and personnel . . . would be reduced by obtaining commonality in aircraft.

. . . As our forces pull back from foreign lands, the demands on our strategic airlift force increase. There is a sense of urgency for us to recognize and exploit the contribution that a civil standby capability has to offer. Our task then is to provide a better blend of civil and military airlift assets so as to achieve a maximum capability from the nation's airlift resources. The result would be an increase in deployment capability at less total cost to the government. We could effectively decrease the need for military transports and still maintain our ability to respond to our commitments abroad. At the same time, the commercial carriers could enjoy reduced operating costs.

. . . A new national airlift policy will have to be developed, unifying the civil and military airlift capabilities. The ultimate goal of this civil-military partnership will be to reduce costs and gain increased airlift capability through efficient utilization of this combined transportation resource. A way must be found to yield a healthy growth rate so as to increase the mobilization base for national security.

A major contribution to this blueprint for the future, which includes all aspects of aviation from the manufacturer to the air carriers as well as the military, is the development of a comprehensive airlift system based on a rational and realistic airlift policy. A major part of such a policy would be the use of the same aircraft type as outlined above. Given agreement on the basic characteristics of this aircraft, a problem arises as to how it would be purchased by the airlines. Assuming the availability of adequate financing, the present system of ownership by the airlines could be continued with the associated mobilization provisions of the CRAF program. Alternatively, the aircraft might be owned jointly by the government and the airlines and used interchangeably. Finally, if financing could not be obtained by the airlines, the government could purchase the aircraft and lease them to the airlines.

Government ownership of aircraft would require new and comprehensive legislation formed from precedents set earlier in the other modes of transportation. The proposed all-encompassing legislation should consolidate, clarify and expand all previous airlift acts and directives. It should also provide for a government airlift commission (somewhat as proposed by Rep. [J.F.] Kennedy in 1949) with broad-based authority to foster and promote the development of the civil-military partnership, but with special emphasis being placed on procurement and operating efficiencies to overcome some of the drawbacks experienced in the Merchant Marine program over the past few decades. The Commission could be authorized to operate and lease property or equipment under its control, enter into contracts, extend or renew loans, and formulate policies that would be meaningful and pertinent to the civil-military air transport sector. Under authority provided by legislation, the Commission could provide construction and operation differential payments as well as various forms of insurance and loan guarantees. With its broad powers, the Commission should be able to accomplish everything from stimulating the air cargo market to developing follow-on aircraft to meet the future demands of the nation. Undoubtedly, a most important task would be the development of recommendations as to airlift policy which would result in a total comprehensive airlift system. This system would emphasize distribution flexibility by reducing the time of movement in transportation pipelines, reducing inventory and warehousing costs, and lessening the chances for loss or damage. . . .

The "total airlift system" could also affect cost savings by attacking areas of duplicated fixed costs such as airfields, support facilities and equipment, storage facilities, freight terminals and systems, and spare parts. The system could include joint tenancy at airfields and other installations. Present military airfields in industrial areas of the country are generally located away from large cities and have good access to highways and railroads, offering excellent transshipment points for commercial air cargo operations.

Economies would be gained by "piggybacking" on maintenance, storage, and freight handling facilities should this yield economies of scale. This, coupled with a common aircraft type featuring standardization of aircrew, maintenance personnel and required supplies, would pay great dividends to the American taxpayer and consumer. . . .

The proposed "total airlift system" would provide the civil industry with cargo capabilities that no other nation could match and, at the same time, provide the military with an augmentation capability to meet the demands of the nation's mobile forces.

The final phase of the "total airlift system" would be the establishment of a worldwide airlift reserve consortium among the civil airlines of our allies. This consortium would insure that future aircraft systems would be complementary and mutually supporting. . . .

THE MILITARY MEDICAL SCHOOL

(Mr. PRICE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE. Mr. Speaker, recently, when the administration announced its budget amendments for fiscal year 1978, I was particularly distressed to hear that the President decided to discontinue funding for the Uniformed Services University of the Health Sciences.

As my colleagues will recall, the military medical school is a part of the Uniformed Services Health Professions Revitalization Act of 1972, which not only established the medical school but also created a complimentary program for health professions scholarships in the Armed Forces. It was hoped by establishing a military medical school that we would encourage physicians and other health care delivery personnel to choose a career in military medicine and not leave the service after a period of obligated duty as is so often the case with those who enter the service from a purely civilian environment.

We on the committee noticed immediately after the establishment of the medical school a surge of professional pride among military medical practitioners in having an institution to which they could relate and to which they could hope to join as teaching and clinical staff members. In short, the school was not only to be a source of career medical personnel but also a source of pride in military medicine.

Specialized training in family medical practice and in tropical medicine has been a principal part of the school's mission to better satisfy the peculiar needs of military personnel and their dependents.

There has been much said about the high cost of training a student in the military medical school as compared to training in civilian institutions. A study which I requested of the General Accounting Office in 1976 encompassing the various factors which reflect Federal support of all medical schools resulted in a finding that the costs of training a student in the military medical school and in the civilian sector were so close as not to present any arguable differences.

Another comment we have heard is that statistics indicate that in the near term there will be sufficient physicians available from private medical training to preclude the need for a military medical school. Those figures are clearly subject to debate, but one fact is evident. We do not foresee sufficient professional manning of career posts in the military medical services unless the military medical school is continued.

Thus, Mr. Speaker, as chairman of the House Armed Services Committee which originally reported the legislation establishing the Uniformed Services University of the Health Sciences and which vigorously supported its construction and funding throughout the intervening years, I trust that the House and the entire Congress will see fit to retain in the basic budget funding in the amount of approximately $11.6 million for fiscal year 1978 and appropriate funding for the years ahead.

FOREIGN POLICY IN THE SUNSHINE

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, the ongoing debate between advocates of "foreign policy in the sunshine" and supporters of Government's legitimate responsibility to withhold certain sensitive and classified intelligence information from the news media continues to generate controversy. Unfortunately, no easy solutions are at hand.

It is not a clear-cut matter of the Government versus the news media. Rather, it boils down to a question of what is in the best interest of American foreign policy and intelligence gathering activities, and who is qualified to make the delicate decisions of what should be made public. The decisions, I might add, bear directly on the security and lives of us all.

Intelligence gathering "in the sunshine" has led in the past to some severely debilitating cases of "sunburn" for our intelligence and diplomatic communities.

In this morning's Washington Post, Ray S. Cline, a former U.S. intelligence official who is currently the executive director of studies at the Georgetown Center for Strategic and International Studies, appealed for a more reasonable attitude on the part of journalists in the area of national security.

We have seen a number of examples recently where sincere investigative reporters and editors went to jail rather than to reveal the sources of information for their stories. These sources may have taken years to cultivate, and without the protection of anonymity, many, if not most, investigative stories would

have never been published. Sensitive sources dry up when exposed to "sunlight."

The parallel in foreign intelligence gathering is obvious. Of all professionals, journalists should understand and respect this rightful role of Government. The inalienable right of a free and vigorous press carries with it the corresponding responsibility of self-limitation when it is in the best interest of our national security. The adversary role of the press should not be an antagonistic one. To criticize American foreign policy is one thing; but to deliberately undermine American foreign policy negotiations and decisionmaking by prematurely exposing them, is quote another.

As Mr. Cline correctly points out about the news media's assumed right "to make concrete and irreversible foreign policy decisions about secret intelligence undertakings" by exposing them in newsprint:

This would be decisionmaking by unelected private authorities without any checks and balances or any right of appeal. I do not believe newspaper managers, editors or reporters are qualified to make the complex judgments involved. Perhaps I am the only man left in Washington who thinks this way, but I feel that the United States should pursue its foreign policy vigorously and act in an energetic way to protect the interest of its allies abroad. Secret measures in support of a sound and moral foreign-policy commitment are not wrong; they are right.

Mr. Speaker, I would like to assure Mr. Cline that he is not alone in the belief that the security of this Nation must be placed above the questionable benefits of a banner headline for an exposé newsstory. I stand solidly with him.

I encourage my colleagues to read "Piety About the Obligation of the Adversary Press," which follows my remarks:

PIETY ABOUT THE OBLIGATION OF THE ADVERSARY PRESS

(By Ray S. Cline)

A Washington Post story by an investigative reporter who helped bring down the imperial presidency, Bob Woodward, raises some fundamental questions about the power of the U.S. press. Should all government secrets be exposed? Do our news media have any responsibility for acting in the public interest and refraining from acting against it?

In a recent article Woodward alleged that the CIA paid secret subsidies over a period of 20 years to King Hussein of Jordan because the king provided confidential reports from his own sources on the troubled Mideast and also guided Jordanian policies along moderate lines helpful to American foreign policy interests in the region. The reportorial tone reflected the standard post-Watergate sense of moral outrage at secrecy.

I cannot, of course, confirm or deny these specific allegations, but from my many years of experience in the CIA and the State Department, I feel obliged to say I cannot see why the journalistic keepers of our conscience are outraged nor can I see what American interest is served by printing a story like this, which, if true, automatically puts a stop to a valuable U.S. secret intellegence activity.

Journalists, above all others, know how tragic it is to lose a good source, not only because of the direct loss of information in any given case but also because of the inhibiting effect on other potential sources who became distrustful that their role cannot be protected.

Beyond that, damaging the regional prestige of a friendly foreign official is hardly a plus for U.S. foreign policy, especially in this case when progress toward peace seems to hinge on Jordan's ability to moderate the anti-Israeli conduct of the Palestine terrorists (the PLO).

To gloss over the injury that may have been done to U.S. interests and U.S. allies in the Mideast by piety about the obligation of the adversary press to expose whatever secrets the government tries to protect is either naive or hypocritical. Does the First Amendment pass over to journalists unrestricted authority to make decisions on such matters, negating careful presidential decisions to the contrary by making them public? This doctrine seems to me dubious and damaging.

The CIA clearly has a legal charter of almost 30 years' standing to act on behalf of the President in carrying out secret missions abroad in the interest of the United States and its allies. One CIA mission is to collect information about efforts by Soviet officials or agents of the KGB or local troublemakers to influence events in ways contrary to U.S. interest in maintaining stability and peace in strategically vital regions like the Mideast. Some foreign political leaders have been able to develop substantial networks of intelligence sources, providing data of value not only to their own country but to the United States. A few have been able to go farther and to use secret American financial aid to set up moderate non-Communist political institutions or political groups to oppose what they perceived as subversion and other hostile political acts by local Communist or terrorist elements financed and directed by outside agents.

For 30 years CIA's role in collecting secret information and taking secret political actions in cooperation with friendly political leaders has not only benefited the nations involved but also strengthened the foreign policy of the United States. When their efforts required secret funds, the money was given; for the most part, it was money well spent.

I do not at all object to having The Washington Post, The New York Times or any other newspaper, for that matter, criticize the foreign policy of the United States. I am rather aghast, however, at their having the right to make concrete and irreversible foreign-policy decisions about secret intelligence undertakings of this kind. This would be decision-making by unelected private authorities without any checks and balances or any right of appeal.

A secret relationship, which may have taken years to build up, is instantly and irrevocably destroyed when exposed. I do not believe newspaper managers, editors or reporters are qualified to make the complex judgments involved.

Perhaps I am the only man left in Washington who thinks in this way, but I feel that the United States should pursue its foreign policy vigorously and act in an energetic way to protect the interests of its allies abroad. Secret measures in support of a sound and moral foreign-policy commitment are not wrong; they are right. Our President under legally established procedures ought to be able to keep such measures secret if they need to be covert to succeed. Please, members of the news-gathering profession, do not blow all the sources of your official counterparts in the foreign intelligence business.

PHYSICISTS ASK FREEDOM FOR YURI ORLOV

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD).

Mr. FASCELL. Mr. Speaker, the arrest in Moscow February 10 of Prof. Yuri Orlov, the head of the unofficial group of Soviet citizens pressing within their own country for observance of the Helsinki Accords, has occasioned protests from many sources. Members of this House and of the Senate have called on Soviet authorities to release Dr. Orlov, as well as the others—Aleksandr Ginzburg, Mikola Rudenko, Oleksei Tykhy, and, most recently, Anatoli Shcharansky—arrested for working to realize the Helsinki promises. Former Attorney General Ramsey Clark, at the invitation of the Committee for the Defense of Soviet Political Prisoners, has agreed to try to assist in the defense of Dr. Orlov and those arrested in the Ukraine. The State Department not only raised the issue of Dr. Orlov's arrest privately with Soviet representatives, it also brought the incident to the attention of members of the United Nations Human Rights Commission.

Now I have learned of another and highly commendable private initiative to obtain just treatment for Dr. Orlov. It comes from scholars—225 physicists in the United States, England, France, Italy, Switzerland, and West Germany—who sent the following telegram to Prof. A. A. Logunov, vice president of the Soviet Academy of Sciences:

We have noted the recent arrest of Dr. Yuri Orlov. He is known to all of us as a distinguished scientist and a respected member of the international community of high energy physics.

We want you to know of our great concern for Dr. Orlov and hope that the matter of his arrest can be favorably resolved in short order.

That telegram carried the signatures of six Nobel laureates in physics: Owen Chamberlain, Edwin H. McMillan, Murray Gell-Mann, Robert Hofstadter, Burton Richter, and Chen-Ning Yang. It is a heartening sign of the commitment of the community of scholars to defend human rights side by side with the search for scientific progress. By their action in aid of Dr. Orlov, these prestigious physicists have expressed not just their own conscience but the values that all scientists, East and West, must encourage as they work together.

I commend them for their initiative and I urge that the Soviet authorities take careful note of it.

TEMPORARY SUSPENSION OF DUTY ON FLUORSPAR

(Mr. ROSTENKOWSKI asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROSTENKOWSKI. Mr. Speaker, I am today introducing legislation that would suspend the duty on fluorspar. United States tariff schedules on fluorspar, which reflect the situation of an earlier and more stable period for raw material acquisition, require the imposition of prohibitive duties on the various grades of fluorspar at a time in our history when it would appear to be in the national interest to establish firm sources of supply for any raw material that must be imported in lieu of domestic supplies.

The steel industry supports suspension of existing duties on fluorspar. Additionally, I have been advised that Kaiser Aluminum and Chemical Corp., Oakland, Calif.; Alcoa, Pittsburgh, Pa.; and Noranda Aluminum Inc., New Madrid, Mo., also support the position of the steel industry relative to the suspension of existing fluorspar duties.

The American steel, aluminum, and chemical industries are also totally dependent on the free flow of imported fluorspar. This reliance on foreign imports has been gradually increasing for the last decade, and reached the point in 1974 where domestic production accounted for only 12 percent of U.S. fluorspar requirements. Due to the fact that known domestic reserves are limited, and of lower quality, fluorspar imports will easily continue to maintain their high percentage of the domestic market until such time as technological innovations release us from our dependence on this material.

According to the American Iron and Steel Institute in their testimony before the Subcommittee on Trade of the House Ways and Means Committee, the U.S. output of fluorspar in 1974, which represents about 4 percent of the world's total, declined by approximately 33 percent from the level of the previous year. United States fluorspar production has steadily decreased over the past 10 years. Total U.S. imports of 1,336,000 tons in 1974, a 10 percent increase over 1973 imports, were almost 88 percent of apparent U.S. supply. According to the U.S. Bureau of Mines, domestic demand is expected to increase at an annual rate of 1 percent through 1980, with world demand increasing at an annual rate of 3 percent. Since U.S. production has continuously declined, any increase in domestic consumption must stem from additional imports. The imports of fluorspar into the United States for a 5-year period 1970–74, came from Mexico—80 percent; Spain—14 percent; Italy—3 percent; and other sources—3 percent.

With respect to fluorspar import duties, acid grade is defined as fluorspar containing over 97 percent calcium fluoride. Under TSUS item 522.21 it bears a duty rate of $2.10 per long ton. It is principally used extensively in the manufacture of hydrofluoric acid, essential in aluminum production. Metallurgical grade is defined as fluorspar containing less than 97 percent calcium fluoride—usually between 60 to 85 percent content. Under TSUS item 522.24 it bears a totally unjustifiable duty rate of $8.40 per long ton. It is used primarily as a fluxing agent in steel production. Despite the huge disparity in duty rates assigned to fluorspar grades, both grades are in heavy demand in this country. The outlook for increasing U.S. production is poor, as U.S. reserves are of low quality and are being depleted.

Duties on fluorspar imports were estimated to have been approximately $5 million in 1974. Domestic consumers absorb these duties in the form of higher acquisition costs. The extremely high duty on metellurgical fluorspar has been in effect for 45 years. No justifiable economic reason for retention of current fluorspar duties exists.

If fluorspar duties are suspended, the small increment of consumption domestic producers account for will continue to be purchased from these domestic sources since U.S. consumers will continue to need their domestic sources of supply.

With the world fluorspar supply/demand ratio continually shifting between shortage and adequacy, and domestic requirements forecast at an increased rate of consumption, I urge the suspension of existing duties on fluorspar.

The bill reads as follows:

H.R. 5265

A bill to provide for the temporary suspension of duty on the importation of fluorspar

Be it enacted by the Senate and House of Representatives of the United States, That subpart B of part 1 of the Appendix to the Tariff Schedules of the United States (19 U.S.C. 1202) is amended by inserting immediately after item 912.10 the following new item:

" 912.15	Fluorspar (provided for in items 522.21 and 522.24, part 1J, schedule 5).....	Free	No change	On or before 6/30/78 ".

SEC. 2. The amendments made by the first section of this Act shall apply with respect to articles entered, or withdrawn from warehouse, on or after the date of enactment of this Act.

EXTENSION OF DUTY SUSPENSIONS ON BICYCLE PARTS

(Mr. ROSTENKOWSKI asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROSTENKOWSKI. Mr. Speaker, I am today introducing legislation that would extend the suspension of duty on bicycle parts such as brakes, hubs, and sprockets which are not presently manufactured domestically. My bill seeks to extend the duty suspensions until the close of June 30, 1979. In addition, the bill removes derailleurs from the duty suspension list since it now appears that there is a domestic source for their manufacture.

Many of our domestic bicycle manufacturers are forced, because of the absence of American-made component parts, to rely on foreign sources of supply for essential parts. One such company is the Schwinn Bicycle Co. of Chicago which is located entirely within the confines of my congressional district. Unless the continued suspension of the duties is effected, our manufacturers will be assessed a duty of 15 percent on imported parts while their foreign competitors will be able to bring assembled bicycles made from the same parts into this country at a duty rate of only 5.5 percent. This tariff differential represents a competitive advantage that is enjoyed by foreign manufacturers.

According to the Bicycle Manufacturers Association of America in their testimony before the Subcommittee on Trade of the House Ways and Means Committee, in the last 10 years imports have increased their share of the market in this country from 18 percent in 1965 to more than 28 percent in 1974. The domestic production of bicycles suffered its sharpest decline in shipments in nearly 100 years during 1975. Prospects for the future look only slightly more promising.

For these reasons I strongly urge that the duty suspensions on bicycles and bicycle parts be extended for a 30-month period and that other component parts not manufactured in this country, specifically coaster brakes, alloy butted frame tubing, alloy cotterless crank sets, alloy rims, and parts of all the foregoing be added to the duty suspension list.

TAX DISCRIMINATION AGAINST U.S. BROADCASTERS

(Mr. MEEDS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MEEDS. Mr. Speaker, the Government of Canada, through bill C–58, implemented on September 21, 1976, is attempting to prevent U.S. border television stations from deriving revenue from Canadian sources—despite the fact that for many Canadian markets the major portion of viewing is from U.S. stations.

Bill C–58 denies a deduction for Canadian tax purposes for the cost of advertising directed primarily to a market in Canada that is broadcast by a U.S. television station. An income tax deduction is permitted, however, for advertisements placed on Canadian stations. United States-originated advertisements are thus subjected to a higher tax rate than advertisements originating in Canada, solely by reason of being imported.

U.S. broadcasters, including KVOS–TV, Bellingham, Wash., a station in my district, are already suffering serious injury as a result of the implementation of bill C–58, and stand to lose as much as $20 million annually.

The Canadian Government has told our State Department that bill C–58 is a matter of internal Canadian tax policy, and is nonnegotiable. What can Congress do to end this tax discrimination against U.S. broadcasters? The answer is simple. We should block Canadian attempts to obtain an immediate exemption from section 602 of the Tax Reform Act of 1976, which limits tax deductions for conventions held outside the United States. Canada has expressed its concern over the adverse impact of section 602 through a note sent to the U.S. Department of State on January 14, 1977.

If Canada is granted an immediate exemption from the U.S. foreign convention provisions, the United States will have lost crucial leverage on the Government of Canada to change its discriminatory anti-U.S. broadcasting provisions. The Congress should make it clear that the limited deductibility of conventions held in Canada is directly related to a satisfactory resolution of the problems raised by section 3 of bill C–58. I believe it is inconsistent and inequitable for Canada to demand national treatment,

or nondiscrimination, with respect to the application of U.S. tax laws, while it continues to blatantly discriminate against the legitimate commercial interests of U.S. broadcasters.

Accordingly, I recommend that if Canada is exempted from the U.S. foreign convention provision, such exemption should be conditioned upon a prior repeal of section 3 of bill C–58, or any other such denial of national treatment directed by the Government of Canada against U.S. broadcasters.

SOURCES OF DISSATISFACTION OF MILITARY PERSONNEL

(Mr. MEEDS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MEEDS. Mr. Speaker, In view of current concern for maintaining an adequate military service force and discussion regarding continuation of the all-voluntary military concept, I have recently met with enlisted men and officers stationed in the Second District of Washington State to consider some of the issues as seen by them.

I have written a letter to President Carter summarizing their perception of the issues and would like to insert this letter in the RECORD. The letter follows:

MARCH 9, 1977.

Hon. JIMMY CARTER,
The President of the United States, The White House, Washington, D.C.

DEAR MR. PRESIDENT: In light of the fact that you are seriously considering changes in the all-voluntary military concept, I wish to delineate some problems which emerged as significant in a recent meeting I had with enlisted men and officers at Whidbey Naval Air Station, Oak Harbor, Washington. I believe they brought out some general issues which represent sources of dissatisfaction for military personnel and which need to be addressed in considering changes or reorganization. Thus, I am taking the liberty of bringing the following to your attention at this time:

Cost of permanent duty station transfer. Moves require out-of-pocket expenditures. Temporary housing is not available on most bases, and travel allowances and temporary housing reimbursements are not adequate. A suggested solution was a Navy lodge on each major base for temporary housing.

Pay raises. The group indicated that pay which keeps up with inflation and cost-of-living could be more desirable than the early and generous retirement provisions; i.e., increase retirement age, but improve pay status.

Medical care. The hospital at Whidbey is grossly inadequate. Patients must often be sent to Bremerton and Madigan Hospitals because it has a prospective eligible population of 28,000 to 35,000, serving the area from Everett to Canada and from the Peninsula to the Cascades. They also expressed a need for a group plan for dependents to cover dental and optical needs.

Failure to reenlist. Reasons given were low salary and diminishing perequisites, lack of re-enlistment bonuses, and better opportunities outside, especially for midmanagement personnel. They noted a much higher retention rate when there were career counselors whose function and effectiveness were highly commended.

Uniform. A survey showed that a great majority were in favor of returning to bell-bottom Navy uniforms.

Congressional demagoguery. A surprising major concern was termed "congressional demagoguery". They indicated that legislation which was introduced with little chance of passage but great value as press release material often became the vehicle of rumors and distortion. Their suggestion was that the Congressional Record be monitored, actual status and chance of passage be assessed and that such information be published in the Navy Times, etc. I will undertake to impress upon my colleagues the importance of their remarks and urge a greater degree of responsibility.

In conclusion, I found morale extremely high and these concerns and suggestions voiced in a constructive manner. The people with whom I spoke were very well motivated, and they articulated the position of enlisted men quite well. I trust that this input from the grass roots level will be of interest and value to you in the decisions you will be making.

Sincerely,

LLOYD MEEDS,
Member of Congress.

SOLAR, NOW

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, solar space and water heating is perfected technically and economically feasible widely throughout the United States—especially in the Northern and Northeastern United States where the worst of last winter's energy emergencies struck.

These are the conclusions of a recent solar energy report by the University of New Mexico and the ERDA Los Alamos Laboratory. This March 13 report on "The Economics of Solar Home Heating" has brought out important economic information on solar energy use. I highly recommend the whole report, but am including the executive summary here.

I urge my colleagues to read this and to consider the legislative recommendations—especially the need for economic incentives, and life-cycle cost techniques. All these appear in the solar package introduced by me and 23 colleagues of the House and Senate on February 23. We have just sent out a Dear Colleague with an additional 80 cosponsors. Let us all join now to pass such legislation and to have the 95th Congress truly remembered as the Congress that brought solar energy into widespread use in this country.

Based on President Carter's campaign espousal of solar energy development, I am hopeful the administration will join with us in backing these legislative measures which attempted to provide for the needs of various economic brackets as well as residential, commercial, and agricultural applications of solar energy.

The summary follows:

EXECUTIVE SUMMARY OF CONTENTS

The rapid depletion of our domestic fossil fuel resource base has been and continues to be an issue of great concern. Shortages, curtailments, and increased dependence upon foreign sources of energy are becoming the rule rather than the exception. This study examines the role of residential solar water and space heating as an alternative source of energy.

Now that some experience has been gained both in manufacturing and installation of solar systems it is apparent that the cost of solar collectors installed, but excluding fixed costs, will be about $\$10/ft^2$. Although this may seem high in comparison to estimates as low as $\$3/ft^2$ used in previous studies, we find that feasibility does occur for solar water and space heating systems between now and 1990 if either decontrolled prices of traditional energy sources are used as the basis of comparison or where curtailments of natural gas occur. The importance of this finding is diminished by the federal government's failure to assist in making capital available for energy conservation. If interest rates are kept high and if money (capital) remains in short supply, the prospects for capital intensive systems in homes, such as solar energy, are diminished greatly.

In this study a scenario of future energy prices both for decontrol and for curtailments with continued controls is developed and consumer costs from traditional sources are projected both on an annualized (life cycle) basis on a current cost basis for residential space heating and domestic hot water. These costs are developed by state through 1990 and are compared to the cost and performance of solar energy systems on a $\$/10^6$ BTU basis to determine year of feasibility for solar energy by state and optimal system design (least cost) given projected energy prices. Potential energy savings in 1990 resulting from utilization of solar energy are also discussed. Finally, policy suggestions to speed the development of solar energy are made both for scenarios of continued price controls and for decontrols.

Regional energy prices for space heating and domestic hot water are developed from an econometric fossil fuel simulation model. The model is based upon estimated relationships which describe the fossil fuel energy sector of the U.S. economy and projects future fossil fuel prices, demand, discovery, and reserves on the assumption of "business as usual". Deregulation of wellhead prices, the ability of OPEC to maintain control of world petroleum prices, and capacity conditions within the energy extraction industry were adopted as basic assumptions. The results for decontrol presented in the study are based on a scenario which assumes: total deregulation of natural gas prices by 1978; a five year (1977–1981) deregulation period in which the price per barrel of domestic crude petroleum is allowed to seek a level consistent with the OPEC price; and the ability of OPEC to maintain the price per barrel at a constant level, adjusted only for inflationary changes.

The results of the fossil fuel model are summarized as follows:

Field prices in dollars per million BTUs show an increasing trend associated with the inevitable exhaustion of nonrenewable fossil fuel energy resources.

Total consumption of fossil fuel energy resources is projected to increase by almost 40 percent in the time span considered.

Domestic discovery of natural gas and crude petroleum is projected to follow a long-run downward trend, although short-run discovery of petroleum is stimulated with deregulation.

With the projected levels of future consumption and the downward trend in discoveries and reserves, natural gas will rapidly approach exhaustion even with price decontrol.

As a result of these conditions solar energy will have its primary near term impact in the areas of residential water and space heating applications as a substitute for natural gas. Therefore, the future of solar energy will, to a great extent, be determined by the structure of the natural gas industry and by

federal pricing policies which pertain to the flow of natural gas. However, because natural gas is in a state of rapid depletion, its price is expected either to rise much faster than other energy sources under decontrol, thereby relinquishing its comparative cost advantage, or with continued controls large scale curtailments will occur. Thus, it was necessary to calculate the price of a competing energy substitute which might replace natural gas. For this purpose, the price per 10^6 BTU of electric heat pumps to provide both space heating and domestic hot water was selected. Oil prices were excluded from the feasibility analysis of solar energy for two reasons. First, as natural gas is exhausted the OPEC determined price of oil might well be expected to rise to match the increase in gas prices. Second, foreign oil cannot reasonably be expected to replace natural gas for home heat and industrial process energy because of the balance of payments problem.

A comparison between decontrolled natural gas and heat pump prices yields the least cost energy alternative to solar. A comparison to the cost in dollars per BTU of solar energy then determines the economic desirability of solar energy. It should be understood that under a policy of complete price decontrol for natural gas, curtailments will not occur because all potential users, wherever they might be located, would be able to competitively bid for natural gas. The feasibility study initially focuses on this idealized situation.

If natural gas prices remain controlled near current (1977) levels, homeowners who can obtain natural gas will have no incentive to substitute solar energy which will invariably cost more on a $/BTU basis. But, even though some homeowners will be able to obtain very cheap energy, others will be forced by curtailment or through moratoriums on new gas hookups to find an alternative energy source for space and water heating. Since we have assumed heat pumps provide the best estimate of future fuel energy costs (excluding natural gas) the appropriate criterion under continued controls is to compare solar energy to electric heat on a regional basis, realizing that some consumers will not consider solar energy systems because of the availability of a declining quantity of cheap gas.

Solar feasibility analysis requires that the performance of a solar energy system be known in terms of the collector area required to provide a given percentage of the space or domestic hot water heating requirements. Although the operation of a solar heating system can be readily understood in a qualitative fashion, the quantitative analysis of a system (i.e., sizing of collector array) involves computer simulation of solar performance using actual hour by hour weather data, and is considerably more difficult. A fairly general method developed at Los Alamos Scientific Laboratories (LASL) was employed to supply the necessary quantative analysis. The heating load must also be known for the performance analysis. For purposes of this study we assume for space heating that we are solar heating an energy efficient, well insulated house with a load of 10 BTUs per degree per square foot and that the house has 1500 square feet of living area. For the domestic hot water analysis we assume a constant daily requirement of 80 gallons at 120° F. where the input temperature is 60° F. This results in an annual hot water load of 15 x 16^6 BTUs.

Cost estimates of solar installations described below are then annualized at some interest rate—in other words the yearly payment required to pay off a loan on the solar system is determined—and this amount adjusted to include operating costs is divided by the BTUs of energy provided by the solar system over a year to determine the cost per BTU for comparison to fossil fuel costs. If annualized fossil fuel costs are used for comparison, and solar energy is cheaper, then feasibility is accepted on a life cycle basis. If current fossil fuel costs are used for comparison, then feasibility is determined on a current cost basis. Economists advocate the former as the appropriate criterion but consumers are likely to respond to the latter, so both criterion are used.

Inflation has been removed from the analysis by specifying all costs and prices in *real* terms (1974 dollars). Therefore, *real* interest rates are used in the feasibility analysis. Because solar energy systems are capital intensive, a narrow range of 2.5 to 4.0 percent real rate of interest typical of the home mortgage market was chosen to test the sensitivity of results (note that these correspond to an 8.5 and 10.0 percent nominal interest rate with 6 percent inflation). The cost of installation for solar space heating on new tract homes in 1974 (1977) dollars was assumed to be $1100 ($1350) as the fixed cost component *plus* a cost of $9.50 ($11.70) per square foot of collector installed. The cost associated with each square foot of collector installed is assumed to drop to $8.00 ($9.80) by 1990. These collector dependent costs include the cost of storage which we assume to be proportional to collector area. Flat plate, air type collectors are assumed in the analysis so operating and maintenance costs per year were assumed to be quite low, .75 percent of total installed cost per year, and the system was assumed to last thirty years. For retrofit of space heating the same collector dependent costs were used. However, it was assumed that the fixed cost component would increase to $3400 ($4200) to account for the individualized engineering and design work required for retrofit. For provision of domestic hot water where liquid collectors are used no difference between new home or retrofit installations was assumed. Here fixed costs were assumed to be $300 ($370) and collector dependent costs to be $11.00 ($13.50) per square foot. Operation and maintenance costs each year were assumed to be 1 percent of installed cost and the water system is assumed to have a twenty year life time.

Typical results for decontrolled energy prices and residential new tract home space heating are shown in Map 2 from the report which employs life cycle costing and a 2.5 percent real interest rate. Raising the interest rate or using current costing generally delays feasibility and eliminates some marginal states, but the pattern of feasibility is similar.

The most important result of the space heating feasibility analysis is the clear picture which emerges: solar feasibility begins in the northern tier of states and with very few exceptions systematically moves southward! There are several important reasons for this type of emerging pattern.

Under a decontrolled energy scenario, conventional fuel prices begin to increase at such a pace that consumers are provided with larger economic incentives to look elsewhere for space heating systems. The cost of natural gas delivered to the states is dependent upon two components; the price at the wellhead plus the price adjustment for transportation and distribution. Thus, with most gas supplies located in the South Central and Southwestern states, prices generally increase as one moves into the Midwestern, North Central, Northeastern and Northwestern States.

Solar energy systems include a fixed cost component, giving rise to a situation in which minimum heating demands will be required to make solar energy competitive. Higher heating loads are evident as one moves northward, allowing the fixed costs to be spread over a larger BTU base.

The results of the feasibility analysis under decontrol for domestic hot water heating as shown in Map 5 for the 2.5 percent real interest rate case do not present as well defined a picture as that exemplified by the north to south movement portrayed for residential space heating. Rather, there is a mixture of Southern and Eastern states demonstrating feasibility in the late 1970s and early 1980s. Generally, Midwestern, Mountain and Northwestern states are excluded during the period of analysis (1976 to 1990).

Major reasons for this type of pattern are based primarily upon three considerations:

Due to higher solar incidence in the Southern and Southwestern states, solar collector areas necessary to deliver a given fraction of domestic hot water demands are measurably lower than elsewhere. This, of course, results in lower costs for the solar systems.

Alternative heating costs in the Eastern states are considerably higher than in most of the remaining states. This makes solar energy competitive in the East Coast states even though larger collector areas are required and subsequently solar costs are greater than in many other states.

Within the states where solar energy was shown not to be competitive by 1990, the combination of higher solar costs due to relatively large collector arrays and alternative backup costs which are not significantly different than those found in the southern tier of states, forced solar feasibility into the 1990s. Further, relatively cheap electricity prices in the Northwestern states kept the alternative energy costs at levels sufficiently low to preclude solar systems during the period of analysis.

Given that solar energy is feasible under decontrol for some portion of residential water and space heating demand, and given better insulated structure potential, the realized energy savings can be fairly significant in many states when contrasted with the possible demand without solar energy systems or better insulation. Based on life cycle costing with a 2.5 percent real interest rate:

Realized energy savings in 1990 from the better insulated residences built between 1976 and 1990 imply a 41 percent reduction in energy demand for space heating. Assuming a midpoint housing production estimate of 1.3 million units annually, and the average residence of the past decade, energy savings in 1990 due to improved insulation of homes constructed during the period of analysis could be 1.04 quads.

Energy savings due to utilization of solar energy for space heating was calculated on the basis of the standard air system analysis. If 85 percent of all new, single-family houses fit solar space heating systems when feasible, the savings in 1990 will be 0.49 quads.

In 1990, energy savings due to utilization of solar energy for domestic hot water will be as much as 0.40 quads (50 percent fit) and 0.69 quads (85 percent fit) or 25 and 41 percent, respectively, of total energy demanded for domestic water heating.

The total national fossil fuel demand in 1990 is projected to be about 90 quads. Although percentages supplied by solar energy appear small at first glance, the economic impact of the industry should not be underestimated. For example, the energy savings due to solar domestic hot water at 85 percent fit (.40 quads) represents 69.5 million barrels of oil saved for the one year. The savings resulting from solar space heating and proper insulation at 85 percent fit (1.33 quads) represents a savings of 229.3 million barrels of oil in 1990. However, it should be made clear that these are upper bound estimates for the role of solar energy in domestic uses, excluding retrofit of space heating.

In the event that price controls are continued, homeowners will need to examine the feasibility of solar energy systems against electricity—either heat pumps or resistance heat. We also examine the more realistic situation of continued control of natural gas prices and the inevitable curtailments in

supply which will result. This analysis is also applicable to retrofits of solar space heating systems for homes that do not presently use natural gas so we consider retrofit as well.

If we assume that natural gas becomes unavailable for home use either through curtailments or moratoriums on new gas hookups as has already occurred periodically throughout the country, solar energy becomes feasible very quickly. Map 9 shows the space heating feasibility pattern for new tract homes using life cycle costing and a 2.5 percent real interest rate. In Map II we represent available retrofit system costs. Here we assume the backup system to be electric resistance with a COP of 1.0. This comparison was made because many homes in states currently suffering curtailments of natural gas already use electric resistance heat. Also, when compared to either form of electric heat solar energy becomes feasible at a much larger fraction of space heat provided, which makes electric heat pumps a rather expensive backup system.

Under the assumptions in Map 9 and with a backup system employing electric heat pumps, two-thirds of the continental United States is already feasible for solar space heating. All but four states demonstrate feasibility by 1990.

When compared to electric resistance heat, even using current prices and the higher 4.0 percent real interest rate (Map 11), we find that a total of thirty-eight states attain feasibility by 1990 with twenty-seven of these states already feasible for this system.

In the case of natural gas curtailment, domestic water heating by solar energy is already feasible compared to electric heating in all states in the continental U.S. except Washington, where it will be feasible by 1983.

Again, in both cases depicted in Maps 9 and 11 it is the northern tier of states, including almost all states which experienced energy emergencies during the winter of 1976–1977 where solar energy is already feasible. This analysis suggests that retrofit of space heating may well be more feasible than is currently accepted. This is an important point because the potential energy savings of such retrofit systems are very large. In summary, the primary result of our analysis is that solar energy for space heating and domestic hot water is widely feasible throughout the continental U.S.

Even with decontrol of traditional energy sources, solar energy will not be competitive unless action is taken to remove the financial and institutional constraints on its efficient use. A federally coordinated program is necessary to facilitate the smooth transition from non-renewable to renewable energy sources. Under a policy of continued price controls, residential users of natural gas must be encouraged to make the transition to solar eenrgy systems before they are faced with the inevitable curtailments of natural gas for home use.

Given the way our financial institutions function it is extremely difficult for homeowners to compare fuel cost savings with either the additional mortgage payment which would be associated with adding solar systems to homes, or the annual cost of the money one might borrow to retrofit such a system to a residence. The reason for this, quite simply put, is that inflation distorts the pattern of yearly payments over time. Thus, where payments on mortgage loans which include solar applications are defined in nominal rather than real dollars, payments actually are biased toward the early years of the loan period. This makes it impossible for the average homeowner to compare the first monthly payment on a solar system with expected annualized energy costs over time for the home. The Graduated Mortgage is a proposal currently under investigation by the Federal Home Loan Bank which would help alleviate this problem.

Although we advocate decontrol of energy prices, we recognize that this may be politically infeasible unless the regressive income effects of such a policy can be corrected. As a viable alternative for the subsidization of solar energy we propose that guaranteed low interest loans be made available for potential solar energy users until such time as other energy prices are fully decontrolled. At that time such subsidies become unnecessary. It is clear from our analysis that interest rate manipulation is the most powerful tool for achieving economic feasibility of solar systems under continued price control of other energy sources. Guaranteed low interest loans would also encourage other important energy conserving technologies such as increased home insulation.

The questions addressed in this study point to the complex interdependencies involved in the transition from exhaustible fossil fuels to renewable energy resources. We strongly recommend that the appropriate agencies and policy making bodies:

Totally deregulate wellhead prices of oil and natural gas by 1981.

Implement a policy which taxes windfall profits accrued by firms as a result of deregulation. These taxes should be effectively transferred to lower income groups to offset adverse income distribution effects associated with higher energy prices.

Provide federal guarantees for loans made on solar installations.

In the event energy price deregulation does not occur:

Design and implement a program which would enable residential homeowners and commercial establishments to obtain low interest rate loans for installing solar devices and investing in energy conserving measures. These loans should also be guaranteed.

Offer economic incentives which would give solar energy the same preferential treatment as enjoyed by the oil and natural gas companies for so many years. These incentives would include income tax credits, property and sales tax exemptions, and other fiscal devices.

Again we stress that such policies are much less efficient than decontrol of energy prices.

Encourage the use of life cycle costing techniques within the public and private sectors:

Require industrial and commercial establishments and government agencies to use life cycle costing in all calculations that pertain to energy financing.

Require all financial institutions to present life cycle costing techniques to clientele considering energy capital investments.

Disseminate information on a widespread national basis concerning the level of future energy prices through the period of deregulation.

Establish new mortgage programs which enable average homeowners to compare their first year's payments for a solar installation with the expected annualized home energy cost over time. Such programs will ameliorate inflationary distortions in the financing of solar home heating units.

FIREWOOD FOR ENERGY

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, I would like to share with my colleagues the idea that a constituent of mine had for our energy quandary. As he states, it is "one small and folksy solution to the problem." However, it is a good idea.

The letter follows:

DEAR MR. OTTINGER: Amid all the larger questions involving energy conservation, I would like to suggest one small and folksy solution to the problem. Knowing that some people do have fireplaces that for the most part are used only during the winter holidays, I'd like to suggest that they get more use out of them during fall, spring and late summer when it is necessary only to get a chill or a bit of dampness off the house. That is a time when the expensive ornament can be of use, and practically so.

As for the source of firewood, the department of agriculture has an interesting pamphlet on firewood that suggests the use of windfalls, pruned branches, and whatever is salvageable from demolition sites. It is not really required that people use prime hickory. And there are ancient apple trees more dangerous than picturesque.

Granted this is a simple method to save some fuel. I have no idea what ten chilly mornings in September or April could add up to in heating days for January. But it is a way to test American endurance for the profitable side.

Sincerely yours,

CARSTEN JOHNSON II.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. GILMAN (at the request of Mr. RHODES), on March 23 and 24, on account of official business.

Mr. JEFFORDS (at the request of Mr. RHODES), for today, on account of official business.

Mr. NEAL (at the request of Mr. WRIGHT), for March 17, on account of official committee business.

Mr. RUDD (at the request of Mr. DEVINE), for such portion of today as may be necessary in order to participate in the Presidential panel hearings of the Department of Interior to take further testimony with regard to the central Arizona project.

Mr. STUMP, for March 21, 1977, on account of attending hearings on the central Arizona project at the Department of Interior.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MARKS) to revise and extend their remarks and include extraneous material:)

Mr. YOUNG of Florida, for 10 minutes, today.

Mr. KEMP, for 5 minutes, today.

(The following Members (at the request of Mr. JENKINS) to revise and extend their remarks and include extraneous material:)

Mr. ROSTENKOWSKI, for 15 minutes, today.

Mr. LAFALCE, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. AKAKA, for 5 minutes, today.

Mr. REUSS, for 30 minutes, today.

Mr. MOFFETT, for 30 minutes, today.

Mr. SHARP, for 5 minutes, today.

Mr. BROOKS, for 10 minutes, today.

Mr. THOMPSON, for 5 minutes, today.

Mr. EILBERG, for 5 minutes, today.

Mr. BINGHAM, for 30 minutes, today.

Mr. WAGGONNER, for 15 minutes, March 22, 1977.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. MARKS) and to include extraneous material:)

Mr. MARKS.
Mrs. PETTIS.
Mr. SCHULZE.
Mr. KETCHUM.
Mr. DICKINSON.
Mr. BADHAM in two instances.
Mr. CORCORAN of Illinois.
Mr. BROWN of Ohio.
Mr. KASTEN.
Mr. ERLENBORN.
Mr. ASHBROOK in two instances.
Mr. THONE.
Mr. FISH.
Mr. LENT.
Mr. FINDLEY.
Mr. STOCKMAN.
Mr. KEMP.
Mr. QUIE.

(The following Members (at the request of Mr. JENKINS) and to include extraneous matter:)

Mr. MOAKLEY.
Mr. ASHLEY.
Mr. ANNUNZIO in six instances.
Mr. GONZALEZ in three instances.
Mr. BROWN of California in 10 instances.
Mr. KREBS.
Mr. ASPIN in 10 instances.
Mr. BURKE of Massachusetts.
Mr. JONES of Oklahoma in two instances.
Mr. ROSE.
Mr. WON PAT.
Mr. RANGEL.
Mr. CHARLES H. WILSON of California.
Mr. GIBBONS.
Mr. ROBERTS.
Mr. JOHN L. BURTON.
Mr. FARY in two instances.
Mr. FORD of Tennessee.
Mr. HOLLAND.
Ms. OAKAR.
Mr. VENTO in two instances.
Mrs. COLLINS of Illinois.
Mr. JACOBS.
Mr. BEARD of Rhode Island.
Mr. FRASER.
Mr. SCHEUER.
Mrs. CHISHOLM.
Mr. TEAGUE.
Mr. MOTTL.
Mr. DINGELL.
Mr. EDWARDS of California.
Mr. MURTHA.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 650. An act to provide temporary emergency assistance to wheat producers by permitting such producers to utilize a portion of their farm wheat acreage allotments for grazing purposes or for hay rather than for commercial production; to the Committee on Agriculture.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 2647. An act to amend the Small Business Act and the Small Business Investment Act of 1958.

ADJOURNMENT

Mr. JENKINS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 28 minutes p.m.), the House adjourned until tomorrow, Tuesday, March 22, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1046. A letter from the Deputy Secretary of Defense, transmitting three reports of violations of the Anti-Deficiency Act, pursuant to section 3679(1)(2) of the Revised Statutes; to the Committee on Appropriations.

1047. A letter from the Acting General Counsel of the Department of Defense, transmitting a draft of proposed legislation to authorize adjustment in the annuities payable under subchapter I of chapter 73 of title 10, United States Code, whenever retired or retainer pay is increased under section 1401a of that title; to the Committee on Armed Services.

1048. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 1-229, "To reorganize the administration of the District of Columbia General Hospital, to establish a Commission to govern that hospital, and for other purposes," pursuant to section 602 (c) of Public Law 93-198; to the Committee on the District of Columbia.

1049. A letter from the Chairman, Federal Election Commission, transmitting a report on the Commission's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1050. A letter from the Deputy Assistant Secretary of Defense (Administration), transmitting notice of a proposed new records system, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

1051. A letter from the Attorney General, transmitting notice of a proposed change in a records system, pursuant to 5 U.S.C. 552a (o); to the Committee on Government Operations.

1052. A letter from the Attorney General, transmitting notice of proposed new and changed records systems, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

1053. A letter from the Chairman, Federal Election Commission, transmitting the Commission's comments on the proposed Universal Voter Registration Act of 1977, pursuant to section 310(d)(2) of the Federal Election Campaign Act of 1971, as amended; to the Committee on House Administration.

1054. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

1055. A letter from the Executive Director, Federal Communications Commission, transmitting reports on the backlog of pending applications and hearing cases in the Commission as of November 30, and December 31, 1976, pursuant to section 5(e) of the Communications Act, as amended; to the Committee on Interstate and Foreign Commerce.

1056. A letter from the Administrator, Federal Energy Administration, transmitting a revised copy of the report (Executive Communication No. 850) submitted February 28, pursuant to section 8(f)(1) of the Emergency Petroleum Allocation Act, as amended; to the Committee on Interstate and Foreign Commerce.

1057. A letter from the Secretary of Transportation, transmitting a report covering calendar year 1976 on utilization of authority to designate and rent inadequate quarters, lease family housing and hire quarters at or near Coast Guard installations, pursuant to 14 U.S.C. 475(f); to the Committee on Merchant Marine and Fisheries.

1058. A letter from the Secretary of Transportation, transmitting the sixth annual report on the special bridge replacement program, pursuant to 23 U.S.C. 144(h); to the Committee on Public Works and Transportation.

1059. A letter from the Acting Administrator of General Services, transmitting the final environmental impact statement for the proposed John F. Kennedy Library, pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969; to the Committee on Public Works and Transportation.

1060. A letter from the Acting Assistant Secretary of Defense (Installations and Logistics), transmitting a report on Department of Defense procurement from small and other business firms during October 1976, pursuant to section 10(d) of the Small Business Act, as amended; to the Committee on Small Business.

1061. A letter from the Acting Comptroller General of the United States, transmitting a report on the status of the Navy's light airborne multipurpose system program (PSAD-77-43, March 18, 1977); jointly, to the Committees on Governmental Operations, and Armed Services.

1062. A letter from the Acting Comptroller General of the United States, transmitting a report on the status of the Navy's SSN-688 attack submarine program (PSAD-77-45, March 18, 1977); jointly, to the Committees on Government Operations, and Armed Services.

1063. A letter from the Acting Comptroller General of the United States, transmitting a report on the mission effectiveness of U.S. antiarmor weapon systems (PSAD-77-67, March 18, 1977); jointly, to the Committees on Government Operations, and Armed Services.

1064. A letter from the Comptroller General of the United States, transmitting a report on the issues surrounding the controversy over nuclear versus conventional power in major strike force surface combatant ships (PSAD-77-74, March 21, 1977); jointly, to the Committees on Government Operations, and Armed Services.

1065. A letter from the Acting Comptroller General of the United States, transmitting a report on the Federal effort to coordinate the fight against organized crime through the Justice Department's strike forces (GGD-77-17, March 17, 1977); jointly, to the Committees on Government Operations; and the Judiciary.

1066. A letter from the Comptroller General of the United States, transmitting a report on the Urban System highway program authorized by the Highway Act of 1973 (CED-77-49, March 18, 1977); jointly, to the Committees on Government Operations, and Public Works and Transportation.

1067. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to provide a comprehensive system of liability and compensation for oil

spill damage and removal costs, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries, and Public Works and Transportation.

1068. A letter from the Acting Comptroller General of the United States, transmitting a report on the usefulness of resource and reserve estimates of the Nation's primary energy fuels—oil, gas, coal, and uranium (EMD-77-6, March 17, 1977); jointly, to the Committees on Government Operations, Interior and Insular, and Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[*Pursuant to the order of the House on Mar. 16, 1977, the following reports were filed on Mar. 18, 1977*]

Mr. PERKINS: Committee on Education and Labor. H.R. 4250. A bill to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers and to establish collective-bargaining procedures in the construction industry; with amendment (Rept. No. 95-96). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE: Committee on Science and Technology. H.R. 4991. A bill to authorize appropriations for activities of the National Science Foundation, and for other purposes (Rept. No. 95-98). Referred to the Committee of the Whole House on the State of the Union.

[*Pursuant to the order of the House on Mar. 17, 1977, the following reports were filed on Mar. 18, 1977*]

Mr. DENT: Committee on House Administration. House Resolution 189. Resolution providing funds for the Committee on Rules (Rept. No. 95-87). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 280. Resolution to provide for the expenses of investigations and studies to be conducted by the Committee on Banking, Finance and Urban Affairs; with amendment (Rept. No. 95-88). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 298. Resolution to provide funds for the expenses of the investigations and studies to be conducted by the Committee on Agriculture with amendment (Rept. No. 95-89). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 310. Resolution to provide for the expenses of investigations, and studies to be conducted by the Committee on Armed Services (Rept. 95-90). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 343. Resolution to provide for the expenses of investigations and studies to be conducted by the Ad Hoc Select Committee on Outer Continental Shelf; with amendment (Rept. No. 95-91). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 370. Resolution to provide funds for the further expenses of the investigations and studies of the Committee on Small Business; with amendment (Rept. No. 95-92). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 378. Resolution providing for the expenses for the first session activities of the Committee on Interior and Insular Affairs; with amendment (Rept. No. 95-93). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 382. Resolution to provide for the expenses of investigations and studies to be conducted by the Select Committee on Aging (Rept. No. 95-94). Referred to the House Calendar.

Mr. TEAGUE: Committee on Science and Technology. H.R. 3965. A bill to authorize research, development, and demonstration projects relating to aviation, and for other purposes; with amendment (Rept. No. 95-95). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 3712. A bill to amend the Library Services and Construction Act to extend the authorizations of appropriations contained in such Act (Rept. 95-97). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted Mar. 21, 1977*]

Mr. RYAN: Committee on International Relations. House Concurrent Resolution 142, Concurrent resolution urging the Canadian Government to reassess its policy of permitting the killing of newborn harp seals (Rept. No. 95-99). Referred to the House Calendar.

Mr. ZABLOCKI: Committee on International Relations. House Concurrent Resolution 97. Concurrent resolution expressing the concern of Congress regarding the harassment of Soviet Jews and other minorities; with amendment (Rept. No. 95-100). Referred to the House Calendar.

Mr. DENT: Committee on House Administration. House Resolution 393. Resolution authorizing additional funds for the leadership offices, and for other purposes; with amendment (Rept. No. 95-101). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BRECKINRIDGE:

H.R. 5231. A bill to provide for the duty-free entry of chlorendic acid; to the Committee on Ways and Means.

By Mr. AKAKA (for himself and Mr. HEFTEL):

H.R. 5232. A bill to authorize the Secretary of the Army to make available to the State of Hawaii or through it to the Queen's Medical Center physical facilities not needed by the Army at Fort DeRussy, Hawaii, for the purpose of establishing a mental health clinic in such facilities; to the Committee on Armed Services.

By Mr. ANNUNZIO (for himself, Mr. ADDABBO, Mr. BEDELL, Mr. DAVIS, Mr. DENT, Mr. HAMMERSCHMIDT, Ms. MIKULSKI, Mr. MOAKLEY, Mr. RODINO, Mr. ROSE, Mr. VENTO, and Mr. ZEFERETTI):

H.R. 5233. A bill to increase for a 5-year period the duty on certain hand tools, and for other purposes; to the Committee on Ways and Means.

By Mr. BINGHAM:

H.R. 5234. A bill to amend the Atomic Energy Act of 1954 to prohibit licensing of commercial Nuclear fuel reprocessing facilities and plutonium-fueled reactors; to the Committee on Interior and Insular Affairs.

By Mr. BRINKLEY:

H.R. 5235. A bill to amend title 38 of the United States Code to shorten the World War I service requirement for the purposes of establishing eligibility for pension under such title; to the Committee on Veterans' Affairs.

H.R. 5236. A bill to amend title XVIII of the Social Security Act to authorize payment under the medicare program for certain services performed by chiropractors; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. BROOMFIELD:

H.R. 5237. A bill to direct the Food and Drug Administeration to withhold its announced prohibition of the use of saccharin in foods and beverages pending further study by the National Academy of Sciences; to the Committee on Interstate and Foreign Commerce.

By Mr. PHILLIP BURTON:

H.R. 5238. A bill to require an employer which assumes the ownership or operation of a business to honor the terms and conditions of a collective-bargaining contract; to the Committee on Education and Labor.

H.R. 5239. A bill to prohibit discrimination on the basis of affectional or sexual preference, and for other purposes; jointly, to the Committees on the Judiciary, and Education and Labor.

By Mr. CARNEY (for himself and Mr. BALDUS):

H.R. 5240. A bill to reaffirm the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce; to reaffirm the authority of the States to regulate terminal and station equipment used for telephone exchange service; to require the Federal Communications Commission to make certain findings in connection with Commission actions authorizing specialized carriers; and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CONABLE (for himself, Mr. ARCHER, Mr. DUNCAN of Tennessee, Mr. WAGGONNER, Mr. RHODES, Mr. ABDNOR, Mr. BROWN of Ohio, Mr. BROWN of Michigan, Mr. COLLINS of Texas, Mr. DAN DANIEL, Mr. DICKINSON, Mr. ERLENBORN, Mr. EMERY, Mrs. FENWICK, Mr. HAGEDORN, Mrs. HOLT, Mr. HORTON, and Mr. HYDE):

H.R. 5241. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

By Mr. CONABLE (for himself, Mr. JOHNSON of Colorado, Mr. KINDNESS, Mr. LAFALCE, Mr. LAGOMARSINO, Mr. LEACH, Mr. LENT, Mr. LOTT, Mr. MCEWEN, Mr. MILLER of Ohio, Mr. QUIE, Mr. RAILSBACK, Mr. RUNNELS, Mr. SAWYER, and Mr. SHIPLEY):

H.R. 5242. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

By Mr. COUGHLIN:

H.R. 5243. A bill to amend title 18 of the United States Code and the Omnibus Crime Control and Safe Streets Act of 1968 for the purpose of designating certain electric weapons as destructive devices; to the Committee on the Judiciary.

By Mr. DUNCAN of Tennessee:

H.R. 5244. A bill to amend title 5, United States Code, to remove the restriction that survivor compensation to any widow or widower will be terminated if such widow or widower remarries; to the Committee on Education and Labor.

By Mr. FITHIAN (for himself, Mr. JACOBS, Mr. HAMILTON, Mr. SHARP, Mr. BRADEMAS, Mr. EVANS of Indiana, Mr. HILLIS, Mr. QUAYLE, Mr. BAUCUS, Mr. OTTINGER, Mr. BROWN of California, Mr. LONG of Louisiana, Mrs. FENWICK, Mr. SIMON, Mr. DOWNEY, Mr. VOLKMER, Mr. CARR, Mr. RYAN, and Mr. BEDELL):

H.R. 5245. A bill to deauthorize the Lafayette Dam and Reservoir, Wabash River, Ind.; to the Committee on Public Works and Transportation.

By Mr. FLYNT:

H.R. 5246. A bill to amend the Federal Food, Drug, and Cosmetic Act with respect to the safety of food additives; to the Committee on Interstate and Foreign Commerce.

By Mr. FOLEY:

H.R. 5247. A bill to authorize the marketing of saccharin under section 409 of the Federal Food, Drug, and Cosmetic Act; to the Committee on Interstate and Foreign Commerce.

By Mr. GUDGER:

H.R. 5248. A bill to amend the Land and Water Conservation Fund Act of 1965, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HANNAFORD:

H.R. 5249. A bill to repeal the provisions of law allowing cost-of-living adjustments in the salaries of Members of Congress based on increases in the General Schedule; to the Committee on Post Office and Civil Service.

By Mr. KASTEN:

H.R. 5250. A bill to provide that the price support of milk be adjusted quarterly; to the Committee on Agriculture.

H.R. 5251. A bill to protect the public health and welfare by providing for the inspection of imported dairy products and by requiring that such products comply with certain minimum standards for sanitation and that the dairy farms on which milk is produced and the plants in which such products are produced meet certain minimum standards of sanitation, and for other purposes; to the Committee on Agriculture.

H.R. 5252. A bill to amend title 13, United States Code, to require the Secretary of Commerce to use sampling methods in taking agricultural censuses; to the Committee on Post Office and Civil Service.

H.R. 5253. A bill to increase the maximum Federal contribution to the cost of any State meat or poultry inspection system from 50 to 80 percent; to the Committee on Agriculture.

H.R. 5254. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

H.R. 5255. A bill to amend the Internal Revenue Code relating to the estate tax treatment of property held subject to joint tenancies; to the Committee on Ways and Means.

By Mr. KOCH:

H.R. 5256. A bill to amend the Urban Mass Transportation Act of 1964 to increase the authorization of funds for the act and to change the formula for the distribution of certain funds under the Act, and for other purposes; jointly, to the Committees on Public Works and Transportation, and Ways and Means.

By Mr. McCLOSKEY:

H.R. 5257. A bill to amend the Renegotiation Act of 1951 to provide that such act shall only be in effect when the President, during a period of national emergency, determines that having the provisions of such act in effect would be in the best interest of the country; to the Committee on Banking, Finance and Urban Affairs.

By Mr. MOLLOHAN (for himself, Mr. AKAKA, Mr. APPLEGATE, Mr. BURKE of Massachusetts, Mr. CARNEY, Mr. CONTE, Mr. EDWARDS of California, Mr. MITCHELL of New York, Mr. Mr. MURPHY of New York, and Mr. SIMON):

H.R. 5258. A bill to authorize the disposal of tin from the national stockpile and the supplemental stockpile; to the Committee on Armed Services.

By Mr. GARY A. MYERS:

H.R. 5259. A bill to amend the Motor Vehicle Information and Cost Savings Act to require the Environmental Protection Agency to compute realistic automobile fuel consumption rate statistics based on actual road tests; to the Committee on Interstate and Foreign Commerce.

By Mr. NOLAN (for himself, Mr. BROWN of California, Mr. SIMON, Mr. BALDUS, and Mr. AKAKA):

H.R. 5260. A bill to direct the Secretary of Agriculture to make payments to owners of cattle who sell their cattle in order to avoid excessive losses which would force such owners out of the business of dairy farming or producing beef cattle; to the Committee on Agriculture.

By Mr. O'BRIEN:

H.R. 5261. A bill to amend the Federal Food, Drug and Cosmetic Act to provide for the evaluation of the risks and benefits of food additives and to permit the continued use of saccharin until an evaluation is completed; to the Committee on Interstate and Foreign Commerce.

By Mr. REUSS:

H.R. 5262. A bill to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Bank and the Asian Development Fund, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. ROSTENKOWSKI:

H.R. 5263. A bill to suspend until the close of June 30, 1979, the duty on certain bicycle parts; to the Committee on Ways and Means.

H.R. 5264. A bill to amend the Social Security Act to authorize international agreements with respect to social security health insurance benefits; to the Committee on Ways and Means.

By Mr. ROSTENKOWSKI (for himself, Mr. CONABLE and Mr. ARCHER):

H.R. 5265. A bill to provide for the temporary suspension of duty on the importation of fluorspar; to the Committee on Ways and Means.

By Mr. ROYBAL:

H.R. 5266. A bill to amend titles XVIII and XIX of the Social Security Act to include services of licensed (registered) nurses, physician extenders, and nurse practitioners among the services for which payment may be made under the medicare and medicaid programs; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. RUPPE:

H.R. 5267. A bill to amend the Ports and Waterways Safety Act of 1972, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. ST GERMAIN:

H.R. 5268. A bill to authorize recomputation at age 60 of the retired pay of members and former members of the uniformed services whose retired pay is computed on the basis of pay scales in effect prior to January 1, 1972, and for other purposes; to the Committee on Armed Servicees.

By Mr. SEIBERLING:

H.R. 5269. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for any contribution, bequest, or gift to the United Nations; to the Committee on Ways and Means.

By Mr. STEIGER:

H.R. 5270. A bill to reduce the duty on aspen wood for wood particle board; to the Committee on Ways and Means.

By Mr. TUCKER:

H.R. 5271. A bill to amend the Federal Food, Drug, and Cosmetic Act to authorize the Secretary increased flexibility in issuing regulations regarding food additives; to the Committee on Interstate and Foreign Commerce.

H.R. 5272. A bill to amend the Internal Revenue Code of 1954 to exempt certain agricultural aircraft from the aircraft use tax, to provide for the refund of the gasoline tax to the agricultural aircroft operator, and for other purposes; to the Committee on Ways and Means.

By Mr. WHITEHURST (for himself, Mr. BAUCUS, Mr. BEDELL, Mr. BROADHEAD, Mr. CARR, Mr. COLLINS of Texas, Mr. ROBERT W. DANIEL, Jr., Mrs. FENWICK, Mr. FINDLEY, Mr. FRENZEL, Mr. LAGOMARSINO, Mr. MARTIN, Mr. PEPPER, Mr. RINALDO, Mr. SIMON, Mr. TREEN, and Mr. WINN):

H.R. 5273. A bill to amend the Internal Revenue Code; to the Committee on Ways and Means.

By Mr. WHITEHURST (for himself, Mr. CARR, Mr. COLLINS of Texas, Mr. ROBERT W. DANIEL, Jr., Mr. EDWARDS of Oklahoma, Mrs. FENWICK, Mr. FINDLEY, Mr. LAGOMARSINO, Mr. TREEN, and Mr. WINN):

H.R. 5274. A bill to amend the Internal Revenue Code of 1954 to provide for individual supplemental retirement savings; to the Committee on Ways and Means.

By Mr. YOUNG of Florida:

H.R. 5275. A bill to regulate lobbying and related activities; to the Committee on the Judiciary.

By Mr. BAUCUS (for himself, Mr. BLOUIN, Mr. JENRETTE, Mr. KRUEGER, Mrs. LLOYD of Tennessee, Mr. McHUGH, Mr. MITCHELL of Maryland, Mr. MOORE, Mr. PANETTA, Mr. PRESSLER, Mr. RYAN, Mr. SKELTON, Mrs. SPELLMAN, and Mr. TRAXLER):

H.R. 5276. A bill to require that imported meat and meat food products made in whole or in part of imported meat be subjected to certain tests and that such meat or products be identified as having been imported; to require the inspection of imported dairy products and that such products comply with certain minimum standards of sanitation; to require that the cost of conducting such tests, inspections, and identification procedures on imported meat and meat food products and on dairy products, as the case may be, be borne by the exporters of such articles, and for other purposes; to the Committee on Agriculture.

By Mr. BEARD of Rhode Island:

H.R. 5277. A bill to provide for the national accounting of the social, health, and Nation's welfare; to the Committee on Government Operations.

By Mr. BURLESON of Texas (for himself, Mr. PICKLE, and Mr. MARLENEE):

H.R. 5278. A bill to repeal the carryover basis provisions added by the Tax Reform Act of 1976; to the Committee on Ways and Means.

By Mr. CLAY (for himself, Mr. MITCHELL of Maryland, Mr. FARY, Mr. CHARLES H. WILSON of California, Mr. MOAKLEY, Mr. DUNCAN of Oregon, Mr. SIMON, Mr. McHUGH, Mrs. SPELLMAN, Mr. CARR, Mr. STOKES, Mr. JENRETTE, Mr. SOLARZ, Mr. LLOYD of California, Mr. OTTINGER, Mr. BADILLO, and Mr. GILMAN):

H.R. 5279. A bill to provide that the Federal Government will reimburse any individual who prevails in a court action if such court action is the result of harassment or other unreasonable conduct by the Federal Government; jointly, to the Committees on the Judiciary and Ways and Means.

By Mr. DICKINSON:

H.R. 5280. A bill to give the Food and Drug Administration greater discretion in the control of food additives; to the Committee on Interstate and Foreign Commerce.

By Mr. DICKINSON (for himself, Mr. MCDONALD, Mr. DORNAN, and Mr. MANN):

H.R. 5281. A bill to amend the Food Stamp Act of 1964, to exclude from coverage under the act households which have members who are on strike, and for other purposes; to the Committee on Agriculture.

By Mr. FORSYTHE (for himself, Mr. MURPHY of New York, Mr. LEGGETT, Mr. BREAUX, Mr. PRITCHARD, Mr. EVANS of Delaware, Mr. AKAKA, Mr. EMERY, Mr. LENT, Mr. AUCOIN, Mr. STUDDS, Mr. TRIBLE, Ms. MIKULSKI, and Mr. HUGHES):

H.R. 5282. A bill to amend the Marine Protection, Research and Sanctuaries Act of 1972 regarding the issuance of interim permits for ocean dumping, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. LAFALCE:

H.R. 5283. A bill to increase the productivity and quality of working life of small enterprises and local governments throughout the Nation; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LE FANTE:

H.R. 5284. A bill to amend the United States Housing Act of 1937, and the National Housing Act, to provide that future social security benefit increases shall be disregarded in determining eligibility for admission to or occupancy of low-rent public housing or the rent which an individual or family must pay for such housing, and that such increases shall also be disregarded in determining eligibility for (and the amount of) other Federal housing subsidies; to the Committee on Banking, Finance and Urban Affairs.

By Mr. LEDERER:

H.R. 5285. A bill to amend the Tariff Schedules of the United States with respect to the tariff treatment accorded to sheets manufactured from acrylic resin materials; to the Committee on Ways and Means.

H.R. 5286. A bill to amend the Tariff Schedules of the United States with respect to the tariff treatment accorded to acetone; to the Committee on Ways and Means.

By Mr. LEGGETT:

H.R. 5287. A bill to authorize the Secretary of Agriculture to subsidize the freight cost of exporting certain surplus agricultural commodities by ship; jointly, to the Committees on Agriculture, and International Relations.

By PEPPER (for himself, Mr. MURPHY of Illinois, and Mr. CORNWELL):

H.R. 5288. A bill to direct the Coordinating Council on Juvenile Justice and Delinquency Prevention to organize and convene a national conference on learning disabilities and juvenile delinquency, and for other purposes; to the Committee on Education and Labor.

By Mr. CARNEY (for himself, Mr. HEFNER, Mr. LEACH, Mr. MANN, Mr. CLEVELAND, Mr. WEISS, Mr. MURPHY of New York, Mr. MURPHY of Illinois, Mr. GRASSLEY, and Mr. WHALEN):

H.J. Res. 336. Joint resolution authorizing the President to proclaim the week beginning November 6, 1977, and ending November 12, 1977, as National Volunteer Firemen Week; to the Committee on Post Office and Civil Service.

By Mr. HANLEY (for himself, Mr. CARNEY, Mr. FISH, and Mr. DELLUMS):

H. Con. Res. 168. Concurrent resolution recommending the creation by the President of a special task force to report on factors relating to the need to deregulate the price of natural gas in interstate commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. RYAN (for himself, Mr. ANDERSON of California, Mr. CORRADA, Mr. EVANS of Georgia, Mr. GEPHARDT, Mr. SIMON, Mr. STARK, and Mr. KOSTMAYER):

H. Con. Res. 169. Conurrent resolution urging the Canadian Government to reassess its policy of permitting the killing of newborn harp seals; to the Committee on International Relations.

By Mr. SCHULZE:

H. Con. Res. 170. Concurrent resolution to urge the President to reduce the risk of chemical warfare; jointly, to the Committees on Armed Services and International Relations.

By Mr. BROOKS:

H. Res. 420. Resolution to continue the work of the Joint Committee on Congressional Operations by establishing a select committee of the House to perform the functions of such Joint Committee for the House; to the Committee on Rules.

By Mr. GAYDOS:

H. Res. 421. Resolution disapproving a proposed regulation of the Federal Election Commission; to the Committee on House Administration.

By Mr. SHARP (for himself, Mr. EVANS of Indiana, Mr. HAMILTON, and Mr. JOHN T. MYERS):

H. Res. 422. Resolution that Congress move expeditiously to resolve pending issues regarding national telecommunications policy, and for other purposes; to the Committee on Interstate and Foreign Commerce.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

46. By the SPEAKER: Memorial of the Legislature of the State of Alaska, relative to the proposed Alaska National Interest Lands Conservation Act; to the Committee on Interior and Insular Affairs.

47. Also, memorial of the Legislature of the Commonwealth of Puerto Rico, relative to Puerto Rico's political status; to the Committee on Interior and Insular Affairs.

48. Also, memorial of the Senate of the State of New Hampshire, relative to the pardoning of draft evaders; to the Committee on the Judiciary.

49. Also, memorial of the Legislature of the State of Oregon, reaffirming its ratification of the proposed amendments to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

50. Also, memorial of the Legislature of the Commonwealth of Virginia, ratifying the amendment to the Constitution of the United States relating to denial of the right to vote for failure to pay taxes; to the Committee on the Judiciary.

51. Also, memorial of the House of Representatives of the State of Hawaii, relative to amending the Internal Revenue Code to promote the sale of residential land subject to leaseholds; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GIBBONS:

H.R. 5289. A bill for the relief of Joe Cortina of Tampa, Fla.; to the Committee on Ways and Means.

By Mr. HAGEDORN:

H.R. 5290. A bill for the relief of Young Shin Joo; to the Committee on the Judiciary.

By Mr. MARRIOTT:

H.R. 5291. A bill for the relief of Ah Young Cho Kwak; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

63. By the SPEAKER: Petition of the city council, Philadelphia, Pa., relative to the proposed Consumer Communications Reform Act of 1977; to the Committee on Interstate and Foreign Commerce.

64. Also, petition of the Confederation Francaise du Travail, Paris, France, relative to the Concorde; to the Committee on Public Works and Transportation.

65. Also, petition of the Assembly of the Ketchikan Gateway Borough, Alaska, relative to approval of an all-Alaska, all-American gas pipeline; jointly, to the Committee on Interstate and Foreign Commerce, and Interior and Insular Affairs.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 4250

By Mr. EDWARDS of Oklahoma:

Page 20, line 25, strike out "This subsection (b)" and insert in lieu thereof "clause (B) of this paragraph (4)".

Page 24, line 3, insert immediately after the word "site" the following: ", and, for the purpose of the preceding provisions, the term 'site' means one single physically contiguous location at which employees are engaged in interrelated construction, alteration, painting, repair, or other work towards a common objective and in close physical proximity to each other".

Amend section 101(b)(2)(A) of title 1, page 25, line 5, by inserting, ": *Provided further*, That once written authorization of such activities by the national or international labor organizations is given, a secret ballot election shall be held by all affected workers, union and non-union, construction and industrial, to approve or disapprove a strike, and only upon the approval of a majority of the ballots cast shall a strike begin." after the words, "achieve an unlawful purpose."

Amend section 101(b)(2) of title 1, page 26, by adding a new subsection (D) which reads as follows: "Any local union that engages in a common situs picketing action without written national or international approval shall be liable to all contractors, subcontractors, their employees and agents for double direct economic loss caused by their actions."

Page 26, line 6, strike out "ninety days after the date of enactment" and insert in lieu thereof "during the period which begins ninety days after the date of the enactment of this Act and ends on December 31, 1980",

Page 40, beginning with line 5, strike out "this" and everything that follows down through "(b)" on line 7, and on line 12, strike out "(c)" and insert in lieu thereof "(b)".

Page 40, beginning with line 14, strike out "recommendations" and everything that follows down through "other" on line 17.

SENATE—*Monday, March 21, 1977*

(Legislative day of Monday, February 21, 1977)

The Senate met at 1:15 p.m., on the expiration of the recess, and was called to order by Hon. DONALD W. RIEGLE, JR., a Senator from the State of Michigan.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, Creator of all that is beautiful and good and true, we thank Thee for the beauty of this world which Thou has given to us for our home. Forgive us, if in any way we have marred or disfigured Thy creation. Tune our hearts to the beauty of sight, the beauty of sound, the beauty of thought, and the beauty of the innerspirit. Guide us as we work that our speech and our actions may be in harmony with the beauty of the world and the mind and spirit of the Creator, in whose name we make our prayer. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The second assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., March 21, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. DONALD W. RIEGLE, JR., a Senator from the State of Michigan, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. RIEGLE thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Friday, March 18, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THOUGHTS THAT BLOOM IN THE SPRING

Mr. ROBERT C. BYRD. Mr. President:

The year's at the spring
And day's at the morn;
Morning's at seven;
The hillside's dew-pearled;
The lark's on the wing;
The snail's on the thorn:
God's in his heaven—
All's right with the world.

As Henry Van Dyke said around the turn of the century:

It may be the first day of spring, but it is not necessarily the first spring day.

I yield back the remainder of my time.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee is recognized.

Mr. BAKER. Mr. President, I commend the majority leader for his remarks, and I hope his recitation warms up the temperature a little on this first day of spring.

SERVICEMEN MISSING IN SOUTHEAST ASIA

Mr. BAKER. Mr. President, it was with a mixture of sadness and frustration that I read Saturday of the return of the bodies of 12 U.S. pilots by the Government of Vietnam. At least for the families of these men, the long years of waiting are over.

For so many others, however, the wait continues and the frustrations continue. For those families who now know, I am relieved; but I have to wonder how many years ago they could have known. I have to wonder how many families are still waiting who could be told. The release of these 12 men engenders in me no sense of gratitude and, certainly, no sense of debt to the government in Hanoi.

Eventually, Mr. President, I will accept our dealings with Vietnam; because, like it or not, we have to live in and deal with the world as it is. Vietnam will be only one of the multitude of nations with whom we trade and for whom we provide economic assistance whose boundaries encompass a conquered people and whose government was established by force.

I cannot say that I ever will like it, but I will accept it but, not, Mr. President, before we are completely satisfied; not before men like Leonard Woodcock and SONNY MONTGOMERY are satisfied, that the Vietnamese Government has provided us every possible assistance and cooperation in accounting for those servicemen still missing in Southeast Asia.

To that end, Mr. President, I believe we were well served by the Presidential Commission returning today from Southeast Asia. For the distinguished members, Mr. Woodcock, Congressman MONTGOMERY, Senator Mansfield, Ambassador Yost, and Mrs. Edelman, it was a sensitive, and in many respects, a painful assignment.

Mr. President, the return of those pilots eloquently reminds us that the Vietnam war is still very much with us. The strong emotions rekindled by the pardon of the draft evaders and the commission of a study to determine what action could be taken for the deserters and those less than honorably discharged was a similar reminder.

The President said that accommodating the desires of the draft resisters and the deserters would help to heal the wounds of the Vietnam war—maybe; I do not think so; but maybe. In any event, that point is past arguing; but there is another point, Mr. President, that we have not even begun to consider.

If we are going to be so concerned, so solicitous, for the draft resisters and deserters, is there no way for this Government to express its appreciation to those who did not run, who did not desert. There were so many more who took their oath, served and served honorably, and returned with no special recognition or favor. Indulge me to read that oath, in part, Mr. President. It says,

I do solemnly swear that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same . . .

A lot of men and women, regardless of their feeling about this war, kept that oath.

In World War II, our troops left with bands playing, fought courageously in places with names that have become a part of our heritage, and returned to more bands and ticker-tape parades. Vietnam was a different war and a different kind of war. Men who went there went anonymously; they fought in places whose names we cannot pronounce, much less remember; and they returned to Travis or El Toro with no bands to greet them, no recognition of the service they had performed, or the oath they had kept.

I want to change that, Mr. President. I believe it is time that we say to those people, "Look, we know it was an unpopular war. We know now we probably had no business even being there. And, for the most part, we weren't; but you were. And, for doing what was asked of you, we are grateful."

There needs to be some recognition, Mr. President, that they served and served honorably. There is no way we can compensate for the disruptions to their lives. Tragically less can we compensate for the agony of the wounded or for the loss of the families of those who did not return at all. But, however inadequate, however much of a mere token, there must be something that this Government can do to say that this Government still reveres honorable service. There may be a day when, once again, this country will call upon its young men and women to serve on its behalf. And, when that day comes, I would not want the last remembered vestige of the Vietnam war to be the pardon of the draft resisters.

I am not prepared yet to say what we should do, but something needs to be done. There needs to be some substantative action by which the Government honors those who did not desert, who did not run from the draft. It may be as simple as a citation and commendation, or an appropriate bonus to Vietnam veterans who served honorably. I think the Congress should turn its attention to this matter in the near future. I will not now argue with the President's decision to act as he has on behalf of those who did not serve, but I believe there must be a balancing equity for those who did.

I urge this matter for the consideration of my colleagues.

Mr. President, I have no further requirement for nor no request for time under the standing order, and I yield it back.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business for not to extend beyond the hour of 2 p.m. with statements therein limited to 10 minutes.

Is there morning business?

Mr. ALLEN. I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ALLEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGE FROM THE HOUSE

ENROLLED BILL SIGNED

At 3:40 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its reading clerks, announced that the Speaker has signed H.R. 2647, an act to amend the Small Business Act and the Small Business Investment Act of 1958.

The enrolled bill was subsequently signed by the President pro tempore (Mr. EASTLAND).

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC–938. A letter from the Secretary of Defense transmitting, pursuant to law, three reports of violations of the Anti-Deficiency Act, and of Department of Defense Directive 7200.1, "Administrative Control of Appropriations within the Department of Defense." (with accompanying papers); to the Committee on Appropriations.

EC–939. A letter from the President of the National Academy of Sciences transmitting, pursuant to law, a report entitled "Perspectives on Technical Information for Environmental Protection" (with an accompanying report); to the Committee on Appropriations.

EC–940. A letter from the Acting General Counsel of the Department of Defense transmitting a draft of proposed legislation to authorize adjustment in the annuities payable under subchapter I of chapter 73 of title 10, United States Code, whenever retired or retainer pay is increased under section 1401a of that title (with accompanying papers); to the Committee on Armed Services.

EC–941. A letter from the Secretary of Transportation transmitting, pursuant to law, the sixth annual report to the Congress on the special bridge replacement program (with an accompanying report); to the Committee on Environment and Public Works.

EC–942. A letter from the president of the Overseas Private Investment Corp. transmitting a draft of proposed legislation to amend the Foreign Assistance Act of 1961, as amended, to authorize additional authority for the Overseas Private Investment Corp. (with accompanying papers); to the Committee on Foreign Relations.

EC–943. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Nuclear or Conventional Power for Surface Combatant Ships?" (with an accompanying report); to the Committee on Governmental Affairs.

EC–944. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Why Urban System Funds were Seldom Used for Mass Transit" (with an accompanying report); to the Committee on Governmental Affairs.

EC–945. A letter from the General Manager of the Tennessee Valley Authority transmitting, pursuant to law, two copies of a report of the TVA's intention to alter five systems of records, in accordance with the Privacy Act (with accompanying reports); to the Committee on Governmental Affairs.

EC–946. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, two copies of a Department of the Army proposal on a new system of records, in accordance with the Privacy Act (with accompany reports); to the Committee on Governmental Affairs.

EC–947. A letter from the Chairman of the National Commission for Manpower Policy transmitting, pursuant to law, Special Report Number 13, "Directions for a National Manpower Policy: A Report on the Proceedings of Three Regional Conferences" and special report No. 14, "Directions for a National Manpower Policy: A collection of Policy Papers Prepared for Three Regional Conferences" (with accompanying reports); to the Committee on Human Resources.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions which were referred as indicated:

POM–96. Senate Joint Resolution No. 7 adopted by the Legislature of the State of Alaska opposing H.R. 39, the "Alaska National Interest Lands Conservation Act"; to the Committee on Energy and Natural Resources:

SENATE JOINT RESOLUTION NO. 7

Be it resolved by the Legislature of the State of Alaska:

Whereas the development of a wise national interest resource policy requires that public land be utilized on an enlightened multiple-use basis, accommodating all reasonable uses for which the land is suited; and

Whereas H.R. 39, designed to implement sec. 17(d)(2) of the Alaska Native Claims Settlement Act, unreasonably shifts the emphasis from multiple-use management of land in the general interest to exclusive resource management in the interests of a few; and

Whereas the thrust of H.R. 39 is illustrated by the creation of 56.0 million acres of national parks, monuments, and preserves, as well as adding 8.1 million acres to those already in existence, thereby precluding the use of that land for mineral development, hunting (except in limited zones yet to be designated), and overall multiple-use management; and

Whereas the overall designation of portions of the national interest areas in the bill as components of the National Wilderness Preservation System creates enclaves of land which will involve serious access problems, be entirely restrictive to any sort of conventional development, and ultimately against the best public interest of most Alaskans; and

Whereas provisions relating to Native subsistence rights are uncertain and imprecise, leaving most substantive questions to be answered by regulations to be adopted in the future; and

Whereas, subject to valid existing rights, all the land designated as national interest land in H.R. 39 is withdrawn from all forms of appropriation under the mining laws and from mineral leasing, thereby placing an untenable burden on the entire nation in this time of energy and raw materials shortage; and

Whereas sec. 704(b) of H.R. 39 arbitrarily revokes land selections by the state in the national interest land areas, granting the state equal acreage, but relegating it to the undesirability of choosing lands of unspecified character and quality elsewhere; and

Whereas only 1.6 million acres are authorized to be designated as National Forest land, the only land category of those to be considered which approaches multiple-use management and considers diverse interests; and

Whereas Title V of H.R. 39 directs that the U.S. Fish and Wildlife Service exert primary interim management control of National Petroleum Reserve 4, representing an inappropriate shift of control considering the resource involved; and

Whereas a cooperative management program administered by a federal and state appointed commission would create a climate for determining the best use of land in Alaska; and

Whereas recognizing that there is a valid national public interest in public land in Alaska, including state land, as well as a valid interest on the part of the people of Alaska in federal land in Alaska, such a cooperative management program would allow land to be jointly administered until such time as its best value can be determined; be it

Resolved by the Alaska State Legislature that it opposes H.R. 39, the "Alaska National Interest Lands Conservation Act", as premature and not in the best interest of the citizens of the state and the nation; and be it further

Resolved That the Alaska State Legislature supports a strong common management program of administering public land and developing a selection policy.

Copies of this resolution shall be sent to the Honorable Jimmy Carter, President of the United States; the Honorable Cecil D. Andrus, Secretary of the Department of the Interior; the Honorable Robert S. Bergland, Secretary of the Department of Agriculture; the Honorable James O. Eastland, President Pro Tempore of the U.S. Senate; the Honorable Thomas P. O'Neill, Jr., Speaker of the U.S. House of Representatives; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

POM–97. Resolution No. 31 adopted by the 14th Guam Legislature relative to commending Senator DANIEL K. INOUYE for introducing the Hawaiian and U.S. Pacific Island Surface Commerce Act and requesting U.S.

Congress action on such measure; to the Committee on Human Resources:

RESOLUTION NO. 31

Be it resolved by the Legislature of the Territory of Guam:

Whereas, Guam and her Pacific Island neighbors are uniquely dependent upon surface commerce originating from the west coast ports of the continental United States; and

Whereas, the west coast shipping strike of 1972 caused a tremendous consumer hardship and significant price increases on Guam, some of which have never been reduced; and

Whereas, the mere and recurring threat of stoppage itself causes great economic damage as merchants and other economic interests in Guam and her Pacific Islands neighbors are forced to follow an expensive process of stockpiling merchandise; and

Whereas, the trade between the west coast and the United States Pacific Islands, including Hawaii, has almost no influence on the collective bargaining process because it constitutes such a small percentage of total west coast maritime trade; and

Whereas, the current peace between labor and management in the west coast longshore and maritime trades cannot be taken for granted; and

Whereas, United States Senator Daniel K. Inouye has been sponsoring legislation to protect Hawaii and the United States Pacific Islands from shipping strikes or threats of such since 1971, with revised legislation passing the Senate during the 93rd Congress; and

Whereas, on January 10, 1977, Senator Inouye reintroduced the Hawaiian and United States Pacific Islands Surface Commerce Act as S. 23, which recognizes the principle that we should interfere as little as possible, consistent with the objective of protecting Pacific Island Commerce, with the normal economic forces which are operative in labor management negotiations; and

Whereas, the proposed solution contained in Senator Inouye's measure is one which has been regularly used on a voluntary basis to transport military cargo including post exchange and commissary supplies during previous shipping stoppages; now, therefore, be it

Resolved, That the members of the Fourteenth Guam Legislature hereby express their support for S. 23, and commend Senator Inouye for his tenacity and concern for this very important problem facing the United States Pacific Island communities; and be it further

Resolved, That the members of the Fourteenth Guam Legislature, on behalf of the citizens of Guam, respectfully request that the United States Congress enact S. 23 to resolve the unique problem facing the Pacific Island communities which depend primarily upon United States products shipped from the west coast; and be it further

Resolved, That the Speaker certify to and the Legislative Secretary attest the adoption hereof and that copies of the same be thereafter transmitted to the Presiding Officer of the United States Senate; the Speaker, U.S. House of Representatives; the Chairman, Senate Committee on Commerce; the Chairman, House Committee on Merchant Marine and Fisheries; Senator Daniel K. Inouye; Honorable Antonio B. Won Pat; and to the Governor of Guam.

POM-98. Senate Joint Resolution No. 1 adopted by the Legislature of the State of California relative to the electoral college; to the Committee on the Judiciary.

SENATE JOINT RESOLUTION NO. 1

Whereas, Since customarily all the states' electoral votes go to the candidate receiving the most popular votes in the state, those who vote for the loser are effectively disenfranchised in the electoral college; and

Whereas, If an election is thrown into the House of Representatives because neither candidate wins a majority of the electoral votes, the nation would go for three months without knowing who would be President and then he might not have been the choice of the most voters; now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the Congress of the United States to adopt Senate Joint Resolution No. 1 as introduced in the 94th Congress, 1st Session, proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States, and to enact laws necessary to implement this procedure; and be it further

Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

COMMITTEE REPORT SUBMITTED DURING RECESS

Under authority of the order of March 18, 1977, the following report was submitted, during the recess of the Senate:

On March 18, 1977, by Mr. HUDDLESTON, from the Committee on Agriculture, Nutrition, and Forestry:

S. 1051. An original bill to amend the U.S. Grain Standards Act with respect to recordkeeping requirements and supervision fees, and to establish an advisory committee to provide advice to the administration of the Federal Grain Inspection Service, and for other purposes (Rept. No. 95-60).

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs, without amendment:

S. 1070. An original bill to authorize additional funds for housing assistance for lower income Americans in fiscal year 1977, to extend the Federal riot reinsurance and crime insurance programs, to establish a National Commission on Neighborhoods, and for other purposes, together with additional views (Rept. No. 95-61).

ORDER FOR STAR PRINT—SENATE JOINT RESOLUTION 4

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Senator from Hawaii (Mr. INOUYE), I ask unanimous consent that Senate Joint Resolution 4, which was introduced on January 10, 1977, be reprinted as a star print containing corrections of certain inadvertent errors in the original printing.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I further ask unanimous consent that an explanation by Mr. INOUYE of the corrections requested be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR INOUYE

I wish to request a star print on S.J. Res. 4 which I introduced on January 10th with the cosponsorship of my colleague from Hawaii, Senator Matsunaga. On line 22 of page 2, the name of the last Queen of Hawaii, Queen Liliuokalani, is misspelled. Of greater importance, however, is line 1 on page 4 which should read . . . to 1778 (hereinafter "Native blood"), two of whom shall. Drop the existing line 1 which is identical with line 5 on page 4.

It is my hope that this measure will receive early action by the Committee and the Senate as it was reported favorably by the Interior Committee in the previous Congress but too late for action on the floor.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated.

(On March 18, 1977, during the recess:)

By Mr. HUDDLESTON, from the Committee on Agriculture, Nutrition, and Forestry:

S. 1051. An original bill to amend the U.S. Grain Standards Act with respect to recordkeeping requirements and supervision fees, and to establish an advisory committee to provide advice to the administration of the Federal Grain Inspection Service, and for other purposes. Placed on the Calendar.

By Mr. STAFFORD:

S. 1052. A bill for the relief of Brian Patrick Webb and his wife, Laurene Ann Webb; to the Committee on the Judiciary.

By Mr. SCOTT (for himself and Mr. TOWER):

S. 1053. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Environment and Public Works.

By Mr. INOUYE (by request):

S. 1054. A bill to amend the International Travel Act of 1961 to provide for the cooperative regulation of the travel agency industry; to the Committee on Commerce, Science, and Transportation.

By Mr. HUMPHREY (for himself, Mr. PERCY, Mr. CRANSTON, Mr. TOWER, Mr. MCGOVERN, Mr. ANDERSON, Mr. BAYH, Mr. DECONCINI, Mr. STAFFORD, Mr. JOHNSTON, and Mr. GLENN):

S. 1055. A bill to declare a national policy on investment in the private sector of the U.S. economy; to the Committee on Governmental Affairs.

By Mr. HATHAWAY:

S. 1056. A bill to amend the Ports and Waterways Safety Act of 1972 and section 4417a of the Revised Statutes in order to extend the provisions of such laws to the fishery conservation zone and to establish additional requirements for certain foreign flag vessels; to the Committee on Commerce, Science, and Transportation.

S. 1057. A bill to provide a comprehensive program with respect to liability and compensation for damages and cleanup costs caused by oil pollution; to the Committee on Environment and Public Works.

By Mr. BELLMON:

S. 1058. A bill to provide for a 50 per centum reduction of the burden on respondents in the censuses of agriculture, drainage, and irrigation taken in 1979 and thereafter, and for other purposes; to the Committee on Governmental Affairs.

By Mr. JOHNSTON:

S. 1059. A bill for the relief of Soon Bok Yoon; to the Committee on the Judiciary.

By Mr. EAGLETON:

S. 1060. A bill to amend the Act of Febru-

ary 9, 1821, to restate the charter of the George Washington University; to the Committee on Governmental Affairs.

S. 1061. A bill to amend the District of Columbia Self-Government and Governmental Reorganization Act with respect to the borrowing authority of the District of Columbia, and for other purposes; to the Committee on Governmental Affairs.

S. 1062. A bill to amend section 441 of the District of Columbia Self-Government and Governmental Reorganization Act; to the Committee on Governmental Affairs.

S. 1063. A bill to amend Public Law 93–198; to the Committee on Governmental Affairs.

By Mr. RIBICOFF:

S. 1064. A bill to authorize Donald G. Carpenter, retired colonel in the U.S. Air Force, to accept an office or position in King Faisal University in Saudi Arabia; to the Committee on the Judiciary.

By Mr. GRIFFIN:

S. 1065. A bill to amend the Federal Unemployment Tax Act to provide that States shall not be required to provide unemployment compensation to employees of educational institutions during established and customary vacation periods and to establish certain minimum requirements for payment of unemployment compensation to substitute teachers; to the Committee on Finance.

By Mr. DOMENICI (for himself, Mr. TOWER, Mr. DOLE, and Mr. DECONCINI):

S. 1066. A bill to establish an Office of Hispanic Affairs in the Executive Office of the President, and in various executive agencies, and for other purposes; to the Committee on Governmental Affairs.

By Mr. DOMENICI:

S. 1067. A bill to provide for a study of the suitability and feasibility of designating the Vietnam Veterans Chapel, Eagle Nest, N.M., as a national memorial to the Vietnam veterans; to the Committee on Energy and Natural Resources.

By Mr. BARTLETT:

S. 1068. A bill to require an annual contribution to the United States from U.S. territories and possessions which impose income taxes; to the Committee on Energy and Natural Resources.

By Mr. DURKIN:

S. 1069. A bill to amend the Toxic Substances Control Act; to the Committee on Commerce, Science, and Transportation.

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

S. 1070. An original bill to authorize additional funds for housing assistance for lower income Americans in fiscal year 1977, to extend the Federal riot reinsurance and crime insurance programs, to establish a National Commission on Neighborhoods, and for other purposes. Placed on the Calendar.

By Mr. HART:

S. 1071. A bill to establish a national system of child and maternal health care and a system of protection against catastrophic health care costs; to the Committee on Finance.

By Mr. SCOTT:

S.J. Res. 40. A joint resolution to authorize and request the President to issue a proclamation designating May 13 of each year as "American Business Day"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. SCOTT (for himself and Mr. TOWER):

S. 1053. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Environment and Public Works.

Mr. SCOTT. Mr. President, today I am introducing a measure to revise automobile pollution control standards in a way that will maintain our national goal of clean air, encourage development of fuel-efficient engines, and avoid production and job losses in auto-related industries nationwide. Of course, all of us want to continue efforts to clean up the Nation's air resources and to protect our citizens' health, but we need to exercise a rule of reason in this regard by weighing carefully the need for maximum environmental purity against the potential cost of such regulation and the impact on jobs and the economy generally. This proposal would phase in tougher standards for all three major automotive pollutants over the next few years and is similar to legislation recommended by the United Auto Workers, and for the most part, supported by the auto industry. Therefore, both union and management appear to be generally in favor of this approach.

As you know, action by the Congress is needed soon to resolve the auto emission standards issue, which was considered last year but not enacted. It seems reasonable, therefore, that we weigh the various alternatives and provide Detroit with a fixed target for meeting tougher standards not only for this fall's 1978 models but those being planned for future years. It is understoood that the law presently in effect imposes emission requirements, which many believe are unnecessary and impractical, particularly in light of Federal fuel efficiency standards. With 1978 model cars unable to meet the tough statutory standards, it seems imperative that the act be amended so manufacturers can make the necessary production decisions without undue delay of penalties being imposed.

The issues involved are quite complex and technical, with uncertainties as to what can or should be done. It appears we have in the past legislated clean air and other environmental goals without recognizing the potential costs and health risks involved or without having the appropriate technology to meet stringent standards by a date certain. This, of course, is contrary to our national interest and sound policymaking.

My proposal would continue nationwide improvement in air quality as newer, less polluting cars replace older ones without pollution controls and would permit localities, such as those areas in California with major smog problems, to impose stricter standards if desired. It also provides authority for waivers to be granted to encourage the availability and use of innovative engines that can substantially save fuel, without endangering public health.

In my opinion, Mr. President, these changes in the law are urgently needed if we are to intensify our efforts to build more fuel-efficient cars and to avoid unreasonable economic hardships that might otherwise result.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1053

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Motor Vehicle Emission Control and Fuel Economy Act of 1977".

LIGHT DUTY MOTOR VEHICLE EMISSIONS

SEC. 2. (a) Subparagraph (A) of section 202 (b) (1) of the Clean Air Act is amended to read as follows:

"(A) The regulations under subsection (a) applicable to emissions of carbon monxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per vehicle mile of hydrocarbons and 15.0 grams per vehicle mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during and after the model year 1980 shall contain standards which provide that the emissions from such vehicles and engines may not exceed 0.41 gram per vehicle mile of hydocarbons and 9.0 grams per vehicle mile of carbon monoxide.".

(b) Subparagraph (B) of section 202 (b) (1) of such Act is amended to read as follows:

"(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1981 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per mile. Such regulations for model year 1982 and thereafter shall, subject to paragraph 5 of this subsection, provide that such emissions from such vehicles and engines may not exceed 1.0 gram per mile.

(c) Section 202(b) of such Act is amended by striking out paragraph (5) thereof and substituting the following:

"(5) The Administrator, after notice and opportunity for hearing, may—

"(A) promulgate, at any time prior to two years before the standards go into effect, regulations containing standards applicable to emissions of oxides of nitrogen which shall apply to light-duty vehicles or engines manufactured during the model year 1982, and, in the discretion of the Administrator, subsequent model years, which allow emissions in excess of 1.0 gram but not in excess of 2.0 grams per mile, but such standards shall provide for the maximum reduction of emissions which the Administrator determines to be technologically practicable for the model year to which they apply, giving appropriate consideration to the cost of compliance, the need for such standards to protect public health and the impact of such standards on motor vehicle fuel consumption, and such standards may be revised in accordance with this clause; or

"(B) waive the standard for emission of oxides of nitrogen (but not to exceed 2.0 grams per mile) for model year 1982 or thereafter in any case in which he determines that a waiver is necessary to permit the use of an innovative power train technology that can produce a substantial energy saving compared to conventional power trains, and that such waiver will not endanger public health.

"(6)(A) Upon promulgation of a regulation under paragraph (5)(A), the Administrator shall report to the Congress respecting the motor vehicle fuel consumption consequences, if any, of the standards in relationship to the motor vehicle fuel consumption associated with the standards applicable for the model year immediately preceding the period of such regulation.

"(B) The Secretary of Transportation and the Federal Energy Administration shall each submit to Congress, as promptly as practicable following submission by the Administrator of the fuel consumption report re-

ferred to in subparagraph (A), separate reports respecting such fuel consumption.".

By Mr. INOUYE (by request):

S. 1054. A bill to amend the International Travel Act of 1961 to provide for the cooperative regulation of the travel agency industry; to the Committee on Commerce, Science, and Transportation.

Mr. INOUYE. Mr. President, by request I am introducing the following proposal to provide for Federal regulation of those "engaged in the business of conducting a travel agency."

I wish to emphasize that at this time I am not fully convinced that circumstances warrant further legislation in this area. Existing laws and regulations, if vigorously enforced, may be adequate to deal with any abuses that may exist. On the other hand, they may not.

Moreover, if additional legislation does appear to be necessary, I am also not convinced that the measure I am introducing today by request is the appropriate one. Changes may be required.

At a future unspecified date in this Congress my subcommittee will hold hearings to determine answers to these questions as part of our national tourism policy study.

Mr. President, those who sell travel to the public provide a valuable service. They not only contribute to the economic prosperity of our Nation, they help enrich the quality of life for millions of Americans.

The overwhelming majority of these men and women are dedicated and thoroughly professional.

As in every profession, however, there are the unscrupulous few. They cause hardship, disappointment, and financial loss to the traveling public. In the process they also cast a stigma on the integrity and honesty of their colleagues, and make it more difficult for the legitimate agents to conduct business and serve the public effectively.

Currently, the Federal Trade Commission has an extensive investigation of the industry in progress which is aimed at discovering what, if any, abuses exist; how extensive they are; and the adequacy of the Commission's authority and regulations to deal with any widespread problems that may exist.

When hearings are held, we will, of course, be most interested in hearing from the Commission and its staff which is investigating this matter.

Other affected Government agencies, State and local officials, organized labor, consumers, and proponents and opponents of the bill will, of course, also have an opportunity to testify on the issues at that time.

At the conclusion of hearings the committee will make whatever recommendations it deems appropriate based on the hearing record and its own determinations.

By Mr. HUMPHREY (for himself, Mr. PERCY, Mr. CRANSTON, Mr. TOWER, Mr. MCGOVERN, Mr. ANDERSON, Mr. BAYH, Mr. DECONCINI, Mr. STAFFORD, Mr. JOHNSTON, and Mr. GLENN):

S. 1055. A bill to declare a national policy on investment in the private sector of the U.S. economy; to the Committee on Governmental Affairs.

INVESTMENT POLICY ACT OF 1977

Mr. HUMPHREY. Mr. President, achieving and sustaining a full employment economy means that 8 million new jobs are going to have to be created during the next 4 years alone for people entering the labor force for the first time.

This responsibility is added to the need to provide adequate job opportunities for the more than 9 million people who are currently unemployed or underemployed.

One of the keys to successfully meeting this challenge is an adequate pool of investment capital for plant and facilities to provide these jobs. But here, too, there are tremendous obstacles. Studies indicate there may be an investment capital shortfall ranging as high as $500 to $600 billion in the next 10 years.

We cannot expand our labor market by this degree nor set the stage to meet massive capital formation needs without clearly established national policy to do so.

ENDING THE DECLINE

Failure to take this step will assure the continued decline of U.S. share of world markets. Our low rate of personal savings, a major source of capital investment, reinforces this dismal prospective. The rate of personal savings in the United States was only 5 percent in the period 1963 to 1972, the rate in Japan was 16.8 percent, Italy 13.3 percent, and Germany 11.3 percent.

While venture capital is drying up in the United States, the German Government has implemented new rules designed to encourage the formation of venture capital groups. Japan has established a special institution to guarantee bank loans to innovative companies. And Canada is employing a number of imaginative methods to encourage venture capital investments.

Investments by the venture community totaled only $181.9 million in the United States during 1974 and dropped to $111.3 million in 1975. But as little as these sums are, a much smaller portion of these totals went into new venture activities. Only $80.6 million went into new projects in 1974. The situation got even worse in 1975 when only $52.4 million flowed from the venture community into new enterprises. The remains of the totals for 1974 and 1975 were directed toward open market investments, leverage buy-outs, and special situation financing of relatively old and well-established companies.

That is why, with Senators PERCY, CRANSTON, TOWER, MCGOVERN, ANDERSON, BAYH, STAFFORD, JOHNSTON, GLENN, and DECONCINI, I have today introduced the Investment Policy Act of 1977. The bill is a revised and improved version of legislation which Senator PERCY and I introduced last year and which was the subject of Banking Committee hearings toward the close of the 94th Congress.

POLICY AND RESPONSIBILITY

The bill declares that—

It is the policy and responsibility of the Federal Government, in cooperation with State and local governments, to use all practical means . . . to provide sufficient incentives to assure meeting the investment needs of private enterprise, including the needs of small and medium size businesses. . . .

The policy statement of the bill includes commitments to increase productivity, reduce and control inflation, and promote private investment in depressed urban and rural areas to eliminate the alarming levels of unemployment that exist there.

The legislation would require the President to make an annual investment policy report to Congress dealing with the levels of capital needed by small, medium, and large businesses, and submit proposals to carry out the measure's declared investment policy.

EROSION OF LEADERSHIP

Without enactment and faithful adherence to such a national investment policy, I fear that the ability of our private enterprise system to successfully compete in both domestic and international markets is in jeopardy. The loss of large segments of some of these markets is already an accomplished fact. We cannot and must not tolerate any further erosion of our economic strength nor the ability that strength gives us to assume a position of world leadership.

Mr. President, our success in providing those 17 million new private section jobs to reach and hold a full employment economy will be directly proportionate to the establishment and growth of new businesses in the years ahead. A study performed for the Commerce Department provides dramatic support for this conviction. Conducted by the staff of the MIT Development Corp., the study compared the performance of young, high growth companies, older but highly innovative firms, and old, well established companies. It found that 5 young, high-growth firms created 35,000 new jobs in a 5-year period ending in 1974. Five innovative and somewhat older firms increased their labor force by 100,000 jobs, while 6 older companies had a total increase of 25,000 jobs over the same period.

The very foundation of our competitive enterprise system rests on the quality and scope of opportunities for the establishment of new business, which is to say small business. Most of our new technology and technological innovation—new and improved tools, products, and methods for the delivery of services—have sprung from small firms headed by people who have the imagination, and skill as well as determination to find ways of entering existing markets on creating entirely new markets. Their better ideas enabled them to carve out a share of the marketplace for themselves.

THE BEDROCK OF THE ECONOMY

The bedrock place of small business in our economy is also indicated by its share of the Nation's business population. By Small Business Administration standards, small business comprises 96 percent or more of all commercial and industrial entities in the Nation. There are nearly 10 million of them. Small business provides employment opportunities for 58

percent of the country's work force. It provides 50 percent of the Nation's gross business product.

Yet small business has always been deprived of adequate investment capital.

Mr. President, this is the reason why the Investment Policy Act of 1977 emphasizes the needs of small- and medium-size businesses which have always had to struggle for investment capital. Data disclosed by the Federal Reserve Board indicates that in the 20-year period ending in 1973, investments in small, independently owned business declined by almost 50 percent in terms of this category's share of gross domestic investment. During that period the small business share of gross domestic investment declined from 15 to 7.5 percent.

Just to stand still and maintain its present share of the Nation's economy, small business will need $300 billion to $600 billion in investment capital during the 11-year period 1975 to 1985. Studies indicate that a continuation of present circumstances will cause a small business capital formation shortfall of over $70 billion in the next 10 years.

DRIED UP CAPITAL MARKETS

The Nation's worst recession since the end of World War II, from which we are now only slowly and hesitatingly emerging, has dried up capital markets for virtually all small business. Its share of long-term debt and equity investment is still less than 25 percent of the totally inadequate level that existed a decade ago. These circumstances constitute major elements contributing to the fact that during the past 10 years more than 204,000 businesses have filed for bankruptcy, almost all of them small businesses. During this period, business bankruptcy filings, which is to say small business bankruptcy filings, increased by an average annual rate of more than 30 percent as compared to previous years.

Absent any new policy, the future looks anything but bright for small and medium-size businesses. Although some $896 million in new equity issues flowed to smaller companies in 1972, drastic curtailments occured in subsequent years. The flow was cut to $205 million in 1973, and plunged to $16.1 million and $16.5 million in 1974 and 1975, respectively.

These reductions occurred despite the increased volume of all common stock offers in 1975. In that year all common stock offerings totaled $6.8 billion as compared to $2.6 billion in 1974. But initial offerings made by companies going into the market for the first time increased at a much slower pace during 1975. In that year initial offerings totaled $230 million—$113 million more than the previous year. And the average size of initial stock offerings was almost $10 million, hardly typical of a small business.

Mr. President, I hope these examples provide convincing evidence of the imperative need for a national investment policy. That policy is spelled out in the Investment Policy Act of 1977 which I urge be acted on as quickly as possible so that a maximum effort can be initiated by the administration and Congress to develop and implement programs to meet the urgent capital needs of American business, particularly small- and medium-size business.

Mr. President, I ask unanimous consent that the Investment Policy Act of 1977 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1055

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Investment Policy Act of 1977".

FINDINGS

SEC. 2. (a) The Congress concludes that the lack of a national policy on investment is a serious deficiency which can adversely affect the economic health and well-being of the Nation. This conclusion is based on the following findings:

(1) The success of a modern and expanding private enterprise system in terms of the production of goods, the providing of services, the employment of workers, the opportunities for profit, and the payment of taxes, is essential to the well-being of the Nation.

(2) The ability of our free enterprise system to compete successfully in both domestic and international markets and the development of new technology and technologically innovative methods for the production of goods and the delivery of services in order to remain competitive depend on the availability of adequate capital at reasonable cost to commerce and industry, including small and medium size businesses which comprise more than 95 percent of the Nation's business entities.

(3) Ultimate success in competition for United States and world markets depends on the availability and better use of essential resources—human, financial, material, plant, and equipment.

(4) Efficient and modern plant and equipment are a prerequisite for American enterprises becoming more productive, improving working conditions, increasing individual skills, enhancing the ability of each individual to achieve full economic potential, and providing job opportunities.

(5) Continually improving productivity and efficiency, together with maximum utilization of plant capacity, are absolutely essential to reduce and control inflation.

(6) Private enterprise investment is necessary to revitalize depressed urban and rural areas in order to achieve significant reductions in the severe and intolerable levels of unemployment that exist there.

(7) Improvements in plant and equipment and the financial resources for working capital are affordable only from savings, namely that part of income which citizens and their enterprises decide to put to work for future benefits rather than their being directly and presently consumed.

(8) These private savings put to work in our competitive enterprises for plant and equipment and working capital are termed investments.

(9) More productive enterprises also require additional financial resources for investment in working capital to meet larger payrolls and expenditures, as well as to carry larger inventories and customer receivables.

(b) The Congress also recognizes that—

(1) In recent years business enterprises in other nations have made very large and significant investments in proportion to their nation's gross domestic product enabling many non-Untied States business enterprises to improve their competitive positions vis-a-vis similar United States enterprises.

(2) United States enterprise should be encouraged to increase its ability to be competitive in all markets of the world as worldwide demand for goods and services continues to increase.

(3) Productive capactiy to satisfy this increasing demand requires new plants, production equipment, and working capital.

(4) Production equipment wears out or becomes obsolete and must be replaced and modernized at increasingly higher cost due to inflation.

(5) Compliance with governmental health, safety, and environmental standards requires sizable investments for many enterprises in the United States.

(6) Private investment must be encouraged so as to provide new plants and equipment together with the working capital required.

(7) Government actions sometimes create uncertainty which results in decreased investment.

DECLARATION OF NATIONAL POLICY

SEC. 3. The Congress declares that it is the policy and responsibility of the Federal Government, in cooperation with State and local governments, to use all practical means consistent with other essential considerations of national policy to provide sufficient incentives to assure meeting the investment needs of private enterprise, including the needs of small and medium size businesses, in order to increase the production of goods, the provision of services, employment, the opportunity for profit, the payment of taxes, and to reduce and control inflation. To the extent it is reasonably possible to do so, private enterprise investments in depressed urban and rural areas should be promoted to reduce the high levels of unemployment that exist there.

FEDERAL AGENCY COORDINATION AND COOPERATION

SEC. 4. In order to carry out the policy set forth in this Act, it is the continuing responsibility of each department, agency, and instrumentality of the Federal Government to use all practicable means to improve and coordinate Federal plans, functions, programs, policies and resources over the short and long term so that the Nation may—

(1) optimize the returns from its allocation of resources to education and training which, among other objectives, prepares citizens for professional responsibility in the economy;

(2) provide an environment in which each citizen has the opportunity and is encouraged to achieve his or her full economic potential and thereby secure the benefits of the fullest utilization of his or her capabilities;

(3) allow United States private enterprise, including small and medium size businesses, to have effective competitive access to world markets, including the United States domestic market;

(4) encourage the effective use of advanced technology in the development and use of natural and manmade economic resources consistent with the preservation of a healthy environment, our social and political values, and our national heritage;

(5) enjoy quality goods and services produced and provided at reasonable prices to consumers and at profitable price levels resulting from higher productivity by producers; and

(6) create an economic environment in which there will be the incentive to invest sufficiently and to allocate an adequate portion of savings for investment in necessary plant and equipment to strengthen the private sector of the national economy, including investments which generate employment

opportunities in depressed urban and rural areas, and to reduce and control inflation.

INVESTMENT POLICY REPORT

SEC. 5. The President shall include in his annual Economic Report to the Congress an Investment Policy Report which shall include—

(1) an assessment of the levels of investment capital available, required by and applied to small, medium and large business entities;

(2) an analysis of current and foreseeable trends in the levels of investment capital available to such entities;

(3) a review of the economic programs of the Federal Government, and other economic conditions affecting the level of capital investment in the United States; and

(4) a description of programs and proposals for carrying out the policy set forth in section 3.

The President shall also transmit to the Congress as a part of the Economic Report such other recommendations as he may deem necessary or desirable to achieve the policy set forth in section 3. The Investment Policy Report, when transmitted to the Congress, shall be referred to the Joint Economic Committee.

COUNCIL OF ECONOMIC ADVISERS

SEC. 6. It shall be the duty of the Council of Economic Advisers (1) to analyze and interpret economic developments, (2) to appraise programs and activities, including those of the Federal Government, relating to the policy set forth in section 3, and (3) to formulate and to recommend to the President measures and activities designed to promote the generation and use of investment for the Nation's competitive private enterprise system.

Mr. PERCY. Mr. President, I am delighted to join again in the introduction of the Investment Policy Act.

Senator HUMPHREY and I first introduced this legislation in July of last year. Since that time we have circulated it to interested individuals and organizations both in and out of government. I made a point of discussing it with my business advisory committee, which is composed of top business leaders in Illinois. And on November 19 of last year, the distinguished chairman of the Senate Committee on Banking, Housing, and Urban Affairs, (Mr. PROXMIRE) held hearings on this proposal.

From each of these sources we were fortunate enough to receive several suggestions and recommendations for improving the act and I believe the bill we are introducing today is significantly improved due to that input.

Specifically, we have emphasized the importance of investment in the private sector in controlling inflation, in keeping the United States competitive in international markets, in revitalizing depressed urban and rural areas, in insuring the continued viability of small- and medium-size businesses and, of particular importance at this time, in assuring adequate jobs and job expansion.

We introduced, and are reintroducing this legislation along with several of our distinguished colleagues, because of our commonly held concern that both elected and appointed policymakers focus on the need for sufficient capital investment in the private sector, today and in the years ahead.

Capital investment is not a new subject, but it is one of particular concern at this time. During the final quarter of 1976, capital outlays, adjusted for inflation, rose at an annual rate of only 3 percent. The average increase during corresponding stages of earlier economic recoveries was 15 percent. While early business surveys indicate that investment may pick up later in this year, there is still cause for concern and action.

The correlation between investment and jobs and investment and productivity is indisputable. Our ability to raise wages without fostering inflation and our ability to open up new jobs at home through new markets abroad all depend on continuing advances in U.S. productivity. And investment does more than lay the basis for future jobs; it creates jobs in the process. Economists now estimate that it takes from $20,000 to as much as $50,000 in capital to back up every worker. In some industries, the figure is even higher. Capital investment must be an integral part of our efforts to cut unemployment and accommodate our growing work force.

While we can agree on the need for sufficient investment, there is considerable disagreement over what the measure of sufficiency is and what incentives Government should employ. We now have direct incentives such as the investment tax credit. An employment tax credit for hiring new workers is also receiving serious consideration. Some believe we should rely on indirect incentives such a general lowering of tax rates on individuals or business. Other have advocated incentives that fall in between, such as integration of corporate and shareholder taxes on dividends and rapid capital recovery on new plant and equipment.

The primary goal and function of the Investment Policy Act is to help us focus on the important subject of capital investment and to help us determine our economy's capital needs so that the decision of what approach to take can be made. The act does not determine the approach, it provides the vehicle which will lead to that determination. Like the Employment Act of 1946, it recognizes an important national priority, providing a framework within which a consensus can be reached.

I have been very pleased by the breadth of support for this legislation. During the hearings held last fall, Alan Greenspan, on behalf of the President's Council of Economic Advisers; Henry Wallich, on behalf of the Board of Governors of the Federal Reserve System; and Sidney Jones, on behalf of the Treasury Department, all endorsed the principle and purpose of the act. In addition, Robert Galvin, chairman of the board of Motorola Corp., who has contributed in so many ways to this act, and Robert Nathan of Robert Nathan Associates also gave their strong endorsement to it.

The recognition of the need to assure adequate capital investment in the private sector is as strong among leaders of the current administration. In a March 3 speech, Secretary of the Treasury Blumenthal stated:

In my view . . . our free enterprise economy can grow and remain healthy, can do the job of providing enough employment for all, only if we ensure that enough private capital flows into financial markets to finance the plant and equipment, the research and development, and the entrepreneurial activities of large and smaller companies alike.

I ask unanimous consent that the full text of Secretary Blumenthal's comments on the need for capital investment be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PERCY. On February 10, during hearings on the President's economic report, Secretary of Labor Marshall pointed out the clear need for a partnership and cooperation between the private and the public sectors in insuring sufficient investment in the private sector. And finally, Secretary of Commerce Kreps and OMB Director Bert Lance have both told me of their support for the national policy established by the Investment Policy Act.

Mr. President, I am hopeful that the Senate Banking Committee will move expeditiously on this measure. The principles laid down by the act are of great importance as we deal with measures to strengthen our delicate economic recovery in the months ahead.

EXHIBIT 1

THE GOVERNMENT'S ROLE IN THE CAPITAL FORMATION PROCESS

(Remarks by the Secretary of the Treasury W. Michael Blumenthal, Waldorf Astoria, March 3, 1977)

In analyzing what the Federal Government can do to promote capital formation, it is best to begin at the beginning.

And the beginning, in my view, is to remind ourselves of the simple, yet oft-overlooked proposition that our free enterprise economy can grow and remain healthy, can do the job of providing enough employment for all, only if we ensure that enough private capital flows into financial markets to finance the plant and equipment, the research and development, and the entrepreneurial activities of large and smaller companies alike.

If that is not the case—and there is increasing concern that it may not be—nothing else that the government can do in shaping an economic program will succeed. An adequate flow of capital is the lifeblood of our economy. Without it, our economy cannot function for long, and our many political, social and cultural goals will remain unfulfilled.

Has there been a shortage of capital? There is no simple answer to that question.

To begin with, difficulties arise simply in defining what we are talking about. There has been a lot of debate in recent years as to whether there is or will be a "capital shortage." But it's not always clear what kind of capital the participants in these debates are referring to. Is it a shortage of financial capital—of means of financing outlays for bricks and mortar? Or is it a shortage of the physical capital itself—the stock of physical assets with which to produce the stream of goods and services called the Gross National Product? Too often, the debate slips back and forth betwen the two without

regard for the fact that they are distinct—albeit interrelated—concepts.

Turning first to physical capital and looking at current numbers on capacity utilization—imperfect as they are—one might be tempted to describe our current stock of plant and equipment as adequate. With operating rates for manufacturing as a whole in the low 80 percent range, there is little to suggest a present shortage. Moreover, the share of total output dedicated to new business fixed investment has been somewhat higher in the past decade than in the preceding two decades—10 percent of real GNP as against 9 percent earlier.

What, then, suggests a shortage of physical capital required to sustain the balanced, noninflationary growth we are all seeking?

To begin with, some industries appear to be nearing the point at which capacity could constrain production. There are at least half a dozen, including food processing, petroleum refining and mining, in which current operating rates are edging close to those that prevailed during the most recent period of high utilization (1973). Moreover, a number of studies have pointed to potential capacity problems in other industries, where even moderate sustained growth in economic activity, can push them to their capacity ceilings, creating "bottleneck" situations long before the total economy was fully utilizing its resources.

Second, we have to look at the changing balance between factor inputs, that is, the balance between growth in the stock of physical capital and growth in the stock of human capital. Respectable though recent growth rates in physical capital may be by historical standards, capital stock has not grown commensurately with growth in the labor force. In the first half of this decade, the average amount of business capital per worker grew at only have the rate at which it had been growing in the 50's and 60's. In other words, we were not providing tools of production as fast as the growth in workers to use them.

This shortfall in the availability of capital for the growing labor force has unpleasant ramifications for the economy. It has contributed in an important degree to the slowing of productivity gains in recent years, a period when output per worker has risen far more slowly than in the 1950's and 1960's. Diminishing rates of gain in productivity put upward pressure on prices, limit improvement in living standards, adversely affect profits, lower incentives for capital investment, and reduce the possibilities for creating jobs in the private sector.

Therefore, if we are to move toward a full employment economy over the balance of this decade, investment in productive capacity will have to absorb a higher proportion of our national output. We will have to achieve a better balance in distributing the results of economic growth between current consumption and investing for even greater future growth.

How do we accomplish this? The first prerequisite for an adequate volume of capital formation, as we see it, is to ensure a sound economy overall, stable and growing, one in which investors can have confidence.

By Mr. HATHAWAY:

S. 1056. A bill to amend the Ports and Waterways Safety Act of 1972 and section 4417a of the Revised Statutes in order to extend the provisions of such laws to the fishery conservation zone and to establish additional requirements for certain foreign flag vessels; to the Committee on Commerce, Science, and Transportation.

S. 1057. A bill to provide a comprehensive program with respect to liability and compensation for damages and cleanup costs caused by oil pollution; to the Committee on Environment and Public Works.

Mr. HATHAWAY. Mr. President, the series of oil tanker accidents this past winter, and most especially in December and January, resulted in intense review of the adequacy of both United States and international regulations governing tanker traffic. The series of mishaps included the largest ever to occur off the U.S. coast—the breakup of the Liberian tanker, the *Argo Merchant*, off the coast of Nantucket, Mass. This spill resulted in nearly 8 million gallons of heavy, No. 6 oil being dumped into the rich Georges Bank area off New England, threatening the fishing, recreational and related industries for an unknown number of years to come. Following this major disaster came a series of tanker mishaps and spills ranging from Los Angeles Harbor to the Thames River in Connecticut.

While we are familiar with many of the immediate impacts of oil spills such as blackened beaches and stranded and dying sea birds, the long-term effects of oil pollution on the marine environment are not known with great certainty. Despite improved technology and sophistication, the *Argo Merchant* spill graphically demonstrated how limited our resources are in combating a major oil spill disaster both in the area of prevention of such accidents, in containing them once they have occurred, and in providing adequate compensation for damages which result. Further, the tanker casualty rate has not been decreasing.

A recent report of the Office of Technology Assessment states that the tanker casualty rate has not shown any decrease over the past years; in fact, both the number of collisions and the associated oil pollution from collisions have actually increased over the original 1969–70 casualty data, while the actual number of operating tankers throughout the world has remained nearly constant.

One estimate of the cost of merchant marine casualties to the United States alone, and excluding the loss of human life, indicates that over $300 million per year is lost. Furthermore, growth in tanker traffic is continuing in the carrying of hazardous cargo such as oil, chemical carriers, liquified natural gas carriers, and others. With the prospect of the growth of very large crude carriers, and the ultra large crude carriers, the potential for major disasters threatening large segments of the ocean and coastal environments also increases.

The shock of the series of oil spills this past winter, as well as the future prospect for continued spillage, is particularly distressing to persons from the coastal States which are heavily dependent upon the coastline's natural resources and ecosystem. Fishing, recreational, and tourist industries are vital to a State such as Maine, with its long and beautiful coastline. The State itself has taken steps to protect its own resources through measures such as the coastal conveyance law which provides for liability for oil spillers, but much remains to be done at the national level.

Pollution of the oceans represents an international as well as a national and State problem. The case of the *Argo Merchant* illustrated the international aspect of the problem well. It occurred outside the territorial seas of the United States, and the provisions of the 1969 Convention on Intervention had to be invoked to permit U.S. action to take action to take action on the grounds of preventing grave and imminent danger to its coastline or related interests from oil pollution. This convention was not adopted until after the 1967 *Torrey Canyon* disaster and is intended to be used in only the most serious accidents. A special and limited international convention had to be invoked in order to permit the United States to attempt to protect resources on which the New England region's economy in great part depends, and resources which we now claim the right to manage with the institution of the 200-mile fisheries limit.

Even after the fact, and with U.S. intervention, however, little was able to be done to contain the oil in the *Argo Merchant* case.

It is apparent that prevention is the key to bringing the high rate of oil spillage and tanker casualties under control. One area for improving the prevention of oilspills immediately presents itself; that of tanker construction and navigational equipment. Internationally, some minimum standards would be provided for new tankers through the International Convention for Prevention of Pollution by Ships; this Convention, however, has not been ratified by the United States and is not in effect. The ongoing Law of the Sea negotiations have included the prevention of vessel source pollution in the revised negotiating text; the U.S. Representative to the Law of the Sea Negotiations testified that official U.S. policy has recognized that the present international regime for vessel pollution prevention is inadequate and that further action is needed. But the history of the 200-mile fisheries limit illustrates graphically how time consuming it may be to obtain ultimate agreement at the LOS conferences.

Legislation has been introduced to upgrade existing tanker requirements in the area of construction, maintenance and navigational equipment.

Preventing the carriage of oil and other hazardous substances in "rust buckets," as the *Argo Merchant* has frequently been described, can improve the safety record in the area of merchant marine personnel. A representative of a maritime consultant firm testified before the Senate's National Ocean Policy Study Group as to the importance of this factor in the prevention of oilspills. He stated:

Merchant marine casualties can result from a number of factors, including a series or combination of events and circumstances. In most cases, human error or personnel fault is a contributing, if not fundamental, causal factor. According to Lloyd's Register, the

greatest number of vessel losses can be traced to groundings, collisions, fires and founderings, all of which invariably involve human judgments. In 1972, the Chairman of the American Hull Insurance Syndicate revealed that 85 percent of his claims payments were for human error caused casualties. U.S. Coast Guard figures for Fiscal Year 1975 show that only 8 percent of the vessels involved in casualties cited material or mechanical failures as the primary cause. These and other data point to the overriding importance of human performance in the operation of our merchant fleets.

Human error cannot be eliminated entirely. It can, however, be mitigated. There is little doubt that the U.S. merchant marine licensing and training requirements are among the most stringent in the world. Yet virtually all of the tankers used for the importation of oil into the United States are registered in foreign countries under so-called flags of convenience. Part of the convenience offered by these flags is the ability to hire foreign crew at low wages. These foreign flag countries often have no real control over the qualifications of the seagoing personnel on the vessels registered under their flags. Very often such personnel, particularly officers and engineers, do not have proper training and are not adequately familiar with navigational equipment.

Recognizing the need for the continued use of some portion of foreign-flag tankers for the carriage of imported oil and other hazardous substances to U.S. ports, I am introducing legislation today which requires that every foreign flag vessel operating within the navigable waters or the Fisheries Conservation Zone of the United States have on board at least two U.S.-licensed mates and one U.S.-licensed engineer. In addition, one of these U.S. citizens would be required to be on watch during the time the vessel is operating in such navigable waters or the Fishery Conservation Zone.

While human error can never be entirely eliminated, the employment of U.S. licensed seamen who are familiar with U.S. waters, owe allegiance to the United States and who possess high navigational skills, can greatly reduce the risk of accidents resulting from human failure. Such a provision may also be easily and quickly implemented.

At the same time, I am also introducing legislation to provide for a comprehensive clean-up program and compensation scheme for victims of damaging oil spills once they have occurred. Existing law for such liability is clearly inadequate and does not serve as an incentive either to those who are in the business of transporting and handling oil by requiring them to assume adequate liability, nor does it protect those who suffer losses as a result of the damage wrought by an oil spill. Hence, I have long supported the enactment of a scheme of strict liability for clean-up costs and compensation for damages.

Several bills have been introduced this Congress to provide for an improved liability system. The bill I am introducing today is similar to one which I have supported both last Congress and this, but it also incorporates ideas from other proposals in an attempt to pull together the best of various bills now under consideration.

The bill establishes strict and unlimited liability for cleanup costs themselves, as well as unlimited liability for damages when the discharge results from gross negligence, willful misconduct, or the violation of applicable safety or operating standards. Otherwise, the owner or operator of a vessel, or facility, is held strictly liable to a maximum liability and a fund established from a fee on the transfer of oil is available for further compensation if needed.

The bill further provides for an accelerated program of research and development in cleanup technology, to be funded from the moneys in the fund established under the act. Disclosure of ownership of vessels is also provided to prevent the use of corporate structures to hide the true ownership of the vessels transporting oil to our ports.

Work has begun on legislation in this area, including that of tanker standards themselves, and I look forward to favorable and rapid committee action on legislation in this vital area of protection of our ocean resources from devastating oil disasters.

By Mr. BELLMON:

S. 1058. A bill to provide for a 50 per centum reduction of the burden on respondents in the censuses of agriculture, drainage, and irrigation taken in 1979 and thereafter, and for other purposes; to the Committee on Governmental Affairs.

AGRICULTURE CENSUS AMENDMENTS ACT OF 1977

Mr. BELLMON. Mr. President, today I am introducing legislation which is intended to streamline the amount of paperwork associated with the agricultural census. The primary purpose of this bill is to reduce the paperwork burden on respondents to the agricultural census by 50 percent. In addition, this bill would require the Department of Commerce to continue to collect certain limited information on very small forms, and to continue to consider them as forms as well as to require the Department of Commerce to improve its statistics on ownership-structure of American farms.

Mr. President, the most recent census of agriculture was a disaster. It was too long, too complex, and too irrelevant. While it is important that reliable agricultural information be collected and published regularly, it is neither necessary nor desirable for farmers to be forced to fill out incredibly detailed forms which many times ask questions for which farmers do not have answers.

The most recent census of agriculture has met with great resistance throughout rural America because of the unreasonable burden it has placed on the farmers. Clearly, too little thought and effort went into considering the average farmer's time and frustration in filling out these forms. The end product was an agricultural census which was a marketer's dream, but a farmer's nightmare. This legislation is designed to meet this problem by forcing a 50-percent reduction in the paperwork burden of the American farmer.

Mr. President, the Bureau of the Census estimates that it took an aggregate of 3.4 million hours to fill out forms for the most recent census of agriculture. Although this is probably an understatement, it points out in graphic terms what the net results of this legislation would be—a reduction by at least 1.7 million hours of the time required to fill out unnecessary Government forms. In order to reduce the paperwork so dramatically, the Bureau of Census would be forced to cut back the size of its questionnaires and to make much greater use of sampling techniques—something that it should have been doing all along.

Everyone talks these days about how redtape and forms are strangling the Nation—but little is done. I am convinced that this legislation presents an opportunity to reduce substantially the work burden of one sector of our economy without damaging in any way the information needs of our society. Additionally, I believe it is necessary to mandate a reduction of this magnitude; otherwise, experience clearly indicates that, even given the best of intentions, the Bureau of the Census—which does not have exclusive control of the content of the census of agriculture—will not be able to reduce appreciably the work burden by the next agricultural census which is planned for 1979. If the provisions of this legislation are not implemented, it is safe to say that the agricultural census of 1979 will be as great a failure as the agricultural census of 1974.

Mr. President, many people have advocated transferring the function of conducting the census of agriculture to the U.S. Department of Agriculture. The finished product of the agricultural census of 1974 would certainly give credence to these claims and I am not convinced that this is such a bad idea. However, I am somewhat skeptical in advocating such a transfer at this particular time. For one reason, there is good indication that USDA is not adequately prepared to conduct an agricultural census by 1979. I am also inclined to believe that the census of agriculture is better conducted by a purely statistical agency in order to negate any potential charges of political manipulation of agricultural statistics.

However, I think the Bureau of Census should be put on notice that if there is not a considerable improvement in the 1979 census of agriculture—including the time that it takes to process and publish the information—then the Congress will give every consideration to transferring the agricultural census to another agency. Consequently, the provisions in this legislation should enable the Bureau of the Census to conduct and produce a more useful agricultural census which would go a long way in stemming the opposition to this agency's continued function of conducting the census of agriculture.

Mr. President, this legislation will do two other things. First, it would require

the Bureau of the Census to continue to collect certain limited information on very small farms, and to continue to consider them as farms. Two years ago, the Bureau of the Census and the Department of Agriculture wanted to increase by 400 percent the minimum sales required for an establishment to be considered as a "farm." This apparently would have resulted in hundreds of thousands of farms being technically redefined out of existence. Because of an adverse congressional response to this redefinition, the action was later rescinded. I believe the Congress ought to preclude anticipated future attempts to redefine large numbers of farms out of existence. Therefore, this bill provides any future changes in definition which would increase sales needed to qualify as a "farm" cannot exceed inflationary trends using 1969 as a base year.

It must be noted that this legislation is not intended to require the Department of Commerce to continue to collect the same information on very small farms as it does on larger units. But some information on small farming enterprises would be useful, and even necessary, if we are ever to develop a comprehensive rural policy for this Nation. One of the components of that policy should be an attempt to help small farm operations become self-sufficient—they are already quite efficient. If the Bureau of the Census stops counting very small establishments as farms, then there will be a self-fulfilling prophecy established. Our Government will find that small farms are no longer viable in America. For "proof" one would need only to look at the most recent Bureau of the Census statistics showing the precipitous decline in the number of farms in the United States which was caused, in fact, by technical redefinition.

Finally, Mr. President, this legislation recognizes the fact that there have been great changes in the ownership structure of American farms in recent years which are not fully understood or documented. Therefore, the bill calls upon the Department of Commerce to improve upon its collection of data in the farm ownership pattern within the United States.

In summary, Mr. President, this legislation is the only sensible means of developing a useful agricultural census. Having been engaged in farming throughout my life, I can attest to the fact that the questionnaires prepared by the Bureau of the Census for the gathering of agricultural information are too long, too complex, and too irrelevant. Since the Bureau of the Census has not been able to recognize its problem, it is incumbent on the Congress to assist the Bureau in developing a census questionnaire which is less burdensome upon our Nation's farmers. The information contained in agricultural census is important to this Nation. By reducing the amount of paperwork burden on the respondents to the agricultural census, we insure against ambivalence on the part of the farmer in responding to these questionnaires. Prompt passage of this legislation is needed so that the Bureau of Census can begin making preparation for the 1979 agricultural census.

Mr. President, I ask unanimous consent that this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1058

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Agriculture Census Amendments Act of 1977".

STATEMENT OF FINDINGS

SEC. 2. The Congress hereby finds—

(1) that the census of agriculture, drainage, and irrigation has increased in complexity and detail to the extent that the reporting burden now imposed on farmers is unreasonable and possibly counterproductive;

(2) that the respondent burden of such census can be substantially reduced by the increased use of sampling and survey techniques without any loss of necessary data;

(3) that in order to develop a comprehensive policy for the rural areas of the United States, and to recognize the continued existence of small farming enterprises and their contributions to our Nation, it is necessary to continue to collect and publish information on such farming enterprises; and

(4) that significant changes in ownership structure of farms in the United States have developed in recent years which need to be better understood and documented.

REDUCTION OF RESPONDENT'S BURDEN BY 1978 AGRICULTURE CENSUS

SEC. 3. The Secretary of Commerce shall—

(1) determine the reporting burden on establishments which, on an annual basis, have average sales of agricultural products of $50,000 or less, and such burden on all other establishments, in the 1974 census taken under section 142 of title 13, United States Code.

(2) take steps which he considers to be consistent with the purposes of such section and which will assure that in the census taken in 1979 under such section—

(A) in the case of establishments which, on an annual basis, have average sales of agricultural products of $50,000 or less, the reporting burden will be equal to or less than one-half of the reporting burden determined by him under paragraph (1) with respect to such establishments, and

(B) in the case of other establishments, the reporting burden will be reduced to the maximum extent feasible, and

(3) not later than 120 days after enactment of this Act, prepare and transmit to the Congress a report which—

(A) sets forth his determinations under paragraph (1) of the respondent burden in the 1974 census, and

(B) states what steps have been or will be taken under paragraph (2) to reduce the respondent burden in the census taken in 1979 under such section and his evaluation of such steps.

CLASSIFICATION OF FARMS USED FOR 1974 AGRICULTURAL CENSUS

SEC. 4. (a) The statistical classification of farms in effect on June 30, 1976, with respect to the 1974 census taken under section 142 of title 13, United States Code, shall be effective, for purposes of that census, on and after the effective date of this Act.

(b) The Act of March 15, 1976, (Public Law 94-229), is amended by striking out section 2 thereof.

CLASSIFICATION OF FARMS TO BE USED IN FUTURE AGRICULTURAL CENSUSES

SEC. 5. The statistical classification of farms effective with respect to censuses taken in 1979 and thereafter under section 142 of title 13, United States Code, shall be prescribed in such a manner as not to exclude any establishment which, for the calendar year to which the data collected relates, has sold or would normally sell more than a minimum value of agricultural products. For purposes of the preceding sentence, the term "minimum value" means, with respect to any census, $250 adjusted by a percentage equal to the percentage change in the index of prices received by farmers (maintained by the Department of Agriculture) from January 1, 1969, through January 1 of the year to which the data collected in such census relate.

OWNERSHIP STRUCTURE OF UNITED STATES FARMS

SEC. 6. The Department of Commerce, in cooperation with the Department of Agriculture, shall develop methods of improving the collection, analysis, and publication of data relating to the ownership structure of farms within the United States, and the Department of Commerce shall collect, analyze, and publish such data.

By Mr. GRIFFIN:

S. 1065. A bill to amend the Federal Unemployment Tax Act to provide that States shall not be required to provide unemployment compensation to employees of educational institutions during established and customary vacation periods and to establish certain minimum requirements for payment of unemployment compensation to substitute teachers; to the Committee on Finance.

UNEMPLOYMENT COMPENSATION AND SCHOOL EMPLOYEES

Mr. GRIFFIN. Mr. President, today I am introducing a bill to avert some potentially serious financial problems faced by many school districts and educational institutions, whose employees will be covered, beginning January 1, by the Unemployment Tax Act.

Although Congress did not intend it, loopholes in the new law could result in an unexpected multimillion-dollar windfall for teachers—at the expense of taxpayers, who already are overburdened and reluctant to pay more taxes to support their local schools.

My bill would plug the loopholes, now—before millions of tax dollars begin in January to seep through them.

When Congress passed the Unemployment Compensation Amendments of 1976, mandatory Federal unemployment insurance coverage was extended for the first time to State and local Government workers, including school employees.

Of course, these units of Government will be required to contribute to unemployment insurance funds for each of their workers covered by the program, just as businesses now do.

In bringing State and local government workers under the unemployment compensation umbrella, Congress recognized that school employees are in a unique category because of the seasonal nature of the school calendar.

Accordingly, provisions were included reflecting an awareness that, although school employes are paid on an annual

basis, most do not in fact work the entire year at their school jobs. For example, the 1976 law stated that school employes who have contracts or reasonable assurances of employment for the following academic year would not be eligible to receive unemployment benefits during the summer months between academic years.

Despite such provisions, the 1976 law creates several enormously expensive financial problems for many school districts and educational institutions around the country—problems which clearly were unintended and not considered by Congress.

For example, it appears that one effect would be to mandate payment of unemployment benefits to school employees during periods of vacations and holiday recesses—such as those scheduled at Christmas and Easter.

Under Michigan law there is no waiting period required in order to establish eligibility for unemployment benefits. This could result in additional costs to school districts in Michigan of nearly $100 per teacher for every week of recess or vacation, or a total of nearly $15 million a year. Seven other States—Alabama, Connecticut, Delaware, Kentucky, Maryland, Nevada, and New Hampshire—similarly have no waiting period for unemployment compensation eligibility, and they could also be affected by this unintended effect of the 1976 law.

In order to correct this flaw in the 1976 law, the bill I am introducing today would amend section 3304(a)(6)(A) of the Internal Revenue Code to provide that the States are not required to pay unemployment compensation to employees of educational institutions during established and customary vaction periods or holiday recesses. This proposed change in the law is entirely consistent with the purposes of the 1976 amendments and would result in significant savings for many school districts—and their taxpayers—around the country.

Another deficiency in the 1976 amendments results from a drafting oversight. Although it was clearly the intent of Congress to designate breaks between school terms as denial periods for unemployment benefits, the actual statutory language does not do so, at least it is ambiguous on this point.

The ambiguity potentially could result in large unemployment benefit expenditures for many schools—particularly colleges and universities.

My bill would correct this oversight by specifically designating term breaks as denial periods. An identical amendment was recently adopted by the House Wavs and Means Committee as part of H.R. 4800, legislation before the House today to extend the supplemental Federal unemployment benefits program.

Finally, my bill would amend section 3304(a)(6)(A) of the Internal Revenue Code so States could deny unemployment benefits to the occasional substitute teacher who works less than one quarter, or 45 days, of the normal 180-day academic year.

As noted, the effect of the 1976 law was to mandate coverage of all school employees. Thus, in many States even substitute teachers who provide only occasional services would be eligible for unemployment compensation benefits. The impact of coverage for all substitute teachers could be very costly for school districts across the country. In Michigan, for example, it is estimated that the 1976 amendments would raise the average daily cost of a substitute teacher from about $25 a day to about $43 a day.

Separate treatment of the occasional substitute teacher under the unemployment compensation laws is justified, I believe, by the unusual employment relationship between substitutes and school districts. Unlike the private employer—who in most cases can get along without filling vacancies created by short-term employee absence—the school employer usually brings in a substitute to fill every spot left open by a teacher's absence.

It should be emphasized that my legislation would not preclude all substitute teachers from qualifying for unemployment benefits. In fact, this bill recognizes the equity of providing benefits for one who works regularly as a substitute teacher. My bill would allow States to deny benefits to those substitutes who work only on an occasional basis; however regular substitutes—those working 45 days or more in any State-determined base period—would not be prejudiced. I believe this represents an appropriate balancing of competing interests in this situation.

The unemployment compensation program was not intended to provide benefits to those who are temporarily on vacation or to those who are not truly unemployed.

My legislation would not deny benefits to those who are truly unemployed. It is designed, however, to insure that taxpayers will not be unduly burdened by quirks in the law that would make school employees—in George Orwell's phase—"more equal than others."

All of us must face the harsh reality that financing education in our country today is a difficult and burdensome responsibility. As the costs of education climb, taxes will have to climb also to keep pace.

It is obvious to me that as we work to improve the quality of education, we must work harder here in Congress to help States and local school districts to control their costs wherever possible. It is with this thought in mind that I am introducing this legislation today.

Mr. President, I ask that the text of the bill, S. 1065, be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1065

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 3304 (a)(6)(A) of the Internal Revenue Code of 1954 (relating to approval of State unemployment laws) is amended—

(1) in clause (i) by striking out "two successive academic years" and inserting in lieu thereof "two successive academic years or terms";

(2) in clauses (i) and (ii) by striking out the word "and" at the end thereof; and

(3) by adding at the end thereof the following new clauses:

"(iii) with respect to any services described in clause (i) or (ii), compensation payable on the basis of such services may, if the State law so provides, be denied to any individual for any week which commences during an established and customary vacation period or holiday recess if such individual performs such services in the period prior to such vacation period or holiday recess, and there is a reasonable assurance that such individual will perform such services in the period following such vacation period or holiday recess, and

"(iv) with respect to services performed by substitute teachers in an instructional, research, or principal administrative capacity for an educational institution to which section 3309(a)(1) applies, compensation payable on the basis of such services may be denied to any individual who is paid on a per diem basis and is employed for less than 45 days in a base period (as defined by State law), and".

(b) The amendments made by this Act shall be effective on the date of enactment of this Act.

By Mr. DOMENICI (for himself, Mr. TOWER, Mr. DOLE, and Mr. DECONCINI):

S. 1066. A bill to establish an Office of Hispanic Affairs in the Executive Office of the President, and in various executive agencies, and for other purposes; to the Committee on Governmental Affairs.

OFFICE OF HISPANIC AFFAIRS

Mr. DOMENICI. Mr. President, it is my pleasure to introduce a bill of critical importance to Hispanic Americans. The bill has two basic components. First, it establishes an Office of Hispanic Affairs in the Executive Office of the President. This would replace a Cabinet-level executive committee for Hispanics that expired on December 31, 1974. Second, the bill establishes offices of Hispanic Affairs throughout the various agencies of the executive branch.

Both components complement each other. An Office of Hispanic Affairs in the White House would insure that Hispanic concerns are heard at the highest policymaking levels of Government. Moreover, the office could serve as a focal point for gathering and disseminating data on the social and economic status of Hispanic-Americans.

Individual offices in each of the agencies would provide an operational arm to the White House Office. They could implement guidance and decisions made by the White House Office and, in turn, provide the central office with the field experience and data on which to base future policy.

Implicit in the introduction of this bill is the belief that despite their contributions to American life, the Hispanic community has failed to receive a proportional share of the benefits of American life. Hispanics continue to be this Nation's most disadvantaged group in terms of education, health, housing, employment, and earning power. And with-

out swift, positive action, this sad state of affairs will continue. I would like to emphasize that this bill has its origins in several years of rising concern by the New Mexico delegations over the inability of Hispanic Americans to make themselves heard. Accordingly I believe that as a first step, Hispanic needs and perspectives must be integrated into governmental decisionmaking. I believe my bill represents an important advance in this direction.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1066

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the purpose of this Act to (1) assure that Federal programs and resources are reaching all Mexican Americans, Puerto Rican Americans, Cuban Americans, and all other Hispanic Americans and providing the assistance they need, (2) assure that the laws, policies, and practices of the Federal Government are providing equal opportunities for Hispanic Americans in all areas, including employment, education, health, housing, and community development, economic development, and grant and contract procurement, and (3) seek out and develop new programs and resources that may be necessary to handle problems that are unique to such persons.

ESTABLISHMENT

SEC. 2. There is established in the Executive Office of the President and various executive agencies the Office of Hispanic Affairs (hereinafter referred to as the "Office").

OFFICE OF THE PRESIDENT

SEC. 3. (a) The Office in the Executive Office of the President shall have a Director who shall be appointed by the President, by and with the advice and consent of the Senate, and who shall be paid at the rate of basic pay in effect for Level V of the Executive Schedule.

(b) The Director may appoint and fix the pay of such personnel as he deems desirable.

(c) The Director may procure temporary and intermittent services to the same extent as is authorized by section 3109(b) of title 5 of the United States Code, but at rates for individuals not to exceed the daily equivalent of the annual rate of basic pay in effect for grade GS–18 of the General Schedule.

DUTIES

SEC. 4. (a) The Director shall—

(1) advise Federal departments and agencies regarding appropriate action to be taken to help assure that Federal programs are providing the assistance needed by Hispanic-Americans;

(2) advise Federal departments and agencies on the development and implementation of comprehensive and coordinated policies, plans, and programs focusing on the special problems and needs of Hispanic-Americans and on priorities thereunder;

(3) advise and assist Hispanic-American groups and individuals in receiving assistance available by law;

(4) establish and maintain an Hispanic information clearinghouse which shall collect, analyze, and disseminate information concerning the social and economic conditions encountered by Hispanic individuals; and

(5) appraise the laws, policies, and performance of the Federal Government with respect to the achievement or denial of equal opportunities for Hispanic-American individuals, and report such appraisal annually to Congress and the President in the report required under section 6 of this Act.

(b) In carrying out his duties, the Director may foster such surveys, studies, research, and demonstration and technical assistance projects, establish such relationships with State and local governments and the private sector, and promote such participation of State and local governments and the private sector as may be appropriate to identify and assist in solving the special problems of Hispanic-Americans.

POWERS

SEC. 5. (a) The Director may prescribe such rules and regulations as he determines necessary to carry out the provisions of this Act.

(b) The Director shall consult with and coordinate the activities of the Office with appropriate Federal departments and agencies, particularly those established under section 9 of this Act, and shall utilize the facilities and resources of such departments and agencies to the maximum extent possible in carrying out his duties.

(c) The Director, in carrying out his duties, may enter into agreements with Federal departments and agencies as he deems appropriate.

(d) The Director shall operate such regional offices as may be necessary to efficiently carry out the provisions of this Act.

ADVISORY TASK FORCES

SEC. 6. (a) The Director may appoint one or more advisory task forces from among persons who are representative of and involved in the affairs of the Mexican American, Puerto Rican American, Cuban American, and other elements of the Hispanic-American community. Any such task force shall—

(1) advise the Director with respect to his functions under the Act;

(2) be approved by either the House or Senate Government Operations Committee;

(3) be subject to the provisions of the Federal Advisory Committee Act (86 Stat. 770);

(4) transmit to Congress and the President a report of its activities on an annual basis or upon completion of work, whichever occurs first.

(b) Each task force member who is appointed from private life shall receive $100 a day for each day during which he is engaged in the actual performance of his duties as a member of the task force. A member of the task force who is an officer or employee of the Federal Government shall serve without additional compensation. All members of the task force shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

OBTAINING INFORMATION AND STAFF

SEC. 7. (a) The Director may secure directly from any Federal agency information necessary to enable him to carry out this Act.

(b) Upon request of the Director, the head of any Federal agency is authorized to detail, on a reimbursable basis, any of the personnel of such agency to the Office to assist him in carrying out his duties under this Act.

(c) Upon request of the Director, the head of any Federal agency is authorized to furnish such services and facilities to the office as is appropriate to carrying out the provisions of this Act.

ANNUAL REPORT

SEC. 8. The Director shall, within six months after the end of each fiscal year, submit a report to the President and the Congress of the activities of the Office for the preceding year, including in such report an appraisal of Federal performance as described in section 3(a)(5) and any recommendations he deems appropriate to accomplish the purposes of this Act.

OFFICES IN VARIOUS EXECUTIVE AGENCIES

SEC. 9. (a) The President shall take such measures as he determines are necessary to insure that an Office of Hispanic Affairs is established and maintained in the Departments of Agriculture, Commerce, Defense, Health, Education, and Welfare, Housing and Urban Development, Interior, Justice, Labor, Transportation, Treasury, the Community Services Administration, the Veterans' Administration, the Civil Service Commission, the Federal Communications Commission, the Small Business Administration, the Energy Research and Development Administration, National Aeronautics and Space Administration, National Science Foundation, Federal Home Loan Bank Board, and such other departments or agencies as the President may designate. The Director of this office, who shall be designated by the head of such department or agency, shall also serve as Special Assistant for Hispanic Affairs to the head of such department or agency.

(b) The Special Assistant for Hispanic Affairs designated within each department or agency may participate in all policy planning and development for all programs within each of the executive departments and agencies to insure the consideration of factors impacting on the various Hispanic communities. The head of each executive department and agency shall insure the participation of the Special Assistant for Hispanic Affairs in the review of all pertinent and relevant rules, regulations and guidelines, and other management directives to assure that the laws, policies, and practices of the Federal Government are providing equal opportunities for Hispanics in all areas; including education, health, housing, and community development, economic development, grant and contract procurement, and employment. The Special Assistant shall, under the direction of the head of each executive department and agency, make recommendations to the head of the executive department or agency to problems and special needs that are unique to Hispanics, and shall be available to advise and assist Hispanic groups and individuals who seek assistance or services from the department or agency.

FEDERAL REGIONAL COUNCILS

SEC. 10. The President may also take such measures as he determines are necessary to instruct the chairpersons of the ten Federal regional councils (established pursuant to Executive Order 11647 of February 10, 1972), to insure that the problems and needs of Hispanics are taken into consideration in decisions related to Federal assistance to State and local governments made by the Federal regional offices. Member agencies of the ten Federal regional councils shall provide available data and information, generated through their Hispanic liaison function, to the Federal regional councils, in order to insure equitable consideration of Hispanic needs in pertinent council decisions.

DUTIES OF THE SECRETARY OF COMMERCE

SEC. 11. The Secretary of Commerce shall take necessary steps to insure that existing information clearinghouse functions within the department shall encompass collection and dissemination of Hispanic information in easily accessible form concerning the social, economic, employment, health, and housing needs and conditions of the Hispanic population of the Nation.

COORDINATION

SEC. 12. The Director in the Executive Office of the President for Hispanic Affairs shall provide leadership and coordination for all departments and agencies of the executive

branch, particularly those established under section 9 of this Act, and such guidance as the President determines is appropriate in implementing this Act. Each department and agency shall issue appropriate rules and regulations to further the purposes of this Act.

BAN OF PARTISAN POLITICAL ACTIVITIES

SEC. 13. No part of any funds authorized to carry out this Act shall be used to finance any activities designed to influence the outcome of any election to Federal office or any voter registration activity, or to pay the salary of the chairperson or any employee of the committee after the date on which such persons engage in such activity, as determined by the United States Civil Service Commission. For the purpose of this section, the term "election" shall have the same meaning as prescribed for such term by section 301(a) of the Federal Election Campaign Act of 1971 (86 Stat. 3), and the term "Federal office" shall have the same meaning as prescribed for such term by section 301(c) of such Act.

AUTHORIZATION OF APPROPRIATIONS

SEC. 14. There is hereby authorized to be appropriated for fiscal years 1978 and 1979 such sums as may be necessary to carry out the provisions of this Act.

By Mr. DOMENICI:

S. 1067. A bill to provide for a study of the suitability and feasibility of designating the Vietnam Veterans Chapel, Eagle Nest, N. Mex., as a national memorial to the Vietnam veterans; to the Committee on Energy and Natural Resources.

VIETNAM VETERANS CHAPEL

Mr. DOMENICI. Mr. President, I am introducing a bill today which would authorize the Secretary of the Interior to conduct a study of the feasibility of administering the Vietnam Veterans Chapel as a national memorial to the Vietnam veteran.

As my colleagues will recall, I introduced this measure during the 94th Congress; however, it was not considered by the committee. Since that time, public support for this bill has grown nationally because of a recent CBS news story on the chapel.

The Vietnam Veterans Chapel is permeated with a unique spirit since its conception, construction, and financial and moral support have been derived from next of kin of Vietnam war dead. It appears to me that it would be appropriate for the Federal Government to assume the responsibility of insuring that future generations are given the certain knowledge that Americans did care about their countrymen who valorously bore the brunt of the battles, and who suffered deaths, wounds, and mental traumas as consequences.

A national memorial should exist not only as a tribute to Vietnam veterans, but also as a symbol which will inspire citizens of this country to strive more diligently than we have for a genuine, enduring peace.

The memorial is located high in the Sangre de Cristo Mountains near Angel Fire and Eagle Nest, N. Mex. The memorial is located on a knoll in the Moreno Valley and during much of the year there is line of snow on the ridges around the valley. The structure of the memorial is compelling and is at one with its natural setting.

Mr. President, I have received many letters from around the Nation and the overwhelming desire of those writing is to see this established as part of the national memorial system.

By Mr. BARTLETT:

S. 1068. A bill to require an annual contribution to the United States from U.S. territories and possessions which impose income taxes; to the Committee on Energy and Natural Resources.

Mr. BARTLETT. Mr. President, today I am introducing legislation which will provide for a percentage of Federal income taxes imposed on U.S. citizens living in U.S. possessions and territories to be paid to the Federal Treasury. Though presently the citizens of these territories pay taxes under a Federal law, none of the revenues are paid to the Federal Treasury, but are retained by the territorial government.

Last year, the Congress, after lengthy debate, passed legislation making the Northern Marianas Islands a commonwealth in political union with the United States. During the Armed Services Subcommittee hearings on this legislation, I expressed great concern that the covenant provided for no payment of Federal taxes directly to the U.S. Treasury.

Rather than single out the Northern Marianas for what could be regarded as unequal treatment among all of the territories and other possessions of the United States, I am introducing this bill which would address the issue equitably and in relation to all U.S. possessions.

Federal programs abound for Puerto Rico, the Northern Marianas, the Virgin Islands, Guam, and other possessions. The indigenous populations have U.S. citizenship and many other benefits that are derived therefrom.

A look at several of the Federal programs for one of these territories, Puerto Rico, underlines the extent of Federal assistance to U.S. possessions.

In fiscal year 1975 Puerto Rico received $26.5 million for social and rehabilitation services, $8.7 million more than my own State of Oklahoma received. For low-rent public housing Puerto Rico received $40 million, compared with $18 million for Oklahoma.

Facilities grants for economic development in Puerto Rico totaled $11.2 million, the highest of any State or territory. Disaster relief assistance to Puerto Rico amounted to $11.2 million, also the highest of any State or territory. Puerto Rico received $41 million for elementary and secondary education, $10 million more than Oklahoma received. In total Federal aid to States and territories for fiscal year 1975, Puerto Rico received $630 million. That exceeds the amount received by 24 of the 50 States.

Mr. President, I do not mean to single out Puerto Rico unnecessarily, but it serves as a startling example of what has happened with Government programs.

Obviously the association between the United States and its territories provides mutual benefits. However, it also implies mutual responsibilities. I believe the citizens of these territories can acknowledge this, further enhancing their relationship with the United States. According to a Congressional Research Service estimate my bill will increase Federal revenues by more than $190 million.

I am not asking for increased taxation, or that a new tax be levied. The population already pays taxes under Federal law. I ask only that a moderate portion of it be paid to the U.S. Treasury instead of being retained by the territorial governments or rebated to the population.

By Mr. DURKIN:

S. 1069. A bill to amend the Toxic Substances Control Act; to the Committee on Commerce, Science, and Transportation.

Mr. DURKIN. Mr. President, perhaps the most important new program enacted last Congress was the Toxic Substance Control Act. The enactment of that legislation was meant to mark the beginning of a serious governmental effort to solve the serious health and environmental problems created by the release of tens of thousands of untested chemicals into the environment over the years. It is no exaggeration to say that we have been treating the human environment, especially the workplace, as one giant research laboratory.

It is not enough to pass a law and applaud the accomplishment. The Toxic Substances Control Act must be implemented. The executive branch must devote the necessary manpower and Congress must authorize and appropriate the necessary moneys to assure effective implementation.

Russell Train, the former Administrator of EPA, spoke candidly about the ability of the EPA to administer the various acts under its jurisdiction shortly after leaving his post. He expressed particular concern over whether the agency had the manpower and financial resources to administer properly the Toxic Substance Control Act. There is little doubt in my mind that the Carter administration will provide EPA with the necessary manpower. The question with which we in Congress must be concerned is the adequacy of the financial resources necessary to administer the act properly.

Today, therefore, I have introduced a bill to increase the authorizations contained in the Toxic Substances Control Act. At the time of enactment, all concerned seemed to recognize that the authorizations contained in the act were inadequate for proper implementation. For fiscal year 1978, the authorization is $12.625 million and for fiscal year 1979, the authorization is $16.2 million. While in absolute terms, these millions of dollars may seem like a lot of money, when compared to the task and when compared to the authorizations contained in legislation for similar programs, they are at best paltry. The Clean Air Act and the Federal Water Pollution Control Act, which in some ways are less expensive and less difficult to administer, have authorizations more than 10 and 20 times greater than provided for implementation of the Toxic Substances Control Act.

The authorizations I propose today are $50 million for fiscal year 1978 and $100

million for fiscal year 1979. These figures are not derived from the EPA, and may be further increased during the hearing process should EPA indicate additional funds are necessary. Our efforts to obtain figures from EPA so far have been unsuccessful, in part because of the natural confusion incident to the change of administration. The figures we have arrived at, however, are sound. The fiscal year 1978 figure is based upon an EPA request to the Office of Management and Budget during the Ford administration, which was not approved. The fiscal year 1979 figure is based on authorizations for similar programs.

I am sympathetic to the difficulties in implementing an act so complex as the Toxic Substances Control Act, and the added problems imposed by a change of administrations. I am not willing, however, to allow these problems to cause the vital increases in authorizations to fall between the cracks this year. Congress has imposed a very tight and strict budgetary process upon itself. There are deadlines that must be met, and it is my intention to assure that the deadlines are met for increased funding with respect to the Toxic Substances Control Act.

By Mr. HART:

S. 1071. A bill to establish a national system of child and maternal health care and a system of protection against catastrophic health care costs; to the Committee on Finance.

COMPREHENSIVE MATERNAL AND CHILD HEALTH PROTECTION ACT

Mr. HART. Mr. President, today I am reintroducing the Comprehensive Maternal and Child Health Protection Act which provides for comprehensive health care services for children and pregnant women, and for catastrophic health insurance.

Mr. President, over the past decade, the effectiveness of our Nation's medical care system has ranked among the leading domestic concerns in Congress and throughout the country. Inaccessibility of care, shortages and maldistribution of medical personnel, and skyrocketing health care costs are only a few of the deficiencies which have led many individuals to charge that our health care system is in a crisis. It is widely maintained that the need for a unified, coordinated national health care policy grows increasingly stronger.

As a consequence, in the last few years a large number of national health insurance bills have been introduced in Congress. These bills have been diversely sponsored by organized medicine, the health insurance industry, labor unions, and businessmen. While a sensible national health insurance proposal should be fiscally possible, administratively manageable, politically feasible, and likely to improve America's health without further inflating the already disastrous rate of medical inflation, few—if any—of the existing proposals meet these basic criteria. Despite this, however, each proposal does offer valuable ideas and mechanisms which, when molded together, could help provide the country with an effective national health care system.

Mr. President, the bill I am offering today reflects the state of learning to date. In particular, my proposal draws on the expertise of Senator KENNEDY who is widely recognized for his contributions and excellence in the health care field. His expertise is reflected in the administrative mechanisms incorporated in my proposal.

The Comprehensive Maternal and Child Health Protection Act initiates a national health insurance program through a comprehensive plan for pregnant women and preschool children, while also providing protection for all Americans against medical expenses that are catastrophically high in relation to family income. I have briefly summarized my proposal below:

TITLE I. MATERNAL AND CHILD HEALTH PROTECTION PROGRAM

COVERAGE

In the first year of the program, all children from birth to six years of age, and all pregnant women will be eligible for comprehensive health care benefits. Each subsequent year, for the next four years of the program, eligibility for child health care services will be expanded by adding two years to the eligibility level, so that by the fifth year of the program, all children fourteen years of age and under would be considered eligible for the program.

BENEFITS

The bill provides for comprehensive health care benefits. Included would be most "preventive" health care as well as a wide range of other services including broken bones, renal dialysis, prenatal and postnatal care for mothers, etc.

REIMBURSEMENT

The only form of payment would be capitation. Physicians, or other qualified health care providers, would sign up eligible children and women annually. The Maternal and Child Health Protection Board (responsible for administering the program on the federal level) would issue an annual lump sum payment to a physician for each eligible individual he or she had enrolled. All those eligible individuals wishing to purchase care in a regular fee for service system would, of course, be free to do so; however, they would not receive federal financial assistance under this program.

FINANCING

The program would be financed from general revenues, and would be partially offset by a reduction in the $750 personal income tax exemption for children.

COST

The Maternal and Child Protection Board will determine the capitation fees. Such fees will reflect the average yearly cost of health care for the eligible categories. If, for example, the Maternal and Child Health Protection Board were to set the capitation rate at $200 per child per year on an average (in 1974, per capita expenditures for those under nineteen years of age was $183), the cost would be $1.8 billion. If we add prenatal and postnatal care for an estimated 3.2 million births, the cost would be an additional $4 billion. The total program cost has been estimated to be approximately $6 billion; however, it is important to remember that this figure is only an estimate.

ADMINISTRATION

At the federal level, the programs would be administered by the Maternal and Child Health Protection Board established within the Department of Health Education, and Welfare. The Board will determine capitation rates; establish systems of quality and program review; be responsible for the formulation of program policy and implementation. The Board will be assisted by a National Maternal and Child Health Protection Advisory Council which will recommend policy and evaluate performance of the program.

On a local level, the program will be administered through HEW regional offices and local health service area offices. Regional advisory councils, similar in nature to the National Advisory Council, will advise the regional offices.

TITLE II. CATASTROPHIC PROTECTION PLAN

COVERAGE

All individuals will be eligible to participate in this program.

BENEFITS

Under this plan, an individual is responsible for those medical expenses amounting to 15 percent of his total taxable income. Any amounts in excess of that amount may either be claimed as a credit against personel income taxes or be refunded to the individual as a cash rebate.

FINANCING

This catastrophic plan will be financed through tax expenditures.

ADMINISTRATION

The Internal Revenue Service will administer the program.

COST

Experts have estimated that this system credits and rebates would cost approximately $5.5 billion.

TERMINATION OF THE PROGRAMS

The bill includes a provision for the termination of the Comprehensive Maternal and Child Health Protection Program and the Catastrophic Protection Tax Credit after the fifth year of operation unless the programs are continued by Act of Congress.

Mr. President, while neither I nor any other Senator would advocate that Congress move recklessly in its efforts to establish a national health care system, the approach I have just described is well within our current fiscal, political, and administrative grasp. Because this program is limited, it will be very manageable and we will be able to learn from the process of implementation and to expand as appropriate.

COMPREHENSIVE MATERNAL AND CHILD HEALTH PROTECTION PROGRAM

The selection of children and pregnant women as the initial category to be covered by a comprehensive program is logical from a number of standpoints. Children are the citizens and the producers of the future. Investment in their health will result in rich dividends to the Nation in the form of increased productivity and reduced medical care expenditures as they reach adulthood.

The care children most need is readily producible, predictable, and is most likely to have an improving effect on their current and future health status. It is also relatively inexpensive. Note that in 1974, per capita expenditures for those under 19 years of age was $183 as compared with $420 for those aged 19 to 64, and $1,218 for those 65 and over.

Similarly, good health care for pregnant women is readily producible. fairly predictable, and though not minimal in cost, has—as we have demon-

strated time and time again—been tremendously valuable in improving the health of newborn infants.

In sum, the uniformity and routine nature of the health care needs of both these categories has several important implications. The overall program costs will be fairly predictable and, therefore, less susceptible to soaring inflation; a large portion of health care services can be delivered by physicians extenders; nurse and child practitioners; and quality review will be much easier for this group than almost any other.

By using children as the starting point for comprehensive health benefits, we will have an excellent opportunity to implement preventive policies and practices. It is widely recognized that preventive policies can play a major role in preserving the health of our people and in reducing the Nation's soaring health care bill. Unfortunately, very little has been done in the past to encourage preventive policies. Under my proposal, incentives to develop and practice preventive medicine will be high—primarily because of the capitation method of payment used to reimburse physicians participating in the program.

In order to obtain benefits under the program, eligible individuals would sign up for health care services with a specific physician or other qualified health care provider participating in the program. That physician will be paid on a lump sum basis and will be responsible for insuring that all necessary health care services are provided to an enrolled individual. Thus, the capitation method of payment will not only provide economic incentives to keep patients well, but it will serve to discourage unnecessary or overutilization of health care resources.

CATASTROPHIC PROTECTION TAX CREDIT PROGRAM

While the merits of this child and maternal health care system are many, this system alone will not begin to respond to one of the most widespread fears of Americans; namely, the possibility of financial ruin from ill health. The United States remains one of the few industrial nations in the world where one can be made destitute by medical care costs.

Because of the unprecedented rise in medical costs, the ability to afford adequate medical care is no longer a problem affecting only the poor. Arguably, private health insurance and public programs have alleviated many of the problems Americans face in paying the high costs of medical care, but they have failed to protect all individuals from the adverse impact of large medical bills. Over a million Americans have no coverage, because the insurance industry has categorized them as "uninsurable." Self-employed individuals, people who work for small firms, or who work in low-wage industries are often unable to buy private insurance at group rates. These individuals then either go without insurance or pay exorbitant premiums for even the most limited coverage.

Currently some 4 percent of the population spends more than a quarter of their income on illness. For families with large medical bills, private insurance is woefully inadequate. Only half of the population carry any major medical coverage. For those with major medical policies, strict limits on "covered" expenditures and requirements for large patient payments are the rule, not the exception. At a time when the average cost of health care for such conditions as terminal cancer exceeds $20,000, even those with insurance can face bankrupting medical outlays.

Because a responsible health care system should respond to the fears of financial ruin, the proposal I am introducing also provides catastrophic protection for the entire population. This protection is incorporated into a reform of our current tax policy for medical expenses and operates on a system of tax credits and rebates.

Under the program, a family would be fully responsible for its medical expenses up to 10 percent of income, the Federal Government would pay half of all additional medical expenses until the cost to the family exceeds 20 percent. After a family had expended 20 percent of its income for medical care, the Federal Government would pay all further costs.

The Federal contribution to catastrophic care would be paid through income tax credits. If medical expenses were so high—or family income so low—that tax liability reached zero, the family would be eligible for a refundable tax credit or direct payment.

I would like to emphasize that this program would not provide financial assistance for minor expenses which can be afforded by the individual, nor would it cover expenses paid for by private insurance. It is also important to note that individuals at different income levels would be required to spend different—though relatively proportionate—amounts of their income before Federal financial assistance would be available. Since the very definition of catastrophe depends upon the relative burden on illness expenses of individual wealth, such a scheme works well in responding to the real needs of individuals for financial help.

The IRS would be responsible for administering this protection plan and the payments of benefits would be integrated into the current tax cycle. That would mean annual adjustments for most; however, the Secretary of the Treasury and HEW are directed to investigate, and provide for more timely payments to individuals claiming a credit or rebate.

This system contains important cost control features insofar as the patient pays a percentage of his health care bill and no services are paid for that are not received. Most importantly, however, such a plan would allay the fears of impoverishment, particularly from cancer, stroke, heart disease, and mental illness. The "deductible" provisions of the tax credit plan limit its overall costs. Although the actual number of beneficiaries of this catastrophic plan would be relatively small, everyone will benefit in terms of freedom from fear. The credit extends a substantial amount of security to all insofar as it assures that no person would become destitute from medical expenses.

Mr. President, it is doubtful that any single plan can cope with all the ills of the health care system. The proposal I am offering is a reasonable step forward, a new approach to our national health care crisis. It is no secret that the present economic and political milieu requires substantial attention to those forms of national health care that can be well administered, are of modest cost to the Federal Treasury and are unlikely to worsen the inflation rate in health. At a time when we are concerned about the size of the Federal budget, this type of program makes fiscal sense.

Mr. President, this proposal is not cast in granite. I am offering this as a new approach to our health care problems and I would urge others, having interest or expertise in this particular area, to contribute to this proposal. Many of the concepts outlined that the bill has been backed by experienced health policy analysts and others vitally interested in insuring the good health of our people through the implementation of a sound, fiscally responsible system. Although Congress has debated comprehensive health care with varying intensity over the past several years, it is likely that during the next Congress there will be concerted effort to enact legislation along these lines. Because the Comprehensive Maternal and Child Health Protection Act is manageable, relatively modest in cost, and unlikely to adversely influence the inflation rate in health care, it merits full consideration in the upcoming discussions on this vital issue.

Mr. President, I ask unanimous consent that the text of the bill be printed in the record.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1071

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Comprehensive Maternal and Child Health Protection Act".

FINDINGS AND DECLARATION OF PURPOSE

SEC. 2. (a) The Congress finds and declares that—

(1) the children of the United States are vital to national development and hold the promise of the Nation's future;

(2) the health of pregnant mothers and children has been demonstrated to be among the highest priority of our health and medical needs in the country; and

(3) all individuals should be protected against the ruinous costs of illness.

(b) The purpose of this Act is—

(1) to establish a comprehensive system of health care services for children and pregnant women;

(2) to establish a nationwide system which will protect individuals against ruinous financial costs of illness.

TITLE I—COMPREHENSIVE MATERNAL AND CHILD HEALTH PROTECTION BENEFITS

PART A—GENERAL PROVISIONS AND ELIGIBILITY

DEFINITIONS

SEC. 101. For the purposes of this Act the term—

(1) "Secretary" means the Secretary of Health, Education, and Welfare;

(2) "Board" means the Maternal and Child Health Protection Board established in section 141;

(3) "Child" means an individual from the time of birth to the age of 6 years;

(4) "Council" means the National Maternal and Child Health Protection Council, established in section 145;

(5) "Health Care Services" means all health care services described in section 111; and

(6) "Participating Provider" means any provider of health care services who has entered into an agreement with the Secretary to provide health care services to eligible persons under this Act.

ELIGIBILITY FOR MATERNAL AND CHILD HEALTH SECURITY BENEFITS

SEC. 102. (a) Every pregnant woman and every child residing in the United States who is—

(1) a legal resident or a citizen of the United States; or

(2) the spouse of a legal resident or a citizen of the United States

shall be eligible for benefits under this Act.

PART B—NATURE AND SCOPE OF BENEFITS

SEC. 111. (a) An eligible child under this title who is enrolled with a participating provider, is entitled to receive from his provider either directly or indirectly all health care services related to the diagnosis and treatment of any disease, injury, or disability, as well as any other health care services necessary for the adequate protection, maintenance, or restoration of his mental and physical health.

(b) An eligible woman under this title who is enrolled with a participating provider, is entitled to receive from her provider, either directly or indirectly, all health care services related to the diagnosis and treatment of pregnancy; the diagnosis and treatment of disease or injury during pregnancy which could threaten the healthy development of the unborn child; any injury, disability or disease relating to or resulting from pregnancy that occurs during the period of twelve weeks immediately following the termination of a pregnancy, including but not limited to the mental and physical well-being of the woman.

PART C—PARTICIPATING PROVIDERS AND PAYMENTS TO PARTICIPATING PROVIDERS

SEC. 121. A provider of health care services shall be a participating provider if such provider enters into an agreement with the Secretary, in a manner determined by the Board, to—

(1) provide directly or indirectly health care services (described in section 111) to eligible persons, without discrimination on the grounds of race, creed, or national origin; and

(2) accept the amount specified in the capitation payment schedule, as established annually by the Board, as the full payment for health care services provided to an eligible person enrolled with that provider.

PAYMENTS TO PROVIDERS—METHOD AND AMOUNT OF PAYMENT

SEC. 122. (a) The Secretary is authorized to make payments to participating providers in accordance with this part. Such payments shall be made from the amounts authorized under section 131 of this Act.

(b) (1) Every participating provider shall be paid by the capitation method, consisting of one annual payment per eligible individual enrolled with that participating provider.

(2) Such payment shall be made by the Secretary to the participating provider on a prospective basis for the year during which health care services are to be furnished to the eligible person by the provider.

(c) The Board shall annually determine the capitation payments to be made under this Act to participating providers for—

(1) health care services described in section 111(a) rendered to eligible children.

(2) health care services described in section 111(b) rendered to eligible women.

(d) Such payments as determined by the Board shall be no less than an amount equal to the annual costs of providing such reasonable health care services as described in section 111 (a) and (b).

(e) The Board may, in consultation with the Council vary capitation payments by geographic region, where the Board has directly or indirectly determined such varaition would be instrumental in providing relief to areas suffering shortages of providers.

PAYMENTS TO NON-PARTICIPATING PROVIDERS

SEC. 123. The Secretary is authorized to establish a program to reimburse or make payments on behalf of eligible individuals who are residing in areas not adequately served by participating providers.

PART D—FINANCING OF THE COMPREHENSIVE MATERNAL AND CHILD HEALTH PROTECTION PROGRAM

AUTHORIZATION OF APPROPRIATIONS

SEC. 131. (a) There are hereby authorized to be appropriated for the fiscal years 1978, 1979, 1980, 1981, and 1982, those amounts necessary for the administration, and operation of the Comprehensive Maternal and Child Health Protection program as described under this title.

ADJUSTMENT IN EXEMPTION FOR DEPENDENTS

SEC. 132. (a) Section 151(e)(1) of title 26 of the Internal Revenue Code of 1954 (relating to the exemption for dependents) is amended by striking "$750" and substituting "$600".

PART E—ADMINISTRATION

ESTABLISHMENT OF THE MATERNAL AND CHILD HEALTH PROTECTION BOARD

SEC. 141. (a) There is hereby established in the Department of Health, Education and Welfare a Maternal and Child Health Protection Board to be composed of 5 members to be appointed by the President, by and with the advice and consent of the Senate. During his term of membership on the Board, no member shall engage in any other business, vocation or employment. Not more than 3 members of the Board shall be members of the same political party.

(b) Each member of the Board shall hold office for a term of 5 years, except that (1) a member appointed to fill a vacancy occurring during the term for which his predecessor was appointed shall be appointed for the remainder of that term, and (2) the terms of office of the members first appointed shall expire, as designated by the President at the time of their appointment, at the end of one, two, three, four and five years, respectively, after the date of enactment of this Act. A member who has served for two consecutive five-year terms shall not be eligible for reappointment until two years after he has ceased to serve.

(c) The President shall designate one of the members of the Board to serve, at the will of the President, as Chairman of the Board.

DUTIES OF THE SECRETARY AND THE BOARD

SEC. 142. (a) The Secretary acting through the Board shall carry out the functions described in subsection (b).

(b) The Board shall—

(1) establish capitation rates to be paid to participating providers;

(2) establish standards and qualifications for participating providers;

(3) establish basic agreements to be entered into between the Secretary and participating providers;

(4) continually monitor and study the operation of the provisions of this Act with special emphasis with regard to the provision of health services to eligible persons;

(5) promulgate such rules and regulations as it deems necessary to carry out the provisions of this Act; and

(6) report annually to the Congress on the administration of this Act.

(c) The Secretary shall make available to the Board all information available to him, from sources within the Department or from other sources, pertaining to the functions of the Board.

(d) The Civil Service Commission, in consultation with the Board, shall to the greatest extent practicable facilitate recruitment, for employment by the Board in the competitive service, of qualified persons experienced in the administration of health prepayment plans, or experienced in other fields pertinent to the administration of this title.

(e) The Secretary is authorized to establish on the staff of the Board, and to fix the compensation for, not more than 20 positions in the professional, scientific, and executive service, each such position being established to effectuate those research and development activities of the Board which require the services of specially qualified scientific, professional, and administrative personnel. The rates of compensation for positions established pursuant to the provisions of this subsection shall not be less than the minimum rate of grade 16 of the General Schedule of the Classification Act of 1949, as amended, not more than the highest rate of grade 18 of the General Schedule of such Act, and the rates of compensation for all such positions shall be subject to the approval of the Civil Service Commission. Positions created pursuant to this subsection shall be included in the classified civil service of the United States, but appointments to such positions shall be made without competitive examination upon approval of the proposed appointee's qualifications by the Civil Service Commission or such officers or agents as it may designate for this purpose.

EXECUTIVE DIRECTOR; DELEGATION OF AUTHORITY

SEC. 143. (a) There is hereby established the position of Executive Director of the Maternal and Child Health Protection Board. The Executive Director shall be appointed by the Board with the approval of the Secretary, and shall perform such duties in the administration of this title as the Board may assign to him.

(b) The Board is authorized to delegate to the Executive Director or to any other officer or employee of the Board or, with the approval of the Secretary (and subject to reimbursement of identifiable costs), to any other officer or employee of the Department, any of its functions or duties under this title other than (1) the issuance of regulations, or (2) the annual determination of the capitation rates under section 122.

REGIONS AND HEALTH SERVICE AREAS

SEC. 144. (a) This title shall be administered by the Board through the regions of the Department (as they may be established from time to time) and, within each region, through health service areas. The areas shall be the same as the health service areas established by the Secretary under section 1511 of the Public Health Service Act, except that with the approval of the Secretary the Board may divide an area established under section 1511 into two or more areas for purposes of this title.

(b) The Board shall establish in each local health service area a local maternal and child health protection office and such branch offices as the Board may find necessary. The local offices and branch office, in addition to such informational and other administrative duties as the Board may assign

them, shall have the function of receiving and investigating complaints by eligible persons or their guardians and by providers of services concerning the administration of this title and of taking or recommending appropriate corrective action.

NATIONAL MATERNAL AND CHILD HEALTH PROTECTION ADVISORY COUNCIL

SEC. 145. (a) There is hereby established a National Maternal and Child Health Protection Advisory Council, which shall consist of the Chairman of the Board, who shall serve as Chairman of the Council, and 12 members, not otherwise in the employ of the United States, appointed by the Secretary on the recommendation of the Board, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service. The appointed members shall include persons who are representative of providers of health services, and of persons (who shall constitute a majority of the Council) who are representatives of eligible consumers of such services. Each appointed member shall hold office for a term of four years, except that (1) any member appointed to fill a vacancy occurring during the term for which his predecessor was appointed shall be appointed for the remainder of that term, and (2) the terms of the members first taking office shall expire, as designated by the Secretary at the time of appointment, three at the end of the first year, three at the end of the second year, three at the end of the third year, and three at the end of the fourth year after the date of the enactment of this Act. Members of the Council who are representative of providers of health care shall be persons who are outstanding in fields related to maternal and child health care; medical, hospital, or other health activities; or who are representative of organizations or associations of professional health personnel; members who are representative of eligible consumers of such care shall be persons, not engaged in and having no financial interest in the furnishing of health services, who are familiar with the needs of the eligible population for personal health services and are experienced in dealing with problems associated with the furnishing of such services.

(b) The Advisory Council is authorized to appoint such professional or technical committees, from its own members or from other persons or both, as may be necessary to carry out its functions. The Council, its members, and its committees shall be provided with such secretarial, clerical, or other assistance as may be authorized by the Board for carrying out their respective functions. The Council shall meet as frequently as the Board deems necessary, but not less than four times each year. Upon request by seven or more members it shall be the duty of the Chairman to call a meeting of the Council.

(c) It shall be the function of the Advisory Council (1) to advise the Board on matters of general policy in the administration of this title, in the formulation of regulations, and (2) to study the operation of this title and the utilization of health services under it, with a view to recommending any changes in the administration of the title or in its provisions which may appear desirable. The Council shall make an annual report to the Board on the performance of its functions, including any recommendations it may have with respect thereto.

(d) Appointed members of the Advisory Council and members of technical or professional committees while serving on business of the Council (inclusive of traveltime), shall receive compensation at rates fixed by the Board, but not in excess of the daily rate paid under GS–18 of the general schedule under section 5332 of title 5, United States Code; and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in Government service employed intermittently.

REGIONAL AND LOCAL ADVISORY COUNCILS

SEC. 146. (a) The Board shall appoint for each of the regions of the Administration and for each health service area a regional or local advisory council, consisting of the regional or local representative of the Board as chairman and (in such numbers as the Board may determine) representatives of providers of health services and representatives (who shall constitute a majority of the members of each council) of eligible consumers of such services. So far as possible, representatives of eligible consumers shall be selected so as to represent the population to be served. Each council shall meet as often as its members may decide, but in no event less than four times each year. It shall be the function of each such council to advise the regional or local representative of the Board, as the case may be, on all matters directly relating to the administration of this title in the region or area, including methods and procedures in the handling of complaints.

(b) The provisions of section 145 (d) shall be applicable to the members of the councils appointed under this section.

PROFESSIONAL AND TECHNICAL ADVISORY COMMITTEES

SEC. 147. (a) The Board shall appoint such standing professional and technical committees as it deems necessary to advise it on the administration of this title with respect to the services described in part B. Each such committee shall consist of experts (in such numbers as the Board may determine) drawn from the health professionals (particularly those professions involved in maternal and child health care), from medical schools or other health educational institutions, from providers of services, or from other sources, whom the Board deems best qualified to advise it with respect to the professional and technical aspects of the furnishing and utilization of, the payment for, and the evaluation of, health care services.

(b) The Board is authorized to appoint such experts and consultants (employed in accordance with section 3109 of title 5, United States Code), and to appoint such temporary professional and technical committees, as it deems necessary to advise it on special problems not encompassed in the assignments of standing committees appointed under subsection (a), or to supplement the advice of standing committees.

(c) In connection with its duties under section 142(c) the Board is authorized to appoint such standing or temporary committees of fiscal, actuarial, and other experts as it deems necessary.

(d) Committees appointed under this section shall be subject to the supervision of the Board.

(e) The provisions of section 145 (d) shall be applicable to experts and consultants and to the members of committees appointed under this section.

PARTICIPATION BY STATE AGENCIES

SEC. 148. (a) The Board shall consult with State health agencies (including agencies established pursuant to title XV of the Public Health Service Act) or other appropriate State agencies in administering health benefits, with a view to coordinating the administration of this title with related State and local activities. Insofar as practicable, the Board shall conduct such consultation through the regional offices of the Administration.

(b) The Board shall make an agreement with any State which is able and willing to do so under which the State health agency or other appropriate State agency will be utilized by the Board in determining whether providers of services meet or continue to meet the qualifications and requirements established in regulations issued by the Board. Such an agreement shall fix the frequency of inspection of providers and shall establish the qualifications required of persons making the inspections. Determinations by State agencies based upon inspections made in accordance with such agreements, and determinations with respect to professional practitioners, may be given by the Board the same effect as determinations by the Board.

(c) An agreement under subsection (b) may provide that a State agency, either directly or through local public agencies, will undertake activities, specified in the agreement, directed to the maintenance and improvement of the quality of services furnished in the State.

(d) The Board shall pay to a State, in advance or otherwise as specified in the agreement, the reasonable cost of services and activities pursuant to an agreement under this section; and may pay a part or all of the cost of training (or may train) State personnel to enable them to meet the qualifications established by the Board for inspectors.

(e) In any State which is unable or unwilling to make inspections in accordance with subsection (b), the Board shall make such inspections either through its own personnel or through contract with an organization or organizations which it finds qualified to perform this function.

(f) Within 90 days after the completion of an inspecton of any provider under subsection (b) or subsection (e), the Board shall make public in readily available place and form the findings of such inspection which pertain significantly to compliance of the provider with those qualifications and requirements issued in regulations by the Board, except that if the State agency or the Board, on the basis of such inspection, has made a determination respecting compliance by the provider, the publication shall be based on such determination.

DISSEMINATION OF INFORMATION; STUDIES AND EVALUATIONS

SEC. 149. (a) The Board shall disseminate, to providers of services and to the public, information concerning the provisions of this title, the persons eligible to receive the benefits of the title, and the nature, scope, and availability of covered services; and to providers of services, information concerning the conditions of participation, methods and amounts of compensation to providers, and other matters relating to their participation.

(b) The Board is authorized, either directly or by contract—

(1) to make statistical and other studies, on a nationwide, regional, State, or local basis, of any aspect of the operation of this title, including studies of the effect of the title upon the health of the people of the United States and the effect of comprehensive health services upon the health of persons receiving such services;

(2) to make such other studies as it may consider necessary or promising for the evaluation, or for the improvement, of the operation of this title.

(d) The Board is authorized to develop, and to test and demonstrate, through agreements with providers of services, methods (including business methods) designed to achieve, through additional incentives or in any manner, improvement in the coordination of services furnished by providers, improvement in the adequacy, quality, or accessibility of service, or decrease in their cost.

(e) The Board shall study the adequacy of the Maternal and Child Health Protection

program in meeting the health care needs of those eligible women and children and the adequacy of the program to function as an alternative to all other related federal medical assistance and health care programs. The Board shall report to Congress on its findings and conclusions not later than the first day of September 1979. The report made by the Secretary under this section shall include recommendations as to whether such federal medical assistance and health care programs should be terminated, reduced or changed in any respect.

DETERMINATIONS; SUSPENSION OR TERMINATION OF PARTICIPATION

SEC. 150. (a) Determinations of entitlement to benefits under this title, determinations of who are participating providers of services, and determination of capitation rates to be paid by the Board to participating providers, shall be made by the Board in accordance with regulations.

(b) If the Board finds that a participating provider of services no longer meets the qualifications and requirements as set forth in regulations issued by the Board, or that a participating provider has intentionally violated the provisions of this title or of regulations, or that he has failed substantially to carry out the agreement entered into with the Secretary, the Board may issue an order suspending or terminating the participation of the provider, or suspending or terminating such provider with respect to particular classes of services.

(c) If the Board has reason to believe that a participating provider or a professional practitioner furnishing services on behalf of another participating provider, has in a substantial number of cases—

(1) furnished to eligible persons covered services—which were not of a quality meeting professionally recognized standards of care, or

(2) neglected to furnish necessary services to eligible persons who were his patients, under circumstances such that the neglect constituted a breach of his professional obligation,

the Board shall submit the evidence in its possession either to an appropriate professional organization or to a committee constituted by the Board after consultation with such an organization (which committee may, when the Board deems it proper, include nonprofessional persons). The Board shall request the organization or committee, with or without further investigation, to recommend what action, if any, should be taken by the Board. Taking into consideration any recommendation so made to it, the Board may issue an order suspending or terminating the participation of the provider or, in the case of a practitioner furnishing services on behalf of another provider, requiring the other provider, as a condition of continued participation, to suspend or discontinue the furnishing of covered services by the practitioner.

(d) The Board, shall, either in advance or by way of reimbursement, pay to an organization or committee established under subsection (c) its reasonable cost incurred in so doing.

(e) No determination under subsection (a) that a person, previously determined to be eligible for benefits, is not eligible therefor, and (unless the Board finds that eligible persons are endangered) no order under subsection (b) or (c) shall be effective until after the person or provider has been afforded an opportunity for a hearing under section 151.

HEARINGS: JUDICIAL REVIEW

SEC. 151. (a) Any person who is aggrieved by a determination made or an order issued under section 150 shall, upon request therefor filed in accordance with regulations, be entitled to a hearing before a hearing officer or a hearing panel of the Board. The hearing shall be held as promptly as possible and at a place convenient to the provider or other person requesting the hearing. For the purpose of reviewing the determinations of hearing officers or panels, the Board shall establish appeals tribunals (which may include regional or other intermediate appeals tribunals), and shall by regulation prescribe the jurisdiction of such and procedures for appeal to them. Decision of hearing officers or hearing panels shall, subject to appeals under this subsection, constitute final decisions to the Board.

(b) In any case in which the Board finds (on the basis of the request for hearing and the records of the Board) that a substantial issue of professional practice or conduct, in a health profession specified for this purpose in regulations, will be involved in the hearing, the hearing shall be held either before a person who is qualified in an appropriate health profession or before a panel which includes a person or persons so qualified, and an appeal in a such a case shall be heard before an appellate tribunal (or a panel thereof) which included a person or persons so qualified. In any case in which a single person qualified as a health professional, or a panel composed entirely of persons so qualified, conducts a hearing or hears an appeal, the Board shall assign an attorney to assist the professional hearing officer in the conduct of the hearing or the appeal and to advise upon the decision of issues of law.

(c)(1) Any provider of services or other person, after any final decision of the Board made after a hearing to which he was a party, (notwithstanding the amount in controversy), may obtain a review of such decision by a civil action commenced within 60 days after the mailing to him of notice of such decision or within such further time as the Board may allow. Such action shall be brought in the district court of the United States, for the judicial district in which the plaintiff resides or has his principal place of business, or, if he does not reside or have his principal place of business within any such judicial district, in the District Court of the United States for the District of Columbia. The Board shall file a certified copy of the transcript of the Board, including the evidence upon which its findings and decision were based.

(2) The Court shall have the power to enter, upon the pleadings and transcript of the record, a judgment affirming, modifying, or reversing the decision of the Board, with or without remanding the case for a rehearing. The findings of the Board as to any fact, if supported by substantial evidence, shall be conclusive.

(3) Where a claim has been denied by the Board or a decision is rendered which is adverse to a provider or other person who was a party to the hearing before the Board, because of failure of the claimant or such a provider or other person to submit proof in conformity with any regulation prescribed by the Board, the court shall review only the question of conformity with the regulation and the validity of the regulation. The Court shall not review a finding by the Board under subsection (b), or a refusal to find, that a substantial issue of professional practice or conduct will be involved in a hearing.

(4) The court shall, on motion of the Board made before it files its answer, remand the case to the Board for further action by the Board, and may, at any time on good cause shown, order additional evidence to be taken before the Board. The Board shall, after the case is remanded, and after hearing such additional evidence if so ordered, modify or affirm its findings of fact or its decision, or both, and shall file with the court any such additional and modified findings of fact and decision and a transcript of the additional record and testimony. Such additional or modified findings of fact and decision shall be reviewable only to the same extent as the original findings of fact and decision.

(5) The judgment of the court shall be final except that it shall be subject to review in the same manner as judgments in other civil actions.

PART F—EXPANSION OF AND TERMINATION OF THE MATERNAL AND CHILD HEALTH PROTECTION ACT

EXPANSION OF PROGRAM

SEC. 161. (a)(1) Effective October 1, 1979, section 101(3) is amended by striking "6" and substituting "8".

(2) Effective October 1, 1980, section 101(3) is amended by striking "8" and substituting "10".

(3) Effective October 1, 1981, section 101(3) is amended by striking "10" and substituting "12".

(4) Effective October 1, 1982, section 101(3) is amended by striking "12" and substituting "14".

(b) The Board shall promulgate such rates and regulations as it deems necessary to carry out the amendments made by subsection (a).

TERMINATION OF THE MATERNAL AND CHILD HEALTH PROTECTION ACT

SEC. 162. (a) The provisions of this title shall terminate at the end of the 1981 fiscal year, unless continued by an Act of Congress.

TITLE II—CATASTROPHIC PROTECTION TAX CREDIT

PART A—ALLOWANCE OF CREDIT

SEC. 201. (a) In General.—Subpart A of part IV of subchatper A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by inserting before section 45 the following new section:

"SEC. 44B. MEDICAL EXPENSES.

"(a) In General.—In the case of an individual there is allowed as a credit against the tax imposed by this chapter an amount, not compensated for by insurance or otherwise, equal to the sum of—

"(1) 50 percent of the amount by which the medical expenses paid or incurred by him during the taxable year exceed 10 percent but are less than or equal to 20 percent of his modified adjusted gross income, plus

"(2) 100 percent of the amount by which such medical expenses exceed 20 percent of his modified adjusted gross income.

"(b) Definitions.—For purposes of this section—

"(1) Medical expenses.—The term 'medical expenses' means amounts paid or incurred by the taxpayer for medical care expenses for himself or for a dependent (as defined in section 152).

"(2) Medical care expenses.—The term 'medical care expenses' means expenses incurred for—

"(A) the diagnosis, cure, mitigation, treatment, or prevention of disease, or for the purpose of affecting any structure or function of the body; or

"(B) transportation primarily for and essential to medical care referred to in clause (1); and

"(C) insurance (including amounts paid as premiums under part B of title XVIII of the Social Security Act, (relating to supplementary medical insurance for the aged) covering medical care referred to in subparagraphs (A) and (B).

"(3) Modified adjusted gross income.—The term 'modified adjusted gross income' means adjusted gross income (as defined in section 62), reduced by the amount of the deductions for personal exemptions allowed under section 151, and increased by—

"(A) the deduction allowed by section 1202 (relating to deduction for capital gains), and

"(B) the sum of any amounts received during the taxable year which are excluded from gross income under section 103 (relating to interest on certain governmental obligations).

"(4) Insurance.—In the case of an insurance contract under which amounts are payable for other than medical care referred to in subparagraphs (A) and (B) of paragraph (2)—

"(A) no amount shall be treated as paid for insurance to which paragraph (2)(C) applies unless the charge for such insurance is either separately stated in the contract, or furnished to the policy holder by the insurance company in a separate statement,

"(B) the amount taken into account as the amount paid for such insurance shall not exceed such charge, and

"(C) no amount shall be treated as paid for such insurance if the amount specified in the contract (or furnished to the policyholder by the insurance company in a separate statement) as the charge for such insurance is unreasonably large in relation to the total charge under the contract.

Subject to the limitations of this paragraph, premiums paid during the taxable year by a taxpayer before he attains the age of 65 for insurance covering medical care for the taxpayer, his spouse, or dependents after the taxpayer attains the age of 65 shall be treated as expenses paid during the taxable year for insurance which constitutes medical care (within the meaning of subparagraphs (A) and (B) of paragraph (2)) if premiums for such insurance are payable (on a level payment basis) under the contract for a period of 10 years or more until the year in which the taxpayer attains the age of 65 (but in no case for a period of less than 5 years).

"(c) ELECTION TO APPLY CREDIT TO PRECEDING YEAR.—

"(1) IN GENERAL.—Notwithstanding the provisions of subsection (a), at the election of the taxpayer, medical expenses paid or incurred in a taxable year may be claimed as a credit against the tax imposed by this chapter for the preceding taxable year.

"(2) LIMITATION.—The amount of the credit claimed under paragraph (1) for the taxable year preceding the taxable year in which the medical expenses were paid or incurred may not exceed the amount of the credit—

"(A) allowable for the preceding taxable year, or

"(B) allowable for the taxable year in which the medical expenses were paid or incurred."

(b) PAYMENTS TO INDIVIDUALS WHOSE CREDITABLE EXPENSES EXCEED THEIR TAX LIABILITY.—

(1) Section 6401(b) of the Internal Revenue Code of 1954 (relating to excess credits) is amended—

(A) by inserting after "earned income credit)" the following: ", 44B (relating to medical expenses),"; and

(B) by striking out "sections 31, 39, and 43" and inserting in lieu thereof "sections 31, 39, 43, and 44B".

(2) Section 6102(a)(4) of such code (relating to assessment authority) is amended—

(A) by striking "or 43" in the caption of such section, and inserting in lieu thereof "43, or 44B", and

(B) by striking out "or section 43 (relating to earned income)" and inserting in lieu thereof ", section 43 (relating to earned income), or section 44B (relating to medical expenses)".

(c) Taxpayer Must File Return to Claim Credit.—Section 6012(a) of the Internal Revenue Code of 1954 (relating to persons required to make returns of income) is amended—

(1) by striking out "and" at the end of paragraph (5),

(2) by inserting "and" after the semicolon at the end of paragraph (6), and

(3) by inserting after paragraph (6) the following new paragraph:

"(6) Every individual who has attained the age of 18 years and who claims the credit allowed by section 44B;".

(d) Repeal of Deduction for Medical Expenses.—

(1) Repeal.—Section 213 of the Internal Revenue Code of 1954 (relating to medical, dental, etc. expenses) is repealed.

(2) Technical amendments.—

(A) Subsection (a) of section 104 of such Code (relating to compensation for injuries or sickness) is amended by striking out "deductions allowed under section 213 (relating to medical, etc., expenses)" and inserting in lieu thereof "credits allowed under section 44B (relating to medical expenses)".

(B) Subsection (b) of section 105 of such Code (relating to amounts received under accident and health plans) is amended—

(i) by striking out "deductions allowed under section 213 (relating to medical, etc., expenses) and inserting in lieu thereof "credits allowed under section 44B (relating to medical expenses)", and

(ii) by striking out "section 213(a) (relating to medical, dental, etc., expenses)," and inserting in lieu thereof "section 44B(a) (relating to medical expenses)".

(D) The table of sections for part VII of subchapter B of chapter 1 of such Code is amended by striking out the item relating to section 213.

(e) COORDINATION WITH CHILD CARE CREDIT.—Section 44A of the Internal Revenue Code of 1954 (relating to expenses for household and dependent care services necessary for gainful employment) is amended by redesignating subsection (g) as subsection (h) and by inserting after subsection (f) the following:

"(g) EXCLUSION OF CERTAIN AMOUNTS.—Any expense allowed as a credit under section 44B shall not be treated as an employment related expense under this section.".

(f) CLERICAL AMENDMENTS.—The table of sections for such subpart is amended by inserting after the item relating to section 44A the following:

"SEC. 44B. MEDICAL EXPENSES.".

(g) EFFECTIVE DATE.—The amendments made by this section apply to taxable years beginning after December 31, 1979.

PART B—REGULATIONS

SEC. 211. (a) The Secretary of the Treasury and the Secretary of Health, Education, and Welfare shall jointly promulgate within 12 months following the date of the enactment of this Act such detailed regulations, forms, and other documentation as may be necessary to—

(1) prevent fraudulent claims for credits or rebates of medical expenses as provided under this title, and

(2) provide for timely payments to individuals claiming a credit or rebate pursuant to this title.

PART C—TERMINATION OF THE CATASTROPHIC PROTECTION TAX CREDIT

SEC. 221. (a) The provisions of this title shall terminate on December 31, 1982.

By Mr. SCOTT:

S.J. Res. 40. A joint resolution to authorize and request the President to issue a proclamation designating May 13 of each year as "American Business Day"; to the Committee on the Judiciary.

Mr. SCOTT. Mr. President, I am introducing today a joint resolution to authorize and request the President of the United States to proclaim May 13 of each year as "American Business Day."

Ours is a nation with an economy that provides very well for its 216 million citizens, and said to have assets of $6.2 trillion or $28,600 for each citizen. It should be remembered that our country was in the beginning a colony sponsored by an English trading company, and that private initiative has produced a standard of living that is truly the envy of the world.

New ideas, inventions, machines and technology, new ways of making more and better goods and services for our people—these are the bounty of our free enterprise system.

A similar resolution introduced in the 94th Congress, was reported favorably by the Judiciary Committee, passed by the Senate but the House failed to act upon it prior to adjournment. While the Senate-passed version limited the observance of an "American Business Day" to May 13, 1976, it would appear that the contributions made by the American business community deserve recognition each year.

Mr. President, I ask unanimous consent that the text of the joint resolution be printed at this point in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 40

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue annually a proclamation designating May 13 of each year as "American Business Day", and calling upon the people of the United States and interested groups and organizations to observe such day with appropriate ceremonies and activities.

ADDITIONAL COSPONSORS

S. 4

At the request of Mr. DOLE, the Senator from Delaware (Mr. BIDEN) was added as a cosponsor of S. 4 to amend the Internal Revenue Code with respect to certain disability pay.

S. 47

At the request of Mr. STAFFORD, the Senator from New Mexico (Mr. DOMENICI) was added as a cosponsor of S. 47, to allow mental health services to be covered under medicaid and medicare.

S. 104

At the request of Mr. INOUYE, the Senator from Vermont (Mr. LEAHY) was added as a cosponsor of S. 104, to amend the Social Security Act.

S. 175

At the request of Mr. SCHWEIKER, the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of S. 175, to provide a special program of financial assistance to Opportunities Industrialization Centers and to other national community based organizations.

S. 258

At the request of Mr. RIBICOFF, the Senator from Maryland (Mr. SARBANES) was added as a cosponsor of S. 258, the Children and Youth Camp Safety Act.

S. 384

At the request of Mr. HATHAWAY, the Senator from South Carolina (Mr. HOLLINGS) was added as a cosponsor of S. 384, the Commercial Fisheries Improvement Fund Act of 1977.

S. 528

At the request of Mr. WILLIAMS, the Senator from Alaska (Mr. GRAVEL) was added as a cosponsor of S. 528, relating to collective bargaining contracts.

S. 657

At the request of Mr. FORD, the Senator from Maryland (Mr. MATHIAS) was added as a cosponsor of S. 657, Earth Resources and Environmental Information Systems Act of 1977.

S. 772

At the request of Mr. BARTLETT, the Senator from Idaho (Mr. MCCLURE) was added as a cosponsor of S. 772, to amend section 1011(d) of the Tax Reform Act of 1976.

S. 834

At the request of Mr. SCHWEIKER, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 834, to amend the Internal Revenue Code of 1954 to permit a taxpayer to deduct, or to claim a credit for, amounts paid as tuition to provide education for himself, or his spouse, or for his dependents.

S. 926

At the request of Mr. CLARK, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 926, to provide for the public financing of primary and general elections for the U.S. Senate.

S. 942

At the request of Mr. EAGLETON, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 942, a bill to amend title II of the Social Security Act to reduce from 20 to 10 years the period of time that a divorced woman's marriage to an indivdiual must be lasted for her to qualify for wife's or widow's benefits on the basis of the wages and self-employment income of such individual.

S. 982

At the request of Mr. THURMOND, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 982, to amend the Internal Revenue Code to provide that an unmarried individual without any dependents who owns or is purchasing his principal residence shall be treated as a head of household for purposes of the Code.

SENATE RESOLUTION 110

At the request of Mr. NELSON, the Senator from West Virginia (Mr. ROBERT C. BYRD), the Senator from Alabama (Mr. ALLEN), the Senator from Massachusetts (Mr. BROOKE), the Senator from New Jersey (Mr. CASE), the Senator from Rhode Island (Mr. CHAFEE), the Senator from Florida (Mr. CHILES), the Senator from Ohio (Mr. GLENN), the Senator from Colorado (Mr. HASKELL), the Senator from Montana (Mr. METCALF), the Senator from Georgia (Mr. NUNN), the Senator from Rhode Island (Mr. PELL), and the Senator from Tennessee (Mr. SASSER) were added as cosponsors of Senate Resolution 110, providing for a Code of Official Conduct for the Senate.

SENATE RESOLUTION 121—ORIGINAL RESOLUTION REPORTED WAIVING CONGRESSIONAL BUDGET ACT WITH RESPECT TO S. 1025

(Referred to the Committee on the Budget.)

Mr. WILLIAMS, from the Committee on Banking, Housing, and Urban Affairs, reported the following original resolution, which was referred to the Committee on the Budget:

S. RES. 121

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 1025. Such waiver is necessary because the need for the additional funds arose after May 15, 1976. The supplemental request, transmitted to Congress on January 18, 1977, covers the pay increase which went into effect in October 1976, and additional funds needed to complete the modernization of the automated data processing and record system of the Securities and Exchange Committee.

Mr. WILLIAMS. Mr. President, I am today reporting a resolution requesting a waiver of section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1025.

SENATE RESOLUTION 122—SUBMISSION OF A RESOLUTION RELATING TO PARLIAMENTARY ELECTIONS IN THE REPUBLIC OF INDIA

(Referred to the Committee on Foreign Relations.)

Mr. MOYNIHAN submitted the following resolution, which was referred to the Committee on Foreign Relations:

S. RES. 122

Whereas, Americans believe that support for representative institutions and individual rights is an important objective of the foreign policy of the United States;

Whereas, the effective functioning of democratic societies in other parts of the world is of deep and permanent interest to the United States and its allies;

Whereas, the largest democratic election in history, involving more than 200 million citizens casting their free ballot, was recently held in the Republic of India: Now, therefore, be it

Resolved,

SEC. 1. That the Senate congratulate the free people of the Republic of India for the successful holding of their recent parliamentary elections.

SEC. 2. That the Secretary of the Senate is hereby directed to provide a copy of this resolution to the Secretary of State for transmittal to the Acting President of India.

SENATE CONCURRENT RESOLUTION 15—SUBMISSION OF A CONCURRENT RESOLUTION TO REDUCE THE RISK OF CHEMICAL AND BIOLOGICAL WARFARE

(Referred to the Committee on Foreign Relations.)

Mr. WEICKER submitted the following concurrent resolution:

S. CON. RES. 15

Resolved by the Senate (the House of Representatives concurring), That the Congress finds that—

(1) the policy of the United States is not to make first use of lethal and incapacitating chemical weapons in war;

(2) in 1972 the United States signed the Convention on the Prohibition of the Development, Production, and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction, and such Convention declared that "[e]ach State Party to the Convention affirms the recognized objective of effective prohibition of chemical weapons and, to this end, undertakes to continue negotiations in good faith with a view to reaching early agreement on effective measures for the prohibition of their development, production, and stockpiling and for their destruction";

(3) in 1975 the United States ratified the Geneva protocol prohibiting the use of chemical and biological weapons in warfare; and

(4) the United States supports the continuing negotiations being conducted by the Conference of the Committee on Disarmament toward this end of an effective chemical weapons treaty.

SEC. 2. It is the sense of the Congress that—

(1) the President should declare a moratorium of three years on the further United States manufacture of lethal and incapacitating nerve and mustard agents and the so-called binary agents;

(2) the President, as a sign of good faith to the world, should order the destruction of three thousand tons of lethal chemical mustard agents from existing United States stockpiles over the three years of such moratorium, and invite interested international organizations, such as the Conference of the Committee on Disarmament to send delegations to view the destruction process;

(3) the President should invite the Union of Soviet Socialist Republics and other nations which possess quantities of lethal chemical weapons to indicate their sincerity in seeking a chemical weapons treaty by following the example of the United States, and should urge the Third World Nations to refrain from seeking the introduction of chemical weapons into their arsenals; and

(4) the President should urge th participants of the Conference of the Committee on Disarmament to rapidly conclude an international treaty banning the manufacture and possession of lethal chemical weapons. Such a treaty, in order to be meaningful, should provide for the destruction of existing stocks and production facilities over a specified period of time. Such a treaty must also provide independent, international procedures for verifying the disposal of stocks and facilities, investigating and challenging suspect activities, and establishing on-site inspections.

Mr. WEICKER. Mr. President, today I am introducing, along with Congressman SCHULZE, a joint resolution urging the destruction of chemical weapons stockpiles and the banning of future production of chemical weapons by all nations of the world.

This is the first major congressional initiative calling for the reduction of chemical weapons stockpiles. It places Congress on record as favoring an international treaty to control these weapons and challenges the Soviets to initiate similar weapons reduction. This proposal sets as the highest priority for the nations of the world the question of weapons control and disarmament.

Chemical weapons are easier to produce, hide and use than other weapons. The details of the chemistry of chemical agents is common knowledge. The technology for producing chemical weapons

is available. This available technology along with existing chemical weapons stockpiles, poses the danger of chemical weapon proliferation throughout the nonnuclear world community. And, the frightening possibility exists that politically motivated; well-financed terrorists organizations can secure lethal chemical weapons and create global havoc. The importance of this pending threat cannot be underestimated.

Chemical weapons have no limits. They can be used any time, anywhere, under any circumstances. They do not discriminate between soldiers or civilians—innocent men, women, or children.

The United States must take the leadership role in seeking an arms control agreement on chemical weapons and force the Soviet Union to reveal its true position. Mr. President, I believe this resolution can set an example for the world that the United States is indeed concerned with the future of chemical weapons.

Senate Concurrent Resolution 15 calls for a 3-year moratorium on the production and stockpiling of new chemical agents, including binary, and on the construction of facilities and equipment related to the production of these agents. Furthermore, it would urge the President to order the destruction of 3,000 tons of mustard gas from our current stockpiles. By taking such initiatives, the United States will demonstrate to the world community our resolve to reach a meaningful international treaty on chemical weapons. Hopefully, these steps will help to move the current negotiations of the Conference on Chemical Disarmament off dead center in Geneva.

Both the United States and the Soviet Union, through the ratification of the Geneva Protocol, have agreed not to use chemical and biological weapons in war. Thus, in the chemical area, we have already achieved a general basis for understanding. No type of warfare evokes such horror and revulsion as the use of chemical weapons. Their use is an affront to humanity; it is abhorrent to the civilized world. Today, Congressman SCHULZE and I are calling on the United States to take some tangible first steps in the hopes of achieving an international agreement which would eliminate an entire class of weapons, namely chemical agents.

Mr. President, although chemical warfare has been practiced since the days of the early Greeks, its sophistication has taken on frightening new dimensions in recent years. With the advent of the new fail-safe "binary" weapons, production, transportation and stockpiling of chemical agents would become safer and easier. The binary weapons are essentially two nonlethal weapons which would be produced, stored, and shipped separately. They only become lethal weapons when they combine at some point during their flight to a target.

In fiscal year 1976, the Congress rejected a Defense Department's $8.8 million request for production facilities for the 155mm binary chemical artillery projectile and the Navy's $1.6 million request for the development of a binary chemical nerve agent bomb, referred to as Big Eye. According to recent press reports, the Defense Department will once again seek funding for this particular project.

Despite the obvious advantages of these weapons, placing a moratorium on the production of binaries and their associated facilities will have an important diplomatic impact on the nations watching this development. No nation could seriously believe that we were sincere in searching for an international treaty banning such weapons if we merely throw out obsolete weapons and replace them with new, improved ones. Also, the construction of new facilities or the modernization of existing ones to handle future binary production, would only be viewed as the preliminary step toward a new round of chemical stockpiling.

Another major provision of this resolution calls for an onsite inspection of the chemical destruction process by invited guests and/or groups. In order to gain a wide range of world opinion in support of this program, it is contemplated that a delegation from the CCD as well as other concerned international organizations, such as the Pugwash Society, would be invited to review the destruction process and facility.

The Weicker-Schulze resolution would include a challenge to the Soviet Union to initiate the same type of reductions over the same period of time and under similar conditions as the one called for in the United States. This would be the least our opponents could do to indicate their sincerity in seeking an international treaty banning chemical weapons. Along with this, the United States would call on the Third World nations to refrain from seeking the introduction of chemical weapons into their arsenals.

The final provision of this resolution includes a plea to the world body to urge the members of the CCD to rapidly conclude an international treaty banning the manufacture and possession of lethal chemical weapons by all nations. This treaty should seek the complete prohibition of the development, production, acquisition, stockpiling or transfer of chemical warfare agents and munitions. It should also provide for the destruction of existing stocks and production facilities in a phased manner over a specified period of time. In this respect, there must be provided a process of verification of the disposal of stocks and facilities through independent, international procedures. And finally, the treaty must establish an international mechanism for investigating suspicious activities, including provisions for challenge and onsite inspections.

There is no doubt that chemical weapons are a byproduct of our highly sophisticated science and technology. But production of nerve gas, mustard gas, binary weapons and the rest is clearly a technology gone mad. It is not the purpose of genius to cavort with insanity.

Mr. President, let the United States take the first vital step. Let us limit our chemical weapons stockpiles. Let us halt this mockery of our own human potential.

AMENDMENTS SUBMITTED FOR PRINTING

FOOD AND AGRICULTURE ACT OF 1977—S. 275

(Ordered to be printed and referred to the Committee on Agriculture, Nutrition, and Forestry.)

Mr. PERCY (for himself, Mr. McGOVERN, and Mr. STEVENSON) submitted an amendment intended to be proposed by them jointly to S. 275, a bill to provide price and income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices, and for other purposes.

EMERGENCY DROUGHT ASSISTANCE WATER TRANSPORTATION ACT

Mr. PERCY. Mr. President, I am submitting today an amendment to S. 275 to help alleviate some of the problems facing millions of people in drought-stricken areas throughout the United States. This amendment would authorize the U.S. Secretary of Agriculture tc pay up to three-fourths of the actual cost of transporting a maximum 90-day supply of water from areas in which water is in plentiful supply to rural residents and livestock producers in drought-striken aeras.

It has become apparent from working with the major disaster programs such as the Federal crop insurance program and the disaster payments program—DDP—established by the Agriculture and Consumer Protection Act of 1973, that present disaster programs are not designed to provide adequate aid for prolonged natural disasters like drought.

The State of Illinois is suffering from an extreme shortage of water, not only on farms but also in rural towns. In January 1977, some 24,100 families in 49 counties were hauling water at a cost of almost $1 million. Currently, the water shortage in Illinois has reached disastrous proportions in at least 37 counties. The effects of the drought are of such severity and magnitude that effective response is beyond the capabilities of the State and the affected local governments.

At present, over 23,000 Illinois farmers are hauling water for family and livestock use. This burden has steadily affected more farmers, as the shallow wells continue to run dry. Some 77 public water systems in Illinois face severe supply problems. There is a shortage of potable water for cooking and drinking and also for use in sanitation, sewerage, and fire suppression. Many public water systems are, therefore, unable or unwilling to sell water to farmers. As a result, farmers must haul water from further distances at greater expense.

Livestock producers have been particularly hard hit by the drought. They are selling off their beef and swine because they can no longer afford to buy and haul water. Cattlemen have been consistently losing money on their herds over the past 3 years. At times the losses have been as much as $100 a head. Although at some time in the future beef prices are going to have to rise as supplies de-

cline, thereby allowing cattlemen to recoup their losses, it is not at all clear that they will be able to sustain this added financial burden caused by the drought.

Farmers, livestock producers, and rural residents in drought stricken areas need financial relief. I urge my colleagues to support this amendment.

ECONOMIC STIMULUS APPROPRIATIONS, 1977—H.R. 4876

AMENDMENT NO. 123

(Ordered to be printed and to lie on the table.)

Mr. NELSON submitted an amendment intended to be proposed by him to H.R. 4876, an act making economic stimulus appropriations for the fiscal year ending September 30, 1977, and for other purposes.

SEWAGE TREATMENT PLANT CONSTRUCTION PROGRAM

Mr. NELSON. Mr. President, I intend to offer an amendment to H.R. 4876, the economic stimulus appropriations bill, to restore the $300 million recommended by the House and deleted by the Appropriations Committee for the section 206 (a) sewage treatment plant construction program.

In 1966 and again in 1972, the Congress and the President made a legal and moral obligation to cities to reimburse them for up to 55 percent of the construction costs of treatment works started between 1966 and 1972, if the cities used their own funds prior to the availability of Federal matching funds. With this promise, over 5,300 projects were started. Yet, 11 years after this commitment was made, the Congress has not fully reimbursed the eligible communities.

The Environmental Protection Agency now estimates that $30 million will eliminate the outstanding Federal obligation. Based on this estimate, the House included $300 million in the bill they sent to the Senate.

It is important to note that the second concurrent budget resolution specifically envisions this additional appropriation.

The cities have been waiting over a decade for this money. They should have to wait no longer. If these funds are appropriated, local moneys will be freed and the cities will have greater flexibility in managing their budgets.

I ask unanimous consent that the text of my amendment and a table showing how this language affects each State be printed in the RECORD.

There being no objection, the amendment and table were ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 123

On page 2, after line 18, insert the following:

ENVIRONMENTAL PROTECTION AGENCY

CONSTRUCTION GRANTS

For payment of reimbursement claims pursuant to Section 206(a) of the Federal Water Pollution Control Act Amendments of 1972 (PL 92-500), as amended, $300,000,000, to remain available until expended.

AMENDMENT NO. 136

(Ordered to be printed and to lie on the table.)

Mr. SCHWEIKER (for himself, Mr. PROXMIRE, and Mr. GARN) submitted an amendment intended to be proposed by them jointly to H.R. 4876, supra.

CODE OF OFFICIAL CONDUCT—SENATE RESOLUTION 110

AMENDMENT NO. 124

(Ordered to be printed and to lie on the table.)

Mr. DURKIN (for himself and Mr. BIDEN) submitted an amendment intended to be proposed by them jointly to amendment No. 65 to Senate Resolution 110, to establish a code of official conduct for Members, officers, and employees of the U.S. Senate, and for other purposes.

AMENDMENT NO. 125

(Ordered to be printed and to lie on the table.)

Mr. JOHNSTON submitted an amendment intended to be proposed by him to Senate Resolution 110, supra.

AMENDMENT NO. 126

(Ordered to be printed and to lie on the table.)

Mr. HANSEN submitted an amendment intended to be proposed by him to Senate Resolution 110, supra.

AMENDMENTS NOS. 127 THROUGH 132

(Ordered to be printed and to lie on the table.)

Mr. JAVITS submitted six amendments intended to be proposed by him to Senate Resolution 110, supra.

AMENDMENT NO. 133

(Ordered to be printed and to lie on the table.)

Mr. PERCY submitted an amendment intended to be proposed by him to Senate Resolution 110, supra.

Mr. PERCY. Mr. President, under the amendment I am submitting herewith, professional services would be treated like all other forms of outside earned income such as honoraria. Specifically, the amendment deletes the prohibition against the provision of professional services for compensation in rule XLV, but retains the provisions prohibiting outside activities which would conflict with the conscientious performance of official duties. In addition, it retains the provision requiring staff to report to their supervisor on any outside activities and the amendment adds a new provision requiring Senators to report to the Secretary of the Senate when they commence and terminate any such activities. Finally, under the amendment, income received from providing professional services would be subject to the 15 percent of income limitation which applies to all other outside earned income.

Thus, while the amendment removes the prohibition against providing professional services for compensation, it limits the total amount of income which can be received from such activities and insures adequate disclosure.

Mr. President, I ask unanimous consent that the text of this amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 133

On page 26, line 3, strike out "and";

On page 26, line 6, strike out "works." and insert in lieu thereof "works, and";

On page 26, between lines 6 and 7, insert the following:

"(3) compensation for professional services.";

On page 27, line 13, insert "(a)" immediately after "3.";

On page 27, between lines 22 and 23, insert the following:

"(b) No Member shall engage in any outside business or professional activity or employment for compensation unless he reports in writing to the Secretary of the Senate upon the commencement and the termination of such activity or employment, including a description of the nature of such activity or employment. Any such report shall be made available for public inspection and copying.";

On page 28, strike out lines 12 through 19, and renumber paragraphs 7 through 12 of proposed rule XLV as paragraphs 6 through 11, respectively;

On page 54, line 18, strike out "9, and 10" and insert in lieu thereof "and 9".

AMENDMENT NO. 134

(Ordered to be printed and to lie on the table.)

Mr. STEVENS submitted an amendment intended to be proposed to Senate Resolution 110, supra.

Mr. STEVENS. Mr. President, my previous comments on this resolution have dealt with the need to provide flexibility for Members of the Senate in the conduct of their official duties and to establish a system under which the conduct of a Senator's official duties are open to full public scrutiny. The best way to accomplish this is to provide for full disclosure of gifts which the Senator accepts under the circumstances defined by proposed rule 43 of Senate Resolution 110. I think that full public disclosure would more than adequately protect the public from any abuses of Senatorial office which might otherwise occur. However, I understand the goal of the Special Committee of Official Conduct in recommending a specific set of limitations pertaining to gifts accepted by Senators.

In a previous statement, I explained the difficulties which the adoption of this rule as reported would create in my home State. There simply are too many situations in which transportation, food, and other services must be supplied by parties who under the proposed rule would be considered as having an interest in affecting legislation before the Senate. Adoption of this rule would prevent me from traveling in many places throughout the State of Alaska because some of these locations are serviced only by private air and ground facilities. In essence, rule 43 as proposed will prevent me from doing the job I was elected to do and deprive me of the ability to function properly as a Member of the U.S. Senate.

My State is not unique, and I know that the problems which I speak of are shared by other Senators. All of us share the need to obtain full knowledge of problems facing our States and still maintain integrity and partiality required of us by the office in which we serve. In final analysis, our success at this endeavor will be judged by our constituency. They will decide whether we have served them or special interest groups, the influence of which proposed rule 43 has been designed to reduce or eliminate.

Because the final decision rests with the electorate, it makes sense to allow each Senator to present his individual case to his own constituency. He serves at their pleasure, and he is ultimately answerable only to them.

Today, I submit an amendment which provides an alternative to the limitation provisions established by rule 43 of the proposed official code on conduct. This amendment would act as an alternative to the limitation provisions of rule 43 and would permit a Member, officer, or employee of the Senate to comply with rule 43 by making a regular public disclosure of any gift, favor, service, or anything of value exceeding $35 which has been accepted by him, his spouse, or a dependent from a person, business, or other entity under circumstances which he knows are intended to affect the present and future performance of his duties. The amendment requires the disclosure to include the identity of the contributor, the nature of the gift, and the date and location of the receipt of such gifts. Furthermore, each supervisor as defined by the proposed code of conduct shall be responsible for the review of and must sign disclosure statements filed by an employee under his supervision.

As an alternative to the limitation provisions of rule 43, Members of the Senate are given the opportunity to choose the particular situation which suits their working situation best. In no case is one system considered to be superior to the other. Rather, the two together provide flexibility and safeguards to insure that the public has the opportunity to decide whether they approve of the manner in which their own Senators conduct their official business.

This is what our goal should be. The voters elect us and the voters should be provided with all relevant information to decide how well we are serving them. This amendment will do just that.

AMENDMENT NO. 135

(Ordered to be printed and to lie on the table.)

Mr. MUSKIE submitted an amendment intended to be proposed by him to Senate Resolution 110, supra.

NOTICES OF HEARINGS

AGRICULTURE AND RELATED AGENCIES APPROPRIATIONS SUBCOMMITTEE

Mr. EAGLETON. Mr. President, I wish to announce that the Appropriations Subcommittee for the Department of Agriculture and Related Agencies has scheduled hearings for Members of Congress and public witnesses for March 28, 29, and 30. By that time, it is anticipated that all of the Federal witnesses will have been heard, and these hearings will conclude the hearings on the appropriations bill for fiscal 1978.

Anyone wishing to present or submit testimony for the appropriations bill for fiscal 1978 should contact the subcommittee staff, room 1320, Dirksen Senate Office Building, telephone number 224–7272, and the necessary arrangements will be made.

ADDITIONAL STATEMENTS

ENERGY OBSTRUCTIONISTS

Mr. BARTLETT. Mr. President, the president of the U.S. Industrial Council, Mr. John G. Hutchens, has some timely and accurate comments for us in the USIC Bulletin of February 15, 1977. That my colleagues and the public might benefit from it, I ask unanimous consent that Mr. Hutchens' column, titled "Energy Obstructionists," be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

ENERGY OBSTRUCTIONISTS

It is very important that the American people realize that the energy crisis they are facing could have been avoided if the counsel of businessmen had been heeded. Unfortunately, energy obstructionists in Congress, the media, and environmental groups have been successful in recent years in blocking essential energy projects.

Since the early 1970s, businessmen have urged rapid development of new energy sources, including opening of new surface coal mines, a speed-up of nuclear power production, a prompt start on offshore drilling in the Atlantic, and deregulation of natural gas prices. In every case, however, energy obstructionists threw up massive roadblocks.

The energy obstructionists are still at work, despite the severity of this winter. *Access To Energy* reports that "A massive hydroelectric project in Maine is to be abandoned because it would uproot 30 specimens of the furbish lousewort, a small plant so named because sheep were thought to get infested with vermin after feeding on it." *Access To Energy* also reports that "400 construction workers were laid off last month at the site of the $2 billion Seabrook nuclear power plant in New Hampshire after some petty EPAcrat reversed a previous decision approving the world's most complex cooling system."

In other words, the people who gave this country its energy shortage are still at work, sounding off in Congress, appearing on radio and TV, writing editorials and drafting letters of environmental protest. It is important to call the roll and point a finger of blame. For example, only a year ago U. S. Rep. John Moss (D-Calif.) said that the gas shortage "has been overstated dramatically by deregulation advocates."

What's most needed is real presidential leadership on the energy front—not public relations gestures and gimmicks. Those who specialize in developing political images can admire President Carter's decision to give his first fireside chat in front of a White House fireplace while dressed in a warm sweater. Such gestures won't create new sources of energy, however. Turning off the outside lights at the White House and the Washington monument won't provide fuel needed to reopen schools and factories in the Middle West.

If Mr. Carter is to meet the test of presidential leadership, he must tell the Congress that permanent deregulation of natural gas prices is the only way to boost production.

Mr. Carter also must restrain the Environmental Protection Agency which cares not a whit for the economic protection of the American people. He must issue orders to the EPA to facilitate, not hinder, the opening of new coal mines. The same type instructions must go to officials who have delayed licensing of nuclear power plants. While other countries are building nuclear power plants in five or six years, American electric utilities must plan for a 10-year development time.

These are imperatives of authentic presidential leadership, given the situation facing the country today. If Mr. Carter won't act on them, the American people will suffer cruelly in the years to come.

VOCATIONALIZING THE WORK EXPERIENCE PROGRAM: THE MINNESOTA STORY

Mr. HUMPHREY. Mr. President, one of the most successful work-experience programs in this country is conducted by the public schools in my own State of Minnesota. This program permits secondary school students in the 10th through 12th grades who have discipline, absenteeism, or grade problems to spend part of each school day working on a job.

Participating youths receive personalized counseling, extensive assistance in choosing a job, and a daily class on occupational relations which covers career planning, applications and interviews, conduct on the job, human relations, employee-employer relations, and other subjects needed for work. There are group guidance sessions, in which participants are encouraged to keep up their grades and where they analyze their strengths and weaknesses.

The jobs—such as waiter or waitress, gas station attendant, dishwasher, jobs in light assembly work, supermarket stock work—provide the opportunity to gain work experience and explore different kinds of jobs and careers.

This program is outlined in an article by Donald Spotts, work experience coordinator for the Centennial School District, Circle Pines, Minn., entitled "Vocationalizing the Work Experience Program—The Minnesota Story."

As Spotts points out, one side benefit of this program is that the jobs provide the best incentive for kids to stay in school and upgrade their educations and themselves.

The Minnesota story is an excellent example of the kinds of work-study programs that would be established nationwide under the Comprehensive Youth Employment Act of 1977, which Senator JAVITS and I introduced on January 11. This bill, if enacted, would set up a work experience for inschool youth program under the CETA prime sponsors that would provide school systems with the funds needed to develop work-study programs in secondary schools. These programs would help young people gain work experience and develop occupational information and would make their educational experiences more relevant.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VOCATIONALIZING THE WORK EXPERIENCE PROGRAM: THE MINNESOTA STORY

(By Donald Spotts)

It's time to tell the story of Minnesota's involvement in work experience programs. In Minnesota, we think they are some of the best programs available for potential dropouts. Our aim is to take students out of unstable school situations, place them in a work experience program, work with them individually, and eventually get them into a secondary vocational education program.

We also have a work experience career exploration program for 14- and 15-year-olds (mostly ninth graders), but this story is about those in the work experience program, students 16 years of age and older in the tenth through twelfth grades. Candidates are students with discipline and behavioral problems, absenteeism, total lack of interest in school, incomplete or F grades, and those who have financial or social problems. Some, many, or all of these problems qualify a student for the program.

To identify these potential dropouts, we use a staffing method involving the teacher-coordinator, principals, counselors, teachers, and interested laymen in the community (probation officers, police, clergy, etc.). Since many students qualify, the staff meets to decide which students have the greatest need. Fifteen to 25 students are usually the maximum for any coordinator. The number is kept fairly small, primarily because of the time and attention devoted to every student. Students, themselves, can request admittance by completing an application blank stating their reasons for wanting to get into the program.

Minnesota now has 200 schools in this work experience program, which started with seven schools in 1969.

ACADEMICS PLUS EMPLOYABILITY

Keep in mind that there is some variation in the program throughout the state, but here is the general pattern:

Work experience students have their class schedules rearranged so that they can spend at least two hours a day working on a job (or seeking a job). Academic subjects include English, history, and an elective, usually a math class. In some schools the schedule will include certain required classes such as science or physical education.

All work experience students are enrolled in a daily, 55-minute occupational relations class. Typical subjects covered are career planning, application and interviewing procedures, human relations, employer-employee relations, conduct on the job, income taxes, unions, legal considerations, etc. Whatever the typical worker might encounter on the job is grist for the mill. The class is flexible. Time can be taken out to help any student who is having trouble with his academic subjects. Because the occupational relations class is small, a close relationship builds up between the students and their coordinator, who also acts as counselor. His interest and concern gives the student someone who will listen to his problems and help him make decisions. Through this relationship and group guidance sessions, the students are encouraged to maintain passing grades in their other subjects. It also helps them to analyze their strengths and weakness and develop self-confidence. Another plus is, of course, assistance in selecting an occupation.

Many work experience coordinators are on extended teaching contracts that include three working weeks before school starts. They use that time to locate job sites, contact employers, and set up training stations. Besides teaching the occupational relations class, the coordinator maintains records, gets work permits, visits employers and parents frequently, and serves as liaison between the student and the school, home, and employer.

TROUBLE ON THE JOB

Not all students get jobs. Some have to try many times before they land the right one, and some get fired during the year. Sometimes the coordinator can lose a training station because of the performance of his students.

Several options are open to the coordinator in helping the student who has trouble getting or holding a job. He can pull the student back into the occupational relations class for more sessions directed toward changing his behavior, talk to his employer, step up parental visits, or send the student on more interviews. Or he can seek help from the school's guidance counselor and other teachers.

The jobs that students usually get are those of waitress, waiter, bus-boy, dishwasher, cook's helper, gas station attendant, car wash, sod helper, jobs in light assembly work, or stock and carryout jobs in supermarkets. Part of the two-week introduction class includes intensive counseling to help the students decide what kind of employment they want. Some students claim they want any kind of job, but when you get down to counseling them, you find there are many they don't want.

So it's important to make the students understand that the purpose of their jobs is not only to teach them employability skills but to help them discover what kinds of occupations are suitable for them, and just as important, what kinds are unsuitable. It doesn't take long for a student to recognize that a job such as dishwashing is really a dead end, and that the way out or up is more education and training.

STUDENT CAN'T LOSE

And that is the whole concept of the program. We take the potential dropout, change his attitude and behavior problems, encourage responsibility, and help him move into a cooperative education program or regular vocational program. Most often it works. Sometimes we keep them two years, sometimes they drop out, but whatever happens to them, they have had the advantage of a coordinator who cared—who had them in class, saw them on the job, met with their employers, and visited their families to talk about their problems.

The number of students who complete the program, transfer to co-op programs, or go back to regular school is surprisingly high. Most coordinators claim that 70 percent of their students stay in school and graduate.

AMERICAN AGRICULTURE DAY

Mr. DOLE. Mr. President, I call your attention to the fact that today—March 21, 1977—has been designated by the National Agri-Marketing Association and other farm groups as American Agriculture Day. This is a day to pause, reflect and pay homage to the several million farmers and ranchers who constitute American agriculture.

Local organizations throughout the Nation are mounting campaigns to make this day and the week ahead a memorable time for the farm community. Thousands of farm and rural people have pooled their time, talents and money in a nationwide effort that will culminate this week. From farm wives, schoolchildren, local business people, and Government representatives to teachers and the media, thousands will be involved in celebrating the achievements and contributions of American agriculture.

The purpose of Agriculture Day is to increase the awareness and visibility of agricultural producers at a time when only 5 percent of our national population consists of farmers and ranchers. The Senator from Kansas, for one, hopes that a great deal of attention may be focused on the central importance of the family farmers to the Nation's economic prosperity, to the maintenance of social

stability, and to the furtherance of our positive spiritual values.

Another purpose of Agriculture Day is to bring producers and consumers closer together in their mutual understanding and appreciation. Today a single average farmer produces enough food in one year to feed 53 consumers—three times as many as 20 years ago when there were twice as many farm workers. In the last 10 years, agricultural production has climbed 20 percent on 6 percent fewer acres. Thanks to the hard work, efficiency and ingenuity of producers, American consumers pay a lower percentage of their annual income on food than consumers in any other industrial society.

The American farmer has accomplished impressive achievements, and his story needs to be told. We can all be proud that our farmers and ranchers are the most productive in the world. Now we must make sure that the farmers and ranchers have sufficient incentive and profit to remain in production, and we must make sure that consumers and urban people understand these facts.

Mr. President, Agriculture Day comes at an appropriate time. This is the second day of spring, and the rich Earth is once again being broken to receive new seed. Those of us who celebrate Agriculture Day are also planting a seed that may one day blossom into a keener appreciation of the mutual interpendence of producers and consumers.

RULES OF THE COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Mr. TALMADGE. Mr. President, pursuant to the requirement of section 133B of the Legislative Reorganization Act of 1946, as amended, I submit herewith, and ask that they be printed in the RECORD, the Rules of the Committee on Agriculture, Nutrition, and Forestry, as adopted by the committee on Monday, March 21, 1977.

There being no objection, the rules were ordered to be printed in the RECORD, as follows:

RULES OF THE COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

1. Regular meetings shall be held on the first and third Wednesday of each month when Congress in is session.

2. Voting by proxy authorized in writing for specific bills or subjects shall be allowed whenever a majority of the committee is actually present.[1]

3. To assure the equitable assignment of members to subcommittees, no member of the committee will receive assignment to a second subcommittee until, in order to seniority, all members of the committee have chosen assignments to one subcommittee, and no member shall receive assignment to a third subcommittee until, in order of seniority, all members have chosen assignments to two subcommittees.

4. Five members shall constitute a quorum for the purpose of transacting committee business: *Provided*, That for the purpose of receiving sworn testimony, a quorum of the committee and each subcommittee thereof shall consist of one member.[1]

[1] For further restrictions with respect to proxies and quorums in the reporting of measures and recommedations, see section 133(d) of the Legislative Reorganization Act of 1946, supra.

A MODERN TALE OF TWO CITIES

Mr. JAVITS. Mr. President, on February 10, 1977, our colleague, Senator MATHIAS, addressed the Student Symposium on Cities on the problems of our cities with a focus on the sunbelt versus the frostbelt areas of the country. Senator MATHIAS offers some interesting solutions and perspectives to this problem and I feel it should be brought to the attention of my colleagues.

I ask unanimous consent that the text of Senator MATHIAS' speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

A MODERN TALE OF TWO CITIES

(By Senator CHARLES MCC. MATHIAS, JR.)

I would like to congratulate the Student Symposium Committee for conceiving this program on the future of the American City and for bringing together so many of those who are actually in the frontline trenches of urban management and budget balancing. I admire them but I don't envy them.

The financial and management picture for many American cities is pretty bleak. New York—the Big Apple—Fun City—is the best example of this, so I'd like to take a moment to review details of the fiscal melodrama that starred New York two years ago.

In late 1975, the Congress worked feverishly to hammer out a Seasonal Financing Act for New York, while the city tottered on the verge of bankruptcy. What triggered this Congressional action was New York City's sudden inability to roll over its short term debt. Without short term—30 to 90 day—cash, the City was not going to be able to pay its employees and faced the prospect of a shut down in vital services, such as schools, hospitals, fire and police, street cleaning and trash removal.

For several months the City alternately cajoled, threatened, and begged the Federal Government to "bail it out" of its short term cash bind, while an unmoved Administration and some elements in Congress "stonewalled" New York. The stalemate was protracted and painful.

But, gradually, it began to dawn on the Congress and on most of the nation that New York's financial crisis wasn't going to go away and couldn't be ignored indefinitely. Like it or not, the nation's economy and growth rate was inextricably tied to New York and, if the bell tolled for the Big Apple, it would toll all over the land.

Spurred by visions of the financial and legal catastrophe that would follow New York's bankruptcy, Congress framed the New York City Seasonal Financial Act. This Act staved off disaster by providing New York with $2.3 billion in loans from the U.S. Treasury over a three year period. In exchange, Mayor Beame was forced to make major changes in his budget management practices and in the city's priorities. These included reducing the municipal payroll, cutting out some social service programs, putting a freeze on hiring, and improving workforce productivity.

Mayor Beame also paid dearly in terms of New York's political autonomy. Now, Big Brother Federal Government keeps a sharp, wary eye on New York's every move to be sure that its $2.3 billion is being prudently used. At regular intervals, the Mayor and the Governor of New York appear before Congressional Committees to account for their stewardship of the giant federal loan.

The brinksmanship which both the Administration and the City of New York practiced as a prelude to settling the crisis did nothing to engender mutual confidence. Both sides suffered a loss of credibility: the City's threats of impending doom never quite materialized, while the Administration's obdurate let-them-go-bankrupt policy promised a financial crisis far worse than default would bring.

Some critics considered New York City an unmanageable, unrepentant spendthrift that deserved to be punished. But more thoughtful observers discerned in the New York crisis broad implications for the economic growth and stability of the rest of the country. They realized that the problems which had come to a head in New York were by no means unique.

In fact, New York's problems are mirrored to some extent in almost all of the cities in the so-called Frostbelt. This area, which includes the Northeast, Mid-Atlantic and Great Lakes' states, is characterized as a declining region in terms of population, economic base, energy resources and income growth rates. It stands in marked contrast to the parts of the country where those same indicators reflect unprecedented growth. That region, known as the Sunbelt, generally takes in all of the South Atlantic, Mid-South, South West and Western parts of the country.

Just as New York epitomizes the problems of the Frostbelt cities, Houston, Texas, is pretty typical of the rapidly growing cities of the Sunbelt. Since 1960 Houston's population has grown by more than 40 percent. Located in oil rich country, Houston has become the darling of the so-called footloose industries—ones that don't need to be close to markets or to manufacturing plants. Knowledge-based industries, which feed off government contracts, particularly space contracts, have established themselves close to the Houston Space Flight Center. They claim their employees like the change of scenery and climate, particularly if the company has relocated from an older, big city. They say there are fewer hassles in the basics of living—better schools, less crime, lower fuel costs, lower cost of living in general.

While Houston and other Sunbelt cities are enjoying remarkable growth and prosperity these days, their sister cities in the Frostbelt are trying with varying degrees of desperation to make ends meet.

A quick statistical comparison of Houston and New York will tell us a lot about the whys and wherefores of their financial condition.

New York's population is 7.5 million; Houston's is 1.4 million.

Between 1970 and 1974, New York City lost 300,000 jobs. The manufacturing sector shrunk by 43,000 jobs annually, with the garment industry alone losing 12,000 jobs a year. Wholesaling, retailing, finance, insurance and real estate averaged combined losses of 24,000 jobs a year.

The only job growth in New York City from 1969 to 1974 was in the service and government sector which showed yearly gains of 8,800 jobs. In other words, year after year as the tax base dwindled, the government payroll grew.

From 1970 to 1973, while New York experienced a 5.3 percent decline in employment, Houston enjoyed a 17.6 percent gain in employment. Houston's unemployment rate is 5.2 percent, New York's a whopping 10.6 percent.

In 1972 New York City had 12.2 municipal workers for every thousand residents, Houston had 7.2 workers.

The high number of New York City workers is partially explained by the variety of services New York provides its residents and commuters, which Houston does not. For example, New York employs thousands of workers to police public housing and the transit system, to operate the subways, to teach college at the tuition free university and to staff city-run hospitals.

Differences in wage costs between the two

cities are also revealing. The average monthly wage for a New York City policeman in 1972 was $1,568, in Houston it was $831. But, to have a discretionary income of $6,000, a New York family must have an annual income of $27,071, while a Houston family needs only $20,000.

There is about a 20 percent difference in the cost of living between the two cities. In 1972 a family of four with an intermediate standard of living spent $2,916 for housing in New York, but only $1,629 in Houston.

Houston's population explosion produced a housing boom of unprecedented proportions. In 1975 and 1976 Houston led the nation in housing starts. 40,000 new houses were started last year. By contrast New York had only 7,840 starts last year.

Since 1970, Houston has increased from 447 square miles to 509 square miles. New York with no place to expand has remained 300 square miles in size.

Another feature of Houston which attracts business is that there are no state or city income taxes although there is a 4 percent state sales tax and a 1 percent city sales tax.

Fun City, on the other hand, socks you with city and state income taxes, a 4 percent state sales tax, a 3 percent county tax and a 1 percent city sales tax. For suburban commuters who work in the city, there is a separate one half percent payroll tax.

The per capita income in Houston in 1974 was $5,954, in New York it was $6,668.

In 1975 taxes per capita in Houston averaged $299, in New York they averaged $634.

Houston spends $3 per capita on welfare, New York spends $337. This is because the State of Texas foots most of the welfare bill while in New York State the costs are shared.

Houston spends $34 per capita for health and hospitals, New York spends $210.

Public Education in Houston costs the city an average of $237 a person, it costs New York $352. Police and fire protection cost Houston $55 a person, New York pays $103.

In all, Houston spends $541 a person on city service and New York spends $1,574, or triple the Houston outlay.

But, statistics alone cannot convey a true picture of these cities, Houston and New York—one riding high, the other floundering. It is important to put this tale of two cities into historical perspective if we are to understand the dynamics of change that govern America's cities today.

America's first towns grew up on rivers and on harbors where trading of goods and services could be centralized and where a market existed. As those port towns of Boston, New York, Philadelphia, Baltimore, Pittsburgh, Cincinnati, Charleston, New Orleans and St. Louis grew into cities, local governments invested vast amounts of capital in public services—roads, sewers, water, mass transport, fire and police protection, schools, sanitation and cultural facilities.

The railroad towns—Atlanta, Chicago, Kansas City, Denver and others—followed suit. They began with the essentials and quickly moved on to the finer things in life—to music and the performing arts, libraries, museums, opera houses, city parks, ice skating, band concerts.

Life was rich and good for most city dwellers in the first two decades of the Twentieth Century in America.

Then things changed. Inventions and new technology; rising expectations confronted by periods of recession, depression and inflation, all brought severe economic dislocation.

The gasoline engine, the horseless carriage, the telephone, the airplanes, the interstate highway system—all were agents of change. People no longer had to be in the same place to transact their business.

Pierre La Clede's fur trading center at St. Louis, with its easy river and rail access to the unsettled West, began to grow. The city's population burgeoned, suburbs appeared. The American Dream home was available on easy terms to suburbanites, courtesy of FHA and VA. Personal income rose. As in-town land became scarce and expensive, jobs shifted to the suburbs, now easily accessible by highway. People began to move out of the inner city in droves—that is, the people who could afford to move out.

The race to the suburbs in the 40's and 50's and the race to the Sun-belt cities of the 60's and 70's have much in common. Brian Berry of the University of Chicago would attribute both to an American tendency to view anything aging or old as discardable.

Professor Berry has identified several cultural traits which he believes distinguish us, as a people. They include:

Love of newness

An overwhelming desire to be near nature

Need to move freely and to occupy virgin territory

A melting pot tradition, with an upward mobility mechanism which encourages high achievers to move up, out and away from the masses.

I think Professor Berry has put his finger on some important cultural traits which dominate our behavior as a people. Our pop culture stars express and reinforce these traits by glorifying the country life style. The State of Colorado may rue the day it ever heard of John Denver and his Rocky Mountain Highs; the City of Galveston may regret its acquaintance with Glen Campbell. But those places are "in".

Now, if we could just get those fellows to do a few tunes on Cleveland or Detroit or Pittsburgh, we might be able to reverse the trend. Our older cities used to have songs written about them—Chicago, New York—I can remember some of them. But that was three decades ago.

Today, the thrill is gone—the Frostbelt cities have an image problem. I think government at all levels must share the blame for this, for not anticipating the changes that have hurt the Frostbelt cities so badly—for not planning ahead.

We let our towns and cities grow like Topsy in a haphazard way. As urban affairs expert Wilbur Thompson puts it: "We sort of woke up one day and there was Cleveland. There was Detroit, with four and a half million people, the biggest factory town on earth".

Now, if these cities offend, we cannot simply cast them from us. Any American city regardless of its geographic location is part of a national economic system. Each city provides unique goods and services to cities in other parts of the country. And, in return, receives goods and services from them.

If a city or region falters, the effect ultimately spreads throughout the system. For example, since the New York City fiasco the interest rate on municipal bond offerings generally has risen everywhere, irrespective of the varying economic health of the cities involved.

Our rapidly growing cities too need help with special problems. They are buffeted by demands from "no-growth" or "slow-growth" advocates, from environmental groups, from their burgeoning population for more and better city services and facilities, and from big businesses for land.

These Sunbelt cities will need all the help they can get in managing local resources—land or people, services or budgets. They can learn from some older cities of the Northeast whose experience in urban management has sifted out the workable from the unworkable.

Every city has lessons to teach and lessons to learn. St. Louis learned the hard way but now can teach how not to design, locate, and manage public housing. The demise of Pruitt-Igoe was unfortunate, but we've learned its lesson. Now you don't find cities proposing to concentrate large numbers of female-headed households in high rise apartment buildings.

Mayors and City Councils of American cities must see their city in the perspective of its region and of the national economy. The Mayors need expert help to identify, plan and manage their resources. They must recognize that pirating industries or other resources from one another is counter productive. There's enough action in America for everyone to have a piece of it. But, to stay in the game, older cities must be innovative in promoting and facilitating new ways to generate revenue and attract population.

So the pressure is on those Mayors in Frostbelt cities to maintain a creative perspective on potential resources. For example, the unemployed are a resource for certain kinds of industries. Old buildings are a resource to be recycled to a new use. Even the old Frostbelt railbeds are a resource to accommodate high speed freight and passenger trains. They could be repaired.

The growth of leisure time and increased mobility, have made tourism a big industry. Changes in our lifestyles suggest changes in city styles.

Historic buildings and places take on a new importance as more and more people hit the road in search of America—in search of roots. Our older cities are the warp and woof of American history and culture. They should capitalize on it. In a country which produces such unique artifacts as the recreational vehicle (or R.V. as it is known), no city with something to offer should have trouble finding takers.

We must also look to businesses and technology to help us innovate. Mayors must recognize that what is quaintly called "the private sector" is the very lifeblood of their city. Too often mutual reservations between Mayors and business have kept them at arm's length.

But, business is the main resource of any city. It is its reason for existence. A healthy city must forge partnerships between government and the local business community. Only when the entrepreneur and the elected official share their thoughts and their goals for the City, will the process of growth and change work.

There are encouraging signs that business is beginning to see its interests best served by investing some capital in "risk" ventures in cities—in the not-so-good neighborhoods and in job training programs.

Neighborhood Housing Services, which operates in more than 30 cities around the country, is one successful program of this type. The concept is simple. "Risk" loans for home repair and purchase are made available to residents of a neighborhood that is beginning to go downhill. The city's lending institutions all chip in small amounts toward a repair and mortgage fund. The pooled money is then loaned to residents who want to paint up and fix up their homes. Money repaid is loaned out again and again as the idea catches on and residents take renewed pride in their homes and their neighborhood. I understand a similar idea is being tried in fourteen neighborhoods here, sponsored by St. Louis lending institutions and the Federal National Mortgage Association.

Our older city neighborhoods could provide new jobs and entirely new kinds of jobs. Vacant buildings await mobilization of youth trained in rehabilitation skills. Many of those older homes have unique brick, iron and woodwork needing repair or reproduction. The promotion of such craft industries would not only speed reoccupation of vacant, deteriorating housing, but could provide jobs for unemployed youth.

Secondary and postsecondary schools need

to gear themselves better to the job market and to enlist businessmen to provide apprentice training in new vocational fields.

The city government must weigh its priorities to see if local property tax or zoning changes should be made to encourage rehabilitation while keeping prices, rents and property assessments within reach of those most in need.

In the metropolitan context, the region's residents must recognize they are all part of one living urban organism. They must be willing to share both the load and the wealth. This means accepting regional special purpose taxes, low income housing on a "fair share" basis, and the elimination of exclusionary zoning. It also means we must move from "no-growth" concepts to "managed-growth" thinking.

Federal policies must take into account the changes going on in our country which I've described here. The Federal Government spends billions of dollars on contracts for goods and services; for office leasing and facility construction. Yet there is little oversight of where those dollars go, whom they benefit and whom they harm.

The effects of Federal spending are most visible in the location and relocation of defense and aerospace installations. In my home State of Maryland this past year the Navy decided to relocate 1,300 employees in its Naval Oceanographic Office from Suitland, Md., to Bay St. Louis, Miss. The cost and benefits of that move were never adequately explored. The hardship it worked on the local economy is still being felt in the high vacancy rate in housing, the decline in local revenues, and the uprooting of families and friends.

Certain local education and welfare costs must be scrutinized to see if the Federal Government should be paying a larger share. Disparities in cost of living and spending for education and welfare at the local level need reexamination. The Federal role should be to assure equal access to these programs at the local level and equal spending, relative to varying costs of living.

I am introducing in this Congress just such a bill. It is designed to help both declining and rapidly growing cities. My "Urban Resources and Management Assistance Act" provides for restructuring several Federal formulas in order to target funds for housing and economic development to cities with the greatest need. The bill takes into account differing costs of living around the country. It establishes a transportation trust fund to facilitate local development of mass transit tailored to each city's particular needs. It calls for recognition at the Federal level of regional growth disparities and the impact Federal spending has on growth rates. It provides investment tax credits for business to locate within city limits. And it makes professional technical assistance available to rapidly growing cities, small towns and rural areas at their request.

Dynamic changes is always at work in this country—in our cities, metropolitan areas and regions. It demands that we keep our antennae tuned to the future; that we be alert to trends, to technological changes and to the opportunities and the dangers they present.

Government at all levels must keep up with the changes that are taking place in population, economic base, natural resources and life style. There's no holding back the tide of change. The challenge which today's mayors face, which we all face as a nation, is how to adapt ourselves and our cities to the new forces at work.

This conference is a step in the right direction. I thank you for asking me to be part of it.

AMERICAN SCHOOL FOOD SERVICE ASSOCIATION LEGISLATIVE ACTION CONFERENCE

Mr. HUMPHREY. Mr. President, I would like to share with my colleagues the remarks I made at the American School Food Service Association dinner on March 14, 1977.

The current school lunch program was enacted approximately 31 years ago, and many changes and improvements have been made in the program, especially in recent years. I pointed out that the program is now available to 90 percent of the children in elementary and secondary schools.

I also suggested that further improvements are needed, such as improving the quality and acceptability of the food offered to children, simplfying the program regulations, and establishing a uniform nutrition education program which would combine the principles of good nutrition in the classroom with the practical application in the school cafeteria.

Recently I introduced a nutrition education bill, S. 720. Increasingly, it is clear that there is a definite correlation between good health, intellectual capabilities, and adequate nutrition. Our children should be exposed to the best nutrition information in order to develop to their full potential.

I also reiterated the need for a universal nutrition program for all children. I have supported such legislation in the past and will do so again.

Mr. President, I ask unanimous consent that the text of my prepared remarks be printed in the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HUBERT H. HUMPHREY

Thank you very much, Mrs. White, for your very kind and gracious introduction.

I am delighted to see President Martin, Dr. Jean Mayer, Congressman Perkins and other distinguished guests in attendance. I have worked with the school Food Service people for many years, and I truly feel that I am among good friends.

This occasion touches me deeply. But I should point out that I am only one of an army of dedicated individuals who have worked for many years to build and improve our child nutrition programs. It is clear that our strength has been growing, as well as support for our programs.

As you are aware, I have an undeserved reputation for never being at a loss for words. Regardless of this obviously fallacious reputation, I simply do not have the words to express my appreciation and gratitude for your generosity and the warmth of your friendship.

Therefore, let me quote just two lines from Shakespeare:

"I can no other answer make but thanks, and thanks and ever thanks."

I understand that this is the fifth annual ASFSA legislative action conference. You are to be congratulated for sponsoring and organizing such a large meeting with attendance from nearly every state.

Your leadership has developed a comprehensive agenda of all work and no play. I am pleased that a full day has been set aside to meet your congressional representatives on Capitol Hill.

As you meet with these members of Congress, don't be reticent about telling them about the accomplishments and problems you face in developing a better program.

And you have no need to be on the defensive about your work. There is no more noble profession than that of providing food to our children for the full development of body and mind.

Now let's look briefly at the past accomplishments in building the child nutrition programs and then try to take a glimpse at the future. We can be justly proud of our many accomplishments, but the job is not finished.

Many changes have occurred since the school lunch program's inception in 1946, and especially in the last six or seven years.

The school lunch program is now available to 90 percent of the children enrolled in elementary and secondary schools. In a number of states this figure approaches 100 percent.

A successful and growing breakfast program has been established.

Eligibility for federal assistance has been extended to virtually any type of non-profit school or child care institution. In effect, we have universal coverage from the standpoint of eligibility.

State matching of federal funds is now required. Moreover, state legislative bodies, especially in the larger states, are responding by the enactment of landmark legislation in support of these programs. I know many of you have been the prime movers in the passage of this legislation.

The service of free and reduced-priced lunches for needy children has been mandated by federal legislation. This program has been remarkably successful. In the late sixties, only about 2.5 million needy children were being reached, but this number now exceeds 10 million.

The level of federal funding for these programs has been guaranteed in specific amounts, adjusted semi-annually to reflect increased costs. This has contributed greatly to facilitating financial planning for state and local governments.

As to the future, I would hope that we would direct our efforts and energies in several areas:

First, we must increase our efforts to improve the quality and acceptability of the food offered to children. Cafeteria facilities in many situations must be made more attractive, and children must be given sufficient time to enjoy their food in a social and friendly atmosphere. Moreover, the sale of other food items in the schools must be controlled to avoid interfering with the nutritional objectives of the program.

Second, we must work to simplify program regulations, procedures and record keeping requirements which have become increasingly difficult for local school officials to understand and administer.

Third, after some 31 years, we still do not have a uniform nutrition education program in our schools to blend the principles of good nutrition in the classroom with the practical application in the school cafeteria. The media is giving more attention to the importance of good nutrition, and greater recognition is being given to this subject in the school curriculum.

But this is not enough. We must build a bridge of communication and exchange of information between school employees in the cafeteria and the teaching and administrative staffs. If this can be done, a nutrition education program can be meaningful, understandable and effective.

Last month, I introduced a bill in the Senate designed to achieve these purposes. This bill was co-sponsored by six other Senators, and an additional five Senators have since joined in sponsoring it.

In dollars, my bill is very modest. It would make no spectacular overnight changes. But

it could well be the beginning step that often results in major progress over a period of time. I commend it to your attention, and I would appreciate your comments and suggestions.

Lastly, I want to talk with you about a universal nutrition program for all children.

In the near future I again will introduce a bill embracing the principle that all children in schools and child care institutions should be offered good nutrition on an equal basis.

I will do this because I believe that it is very important to get the Congress, the Executive Branch and the American public to focus their attention on this vitally important principle. Personally, I am convinced that this approach ultimately will be adopted because it makes sense and is in the best interest of the nation's children.

I have never heard any objection to the universal nutrition approach except that it would cost more money. But when you examine a program, you must consider the cost issue from two angles: First, what will it cost on an immediate basis? Second, what will be the cost to taxpayers, both in terms of money and human suffering, if the program is *not* adopted.

I believe that we must begin to measure the true cost of a program on the basis of the second perspective.

We ought to be demanding answers to three questions:

The poor child entering kindergarten or first grade perhaps does not understand or care that he has been singled out to receive a free lunch. As he grows older, he does understand and he is resentful. How many disciplinary, attendance and juvenile delinquency problems are caused by this misunderstanding?

Second, to what extent does a lack of nutrition education in the schools lead to poor diets, malnutrition and reduced performance? As a result, how many children leave school unable to earn a living, thereby becoming a financial burden to society?

Finally, how closely are poor nutrition and poor dietary habits related to the need for dental and health care in later life? We are all aware of the billions of dollars it costs to meet these needs, and there is a mountain of evidence that many kinds of illnesses are nutrition related.

I am reminded of the TV ad where the mechanic has just done a costly engine overhaul because the oil filter was not replaced regularly. The mechanic says "You can pay me now,"—for a simple oil filter—"or you can pay me later."

If we neglect our nation's health we will continue to pay later in terms of ever increasing medical bills. Unfortunately, we don't know the specific answers to these questions. But I do believe the answers can be found.

For this reason, I plan to ask the Secretary of Agriculture to assemble a group of experts to make a comprehensive study of the feasibility of a universal nutrition program for children, its costs, and its impact on other cost areas. Such a study also would be concerned with the cost savings that would accrue through simplifying and streamlining program administration.

Your organization should lend its talent and experience to assist in this undertaking.

This has been a happy and joyous occasion for me. I wish you well. And, I shall continue to work with you to help improve the health and nutrition of all children.

FORMATION OF THE MESOTHELIOMA RESEARCH CENTER

Mr. HATCH. Mr. President, the Occupational Safety and Health Act has traveled a very rocky road since its creation. The goals of OSHA are, indeed, laudable and worthy of continued support: to assure safe and healthful working conditions for working men and women across our great land.

Yet the act and its administration have been attacked by protagonists as well as antagonists as being both entirely too weak and overly tough. Somewhere between these two extreme positions reflects OSHA's true state.

There are serious problems regarding the act's administration; it is not fiction. OSHA's deficiencies have been pointed out over and over again in Labor Committee oversight hearings and yet no remedial legislation of any kind seems to be forthcoming from that committee. For example, I am told that even a single proposal amending OSHA to provide for voluntary onsite consultation and education services to help employers comply with the act could not be enacted by the Senate last Congress. This was the case despite widespread bipartisan support for the proposal in this body as well as House approval of the concept.

Mr. President, some of the Members of this body must accept the responsibility for allowing OSHA to languish in this state of dissension and ineffectiveness. While the debate continues as to OSHA's fate, my colleagues should know that some private parties are rolling up their sleeves to get the job done. Specifically the Johns-Manville Co. and the International Association of Heat and Frost Insulators have formed a joint labor-management effort to eliminate the needless tragedy of job-related illness by creating the Mount Sinai Cancer Research Center.

This organization was formed to conduct research into the early detection, prevention, and treatment of mesothelioma—the asbestos-related disease which has affected so many industrial workers. This spirit of cooperation and determination by labor and industry to work together to fight against job-related illnesses is commendable. Hopefully it will begin a trend whereby other labor and management groups will in a similar way combine to accomplish OSHA's mission with a minimum of conflict. The health and safety of employees should not be caught in the struggle between OSHA's competing forces and the Mesothelioma Research and Therapy Center underscores this principle.

Mr. President, I ask unanimous consent that an article appearing in the Asbestos Worker which gives a fuller explanation of the joint project be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Asbestos Worker, February 1977]

UNION, JOHNS-MANVILLE SET UP MOUNT SINAI CANCER RESEARCH CENTER

General President Andrew T. Haas joined with Johns-Manville Corporation President John A. McKinney and members of the medical and scientific community in New York last month to announce a unique new center for research into early detection, prevention, and treatment of mesothelioma.

The center, to be located at the Mount Sinai Medical Center, is a joint venture of the International Association of Heat and Frost Insulators and Asbestos Workers and the Johns-Manville Corporation. Initial funds for the center are being provided equally, with the Union's $250,000 contribution coming from the Insulator's Health Hazard Fund.

The new center will concentrate on research into pre-clinical diagnosis and treatment of the asbestos-related disease of the pleural lining for which, so far, there has been no cure.

Secretary-Treasurer William G. Bernard and General Executive Board members accompanied President Haas to the press conference which was attended by major news media representatives including reporters from The New York Times, the Medical World News, ABC–TV News, and other newspaper and broadcast journalists.

Addressing the conference, President Haas welcomed the "spirit of cooperation and determination on the part of labor and industry in the fight against job-related illnesses which threaten the health and well-being of all workers."

Referring to the Occupational Safety and Health Act of 1972 and the Toxic Substances Control Act of 1976 as "the outgrowth of increased recognition and concern for the health and safety of American workers," he added, "beneficial as they are, however, these laws do not represent a total solution to the threat of human pain, suffering, and death inflicted by the work environment.

"The Mesothelioma Research and Therapy Center at Mount Sinai is an example of what can further be done, in a spirit of labor-management cooperation, to reduce and ultimately eliminate the needless tragedy of job-related illness."

In his remarks before the press conference, Johns-Mansville President McKinney cited his firm's cooperation with the union noting, "I don't think there could be any more eloquent testimony as to the urgency of this work to be done at Mount Sinai in the months ahead than this partnership."

Mr. McKinney added that Johns-Manville "is particularly eager to do anything it can, not just to correct old errors, but also to take preventive measures to see that the workers of today and tomorrow are not subjected to health hazards."

Both President Haas and Mr. McKinney noted that the new center is the second joint venture for the union and the company. In the late 1960's, a contribution from the two groups enabled Mount Sinai researchers to discover through an electron microscope the dangers of sprayed asbestos in the construction industry.

Also participating in the press conference were Drs. Irving J. Selikoff and James F. Holland, who will be co-directors of the new program; Dr. Thomas C. Chalmers, Mount Sinai president and dean; Sheldon W. Samuels, director of the Department of Occupational and Environmental Health, Industrial Union Department, AFL–CIO; U.S. Representative Millicent Fenwick (R-N.J.); Dr. Frank J. Rauscher Jr. of the American Cancer Society Research Department; and Dr. Paul Kotin of the Health, Safety and Environment Department of Johns-Manville Corporation.

Dr. Chalmers welcomed the participants and noted that the new program "goes beyond a partnership between industry and labor. The new project offers the combined efforts of two major Mount Sinai facilities"—the Department of Neoplastic Diseases, under the direction of Dr. Holland, and the Environmental Sciences Laboratory under the direction of Dr. Selikoff.

"This is a merger of epidemiology, public health, basic science, and clinical application all aimed at a single enemy, environmental cancer," he explained.

Dr. Selikoff told the conference that the

identification and significance of new cases of occupational cancer have brought with them a new problem—"what to do about the millions of individuals exposed to (cancer-causing) agent in the past, with increased risk of cancer in the future."

Dr. Selikoff explained that research in the past 10 to 20 years has been "extraordinarily important" in teaching that certain conventional materials in our environment are having adverse impact on world health.

"In the 1930s, 40s, and 50s we did not have any idea about the impact of what we were doing to our environment by improper use of certain materials," Dr. Selikoff said.

"In the 1960s, however," he added, "we began to realize this impact and now we are taking the results of research into causes of cancer and accepting an obligation to find a cure."

The results of such efforts in other areas are evident, Dr. Sleikoff noted. "Fifteen to 20 years ago a diagnosis of Hodgkins disease would almost certainly have been a death warrant and I think the known cases of cure could have been counted on one hand. Today, however, we can cure about 50 per cent of the cases."

Co-director Dr. Holland termed the new center "a venture to set the pattern for joint participation. The problem is not one of building a center, but, rather, it is a problem of bringing together the representatives of the various areas of concern.

"The Asbestos Workers Union and Johns-Manville Corporation represent both ends of the spectrum of concern," he said.

Dr. Holland noted that the new center "offers the promise of significant findings and a rare opportunity to create a practical model for the study of other environmentally caused cancers.

"Not only is it essential that we study the causes of environmental cancer and its early diagnosis, but we must know more about biochemical changes in tissues as cancer develops and use this knowledge to develop effective treatment for these cancers."

The Mesothelioma Center offers this opportunity, Dr. Holland said.

The overall thrust of the program will be to, first, determine who is likely to develop mesothelioma and why; second, to determine by what means prevention is possible; and, finally, the development of effective treatments and, hopefully, a cure for mesothelioma.

The program will be concentrated in five specific areas:

Studies conducted with a group of selected patients.

The use of early diagnostic techniques.

The use of personnel at the highest levels of science and medicine.

The use of chemotherapy and other forms of treatment, including immunotherapy, surgery, and radiotherapy.

The translation of findings to the world medical community.

Participants in the press conference noted that 85 per cent of all mesothelioma cases are directly caused by asbestos, accounting for a 7 per cent death rate among asbestos workers and others coming in direct contact with the material over prolonged periods of time.

Mesothelioma, a malignant tumor of the lining of the chest or abdomen, was very rare prior to 1960. In recent years, however, it has appeared with increasing frequency and it is often associated with previous exposure to asbestos by the victim, generally 20, 30, or more years before detection. Among individuals exposed occupationally to asbestos as insulators on construction sites, mesothelioma is a serious threat that so far has resisted treatment.

Surgical removal has invariably proven to be unsuccessful. Individuals usually die within two years following first diagnosis.

Moreover, the unusually long period of time between first exposure to asbestos and detection of disease underscores the need for effective legislation to provide financial assistance to those who are stricken.

Representative Fenwick stressed this need while announcing at the press conference that she intends to introduce in Congress a "white lung bill" to provide such assistance.

"I have the beginnings of this bill right here," she said, holding up the manuscript, "and I have been discussing it with President Haas."

Dr. Kotin of Johns-Manville termed the new center a "bridging of concerns which are triangular in nature. First, we must provide a safe work place. Second, we must educate the worker, the consumer, and the general public about environmental safety and health. And, third, we must commit our resources to undo the bad practices of the past."

Dr. Kotin added that "most importantly, this center will address the problem in a way most likely to achieve results."

Mr. Samuels of the AFL–CIO's Industrial Union Department expressed his feeling that the center represents "a prayer and an injunction" in which mankind has chosen to commit himself to the protection of life above all else.

He added that the center is an attempt to reduce the "polarization between union and management, both of which have the health and safety of the worker at stake.

Support for the program "in any way possible" was pledged during the conference by Dr. Rauscher on behalf of the American Cancer Society.

Throughout the press conference, participants expressed optimism for the success of the new research program and collectively issued an invitation to other groups to join in the effort not only in the attack against mesothelioma, but for additional information useful in the detection, prevention, treatment, and cure of other, equally tragic forms of cancer.

Beyond these hopes, however, the creation of the new center at Mount Sinai offers a lesson as expressed by Congresswoman Fenwick.

"We see a model for society in this center," said the congresswoman. "We see a union concerned for its members and a great corporation concerned about its workers.

"We (in government) and others (in the private sector) can learn the lesson of cooperation in this attempt to solve a mutual problem. Can this lesson not be applied to all of society? Let us hope so and let us work in that direction."

LAKE LANIER ISLANDS

Mr. TALMADGE. Mr. President, the Georgia General Assembly, while in session in Atlanta, adopted a resolution which, for myself and my colleague, Senator NUNN, I bring to the attention of the Senate, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

[General Assembly]

RESOLUTION

To petition the United States Congress for funds as a grant to the Georgia Department of Transportation for the purpose of constructing a partially controlled access road from Georgia Highway 365 to the "Lake Lanier Islands"; and for other purposes

Whereas, the "Lake Lanier Islands" are within the United States Corps of Engineers impoundments of Lake Sidney Lanier; and

Whereas, the "Lake Lanier Islands" are leased by the United States Corps of Engineers to the Lake Lanier Islands Development Authority, an instrumentality of the State of Georgia, for the purpose of development and operation as a public recreational area; and

Whereas, the "Lake Lanier Islands" are accessible only by Georgia Highway 347 which has an "at grade" railroad crossing and which crosses major North/South traffic arteries; and

Whereas, the "Lake Lanier Islands" visitation is expected to be in excess of two million visitors annually before 1980.

Now, therefore, be it resolved by the General Assembly of Georgia that the United States Congress be requested to provide from funds other than those normally apportioned to Georgia for highway purposes, such funds as necessary to construct a partially controlled access highway to the "Lake Lanier Islands" from Georgia Highway 365.

Be it further resolved that the Clerk of the House of Representatives is hereby authorized and directed to transmit an appropriate copy of this Resolution to the Representatives to the United States Congress from the State of Georgia.

Be it further resolved that the Representatives to the United Sttaes Congress from the State of Georgia are requested to present this Resolution as being in the best interest and safety of the citizens of the United States of America.

TAX ON AMERICANS ABROAD

Mr. BARTLETT. Mr. President, I noted with pleasure that the Senate Finance Committee voted on March 16 to include the provisions of my bill, S. 772, in the tax portion of the President's economic stimulus package. I would like to commend all the members of the committee for doing so. S. 772 would change the effective date of those provisions of the 1976 Tax Reform Act which affect Americans living or working abroad from January 1, 1976 to January 1, 1977.

Aside from correcting an injustice, this change will further the goals of President Carter to stimulate our economy. The Treasury had estimated that the changes made in the 1976 Tax Reform Act would cost American taxpayers in the neighborhood of $40 million per year. Information I have leads me to believe that the effects of the changed tax treatment for Americans working abroad will be very much greater. In discussions with just one company, I have learned that they expected to pay an extra $9 million in taxes just to cover last year's operations. Changing the effective date of these provisions will save them that cost this year; however, they face the same increased costs next year. As a result, their competitive position in the world market will be severely damaged. America's competitive position in general will also be severely damaged by our current tax policies.

I hope that the provisions of S. 772 remain in H.R. 3477 through the floor debate and through the conference committee. We will then have the remainder of this year to reconsider the whole question of taxation on Americans working abroad. I think any realistic analysis will demonstrate that our tax policy in the past, and certainly as it now stands, has hindered American business operations overseas.

I ask unanimous consent that the following article from the March 17, 1977, issue of the Wall Street Journal concerning this issue be printed in the RECORD following my remarks. I think this story graphically points out the pernicious effects of our tax policy in regard to America's international economic standing. In this season when the foul winds of protectionism are beginning to stir in the land again, we in Congress must squarely face the realities of international economic competition and their far-reaching effects.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Mar. 17, 1977]

U.S. FIRMS IN MIDEAST HAVE TOUGHER GOING; TAX REFORM ACT CITED

(By Ray Vicker)

RIYADH, SAUDI ARABIA.—U.S. exports of goods and services are running into tougher competition in the Middle East, and Americans and others in the region say the Tax Reform Act of 1976 isn't helping matters one bit.

The Middle East is the world's fastest-growing market, and its most important countries for U.S. companies are Iran and Saudi Arabia, in that order. The Saudi Arabian market has long been dominated by the U.S.; in 1976, U.S. exports here climbed to $2.8 billion from $1.5 billion the previous year. But the U.S. share of the market has fallen, from 31% in 1974 to an estimated 25% now.

American sales to Iran actually declined last year, to $2.8 billion from $3.2 billion in 1975. At the same time, West Germany's sales to Iran increased by 11%, France's by 19%.

Over all, U.S. nonmilitary trade with the 19 countries of the Middle East and North Africa increased by only 10% in 1976 from 1975, after an increase of more than 300% from 1972 to 1975. Some tapering off was to be expected—the oil producers couldn't indefinitely increase their purchases at the rate set immediately after the quadrupling of oil prices in 1973—but the tough competition also hurt.

Now comes the new law, which many observers say is making things worse by increasing U.S. firms' costs and by touching off an exodus of Americans from the Middle East.

NOW IN EFFECT

The law, which takes effect with the current tax returns, tightens Washington's tax treatment of Americans abroad. Its impact varies from country to country, but it has been estimated that the U.S. income tax paid by an American in the Middle East may rise by thousands of dollars. Often the tax will exceed the tax he would have paid had he stayed in the U.S. at the same salary but without those large, and taxable, allowances he gets so that he can live in his accustomed manner in this high-cost area—an area where an ordinary meal may cost $20 and a decent apartment may rent for $2,000 a month.

Overseas Americans first tax returns under the new law aren't due till June 15, but the measure's impact on U.S. firms could be assessed last October when Congress passed it. Here in the Middle East at least, the repercussions are already being felt.

Many big American banks and other firms, especially companies with manufacturing operations abroad, compensate employes for any added taxes they incur in an overseas post. In such cases, the Americans are often an insignificant cost item in a sizable operation, and the added costs may be absorbed without too much trouble.

But the kind of U.S. firm most common in the Middle East—a construction company, service firm, individual entrepreneur or one-shot exporter of a major installation—operates on a contract basis and may not be able to bear any added costs. A construction company, for example, may have a 3,000-man operation that includes 500 Americans. The margin of profit in the contract may not permit the firm to assume their added tax burden.

A COMPANY'S OPTIONS

If the burden isn't assumed, the Americans may quit and go home, and the foreign expatriates hired to replace them may not fit the operation so well. Disrupting though it may be, the hiring of foreign expatriates to replace Americans is already occurring as other Americans are no longer so eager to accept overseas assignments.

If, on the other hand, the firm does assume the tax burden, then the profit is slashed. The bid on the next contract will have to be high enough to reflect the burden; hence that contract may be lost to, say, a British or Japanese firm.

Other key Americans in the Middle East are business consultants; still others are advisers to ministries of the host government. Many of them make purchasing decisions to the tune of millions of dollars and, because of their backgrounds, usually favor American products. Although an adviser might persuade his ministry to give him a hefty raise, generally there is no one to pay these Americans' added taxes except themselves. These people are experts who feel they can easily find jobs in the U.S., and many of them are going home. They are being replaced by other nationals, who won't be disposed to recommend American products.

COMPETITOR'S MOVES

All this comes at a time when Japan, West Germany, France, Italy and other countries are already giving strong support to their hard-working companies in the Middle East. One $953 million contract in Saudi Arabia has been lost by American companies to a South Korean construction firm. France has the inside track on some water desalination projects; French President Valery Giscard d'Estaing recently visited Saudi Arabia, plugging France as an economic and political friend. West German companies are pushing much harder into Iran. Italy dominates the Libyan market, and its share of sales is increasing. In a press conference at the International Hotel here, a member of a Japanese trade delegation emphasizes his country's "total readiness" to provide Saudi Arabia with Japanese industrial and technical know-how.

"America is losing out, and it is your own government which is accelerating that trend," says Faisal Beshir, Saudi Arabia's deputy minister of planning. "I recognize the right of your government to pass any laws which it wants. But in this case it is America which will suffer, not us. There are many other countries who are only too happy to replace America in supplying us with the things we need." Most countries don't tax nonresident citizens.

Not everyone, it seems, agrees that the new tax law is having such dire effects. Tax "reformers" in the U.S. say Americans abroad have simply been avoiding paying their fair share of U.S. taxes, and a House Ways and Means Committee task force has recommended that the treatment of overseas earnings be tightened still further.

Among other things, the 1976 act reduces to $15,000 a year—from $20,000 and in some cases $25,000—the amount of income that an overseas taxpayer can exclude from reported earnings. The Ways and Means task force recommends repeal of the entire exclusion. It argues that living costs abroad are often lower than in some parts of the U.S. and that in those cases where living costs are indeed higher abroad, these costs "should not be provided for through a government subsidy."

The panel does propose some tax relief in lieu of the exclusion. It urges, for example, that overseas workers be allowed a tax deduction for expenses of educating their children when these are reimbursed by employers. And it recommends retention of the exclusion for construction and engineering workers. It also notes that if the exclusion is designed to spur U.S. exports, it could be limited to individuals involved in the export trade.

Whatever the merits of the argument so far as the Middle East is concerned, the U.S. Department of Commerce certainly seems undaunted. "Business opportunities in the Middle East and North Africa region for aggressive U.S. companies will continue to expand in 1977. U.S. exports may top $14 billion (versus $11 billion in 1976)," Kathleen Keim of the Bureau of International Commerce says in a recent report.

ADVANTAGES IN AREA

America does enjoy advantages in the Middle East. For one thing, 30,000 Americans are in Saudi Arabia now, and there are at least as many elsewhere in the area. They plug the American way, sell U.S. goods and show the Saudis how to apply American technology to their problems. Seventy-five American consulting firms operate in Saudi Arabia. Contracts outstanding with American companies total $17 billion. Yet company officials display anxieties.

Costs may rise no matter how a company reacts to the tax law. If it hires foreign expatriates, the turnover will lower efficiency, at least for a while; also, the company may have to set up personnel departments in foreign lands. If the company flies Americans in and out on a rotating basis so that they remain residents of the U.S.—the firm thereby holding on to Americans without assuming any added tax burden—that costs money, too, even if it is cheaper than compensating employes for added taxes.

"Our costs have been increasing and that makes us less competitive," says Ben Dorfman, vice president of the Dhahran subsidiary of Fluor Corp., the engineering and construction company, as he discusses the tax law's effects. A quarter of Fluor's work force here, or 600 men, are Americans and they hold some of the top jobs. They work on a giant gas-collecting network being built with Arabian American Oil Co. (Aramco) in Saudi Arabia's Eastern Province. That project alone could have a final price tag of over $16 billion. "A lot of our Americans," Mr. Dorfman says, "are thinking of going home."

Similar comments come from Lindell E. Montgomery, manager in Saudi Arabia for Geophysical Services International, a Texas Instruments subsidiary operating in Dhahran. "That tax bill is adding to our cost of doing business," Mr. Montgomery says. He heads a staff of 175 senior-rated expatriates, which over the years has been predominantly American. The Americans now constitute less than 30% of the total and the firm is looking to foreigners to fill even more of its jobs. Geophysical Services studies terrain and rock structure in connection with oil explorations.

Neither Fluor nor Geophysical Services will say how it is handling individual Americans' added tax burden—perhaps the companies are helping some of the employes. But both firms face rising turnover and both have set up recruitment programs in foreign lands. A spokesman for Geophysical Services says the tax bill has lowered the firm's margin of profit on each contract by a percentage point.

"IRREVOCABLE" DECISIONS

"One thing that our government doesn't seem to realize is that sometimes decisions affecting trade may be irrevocable," says Frank Jungers, Aramco's chairman. Mr. Jungers notes that Aramco built the first electricity network in Saudi Arabia's East-

ern Province for its own operations. It had American engineers and so they went for the American system of 110 volts 60 cycles.

"So this became standard here," Mr. Jungers says, "and this has had a continuing good effect upon sales of American-made refrigerators, ranges and other electrical appliances."

Now he worries that Saudi Arabia is at a turning point in many industrial areas. If certain jobs go to foreign firms, he feels, the long-range effects may be as great as the effects of that electricity networks were, but in the opposite direction.

Recently Aramco investigated costs of giving preference to Americans when hiring expatriates. It found that it could hire 2.8 Britons in key executive and technical posts for the cost of one American, and 2.3 Britons for one American in jobs for young engineers just out of college. Aramco now has 850 Britons on its staff compared with "only a handful a few years ago." It still employs close to 1,800 Americans. How many it will still have a year from now is a question.

"There will be an exodus of Americans," Deputy Planning Minister Beshir says. The planning ministry itself is laced with American advisers, and although Mr. Beshir says he can easily hire Germans, Britons, Frenchmen and other expatriates, he isn't enthusiastic about the possibility of having to replace Americans. Like many in the Saudi government, Mr. Beshir is U.S.-educated (University of Oregon) and U.S.-biased (he spent nine years in the U.S., including a stint as a door-to-door salesman).

A COMMISSIONER'S VIEW

That same attitude is encountered in the office of Faroul Akhdar, head of Saudi Arabia's Royal Commission for Juball and Yanbu. The commission is building the infrastructure for a $30 billion project to create mammoth ports at Jubail on the Persian Gulf and Yanbu on the Red Sea. Thus, it is deeply involved in letting contracts for goods and services, and Mr. Akhdar, who attended the University of California, says he has always been partial to American products and technology.

But American advisers are giving up their jobs for tax reasons, Mr. Akhdar says and are being replaced by West Europeans, who almost automatically think of European companies when something must be procured.

In Iran, too, says Frank I. Gurney, manager of Pan American Airways in Tehran, "an exodus of American expatriates has already started." Last September, there were about 31,000 Americans in Tehran. According to a rough estimate made by Americans there, the number has declined to 28,000 and is still dropping. Under normal circumstances, the total would probably rise.

R. P. M. Carlson, managing director of Melli Industrial Group, an Iranian conglomerate, says, "The sad part of it is that once these Americans leave, they are very unlikely to come back no matter what happens in the future to American taxes."

The new tax law may harm U.S. political relations with Mideast lands. An Iranian official tells about a U.S. firm whose 500 Americans in Iran perform a service considered important by the Iranian government:

"The company approached us and said that the new American tax is costing them $8 million to $10 million a year extra. They said they couldn't continue their contract with us if they didn't get help, so we made an adjustment in our contract with them.

"If taxes are being collected on Americans in Iran, the money should be going to Iran, not to the United States. Your government is actually forcing us to pay taxes to the United States if there are technicians that we want to keep here."

YOUR FIRST ANSWER IS ALWAYS RIGHT

Mr. DURKIN. Mr. President, most of us have heard the adage "your first answer is always right" or "never second guess yourself." This advice is most often given to students taking examinations.

Mr. President, the Senate must by now be feeling like the student who changed a correct answer on an examination to a wrong answer at the last minute, with respect to its confirmation of S. John Byington as Chairman of the Consumer Product Safety Commission. Most of us recall that when his nomination first came to a vote in the Senate, the vote was against confirmation. Confirmation came several days later on a motion to reconsider the initial vote.

In the Wall Street Journal of March 19, 1977, appeared an article on the performance of S. John Byington in his new post. It is a sad story that portrays an egotistical, arrogant man who is abusing a position of trust for personal political benefit. It is a story that saddens me greatly when I think how important the work of the Commission is to the safety of millions of children and adults alike.

Mr. President, I ask unanimous consent that the March 17, 1977, Wall Street Journal article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHIEF OF AN AGENCY STUMPS TO PROMOTE IT AND MAYBE HIMSELF

(By Bruce F. Freed)

WASHINGTON.—When S. John Byington took over as chairman of the Consumer Product Safety Commission nine months ago, his big worry, he says, was that not enough people knew about the agency.

So he set out to change that. He hired two public-relations firms to tell him to make the agency more widely known, and he began traveling the country making scores of speeches.

"It's imperative that I be an aggressive public speaker to get the commission known," Mr. Byington says. Soon he will speak in Seattle and San Francisco, and this summer he will carry the word about the commission to a conference in Japan.

Although the 39-year-old chairman argues that the agency cannot be effective unless it is more widely known, Mr. Byington's critics contend that what he really wants is to make himself better known—so he can get elected to political office. These critics, whose number is growing inside the commission and within the consumer movement generally, claim that he is an absentee chairman, and that under his leadership the agency's work has lagged and staff morale has dropped.

ADVICE FROM A CONSUMER

"Why don't you stay home and run the commission?" demanded Carol Foreman, who was then head of the Consumer Federation of America, during a question-and-answer session at the federation's annual meeting last December. (Mrs. Foreman recently left the federation and has been appointed to an Agriculture Department post.)

Mr. Byington denies that his traveling and speechmaking are in preparation for a political career in his home state of Michigan. But some of his friends believe that is the case—and there is some evidence to support that view. "I think John wants to be governor of Michigan," says a longtime acquaintance, "or maybe a U.S. Senator."

If Mr. Byington does seek higher office, he will be part of a common Washington phenomenon—the ambitious young man who uses a relatively obscure federal job as a base for seeking higher office. Among others who have followed this course in recent years are Rufus Edmisten, a Senate Watergate committee aide who became North Carolina's attorney general and now apparently hopes to become a Senator or governor, and Lewis Engman, former chairman of the Federal Trade Commission who ran for Senator in Michigan last year but lost in the Republican primary.

Mr. Byington was deputy director of the White House Consumer Affairs Office when President Ford nominated him to be chairman of the commission. Consumer spokesmen fought his nomination, charging that he lacked the necessary background for the job and arguing that his apparent opposition to a proposed new consumer protection agency proved he was anticonsumer. The controversy held up his confirmation by the Senate for six months.

Mr. Byington has never made clear his attitude about a new consumer protection agency, but he has argued that alternative ways already exist for consumers to get their views expressed before federal regulatory agencies. During the Senate debate on the Byington nomination, Sen. John Durkin of New Hampshire complained to his colleagues: "We had a very difficult job in the hearings getting the nominee to tell us whether he would support the consumer protection agency or not. He was extremely evasive throughout the hearings, and I am afraid I have to say . . . that he would not tell you if your coat was on fire."

When he finally took over the commission, Mr. Byington found that the agency was being heavily criticized by consumer groups and some lawmakers as failing to carry out its primary task of setting federal safety standards for consumer products. Mr. Byington promised to turn the commission into "the best regulatory agency in town."

In fact, it has become one of the most quarrelsome agencies in the capital. Determined to show he was boss, Mr. Byington immediately redrew the agency's organization chart, setting up new offices and hiring outsiders to run them. That provoked cries of "one-man rule" and charges that he was thwarting the congressional intention that agency policy be set by the full five-member commission.

"Government by ambush," charged R. David Pittle, the panel's vice chairman. The Civil Service Commission blocked some of the Byington appointments because civil-service rules weren't followed. Late last year, Mr. Pittle and the other commissioners finally forced Mr. Byington to agree to give them advance notice before making further personnel or organizational changes.

But the damage already had been done, according to agency staff members, many of whom have become bitter opponents of their chairman.

Staff members contend that the serious work of the agency—setting product safety standards—is lagging and the lag is mainly the chairman's fault. Since Mr. Byington took over, only a standard on architectural glass has been approved (and it had been in the works since 1973). Mr. Byington has proposed only three other standards; affecting refuse bins, baby pacifiers and lead-based house paint, and they are a long way from adoption.

Staff members complain that for four months many of them were diverted to prepare "product profiles," which Mr. Byington has said would help the commission decide which products it should set safety standards for. The staff members say the profiles

are "publicity gimmicks" that have turned out to be worthless to the commission.

A sample of the product-profile prose: "Substantial amount of front end R&D has been conducted by NBS. Therefore, CPSC regulatory development effort should be minimal. Development of an MSR under Section 7 could incorporate NBS work with few, if any, modifications. Adoption of UL Standard 217 (standard for single and multiple-station smoke detectors) might provide the basis for a satisfactory MSR."

Consumer advocates are even more opposed to Mr. Byington today than they were when trying to block his appointment. "I never thought John would be as disruptive an influence at the commission as he's turned out to be," says Carol Foreman. Robert J. McEwen, a member of an outside advisory council named by the full commission, says Mr. Byington should resign. "He's put on a reorganization that's more show than substance," Mr. McEwen says, "and he's more interested in advertising and his industry contacts than in producing standards."

Mr. Byington, a Republican, says he is being unjustly criticized. "My main task when I came here was to reorganize the commission and to get it running effectively," he says. "Whatever opposition I encounter comes from the fact that I've reorganized the agency." He contends that it is only natural for employes who had been comfortable with the status quo to object to the changes he has made.

Regarding criticism from consumer leaders, he says, "I don't understand why the consumer groups in Washington are still hostile toward me. I don't feel that hostility in my dealings with consumer groups around the country." He notes that consumer groups have long maintained that the agency was doing a poor job and that they therefore should praise him for "trying to turn it around."

Mr. Byington says he hasn't any intention of resigning. Unlike most other regulatory agencies, the commission operates under legislation granting the chairman and the other four commissioners (two Democrats and two Republicans) fixed terms. Mr. Byington was appointed to fill a vacancy, and his term expires in October 1978.

Meantime, Mr. Byington will keep traveling around the country to spread the word about the commission—and about himself. In a November speech in San Francisco, Mr. Byington said he had gone to Washington "after helping Gov. George Romney reorganize the government of the state of Michigan." He added, "We reduced the number of agencies from 144 to 19." He didn't mention that his job as assistant press secretary was mainly to write speeches and help set up radio and television coverage of the governor.

Mr. Byington's speeches sometimes range rhapsodically far beyond the subject of product safety. Election Day found him in Los Angeles, telling a civic group:

"I believe in America's greatness. I believe this great nation embodies the great hopes and dreams of mankind. If you agree, then let us shake off the cynicism and despondency that surrounds us. Let us individually and collectively accept the challenge of such a radical idea as believing that we can make a difference."

In December, he took a government-financed, six-day tour of Europe, making several speeches and observing a Common Market meeting. Why Europe? "It was a chance," he says, "for me to make the Product Safety Commission better known to consumer leaders there."

Some of Mr. Byington's speaking engagements are lined up by a Los Angeles public relations firm, Terzian Associates, to which the commission paid $17,878 in consulting fees last year, although the commission itself employs six full-time public-affairs specialists.

"John called me soon after he took over the commission," recalls Carl Terizian, the firm's president, "and said he wanted me to look at the commission's reputation and the public's concept of it." The Terzian firm proceeded to do an analysis for Mr. Byington of ways to improve the commission's image. (The chairman already had employed, at a cost to the commission at $9,500, a Washington consulting firm to do a study of the commission's public-affairs operation. That firm recommended an advertising campaign, later carried out, to "raise the image of the commission and give it position and credibility within the industrial and consumer communities.")

While trying to improve the commission's image, the Terzian firm also has worked on Mr. Byington's image. Mr. Terzian says he has arranged several Byington speeches, has persuaded magazines to publish articles about the chairman, has set up broadcast coverage of some of his speeches, and has introduced him to "key business people."

Mr. Terzian says some of the work for Mr. Byington was paid for by the commission and some was "volunteered," but he won't be more specific.

Within the commission, the Terzian firm reports only to the chairman. Mr. Byington presumably knows how to evaluate a public-relations firm's work. His first Washington job, in the early 1960s, was as a public-relations man for the American Pharmaceutical Association.

SHADOW OPEN MARKET COMMITTEE

Mr. HATCH. Mr. President, the Shadow Open Market Committee is a group of academic and business economic experts who meet semiannually to encourage discussion of alternative economic policies and to recommend policies that promote economic stability. They carefully watch the fiscal policy of the administration and the monetary policy of the Federal Reserve.

At its semiannual meeting this month the committee took note of what it regards as a disquieting change in economic policy that threatens continued increased employment and reduced inflation. The committee warns that a policy of stimulating demand now may produce a temporary increase in employment at the expense of higher inflation and higher unemployment later. As the committee points out, production of money is no cure for the shortfalls in the production of goods.

In place of economic policies that will increase the money supply to allow for more spending, we need to lower the tax rates in order to increase the incentives to hire, to work, and to invest.

I ask unanimous consent that the policy statement of the committee be printed in the RECORD.

There being no objection, the policy statement was ordered to be printed in the RECORD, as follows:

POLICY STATEMENT OF THE SHADOW OPEN MARKET COMMITTEE

For the past several years the Administration and the Federal Reserve have pursued policies that fostered recovery, increased employment and reduced inflation. The economy is now closer to the long-term goal of high employment without inflation than many believed possible a year or two ago.

Currently, statements by the Administration and actions of the Administration and the Congress suggest that this approach has ended. Emphasis appears to have shifted to the system of priorities and fine tuning based on the mistaken belief that policymakers can reduce unemployment without increasing inflation. Fine tuning, whenever it has been tried, has resulted in higher inflation and often higher unemployment.

At its meeting today, the Shadow Open Market Committee took note of some disquieting policy proposals and actions. These include (1) a package of stimulants to bring about a short-term blip in employment and consumption, but little encouragement to capital formation—a crucial determinant of productivity increases that sustain long-term growth of employment and standards of living; (2) proposed changes in taxes and in minimum wages that increase unemployment and reduce incentives to work; (3) pressure on foreign governments to inflate their economies in the hope of gaining support for inflationary policies in the United States; (4) an increased growth rate of money, currency and demand deposits that stimulates the economy now, but raises the rate of inflation in future years.

We do not accept the view that capital formation can be encouraged only by stimulating consumption expenditures. Lagging investment is more likely to revive if businessmen can confidently look forward to an environment in which government deficits do not absorb $100–$150 billion of private sector savings in the next two years. Real savings would then be available to finance expenditures on plants and equipment.

It is misguided to attempt to stimulate consumption expenditures by expansive monetary and fiscal policies in response to supply cutbacks in a period such as the extremely cold winter of 1976–77? Production of money is no cure for the shortfalls in the production of goods.

If the proposal to raise minimum wages is adopted, this will lead to higher unemployment, particularly for new entrants into the labor force. The result will be to increase pressure on the Federal Reserve to increase the monetary growth rate and ultimately to raise the inflation rate.

We should refrain from pressuring foreign governments to inflate their economies. They are better judges than we are of their own national interests.

A return to high employment without inflation will not be achieved by fine tuning the economy. It is doubtful that employment and output will be increased, on average, during the next three to five years, by a policy of increasing employment now and slowing inflation "later." A lasting recovery with low inflation can be achieved if, instead of fine tuning, we proceed gradually to achieve both goals; higher employment and a stable price level.

The Committeee recommends that the growth rate of money—currency and demand deposits—be held in the range of 4 to 4½ percent for the next year. A 4 to 4½ percent rate of monetary growth would bring the stock of money to approximately $320-billion in the third quarter 1977 and to $326-billion in the first quarter 1978. These projections are made from the average $313-billion that would have prevailed in first quarter 1977 if our previous recommendations had been followed. Currently, we anticipate an average money stock of $315-billion for the first quarter, so the policy we recommend requires the Federal Reserve to offset the recent surge in money and then maintain a less inflationary policy.

THE CHOICES BEFORE US

We recognize that the policy we recommend reduces the measured growth rate of money, temporarily, by removing the recent

bulge in money growth. From 4th quarter 1976 to 4th quarter 1977, our proposal brings the growth of money to approximately 4½ percent, near the lower end of the Federal Reserve target for money, but is still far above the rate ultimately required to achieve price stability. The recommended rate of growth is one percentage point lower than the growth rate endorsed by Chairman Reuss of the House Banking Committee and more than thirty members of Congress.

A more rapid growth of money in the next few quarters might possibly lead to a temporary increase in employment and real product.

The effects of higher monetary growth are not, however, limited to the response of output in 1977 or 1978. Increased monetary growth raises actual and anticipated inflation. The increase in inflation is not immediately apparent but would become apparent in 1978 and 1979. Once again, we would be faced with the choice we had in 1966, 1969, 1974 and in the intervening years—to accept more inflation or to shift "priorities" from reducing unemployment to reducing inflation. Guidelines and guideposts—under old or new names—will neither reduce inflation nor change the outcome.

The choice before us is to trade a short-term increase in employment for higher steadily move toward high employment without inflation. The Administration and much of the Congress appear to have chosen a course that will lead to higher inflation. The Federal Reserve flirts with the prospect of supporting the policy by increasing the rate of monetary growth.

The rate of monetary expansion consistent with high employment and stable prices is in the neighborhood of 2 percent per year. Higher rates of monetary expansion move us away from our long-term goals and increase the difficulty of restoring full employment and ending inflation.

WATER POLLUTION CONTROL

Mr. MUSKIE. Mr. President, on February 23, the Supreme Court issued a decision in the case of DuPont against Train which affirmed the water pollution control program as created by the Congress in the 1972 Clean Water Act and the way that the Environmental Protection Agency has implemented that act. The Court, in an 8-to-0 opinion, recognized that Congress meant to require a strong, expeditious, and nationally uniform program of effluent reduction; upheld EPA's strategy of issuing binding effluent limitation guidelines for subcategories of industry; and upheld the Agency's refusal to provide a variance mechanism in new source performance standards.

This decision should successfully conclude the 10-year effort made by the Congress to establish a uniform, binding pollution control program. And it should end the 4-year effort to distort the precise intent of Congress that effluent guidelines result in uniform application of effluent controls.

The latter effort had limited success in lower courts. The eighth circuit in CPC International, Inc. against Train found that EPA could only provide guidance to permit writers with regard to existing facilities and the Fourth Circuit in DuPont against Train found that a variance procedure must be included in new source regulations. But the Supreme Court overturned the lower courts and held that these decisions were contrary to congressional intent.

The Supreme Court's decision should also put to rest other issues which have stalled the water clean-up effort. For example, the third circuit, in American Iron and Steel Institute against EPA, ordered the Agency to issue its existing source regulations in ranges of numbers. The Supreme Court held that congressional statements concerning "ranges" referred only to the range created by single number limitations for various subcategories within any one industry category, not that each subcategory's requirements be expressed as a range of numbers.

The Supreme Court also held that EPA properly satisfied the requirements of section 304 of the act in its regulations. Thus, the confusion caused by the "range of numbers" controversy should not be clear. Similarly, there is now hope that the confusing notion that existing source regulations are only "presumptively applicable" will be replaced by a recognition that EPA has properly implemented the law and that its variance provision for the 1977 regulations is appropriately narrow in scope.

Of course, the Supreme Court did not dispose of all unresolved questions of interpretation of the 1972 law. But most questions were addressed and decided. The contention by some industries that EPA must do a cost-benefit analysis of its application of "Best Available Technology, 1983" requirements to individual sources, a view flatly contradicted by the language and legislative history of the Clean Water Act, has been rejected.

Mr. President, there is an important practical benefit of the Supreme Court's opinion. The Court has made clear that review of effluent limitation guideline regulations resides solely in Federal Courts of Appeals and not in Federal district courts. This adheres to the congressional intent, expressed in section 509 of the act, that persons affected by such regulations have the due process of law to which all citizens are entitled, but that judicial review should proceed in the most expeditious manner possible.

To date that review has hardly been expeditious. The only result of review has been to delay and frustrate the Nation's clean water effort.

I hope with the Court's unanimous affirmation of congressional intent that those who have been resisting compliance with this law will cease this resistance and join in the national effort to clean up our vital and scarce water resources.

I ask unanimous consent that the full text of this decision be printed in the RECORD.

There being no objection, the text of the decision was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States]

SYLLABUS: E. I. DUPONT DE NEMOURS & CO. ET AL. *v.* TRAIN, ADMINISTRATOR, ENVIRONMENTAL PROTECTION AGENCY, ET AL.

(NOTE.—Where it is feasible, a syllabus (headnote) will be released, as is being done in connection with this case, at the time the opinion is issued. The syllabus constitutes no part of the opinion of the Court but has been prepared by the Reporter of Decisions for the convenience of the reader. See *United States* v. *Detroit Lumber Co.*, 200 U.S. 321, 37.)

CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE FOURTH CIRCUIT

No. 75-978. Argued December 8, 1976—Decided February 23, 1977 *

The Federal Water Pollution Control Act Amendments of 1972 (Amendments) authorized a series of steps to be taken to eliminate all discharges of pollutants into the Nation's waters by 1985. The first steps are described in § 304, which directs the Administrator of the Environmental Protection Agency (EPA) (the agency charged under § 101 with administering the Amendments) to develop and publish various kinds of technical data as guidelines for discharging responsibilities under the Amendments. Section 301(a) proscribes the discharge of any pollutant unless the discharge complies with certain sections, including § 301 itself, § 306, and § 402. Section 301(b) defines the effluent limitations that must be achieved for existing "point sources" (conveyances from which pollutants are discharged) in two stages: (1) No later than July 1, 1977, such limitations for point sources must require the application of the "best practicable control technology currently available," and (2) by July 1, 1983, the limitations for "categories and classes of point sources" must require application of the "best available technology economically achievable." Section 301(c) authorizes the EPA Administrator to grant variances for the 1983 limitations for any point source for which a permit application is filed after July 1, 1977. Section 301(b) directs the Administrator to publish regulations establishing national standards for new sources within each category of sources discharging pollutants, and § 306(e) makes it unlawful to operate a new source in violation of the applicable standard. Section 402 authorizes the Administrator to issue permits for individual point sources, and also to review and approve the plan of any State desiring to administer its own permit program. Section 509(b)(1)(E) provides that review of the Administrator's action in approving or promulgating

* Together with No. 75-1473, *E. I. duPont de Nemours & Co. et al.* v. *Train, Administrator, Environmental Protection Agency*, and No. 75-1705, *Train, Administrator, Environmental Protection Agency* v. *E. I. duPont de Nemours & Co. et al.*, also on certiorari to the same court.

any effluent limitation under § 301 or § 306 may be had in the courts of appeals. The EPA, which is empowered under § 501 (a) to make "such regulations as are necessary to carry out" its functions, promulgated industry-wide regulations imposing three sets of limitations on petitioner inorganic chemical manufacturers' discharges of pollutants into waters. The first two impose progressively higher levels of pollutant control on existing point sources (a) after July 1, 1977, and (b) after July 1, 1983, and the third set imposes limits on "new sources" that may be constructed in the future. Petitioner manufacturers filed both a suit in the District Court to set aside the regulations and a petition for review of the regulations in the Court of Appeals, contending that § 301 is not an independent source of authority for setting effluent limitations by regulation but is merely a description of such limitations which are set for each plant on an individual basis during the permit-issuance process, and that § 402 provides the only authority for issuance of enforceable limitations on the discharge of pollutants by existing plants. The Court of Appeals affirmed the District Court's dismissal of the suit to set aside the regulations on the ground that the Court of Appeals had exclusive jurisdiction to consider the validity of the regulations, and held on the petition for review that the EPA was authorized to issue "presumptively applicable" effluent limitations and new source standards, and was required to provide a variance procedure for new sources. *Held:*

1. The EPA has authority under § 301 to limit discharges by existing plants through industry-wide regulations setting forth uniform effluent limitations for both 1977 and 1983, provided some allowance is made for variations in individual plants. Pp. 12–22.

(a) Both the language of § 301 and the legislative history of the Amendments support the view that § 301 limitations are to be adopted by the Administrator, that they are to be based primarily on classes and categories, and that they are to take the form of regulations. Pp. 12–17.

(b) The legislative history also makes it clear that § 304 guidelines are not merely aimed at guiding the discretion of permit issuers in setting limitations for individual plants, but § 304 requires that the guidelines survey the practicable or available pollution control technology for an industry and assess its effectiveness, and then describe the methodology the EPA intends to use in the § 301 regulations to determine the effluent limitations for particular plants. Pp. 17–18.

(c) The above construction of the Amendments is also supported by §§ 101(d) and 501(a). Pp. 18–19.

2. Section 509(b)(1)(E) unambiguously authorizes court of appeals review of EPA action promulgating an effluent limitation for existing point sources under § 301, and the reference in § 509(b)(1)(E) to § 301 was not intended only to provide for review of the grant or denial of an individual variance under § 301(c). Since effluent limitations are typically promulgated in the same proceeding as the new source standards under § 306, there is no doubt that Congress intended review of the two sets of regulations to be had in the same forum. Pp. 22–23.

3. Variances for individual plants unable to comply with the new source standards issued under § 306 are not authorized. Congress clearly intended regulations under § 306 to be absolute prohibitions, as is indicated by the use of the word "standards" in § 306, as well as by the description of the preferred standard as one "permitting *no* discharge of pollutants." Pp. 23–25.

No. 75–978, 528 F.2d 1136, affirmed; Nos. 75–1473 and 75–1705, — F.2d —, affirmed in part and reversed in part.

STEVENS, J., delivered the opinion of the Court, in which all Members joined, except POWELL, J., who took no part in the consideration or decision of the cases.

[Supreme Court Of The United States,
No. 75–978, 75–1473 and 75–1705]

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE FOURTH CIRCUIT.

E. I. duPont de Nemours and Company et al., Petitioners, 75–978 *v.* Russell E. Train, Administrator, Environmental Protection Agency, et al.

E. I. duPont de Nemours and Company, et al., Petitioners, 75–1473 *v.* Russell E. Train, Administrator, Environmental Protection Agency.

Russell E. Train, Administrator, Environmental Protection Agency, Petitioner, 75–1705 *v.* E. I. duPont de Nemours and Company, et al.

[February 23, 1977]

MR. JUSTICE STEVENS delivered the opinion of the Court.

Inorganic chemical manufacturing plants operated by the eight petitioners discharge various pollutants into the Nation's waters and therefore are "point sources" within the meaning of the Federal Water Pollution Control Act Amendments of 1972, 86 Stat. 816, 33 U. S. C. § 1251 *se seq.* (Supp. IV) ("The Act").[1] The Environmental Protection Agency[2] has promulgated industry-wide regulations imposing three sets of precise limitations on petitioners' discharges. The first two impose progressively higher levels of pollution control on existing point sources after July 1, 1977, and after July 1, 1983, respectively. The third set imposes limits on "new sources" that may be constructed in the future.[3]

These cases present three important questions of statutory construction: (1) whether EPA has the authority under § 301 of the Act to issue industry-wide regulations limiting discharges by existing plants; (2) whether the Court of Appeals, which admittedly is authorized to review the standards for new sources, also has jurisdiction under § 509 to review the regulations concerning existing plants; and (3) whether the new source standards issued under § 306 must allow variances for individual plants.

As a preface to our discussion of these three questions, we summarize relevant portions of the statute and then describe the procedure which EPA followed in promulgating the challenged regulations.

THE STATUTE

The statute, enacted on October 18, 1972, authorized a series of steps to be taken to achieve the goal of eliminating all discharges of pollutants into the Nation's waters by 1985, § 101(a)(1).

The first steps required by the Act are described in § 304, which directs the Administrator to develop and publish various kinds of technical data to provide guidance in discharging responsibilities imposed by other sections of the Act. Thus, within 60 days, 120 days, and 180 days after the date of enactment, the Administrator was to promulgate a series of guidelines to assist the States in developing and carrying out permit programs pursuant to § 402. §§ 304 (h), (f), (g). Within 270 days, he was to develop the information to be used in formulating standards for new plants pursuant to § 306. § 304(c). And within one year he was to publish regulations providing guidance for effluent limitations on existing point sources. Section 304 (b)[4] goes into great detail concerning the contents of these regulations. They must identify the degree of effluent reduction attainable through use of the best practicable or best available technology for a class of plants. The guidelines must also "specify factors to be taken into account" in determining the control measures applicable to point sources within these classes. A list of factors to be considered then follows. The Administrator was also directed to develop and publish, within one year, elaborate criteria for water quality accurately reflecting the most current scientific knowledge, and also technical information on factors necessary to restore and maintain water quality. § 304(a). The title of § 304 describes it as the "information and guidelines" portion of the statute.

Section 301 is captioned "effluent limitations."[5] Section 301(a) makes the discharge of any pollutant unlawful unless the discharge is in compliance with certain enumerated sections of the Act. The enumerated sections which are relevant to this case are § 301 itself, § 306, and § 402.[6] A brief word about each of these sections is necessary.

Section 402[7] authorizes the Administrator to issue permits for individual point sources, and also authorizes him to review and approve the plan of any State desiring to administer its own permit program. These permits serve "to transform generally applicable effluent limitations . . . into the obligations (including a timetable for compliance) of the individual discharger[s.] . . ." *EPA* v. *State Water Resources Control Board*, 426 U.S. 200, 205. Petitioner chemical companies' position in this litigation is that § 402 provides the only statutory authority for the issuance of enforceable limitations on the discharge of pollutants by existing plants. It is noteworthy, however, that although this section authorizes the imposition of limitations in individual permits, the section itself does not mandate either the Administrator or the States to use permits as the method of prescribing effluent limitations.

Section 306[8] directs the Administrator to publish within 90 days a list of categories of sources discharging pollutants and within one year thereafter, to publish regulations establishing national standards of performance for new sources within each category. Section 306 contains no provision for exceptions from the standards for individual plants; on the contrary, subsection (e) expressly makes it unlawful to operate a new source in violation of the applicable standard of performance after its effective date. The statute provides that the new source standards shall reflect the greatest degree of effluent reduction achievable through application of the best available demonstrated control technology.

Section 301 (b) defines the effluent limitations that shall be achieved by existing point sources in two stages. By July 1, 1977, the effluent limitations shall require the application of the best *practicable* control technology currently available; by July 1, 1983, the limitations shall require application of the best *available* technology economically achievable. The statute expressly provides that the limitations which are to become effective in 1983 are applicable to "categories and classes of point sources"; this phase is omitted from the description of the 1977 limitations. While § 301 states that these limitations "shall be achieved," it fails to state who will establish the limitations.

Section 301 (c) authorizes the Administrator to grant variances from the 1983 limitations. Section 301 (e) states that effluent limitations established pursuant to § 301 shall be applied to all point sources.

To summarize, § 301 (b) requires the achievement of effluent limitations requiring use of the "best practicable" or "best available" technology. It refers to § 304 for a definition of these terms. Section 304 requires the publication of "regulations, pro-

---

Footnotes at end of article.

viding guidelines for effluent limitations." Finally, permits issued under § 402 must require compliance with § 301 effluent limitations. Nowhere are we told who sets the § 301 limitations, or precisely how they relate to § 304 guidelines and § 402 permits.

THE REGULATION

The various deadlines imposed on the Administrator were too ambiguous for him to meet. For that reason, the procedure which he followed in adopting the regulations applicable to the inorganic chemical industry and to other classes of point sources, is somewhat different from that apparently contemplated by the statute. Specifically, as will appear, he did not adopt guidelines pursuant to § 304 before defining the effluent limitations for existing sources described in § 301 (b) or the national standards for new sources described in § 306. The case illustrates the approach the Administrator followed in implementing the Act.

EPA began by engaging a private contractor to prepare a Development Document. This document provided a detailed technical study of pollution control in the industry. The study first divided the industry into categories. For each category, present levels of pollution were measured and plants with exemplary pollution control were investigated. Based on this information, other technical data, and economic studies, a determination was made of the degree of pollution control which could be achieved by the various levels of technology mandated by the statute. The study was made available to the public and circulated to interested persons. It formed the basis of "effluent limitation guideline" regulations issued by EPA after receiving public comment on proposed regulations. These regulations divide the industry into 22 subcategories. Within each category, precise numerical limits are set for various pollutants.[9] The regulations for each subcategory contain a variance clause, applicable only to the 1977 limitations.[10]

Eight chemical companies filed petitions in the United States Court of Appeals for the Fourth Circuit for review of these regulations.[11] The Court of Appeals rejected their challenge to EPA's authority to issue precise, single-number limitations for discharges of pollutants from existing sources. It held, however, that these limitations and the new plant standards were only "presumptively applicable" to individual plants.[12] We granted the chemical companies' petitions for certiorari in order to consider the scope of EPA's authority to issue existing-source regulations. We also granted the Government's cross-petition for review of the ruling that new source standards are only presumptively applicable. 426 U.S. 947. For convenience, we will refer to the chemical companies as the "petitioners."

THE ISSUES

The broad outlines of the parties' respective theories may be stated briefly. EPA contends that § 302(b) authorizes it to issue regulations establishing effluent limitations for classes of plants. The permits granted under § 402, in EPA's view, simply incorporate these across-the-board limitations, except for the limited variances allowed by the regulations themselves and by § 301(c). The § 304(b) guidelines, according to EPA, were intended to guide it in later establishing § 301 effluent limitation regulations. Because the process proved more time consuming than Congress assumed when it established this two-stage process, EPA condensed the two stages into a single regulation.[13]

In contrast, petitioners contend that § 301 is not an independent source of authority for setting effluent limitations by regulation. Instead, § 301 is seen as merely a description of the effluent limitations which are set for each plant on an individual basis during the permit-issuance process. Under the industry view, the § 304 guidelines serve the function of guiding the permit issuer in setting the effluent limitations.

The jurisdictional issue is subsidiary to the critical question whether EPA has the power to issue effluent limitations by regulation. Section 590(b)(1) provides that "[r]eview of the Administrator's action . . . (E) in approving or promulgating any effluent limitation under section 301" may be had in the courts of appeals. On the other hand, the Act does not provide for judicial review of § 304 guidelines. If EPA is correct that its regulations are "effluent limitations under section 301," the regulations are directly reviewable in the Court of Appeals. If industry is correct that the regulations can only be considered § 304 guidelines, suit to review the regulations could probably be brought only in the District Court, if anywhere.[14] Thus, the issue of jurisdiction to review the regulations is intertwined with the issue of EPA's power to issue the regulations.[15]

I

We think § 301 itself is the key to the problem. The statutory language concerning the 1983 limitations, in particular, leaves no doubt that these limitations are to be set by regulation. Subsection (b)(2)(A) of § 301 states that by 1983 "effluent limitations *for categories and classes* of point sources" are to be achieved which will require "application of the best available technology economically achievable *for such category or class.*" (Emphasis added.) These effluent limitations are to require elimination of all discharges if "such elimination is technologically and economically achievable for a *category or class* of point sources." (Emphasis added.) This is "language difficult to reconcile with the view that individual effluent limitations are to be set when each permit is issued." *American Meat Institute* v. *EPA*, 526 F. 2d 442, 450 (CA7 1975). The statute thus focuses expressly on the characteristics of the "category or class" rather than the characteristics of individual point sources.[16] Normally, such class-wide determinations would be made by regulation, not in the course of issuing a permit to one member of the class.[17]

Thus, we find that § 301 unambiguously provides for the use of regulations to establish the 1983 effluent limitations. Different language is used in § 301 with respect to the 1977 limitations. Here, the statute speaks of "effluent limitations for point sources," rather than "effluent limitations for categories and classes of point sources." Nothing elsewhere in the Act, however, suggests any radical difference in the mechanism used to impose limitations for the 1977 and 1983 deadlines. See *American Iron & Steel Institute* v. *EPA*, 526 F. 2d 1027, 1042 n. 32 (CA3 1975). For instance, there is no indication in either § 301 or § 304 that the § 304 guidelines play a different role in setting 1977 limitations. Moreover, it would be highly anomalous if the 1983 regulations and the new source standards[18] were directly reviewable in the Court of Appeals, while the 1977 regulations based on the same administrative record were reviewable only in the District Court. The magnitude and highly technical character of the administrative record involved with these regulations makes it almost inconceivable that Congress would have required duplicate review in the first instance by different courts. We conclude that the statute authorizes the 1977 limitations as well as the 1983 limitations to be set by regulation, so long as some allowance is made for variations in individual plants, as EPA has done by including a variance clause in its 1977 limitations.[19]

The question of the form of § 301 limitations is tied to the question whether the Act requires the Administrator or the permit issuer to establish the limitations. Section 301 does not itself answer this question, for it speaks only in the passive voice of the achievement and establishment of the limitations. But other parts of the statute leave little doubt on this score. Section 304 (b) states that "[f]or the purpose of adopting or revising effluent limitations . . . the Administrator shall" issue guideline, regulations; while the judicial review section (§ 509(b)(1)) speaks of "the Administrator's action . . . in approving or promulgating any effluent limitation or other limitation under section 301. . . ." See *infra*, at 22–23. And § 101(d) requires us to resolve any ambiguity on this score in favor of the Administrator. It provides that "[e]xcept as otherwise *expressly* provided in this Act, the Administrator of the Environmental Protection Agency . . . shall administer this Act." (Emphasis added.) In sum, the language of the statute supports the view that § 301 limitations are to be adopted by the Administrator, that they are to be based primarily on classes and categories, and that they are to take the form of regulations.

The legislative history supports this reading of § 301. The Senate Report states that "pursuant to subsection 301(b)(1)(A), and Section 304(b)" the Administrator is to set a base level for all plants in a given category, and "[1]n no case . . . should any plant be allowed to discharge more pollutants per unit of production than is defined by that base level." Leg. Hist., at 1468.[20] The Conference Report on § 301 states that "the determination of the economic impact of an effluent limitation [will be made] on the basis of classes and categories of point sources, as distinguished from a plant by plant determination." Leg. Hist., at 304. In presenting the Conference Report to the Senate, Senator Muskie, perhaps the Act's primary author, emphasized the importance of uniformity in setting § 301 limitations. He explained that this goal of uniformity required that EPA focus on classes or categories of sources in formulating effluent limitations. Regarding the requirement contained in § 301 that plants use the "best practicable control technology" by 1977, he stated:

"The modification of subsection 304(b)(1) is intended to clarify what is meant by the term 'practicable.' The balancing test between total cost and effluent reduction benefits is intended to limit the application of technology only where the additional degree of effluent reduction is wholly out of proportion to the costs of achieving such marginal level of reduction for *any class or category* of sources.

"The Conferees agreed upon this limited cost-benefit analysis in order to maintain *uniformity within a class and category* of point sources subject to effluent limitations, and to avoid imposing on the Administrator any requirement to consider the location of sources within a category or to ascertain water quality impact of effluent controls, or to determine the economic impact of controls on any individual plant in a single community." Leg. Hist., at 170 (emphasis added).

He added that:

"The Conferees intend that the factors described in section 304(b) be considered only within classes or categories of point sources and that such factors not be considered at the time of the application of an effluent limitation to an individual point source within such a category or class." Leg. Hist., at 172.

This legislative history supports our reading of § 301 and makes it clear than the § 304 guidelines are not merely aimed at guiding the discretion of permit issuers in setting limitations for individual plants.

What, then, is the function of the § 304(b) guidelines? As we noted earlier, § 304(b) requires EPA to identify the amount of effluent reduction attainable through use of the best practicable or available technology and to

Footnotes at end of article.

"specify factors to be taken into account" in determining the pollution control methods "to be applicable to point sources . . . within such categories or classes." These guidelines are to be issued "[f]or the purpose of adopting or revising effluent limitations under this Act." [21] As we read it, § 304 requires that the guidelines survey the practicable or available pollution control technology for an industry and assess its effectiveness. The guidelines are then to describe the methodology EPA intends to use in the § 301 regulations to determine the effluent limitations for particular plants. If the technical complexity of the task had not prevented EPA from issuing the guidelines within the statutory deadline,[22] they could have provided valuable guidance to permit issuers, industry, and the public, prior to the issuance of the § 301 regulations.[23]

Our construction of the Act is supported by § 501(a), which gives EPA the power to make "such regulations as are necessary to carry out" its functions, and by § 101(d), which charges the agency with the duty of administering the Act. In construing this grant of authority, as Justice Harlan wrote in connection with a somewhat similar problem:

"'[C]onsiderations of feasibility and practicality are certainly germane' to the issues before us. *Bowles* v. *Willingham* [321 U.S.], at 517. We cannot, in these circumstances, conclude that Congress has given authority inadeqaute to achieve with reasonable effectiveness the purposes for which it has acted." *The Permian Basin Area Rate Cases*, 390 U.S. 747, 777.

The petitioners' view of the Act would place an impossible burden on EPA. It would require EPA to give individual consideration to the circumstances of each of the more than 42,000 dischargers who have applied for permits (Respondent's Br., at 30 n. 22), and to issue or approve all these permits well in advance of the 1977 deadline in order to give industry time to install the necessary pollution control equipment. We do not believe that Congress would have failed so conspicuously to provide EPA with the authority needed to achieve the statutory goals.

Both EPA and petitioners refer to numerous other provisions of the Act and fragments of legislative history in support of their positions. We do not find these conclusive, and little point would be served by discussing them in detail. We are satisfied that our reading of § 301 is consistent with the rest of the legislative scheme.[24]

Language we recently employed in another case involving the validity of EPA regulations applies equally to this case:

"We therefore conclude that the Agency's interpretation . . . was 'correct,' to the extent that it can be said with complete assurance that any particular interpretation of a complex statute such as this is the 'correct' one. Given this conclusion, as well as the facts that the Agency is charged with administration of the Act, and that there has undoubtedly been reliance upon its interpretation by the States and other parties affected by the Act, we have no doubt whatever that its construction was sufficiently reasonable to preclude the Court of Appeals from substituting its judgment for that of the Agency." *Train* v. *Natural Resources Defense Council*, 421 U.S. 60, 87.[25]

When as in this case, the Agency's interpretation is also supported by thorough, scholarly opinions written by some of our finest judges, and has received the overwhelming support of the courts of appeals, we would be reluctant indeed to upset the Agency's judgment. In this case, on the contrary, our independent examination confirms the correctness of the Agency's construction of the statute.[26]

Consequently, we hold that EPA has the authority to issue regulations setting forth uniform effluent limitations for categories of plants.

Our holding that § 301 does authorize the Administrator to promulgate effluent limitations for classes and categories of existing point sources necessarily resolves the jurisdictional issue as well. For, as we have already pointed out, § 509(b)(1) provides that "[r]eview of the Administrator's action . . . in approving or promulgating any effluent limitation or other limitation under sections 301, 302, or 306, . . . may be had by any interested person in the Circuit Court of Appeals of the United States for the Federal judicial district in which such person resides or transacts such business . . . ."

Petitioners have argued that the reference to § 301 was intended only to provide for review of the grant or denial of an individual variance pursuant to § 301(c). We find this argument unpersuasive for two reasons in addition to those discussed in Part I of this opinion. First, in other portions of § 509, Congress referred to specific subsections of the Act and presumably would have specifically mentioned § 301(c) if only action pursuant to that subsection were intended to be reviewable in the Court of Appeals. More importantly, petitioners' construction would produce the truly perverse situation in which the Court of Appeals would review numerous individual actions issuing or denying permits pursuant to § 402 but would have no power of direct review of the basic regulations governing those individual actions. See *American Meat Institute* v. *EPA*, 526 F. 2d 442 (CA7 1975).

We regard § 509(b)(1)(E) as unambiguously authorizing Court of Appeals review of EPA action promulgating an effluent limitation for existing point sources under § 301. Since those limitations are typically promulgated in the same proceeding as the new source standards under § 306, we have no doubt that Congress intended review of the two sets of regulations to be had in the same forum.[27]

III

The remaining issue in this case concerns new plants. Under § 306, EPA is to promulgate "regulations establishing Federal standards of performance for new sources. . . ." § 306(b)(1)(B). A "standard of performance" is a "standard for the control of the discharge of pollutants which reflects the greatest degree of effluent reduction which the Administrator determines to be achievable through application of the best available demonstrated control technology, . . . including, where practicable, a standard permitting no discharge of pollutants." § 306(a)(1). In setting the standard, "[t]he Administrator may distinguish among classes, types, and sizes within categories of new sources . . . and shall consider the type of process employed (including whether batch or continuous)." § 306(b)(2). As the House Report states, the standard must reflect the best technology for "that category of sources, and for class, types and sizes within categories." Leg. Hist., at 798.

The Court of Appeals held that:

"Neither the Act nor the regulations contain any variance provision for new sources. The rule of presumptive applicability applies to new sources as well as existing sources. On remand EPA should come forward with some limited escape mechanism for new sources." 541 F. 2d, at 1028.

The Court's rationale was that "[p]rovisions for variances, modifications, and exceptions are appropriate for the regulatory process." *Ibid.*

The question, however, is not what a court thinks is generally appropriate to the regulatory process; it is what Congress intended for *these* regulations. It is clear that Congress intended these regulations to be absolute prohibitions. The use of the word "standards" implies as much. So does the description of the preferred standard as one "permitting *no* discharge of pollutants." (Emphasis added.) It is "unlawful for *any* owner or operator of *any* new source to operate such source in violation of any standard of performance applicable to such source." § 306(e) (emphasis added). In striking contrast to § 301(c), there is no statutory provision for variances, and a variance provision would be inappropriate in a standard that was intended to insure national uniformity and "maximum feasible control of new sources." Leg. Hist., at 1476.[28]

That portion of the judgment of the Court of Appeals requiring EPA to provide a variance procedure for new sources is reversed. In all other aspects, the judgment of the Court of Appeals is affirmed.

It is so ordered.

Mr. JUSTICE POWELL took no part in the consideration or decision of these cases.

FOOTNOTES

[1] A "point source" is "any discernible, confined and discrete conveyance, . . . from which pollutants are or may be discharged." § 502(14), 33 U.S.C. § 1362(14).

[2] Throughout this opinion we will refer interchangeably to the Administrator of the EPA and to the Agency itself.

[3] The reasons for the statutory scheme have been described as follows: "Such direct restrictions on discharges facilitate enforcement by making it unnecessary to work backward from an overpolluted body of water to determine which point sources are responsible and which must be abated. In addition, a discharger's performance is now measured against strict technology-based effluent limitations—specified levels of treatment—to which it must conform, rather than against limitations derived from water quality standards to which it and other polluters must collectively conform." *EPA* v. *State Water Resources Control Board*, 426 U.S. 200, 204–205 (footnotes omitted).

[4] Section 304(b) provides:

"(b) For the purpose of adopting or revising effluent limitations under this Act the Administrator shall, after consultation with appropriate Federal and State agencies and other interested persons, publish within one year of enactment of this title, regulations, providing guidelines for effluent limitations, and, at least annually thereafter, revise, if appropriate, such regulations. Such regulations shall—

"(1)(A) identify, in terms of amounts of constituents and chemical, physical, and biological characteristics of pollutants, the degree of effluent reduction attainable through the application of the best practicable control technology currently available for classes and categories of point sources (other than publicly owned treatment works); and

"(B) specify factors to be taken into account in determining the control measures and practices to be applicable to point sources (other than publicly owned treatment works) within such categories or classes. Factors relating to the assessment of best practicable control technology currently available to comply with subsection (b)(1) of section 301 of this Act shall include consideration of the total cost of application of technology in relation to the effluent reduction benefits to be achieved from such application, and shall also take into account the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, nonwater quality environmental impact (including energy requirements), and such other factors as the Administrator deems appropriate;

"(2)(A) identify, in terms of amounts of constituents and chemical, physical, and

biological characteristics of pollutants, the degree of effluent reduction attainable through the application of the best control measures and practices achievable including treatment techniques, process and procedure innovations, operating methods, and other alternatives for classes and categories of point sources (other than publicly owned treatment works); and

"(B) specify factors to be taken into account in determining the best measures and practices available to comply with subsection (b)(2) of section 301 of this Act to be applicable to any point source (other than publicly owned treatment works) within such categories or classes. Factors relating to the assessment of best available technology shall take into account the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, the cost of achieving such effluent reduction, non-water quality environmental impact (including energy requirements), and such other factors as the Administrator deems appropriate; and

"(3) identify control measures and practices available to eliminate the discharge of pollutants from categories and classes of point sources, taking into account the cost of achieving such elimination of the discharge of pollutants." 33 U.S.C. § 1314(b).

[5] Section 301 provides in pertinent part:

"SEC. 301. (a) Except as in compliance with this section and section 302, 306, 307, 318, 402, and 404 of this Act, the discharge of any pollutant by any person shall be unlawful.

"(b) In order to carry out, the objective of this Act there shall be achieved—

"(1)(A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to section 304(b) of this Act, . . .

"(2)(A) not later than July 1, 1983, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act, which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to section 315), that such elimination is technologically and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act.

"(c) The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

"(d) Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

"(e) Effluent limitations established pursuant to this section or section 302 of this Act shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this Act." 33 U.S.C. § 1311.

[6] There is no provision for compliance with § 304, the guideline section.

[7] Section 402(a)(1) provides:

"Except as provided in sections 318 and 404 of this Act, the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a) upon condition that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act, or prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act." 33 U.S.C. § 1342(a)(1).

Under § 402(b), the Administrator may delegate this authority to the States, but retains the power to withdraw approval of the state program, § 402(c)(3), and to veto individual state permits, § 402(d). Finally, under § 402(k), compliance with the permit is generally deemed compliance with § 301. Twenty-seven States now administer their own permit programs.

[8] The pertinent provisions of § 306, 33 U.S.C. § 1316, are as follows:

"(a) For purposes of this section:

"(1) The term 'standard of performance' means a standard for the control of the discharge of pollutants which reflects the greatest degree of effluent reduction which the Administrator determines to be achievable through application of the best available demonstrated control technology, processes, operating methods, or other alternatives, including, where practicable, a standard permitting no discharge of pollutants.

"(b)(1) . . .

"(B) As soon as practicable, but in no case more than one year, after a category of sources is included in a list under subparagraph (A) of this paragraph, the Administrator shall propose and publish regulations establishing Federal standards of performance for new sources within such category. . . .

"(2) The Administrator may distinguish among classes, types, and sizes within categories of new sources for the purposes of establishing such standards and shall consider the type of process employed (including whether batch or continuous).

"(3) The provisions of this section shall apply to any new source owned or operated by the United States.

"(e) After the effective date of standards of performance promulgated under this section, it shall be unlawful for any owner or operator of any new source to operate such source in violation of any standard of performance applicable to such source."

[9] Some subcategories are required to eliminate all discharges by 1977. *E. g.*, 40 CFR §§ 415.70–415.76. Other subcategories are subject to less stringent restrictions. For instance, by 1977 plants producing titanium dioxide by the chloride process must reduce average daily discharges of dissolved iron to 0.72 pounds per thousand pounds of product. This limit is cut in half for existing plants in 1983 and for all new plants. 40 CFR §§ 415.220–415.225.

[10] These limitations may be made "either more or less stringent" to the extent that "factors relating to the equipment or facilities involved, the process applied, or other such factors related to such discharges are fundamentally different from the factors considered" in establishing the limitations. See, *e. g.*, for the two subcategories discussed *supra*, n. 9, 40 CFR §§ 415.72 and 415.222, respectively.

[11] Because EPA's authority to issue the regulations is closely tied to the question whether the regulations are directly reviewable in the Court of Appeals, see p. 11, *infra*, some of the companies also filed suit in District Court challenging the regulations. The District Court held that EPA had the authority to issue the regulations and that exclusive jurisdiction was therefore in the Court of Appeals. 383 F. Supp. 1244 (WD Va. 1974), aff'd, 528 F. 2d 1136.

[12] The Court of Appeals issued two separate opinions. In *Du Pont I*, 528 F. 2d 1136, the court held that it had exclusive jurisdiction to consider the validity of the regulations. It therefore affirmed the District Court's dismissal of a suit to set aside the regulations. See n. 11, *supra*. In *Dupont II*, 541 F. 2d 1018, the court held that EPA was authorized to issue "presumptively applicable" effluent limitations and new source standards. No. 75–978 is the companies petition for certiorari in *DuPont I*, which we granted last Term, 425 U.S. 933. No. 75–1473 is their petition in *DuPont II*. We granted that petition, consolidated it with EPA's cross-petition, No. 1705, and ordered that they be argued *in tandem* with the companies' petition in *DuPont I*. 426 U.S. 947.

[13] Section 304(b) calls for publication of guideline regulations within one year of the Act's passage. EPA failed to meet this deadline and was ordered to issue the regulations on a judicially imposed timetable. *National Resources Defense Council, Inc.* v. *Train*, —— U.S. App. D.C. ——, 510 F. 2d 694 (1975).

[14] Although the Act itself does not provide for review of guidelines, the Eighth Circuit has held that they are reviewable in the District Court, apparently under the Administrative Procedure Act. *CPC International, Inc.* v. *Train*, 515 F. 2d 1032, 1038 (1975). It has been suggested, however, that even if the EPA regulations are considered to be only § 304 guidelines, the Court of Appeals might still have ancillary jurisdiction to review them because of their close relationship with the § 301 effluent limitations, and because they were developed on the same record as the § 306 standards of performance for new plants, which are directly reviewable in the Court of Appeals.

[15] The courts of appeals have resolved these issues in various ways. Only the Eighth Circuit, the first to consider the issues, has accepted the industry position. In *CPC International, Inc.* v. *Train*, 515 F. 2d 1032 (1975), it held that EPA lacked the authority to issue effluent limitation regulations and that jurisdiction to review the regulations as § 304 guidelines was in the District Court. The Fourth Circuit, in *DuPont II*, 541 F. 2d 1018 (1976), and the Tenth Circuit, in *American Petroleum Institute* v. *EPA*, 540 F. 2d 1023 (1976), held that EPA has the authority to issue effluent limitation regulations, but that these regulations are only presumptively applicable to individual sources. The majority position, adopted by the Third Circuit, *American Iron & Steel Institute* v. *EPA*, 526 F. 2d 1027 (1975); the Seventh Circuit, *American Meat Institute* v. *EPA*, 526 F. 2d 442 (1975); the District of Columbia Circuit, *American Frozen Food Institute* v. *Train*, 539 F. 2d 107 (1976); and the Second Circuit, *Hooker Chemicals & Plastic Corp.* v. *Train*, 537 F. 2d 620 (1976); is that EPA has the authority to issue regulations setting forth effluent limitations which individual plants may not exceed. Even these courts are not in complete agreement about the form the regulations should take. The commentators have also divided on these problems. See Parenteau & Tauman, The Effluent Limitations Controversy, 6 Ecology Law Quarterly 1 (1976); Note, Judicial Maelstrom in Federal Waters, 45 Ford. L. Rev. 625 (1976); Comment, The Application of Effluent Limitations and Effluent Guidelines to Industrial Polluters, 13 Houst. L. Rev. 348 (1976); Note, Effective National Regulation of Point Sources Under the 1972 Federal Water Pollution Control Act, 10 Ga. L. Rev. 983 (1976).

The difference in opinion among the Cir-

cuits may be less significant than might appear. The Eighth Circuit has concluded that:

"Under our ruling, the limitations written into individual permits for existing point sources should be substantially similar to those written into permits if the EPA's theory of the Act were to be adopted.

"The only practical difference resulting from the Court's interpretation of the statute is that the § 304(b) guidelines for *existing* sources must be reviewed first in the District Court, while the § 306(b) standards of performance for *new* plants—often based on the same scientific research and conclusions—must be reviewed first in the Court of Appeals." *CPC International, Inc.* v. *Train*, 540 F. 2d 1329, 1331–1332 n. 1 (1976) (*CPC II*). See also *American Meat Institute, supra*, 526 F. 2d, at 449 n. 14.

While this Court has not had occasion to rule directly on this question, our discussion of the Act in a case decided last Term is suggestive of the answer. We then described § 402 permits as "serv[ing] to transform *generally applicable effluent limitations* . . . into the obligations (including a timetable for compliance) of the individual discharger. . . ." 426 U.S. 200, 205 (emphasis added). This description clearly implied that effluent limitations of general application are to be established before individual permits are issued.

[16] The Court of Appeals noted that "[t]he 1983 and new source requirements are on the basis of categories." *DuPont II*, 541 F. 2d, at 1029.

[17] Furthermore, § 301(c) provides that the 1983 limitations may be modified if the owner of a plant shows "that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in a reasonable further progress toward the elimination of the discharge of pollutants." This provision shows that the § 301(b) limitations for 1983 are to be established prior to consideration of the characteristics of the individual plant. *American Iron & Steel Institute* v. *EPA*, 526 F. 2d 1027, 1037 n. 15 (CA3 1975). Moreover, it shows that the term "best technology economically achievable" does not refer to any individual plant. Otherwise, it would be impossible for this "economically achievable" technology to be beyond the individual owner's "economic capability."

[18] Section 509(b)(1)(A) makes new source standards directly reviewable in the Court of Appeals. The Court of Appeals in this case did not believe that Congress "intended for review to be bifurcated," with the new source standards reviewable in a different forum than regulations governing existing sources. 528 F. 2d, at 1141. The Eighth Circuit has acknowledged the practical problems and potential for inconsistent rulings created by bifurcated review. *CPC II*, 540 F. 2d 1329, 1332 n. 1 (1976). We consider it unlikely that Congress intended such bifurcated review, and even less likely that Congress intended regulations governing existing sources to be reviewable in two different forums, depending on whether the regulations require compliance in 1977 or 1983.

[19] We agree with the Court of Appeals, 541 F. 2d, at 1028, that consideration of whether EPA's variance provisions has the proper scope would be premature.

[20] All citations to the legislative history are to "A Legislative History of the Water Pollution Control Act Amendments of 1972," prepared by the Environmental Policy Division of the Congressional Research Service of the Library of Congress (Committee Print 1973).

[21] Petitioners rely heavily on selected portions of the following passage from the Senate Report to support their view of § 301:

"It is the Committee's intention that pursuant to subsection 301(b)(1)(A), and Section 304(b) the Administrator will interpret the term 'best practicable' when applied to various categories of industries as a basis for specifying clear and precise effluent limitations to be implemented by January 1, 1976 [now July 1, 1977]. In defining the best practicable for any given industrial category, the Committee expects the Administrator to take a number of factors into account. These factors should include the age of the plants, their size and the unit processes involved and the cost of applying such controls. In effect, for any industrial category, the Committee expects the Administrator to define a range of discharge levels, above a certain base level applicable to all plants within that category. In applying effluent limitations to any individual plant, the factors cited above should be applied to that specific plant. In no case, however, should any plant be allowed to discharge more pollutants per unit of production than is defined by that base level.

"The Administrator should establish the range of best practicable levels based upon the average of the best existing performance by plant of various sizes, ages, and unit processes within each industrial category." Leg. Hist. 1468.

If construed to be consistent with the legislative history we have already discussed, and with what we have found to be the clear statutory language, this language can be fairly read to allow the use of subcategories based on factors such as size, age, and unit processes, with effluent limitations for each category normally based on the performance of the best plants in that subcategory.

[22] As the Court of Appeals held (541 F. 2d, at 1027), EPA's response to this problem was within its discretion. Accord, *American Frozen Food Institute* v. *Train* — U.S. App. D.C. — 539 F. 2d 107, 130–131 (1967). Even if we considered this course a procedural error, it would not invalidate the § 301 regulations themselves since the purposes for issuing the guidelines were substantially achieved, see n. 23, *infra*, and no prejudice has been shown.

[23] The guidelines could have served at least three functions. First, they would have provided guidance to permit issuers prior to promulgation of the § 301 effluent limitation regulations. Second, they would have given industry more time to prepare to meet § 301 regulations. Third, they would have afforded a greater opportunity for public input into the final § 301 regulations, by giving notice of the general outlines of those regulations. These functions were substantially served by EPA's practice of obtaining public comment on the development document and proposed regulations. In addition, the guidelines could furnish technical guidance to companies lacking expertise in pollution control by informing them of appropriate control methods. See Leg. His. 1463. This function is served by the Development Document and supporting materials.

[24] See *American Iron & Steel Inst.* v. *EPA*, 526 F. 2d 1027, 1037–1041 (CA3 1975); *American Meat Inst.* v. *EPA*, 526 F. 2d 442, 450–452 (CA7 1975); *American Frozen Food Inst.* v. *Train*, 539 F. 2d 107, 116–131,— U.S. App. D.C. —, (1976). As these Courts have noted, a number of provisions of the Act seem to assume that § 301 effluent limitations have some existence apart from § 402 permits. Section 301(a) makes any discharge unlawful "[e]xcept as in compliance with this section and section [] . . . 402 . . . of this Act." Similarly, § 509(b), the judicial review provision, refers separately to the Administrator's action "(E) in approving or promulgating any effluent limitation or other limitation under section 301 . . . and (F) in issuing or denying any permit under section 402." Likewise, § 505(f), defines "effluent standard or limitation," for purposes of the citizen enforcement provision of the Act, to include "(2) an effluent limitation or other limitation under section 301 or 302 of this Act," and "(6) a permit or condition thereof issued under section 402 of this Act." The legislative history also recognizes a distinction between permit conditions and § 301 limitations. For instance: "The [House] Committee further recognizes that the requirements under [section] 301 . . . will not all be promulgated immediately upon enactment of this bill. Nevertheless, it would be unreasonable to delay issuing of permits until all the implementing steps are necessary." Leg. Hist., at 813.

These Court of Appeals decisions have also thoroughly considered the arguments the Eighth Circuit found to be persuasive. The most important contrary arguments are these:

(1) The Eighth Circuit was impressed by the differences between § 301 and sections explicitly authorizing EPA to issue regulations. These differences are less than the Eighth Circuit believed. For instance, the Eighth Circuit stressed that the explicitly authorized regulations were referred to as "standards," and that this term is not used in § 301. *CPC I*, 515 F. 2d, at 1038. But § 316(b) refers to "any standard established pursuant to section 301." Other differences between § 301 and sections providing explicitly for enforceable regulations, such as the lack of any statutory timetable for § 301 limitations, can be explained on the basis of the greater difficulty of drafting § 301 regulations.

(2) There was heated debate in Congress concerning whether EPA should be able to veto individual state permits, as the Act now provides. The Eighth Circuit believed that "creation of the veto power would make no sense if the EPA was already empowered to promulgate regulations under § 301." *CPC I*, 515 F. 2d, at 1040–1041. We disagree. "[A] veto power could have been considered just as necessary to ensure compliance by the permit grantors with section 301 limitations as with section 304 guidelines." *American Iron & Steel Inst.*, 526 F. 2d, at 1041. The veto power would be especially important because large numbers of permits could be issued before the § 301 regulations were promulgated. During this interim period, inconsistency with the § 304(b) guidelines could be a ground for vetoing a permit. (Moreover, we disagree with the Eighth Circuit's contention that EPA's power to object to "the issuance of such permit as being outside the guidelines and requirements of this act," § 402(d)(2), can only refer to § 304(b) guidelines. 515 F. 2d, at 1038–1039. Section 304(h) provides for guidelines governing the procedure for issuance of permits; EPA can veto permits if "the issuance of such permit" violated these guidelines.)

We are also unconvinced by the argument that our view of the Act violates the congressional intent to leave the States a major role in controlling water pollution. See *American Meat Institute, supra*, 526 F. 2d, at 452.

[25] Petitioners contend that the administrative construction should not receive deference because it was not contemporaneous with the passage of the Act. They base this argument primarily on the fact that EPA's initial notices of its proposed rulemaking refer to § 304(b), rather than § 301, as the source of authority. But, this is merely evidence that the Administrator originally intended to issue guidelines prior to issuing effluent limitation regulatons. *American Frozen Food Inst.* v. *Train*, 539 F. 2d 107, 130 n. 6 — U.S. App. D.C. — (1976). In fact, in a letter urging the President to sign the Act, the Administrator stated that "[t]he Conference bill fully incorporates as its central regulatory point the Administrator's proposal concerning *effluent limitation in terms of industrial categories and groups* ultimately applicable to individual dischargers through a permit system." Leg. Hist. 149

(emphasis added). Finally, the EPA interpretation would be entitled to some deference even if it was not contemporaneous, "having in mind the complexity and technical nature of the statutes and the subjects they regulate, the obscurity of the statutory language, and EPA's unique experience and expertise in dealing with the problems created by these conditions." *American Meat Inst.* v. *EPA*, 526 F. 2d 442, 450 n. 16 (CA7 1975).

[26] This case exemplifies the wisdom of allowing difficult issues to mature through full consideration by the courts of appeals. By eliminating the many subsidiary, but still troubling, arguments raised by industry, these courts have vastly simplified our task, as well as having underscored the reasonableness of the agency view.

[27] It should be noted that petitioners' principal arguments are directed to the proposition that § 301 did not *mandate* the promulgation of industry-wide regulations for existing point sources. But that ultimate proposition is not necessarily inconsistent with EPA's position that it was *authorized* to proceed by regulation if the aggregate effect of thousands of individual permit proceedings would not achieve the required effluent limitations by the 1977 and 1983 deadlines. Even with respect to the permit programs authorized by § 402, it is clear that EPA can delegate responsibilities to the States without surrendering its ultimate authority over such programs as well as over individual permit actions.

[28] Petitioners attach some significance to the fact that compliance with a § 402 permit is "deemed compliance, for purposes of sections 309 [the federal enforcement section] and 505 [the citizen suit section], with section[ ] ... 306 ...." § 402(k). This provision plainly cannot allow deviations from § 306 standards in issuing the permit. For after standards of performance are promulgated, the permit can only be issued "upon condition that such discharge will meet ... all applicable requirements under section[ ] ... 306 ...." § 402(a)(1); and one of the requirements of § 306 is that no new source may operate in violation of any standard of performance § 306(e) The purpose of § 402(k) seems to be to insulate permit holders from changes in various regulations during the period of a permit and to relieve them of having to litigate in an enforcement action the question whether their permits are sufficiently strict In short, § 402(k) serves the purpose of giving permits finality.

PRESIDENTIAL PARDONS

Mr. GARN. Mr. President, President Carter has recently issued a pardon that has deeply troubled and, I believe, divided the Nation. I opposed that pardon, believing that the cases should be dealt with compassionately but individually.

I have received a letter from one of Utah's most distinguished citizens, Ernest L. Wilkinson, in which Dr. Wilkinson expresses his opposition to the pardon. Dr. Wilkinson is a distinguished lawyer, author, retired president of Brigham Young University, and church official. He has also taken an active role in politics and is a recipient of the George Washington Medal of the Freedom Foundation.

I ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BRIGHAM YOUNG UNIVERSITY,
Provo, Utah, January 27, 1977.

The EDITOR,
Salt Lake Tribune,
Salt Lake City, Utah.

DEAR SIR: As a veteran of World War I and one who, as president of Brigham Young University, encouraged students of that institution, whenever drafted, to respond to the call of their country and do their duty as American citizens, I did not vote for Jimmy Carter for President because of his announced statement that he would pardon draft evaders, and for other reasons. I still clung to the hope, however, that when faced with the responsibility of the presidency he would consult with our military leaders and with Congress on the matter before taking any final action.

I was encouraged in this belief by his acceptance address in which he quoted from Micah 6:8, confirming that the Lord requires of all men, including the President, "to do justly, and to love mercy, and to walk humbly with thy God." I was shocked, however, the very next day, when he brazenly violated this commandment to be "just" by pardoning hundreds of thousands of deserters who had failed to respond to the call of their country. In doing this, how can it be said that the President is dealing justly with the 57,000 American boys who were killed in Vietnam and the 300,000 who were wounded, many of whom themselves were opposed to the Vietnam War but who, as patriots, responded to the call of their country by either volunteering or accepting the draft. Or how can it be said he dealt justly with the 28,000,000 who served.

The President's precipitous action in doing this the first day of his administration was also an insult to the Congress of the United States, where one of their most distinguished Senators, Allen, of Alabama, in behalf of himself and eight other Senators, including Senator Hatch, had already introduced a resolution "to express the sense of the Senate in opposition to a general presidential pardon by proclaiming an Executive order of Vietnam draft evaders."

This was in direct violation also to the many utterances Carter made during his campaign that he proposed to work with Congress on all matters. By issuing his pardon proclamation the first day he was in office he obviously intended to prevent an effective presentation by the Senators, most of whom are of his own party, of their views on this subject. This precipitous action in order to prevent a proper expression of the will of Congress is hardly a fair way for a new president to cement his relations with Congress, and if persisted in in other matters could cause an open breach between himself and the Senate. Indeed, some have already been alienated by this throttling of their Senatorial prerogatives.

Indeed, as late as January 26, Senator Byrd, the Democratic leader, moved to have the resolution of Senator Allen struck from the calendar. His motion carried by a vote of 49 to 45, indicating that a very large number of the President's own party are opposed to the President's action. Some voted in favor of Byrd's motion because the President had already acted. Except for this the resolution may have carried. This is probably the reason the President planned to beat the Senate to it.

One of the aspects of Carter's action which disturbs me most is that draft evaders who have become teachers in educational institutions in other countries may now return to the United States and teach their students in the United States the same disloyal acts which they practiced and for which they have been fully pardoned.

An attempt is made to justify the action of President Carter by equating it with the pardon of the Confederates by General Grant and President Lincoln after the Civil War. The Civil War pardon was necessary to again unite us as a nation, and then only after a a complete surrender of all Confederate troops. Considering the relatively small number of deserters in the Vietnam War as opposed to the large number of patriots who shouldered arms, the comparison is not even relevant. Indeed, the Department of Justice estimates the numbers now being pardoned to be only about 10,000.

Briefly stated, the pardon of President Nixon, who of all people should obey the law of the land, by President Ford, and the pardon of thousands of draft evaders by President Carter were, to my mind, glaring abuses of the President's pardoning power by both Presidents.

Respectfully submitted,
ERNEST L. WILKINSON.

BUSINESS LEADERS' VIEWS ON ECONOMIC PLANNING

Mr. HUMPHREY. Mr. President, last summer, the Joint Economic Committee conducted a survey of business leaders' opinions on national economic planning. The purpose was to obtain the views of business leaders on the issue of planning, with specific focus on the Humphrey-Javits bill, in a purely informal context.

A member of the staff of the committee visited with 28 business executives, many of whom are the chief executive officers of some of the largest corporations in the Nation. And the firms represented in the survey included companies such as: Exxon, Procter & Gamble, IBM, Bank of America, Alcoa, General Electric, Kennecott Copper, General Motors, Citicorp, and many others.

The principal result of the survey, in my judgment, is the remarkable consensus that seems to exist within the business community concerning many of the principles underlying the economic planning proposal introduced by Senator JAVITS and myself. Although there are some differences of opinion within the business community, the survey concludes that business generally supports:

The need to improve the quality of our economic information in order to allow more intelligent debate on issues and to upgrade the quality of decisions;

Efforts to examine the tradeoffs and interactions of alternative policy proposals through such mechanisms as economic impact statements and cost-benefit analyses;

The employment of economic forecasts in order to test different assumptions concerning future economic behavior and outcomes;

Improved Government planning of its own activities; and

Actions by the Federal Government to find solutions to specific national, social, and economic problems such as unemployment.

A number of the businessmen interviewed, opposed the idea of new Government agencies to perform the planning functions. Rather, they suggested using existing agencies such as an expanded Council of Economic Advisers and the Office of Management and Budget in the

executive branch, and the Budget Committees, the Congressional Budget Office, and the Office of Technology Assessment in the legislative branch.

I believe that the proponents of the economic planning policy and the business community are in substantial agreement with regard to the major features of the proposal advanced by Senator JAVITS and myself. The survey, which was performed by Mr. Robert Fuller, who was with the staff of the Joint Economic Committee, as a conference board congressional intern during 1976, provides many interesting insights into the attitudes and convictions of the business community and is a significant contribution to the dialog about economic planning.

Mr. President, I ask unanimous consent that the "Survey of Business Leaders' Opinions on National Economic Planning," prepared for the Joint Economic Committee, and a list of the business leaders interviewed, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SURVEY OF BUSINESS LEADERS' OPINIONS ON NATIONAL ECONOMIC PLANNING

During late July and early August 1976, twenty-eight business leaders were interviewed as to their views on national economic planning. Most of the companies were large national firms and were diversified by industry and headquarters locality. Since all of the interviews were off-the-record, no individuals are quoted, but a list of the participants is attached. In general, all the businessmen were very well-informed, had strong opinions about the subject, and appreciated the Committee's interest in hearing their views. As one put it, "You (Chairman Humphrey) were characteristically fair-minded in soliciting the views of businessmen on this issue, and I know that you would want nothing less than candor and frankness in their responses."

SUMMARY

The general business view of planning is as follows:

First, business supports the need to improve the quality of our economic information and feels that having a centralized unit to collect and analyze data would be practical. They believe there is some risk that the information could be misused, but think that the benefits of better information about our economic system outweigh the risks.

Second, business approves of having this centralized unit do forecasting, particularly in showing the ranges of outcomes on which various policy alternatives may have an effect. Impact statements showing cost-benefit analysis of every piece of legislation were considered very worthwhile.

Third, business believes that government has a role to set standards of behavior for our society (pollution, safety, anti-trust, etc.), but then the market system should be allowed to operate as freely as possible. Although it has imperfections, the marketplace is, in their view, the most flexible, responsive and democratic system ever developed. They believe planning seeks to modify this system and thereby to restrict consumers' right of free choice.

Fourth, business believes a planning effort takes on too much if it tries to set goals for the whole economy. They believe our system is so complex that there will never be general agreement on goals and the goals will be so broad that the public will have little idea how their actions can affect the overall goals. Consequently, there would be no general support for the goals.

Fifth, they believe that the goals established through the political process will promise a good deal more than can be achieved. Because of the adversary relationship between business and government, they believe that business will be blamed for not "doing its part" when the goals are not achieved. This will establish a regulatory atmosphere which will result in giving government more control over the private sector.

Sixth, business recommends that, rather than try to plan the whole society, it would be better to identify specific problem areas (teenage unemployment, energy, etc.). By going narrower and deeper, the chances of success will be much improved. This is because:

(a) The information base should be easier to accumulate because the problem is more quantifiable.

(b) Predicting the effects of policy decisions on narrower goals will be easier and more accurate.

(c) Reaching general consensus on the best policy decision to implement will be expedited because the narrower issue will be more clearly understood.

(d) Groups affecting the economy—business, labor, consumers, government—will all have a better understanding of how their actions could affect the achievement of the goals and thus would be more willing to cooperate to achieve them.

Even if the planning effort focuses on specific issues, the business leaders were not optimistic that this would help to solve our nation's problems. The recent experience with attempts to plan in the energy area was very disillusioning to them because no satisfactory energy policy emerged from the effort. They question whether political factors will not always override economic factors.

Seventh, business does not believe it is necessary to create a new government agency to undertake planning. Expanding the powers of existing executive or legislative branch organizations or possibly commissioning a private or quasipublic group could achieve the same ends. There was concern that a national planning agency would become very powerful and upset the current balance of power in our political and economic systems.

ASSUMPTIONS

In the interviews, it was apparent that businessmen have strong beliefs about how our economy, our government, and our whole society interrelate, which affect their view of planning.

The first assumption businessmen make is: the less government—the better for the economy and society in general. Besides government's role to set standards for behavior in our society, it also has a role to monitor society to ensure that standards are being observed. In emergency situations, the government has a role in the allocation of resources. Once these basic guidelines are established, however, the market system should be allowed to operate as freely as possible to allocate resources. Although they concede that it has imperfections, the free marketplace is in this view the most efficient and fair economic system ever developed. They feel that the market is a basically stable system, and that government control tends to be a destabilizing influence. In general, the businessmen believe that the advocates of planning assume that the present marketplace system needs to be modified, which they equate to mean that consumers' rights to free choice would then be modified. They quote statements by sponsors of planning legislation such as, "Do we really need so much plastic packaging when it litters the land and is energy intensive?," to support their views that consumer choice would be restricted.

A second assumption businessmen make concerns the nature of government bureaucracies. Businessmen assume that, once created, agencies often have a mind of their own and have significant discretionary authority to interpret laws. This can lead to having an elitist group deciding for the electorate what is best for them. Bureaucracies have a natural tendency to increase their powers and often are kept in existence long after their original reason for existence has been fulfilled. Nearly all those interviewed related experiences about how some agency had treated their company in a belligerent or autocratic way. Business is consequently fearful about the effects that admittedly well-intended legislation may have on them because of previous dealings with government agencies.

Third, businessmen believe that our society is a culture of individualism, decentralization, competition, and advocacy. We are not a society of consensus like Japan, where some individuals voluntarily subordinate their own self-interest for the national good. Unless we are in an emergency situation, they believe most Americans will seek to maximize their own self-interest.

The advocacy nature of our society also affects the relationship between business and government and leads to a fourth assumption. Businessmen sense an adversary relationship with the government. They perceive a distinct possibility that planning may be used against them. The fact that several noted critics of big business such as Professors Leontief and Galbraith and some major labor leaders have endorsed planning legislation has reinforced this view.

A fifth assumption is that political leaders always will promise more than can be achieved. This is seen to be a natural outcome of the electoral process. Most feel that national economic planning would intensify this bias. They also note that making decisions in our legislative process is a laborious process because our system allows all the divergent views to be heard. Once goals are established, they may add an element of rigidity to the economy when in fact flexibility is crucial to meet new and unforeseen challenges. Business notes that their own plans have often been quite inaccurate, but the marketplace forces them to adjust quickly or suffer the consequences. They see no such pressure on the government.

A sixth assumption is that business believes economics is an art and its ability to forecast is quite limited. There are so many interrelated variables in our system that evaluating the effects of any particular input are far from certain. They do not believe the economy can be fine-tuned because "surprises" (droughts, energy embargoes, etc.) can't be predicted with any accuracy. Business feels the planning efforts place too much reliance on the ability of economists to make fairly accurate projections. They note that despite government sponsored planning in other countries, all countries have experienced inflation, unemployment and economic setbacks in the past three years.

GENERAL VIEWS

A problem with the discussion of planning is a definition of the word. In interviewing, the term was broken down into several components:

(a) Improvement of the quality and quantity of economic information;

(b) Government planning of government activities;

(c) Goal-setting by the government; and

(d) Government planning of private sector activities.

Business generally supports the need to improve the quality of our economic information. They feel that improving the sta-

tistical base would upgrade the quality of decisions we make, and also allow more intelligent debate on issues. Having a common data base might also reduce the incidences of different agencies asking for essentially the same information to be prepared in a slightly different manner. The businessmen do not have objection to some new centralizing agency collecting the information and consolidating the inputs from all the sources who now collect economic information.

However, most of them would prefer to expand the Council of Economic Advisers to fulfill this need rather than create a new agency. Because of the assumed adversary relationship between business and government, some concern was expressed about possible misuse of information, either by leaking confidential data or distortion of the facts. Line-of-business reporting is a particularly worrisome development because of the possible leak of proprietary information. Despite the concerns about the information gathering, these business leaders clearly feel the benefits of improving our economic statistics outweight the potential risks.

In addition to supporting efforts toward the collection of historical data, business also supports efforts to examine the trade-offs and interactions of alternative policies. They feel the economic impact statements should be an integral part of new legislation as well as government agency decisions. This cost-benefit analysis might help to reduce the occurrences where the intent of legislation is far different from the outcome.

Business also supports efforts to make economic forecasts, or "anticipatory analysis" as one termed it. Rather than make one specific forecast, most interviewees would prefer to have a range of outcomes using differing assumptions. This might help business, consumers, labor, etc. in their own planning to determine areas of opportunity for development.

The second aspect of planning—government planning of its own activities—is strongly endorsed by business. The budget process and efforts in zero-based budgeting were taken as encouraging signs that progress is being made in this area. However, business would feel a lot more comfortable about planning if the government did a better job of planning its own activities before it tries planning for the whole economy.

In the goal-setting area lies the heart of most businessmen's objections to planning. They recognized that legislative proposals for planning currently only recommend indicative goals in broad policy areas; initially, no goals would be set for specific production sectors or individual industries. The business leaders asume, however, that the goals reached by the legislative process will be unrealistically high. The planners claim setting high goals will push people to achieve maximum output, but business fears that public disenchantment may result when the goals are not achieved. The pro-planners believe that establishing goals will help to focus our national energies toward some agreed on national purpose. Business does not believe this collective voluntarism works unless there is a national emergency and the public has a very clear understanding of the issue. They feel it will be difficult for the public to identify what it can do to help achieve broad policy goals and, therefore, the natural tendency of Americans to act in their own self-interest will prevail. Theoretically, if the goals are only voluntary and are not met, nothing happens.

However, business believes that the planners (either in Congress or a national planning agency) would not admit that their goals were unrealistic, but rather would seek to blame someone for not doing his part to achieve the national goals. Business believes that they would be blamed and this would establish a regulatory atmosphere to "help business do its share." The original advisory planning agency would then be given powers to control actions in the private sector. Business sees goal-setting for the national economy as the first step which will inevitably lead to more government control of the private sector.

Rather than attempt to plan the whole economy, most of the businessmen recommend attempts to solve specific problem areas in our economy. They feel that national economic planning is an attempt to use macro-solutions to solve micro-problems. They believe that a more effective way to find solutions to our nation's social and economic problems is to break them down into specific problem areas, for example, teenage unemployment or establishing job opportunities for every American who wants to work. By identifying the micro-problems, business, government, labor, consumers, etc., would have a clearer understanding of the effects of their actions toward achieving established goals.

However, even if the planning were broken down into more manageable portions, the businessmen were somewhat skeptical about the results that could be achieved. Many cited the attempt at planning in the energy area as one example of their reservations. In energy, there are more comprehensive statistics available to analyze the situation than nearly any issue today. There have been panels of experts to study the situation; government agencies have been established or given responsibility to make recommendations for planning in energy. Despite all this information, the government has not been able to accomplish the objectives which seem to have been clearly agreed upon by everyone; that is, to increase our self-reliance. Business feels that political factors have been more important than economic factors in trying to resolve this issue. The actions taken by the legislative branch and supported by the executive branch have done nothing to make America more energy independent. As one stated it, "This leads many businessmen to believe that the political process would make national planning more of a political football than a means of accomplishing better results for the citizens of our nation."

Because of business' rather negative assumptions about government bureaucracies, many question if it is necessary to establish a new agency to undertake planning in any form. There are already several organizations in place that could carry out the planning function. In the legislaive area, there are the Congressional Budget Office, the Budget Committees and the Office of Technology Assessment; on the executive side, the Office of Management and Budget and the Council of Economic Advisers could easily be expanded. Business agrees that our economy has not performed well in many areas, but do not feel a new hierarchy is necessary to better address and recommend solutions to improve our performances.

Several businessmen suggested that, rather than have a government agency do planning, possibly a private or quasipublic organization would be better. This might help to minimize the political influences of the planning function. Some suggested using organizations like the National Planning Association or The Conference Board. Others felt that a new independent corporation, comparable to COMSAT, should be established. Minimizing the effect of political influences is an important element of planning. Most businessmen who have supported national planning have stated this as a pre-condition that must be undertaken before planning can work. The energy example led most of the interviewees to believe that it is not possible to de-politicize the goal-setting process.

Another element of national planning that the sponsors of the planning bills want to achieve is to broaden the base of our economic decision-making. Most businessmen felt our existing methods of economic policy-making allowed sufficient inputs. Many government agencies have outside advisory boards. The hearing process allows a wide range of ideas to be presented. In fact they worry that a government planning agency might become isolated, and thereby reduce the level of inputs.

Several businessmen question whether the sponsors of national economic planning are setting purely indicative goals, or in fact intend to coerce the private sector. The following are examples used to exemplify their concern:

Sec. 208(a)(3) of S. 1795: "recommend legislative and administrative actions necessary or desirable to achieve the objectives of the plan, including recommendations with respect to money supply growth, the Federal budget, credit need, interest rates, taxes and subsidies, anti-trust and major policies, changes in industrial structure and regulation, international trade, and other policies and programs of economic significance."

Senator Humphrey quote in Challenge magazine, March/April 1975 from "Planning Economic Policy":

"What can government do about it? Government can do a lot about it. For example, the size of automobiles, and consequently energy consumption, can be influenced a great deal by taxing cubic displacement, horsepower, or weight . . . Government can also influence industry by giving an investment tax to companies that produce fuel-efficient automobiles. These are just two ways in which government policy can influence the private economy."

Statements by the Initiative Committee for National Economic Planning like: "The heart of planning is to go from information to action" or "The Plan would induce industry to comply."

Consequently, most businessmen do not feel certain that proposed planning legislation would be purely advisory. Several suggest that a hypothetical model showing how the legislation might be carried out would be very helpful to their understanding of the issue.

BUSINESS LEADERS INTERVIEWED

Roger E. Anderson, Chairman, Continental Illinois Corporation, Chicago, Illinois.

Thomas G. Ayers, Chairman, Commonwealth Edison Company, Chicago, Illinois.

Norton Belknap, Vice President of Corporate Planning, Exxon Corporation, New York City.

B. F. Biaggini, President, Southern Pacific Company, San Francisco, California.

Jack Black, Vice President of Public Affairs, Pacific Telephone & Telegraph Company, San Francisco, California.

Owen B. Butler, Vice Chairman, Procter & Gamble Company, Cincinnati, Ohio.

Fletcher L. Byrom, Chairman, Koppers Company, Inc., Pittsburgh, Pennsylvania.

Frank T. Cary, Chairman, International Business Machines Corporation, Armonk, New York.

A. W. Clausen, President, Bankamerica Corporation, San Francisco, California.

R. Hal Dean, Chairman, Ralston Purina Company, St. Louis, Missouri.

James L. Ferguson, Chairman, General Foods Corporation, White Plains, New York.

W. H. Krome George, Chairman, Aluminum Company of America, Pittsburgh, Pennsylvania.

John W. Hanley, Chairman, Monsanto Company, St. Louis, Missouri.

Robert S. Hatfield, Chairman, Continental Group, Inc., New York City.

Leon Hess, Chairman, Amerada Hess Corporation, New York City.

Reginald H. Jones, Chairman, General Electric Company, Fairfield, Connecticut.

Reynold C. MacDonald, Chairman, Interlake, Inc., Oakbrook, Illinois.

Jerry McAfee, Chairman, Gulf Oil Corporation, Pittsburgh, Pennsylvania.

Robert McClellen, Vice President, FMC Corporation, Chicago, Illinois.

Harold W. McGraw, Jr., Chairman, McGraw-Hill, Inc., New York City.

Frank R. Milliken, President, Kennecott Copper Corporation, New York City.

Thomas A. Murphy, Chairman, General Motors Corporation, Detroit, Michigan.

Leif Olsen, Senior Vice President and Chief Economist, Citicorp, New York City.

Norman Robertson, Senior Vice President and Chief Economist, Mellon Bank N.A., Pittsburgh, Pennsylvania.

Irving S. Shapiro, Chairman, E. I. duPont de Nemours & Company, Inc., Wilmington, Delaware.

Richard R. Shinn, President, Metropolitan Life Insurance Company, New York City.

Arthur R. Taylor, President, CBS Inc., New York City.

Rawleigh Warner, Jr., Chairman, Mobil Oil Corporation, New York City.

JOB CREATION

Mr. HATCH. Mr. President, reducing the current unacceptably high rate of national unemployment is one of the greatest challenges faced by the 95th Congress. I think most observers will agree that creating more jobs is the best long-term solution—however, there is substantial disagreement as to the most effective manner by which full employment is to be achieved. I suspect the debate will vigorously continue before we find a consensus or a combination of solutions for this most serious problem.

In this continuing dialog, at some point we will be forced to wrestle with the question of which philosophies are best implemented to solve or alleviate the problem. For example, should big powerful Government be the primary instrument for the solution through a massive public service jobs program? Or, are we best advised to rely upon the expansion of the private enterprise system through acceptable tax or other appropriate incentives? Or are these two approaches mutually exclusive?

One of the clearest thoughts I have seen on this subject is reported in a speech recently delivered by James H. Evans, president of the Union Pacific Corp., upon his receipt of the International Businessman of the Year Award given by the College of Business, Graduate School of Management, Brigham Young University. I believe Mr. Evans' speech merits the attention of my colleagues and I ask unanimous consent that its text now be printed in full in the RECORD.

There being no obection, the speech was ordered to be printed in the RECORD, as follows:

JOBS CREATION: TODAY'S CHALLENGE TO THE ENTERPRISE OF FREE MEN

(By James H. Evans)

President Tanner, President Oaks, Dean Bateman, Chairman Sears, Governor-elect Matheson, and honored guests. It is a great pleasure and a distinct honor to be invited to Brigham Young University by your distinguished National Advisory Council, which is functioning so effectively under the leadership of my good friend, Robert N. Sears. I regard it as a rare privilege to be asked to speak to such a magnificent group of business leaders, educators, and churchmen in the intellectual environment of this great university.

Moreover, I am pleased beyond measure to be selected by the National Advisory Council of the Graduate School of Management and the College of Business as International Businessman of the Year. I regard it as one of the most gratifying events of my life.

It is also a great personal pleasure for Mrs. Evans and me to be back among the wonderful people of Utah and of Brigham Young University. We at Union Pacific feel very much at home in Utah, since our roots started growing here early and are now very, very deep.

Brigham Young was one of the first members of the Board of Directors of the Union Pacific Railroad Company. He served with characteristic distinction and foresight during the trying birth period of the 1860s. He and the Mormon pioneers helped us to build the final, hard-won miles of railroad track in Utah that linked us with the Central Pacific Railroad at Promontory, not far from here.

Brigham Young also helped to transform the Union Pacific Railroad from a single iron band of trank across the prairie into a far-flung network of rail which tied the West and the nation together. He supported the construction of branchlines from Ogden to Salt Lake City and throughout the Rocky Mountain region. This concept eventually led Union Pacific to open up channels of commerce to Los Angeles and to Portland and across the wide Pacific.

Brigham Young once called Union Pacific a "gigantic work which will . . . bind the country together." Here again, he demonstrated that prophetic instinct for destiny that marked his words throughout a long and fruitful life.

Many other prominent men of Utah and the LDS Church, including Joseph F. Smith, Heber J. Grant, and Harold B. Lee, have served us magnificiently, helping to build the modern Union Pacific. Harold B. Lee was a member of our Board of Directors for nearly seventeen years until his untimely death in December 1973. President Lee's flawless character, great wisdom, personal charm, innate kindliness, and foresight were a tremendous inspiration to all of us who were privileged to serve with him.

The University library named for him is a fitting—a really perfect—memorial to President Lee because the pursuit of excellence through knowledge was a hallmark of his life.

With regard to Utah and its continuing influence on the ongoing vitality of Union Pacific, two of your distinguished citizens, George S. Eccles and his nephew Spencer F. Eccles, are presently members of our Board of Directors. George Ecceles has served with great distinction since 1957, and Spencer Eccles agreed just this year to help us in the tasks for the future.

We have always considered our relationship with Utah a two-way obligation—one in which we hope to give as well as to receive. Just last Tuesday, for instance, you chose Scott Matheson, who served until August 1 as Union Pacific Railroad Company's General Solicitor and Senior Railroad Legal Officer in the Intermountain Region, to be your next governor. We are confident that Scott will serve Utah well, although he will have his work cut out for him in matching the splendid record of our great and good friend, Governor Calvin Rampton.

One other tie that binds me personally to your great University is that your esteemed President Dallin Oaks and I have had the common privilege, albeit at different times, of sitting at the feet of Edward Levi, who was then teaching the philosophy of the law at the University of Chicago Law School. Edward Levi was later Dean of the University of Chicago Law School and then the University's Provost and President. Now, of course, he is Attorney General of the United States.

Our mutual involvement under the aegis of Edward Levi with the natural law, wherein we studied Plato, Aristotle, and St. Thomas Aquinas before we even looked at a legal case per se, imparted what I believe to be a broader view of our responsibility as lawyers. Therefore, it is only natural that Dallin and I would be impelled to attempt to serve society beyond the bounds of our respective callings. I'm sure that this has helped strengthen Dallin's resolve in his imaginative and commendable campaign to use the precious guarantees embodied in the First Amendment to defend academic freedom against the pernicious and growing influence of Big Government on higher education. He has spoken eloquently on this subject on several occasions, and I commend him for continuing to speak out.

I am confident that President Oaks is not the only one here this evening who is disturbed by the increasingly dominant role that Big Government is playing in the field of higher education. Many of use are deeply concerned about that and also about Big Government's influence in our daily personal and business lives.

This leads me to observe that, with 1984 only a little over seven years away, George Orwell's frightening prophecy of a "Big Brother" who is watching all of us seems ever closer to fulfillment.

Indeed, one of the dominant theories or philosophies of government today is what might be called the "Big Brother" approach. Its basic assumption is that big, powerful government can and should be the primary instrument for the solution of all our major economic and social problems.

According to this theory, Big Government, making full use of its great and growing power—particularly its power to tax both individuals and businesses—provides the only means of meeting challenges that have become too unmanageable to be handled successfully in any other way. And along with this belief goes its corollary: that only government has the wisdom to deal with these issues.

There is another philosophy, however, that is directly opposed to Big Government's approach. The basic contention of this school of thought is that the only real and lasting way to solve major economic and social problems is through private enterprise—the enterprise of free men, who, each day, as individuals, make the millions of decisions that combine to give us direction through collective wisdom.

The proponents of this second philosophy—and I assure you that I am one of them—believe that we have had enough of Big Government. We furthermore believe that if we remove the fetters with which individuals endeavor has been increasingly bound, we will once again release in this nation the vigor and energy of our private enterprise system and will achieve thereby a vital and growing economy—and a healthy and resilient social fabric in our broader society.

The fundamental differences between these two philosophies can be clearly illustrated by contrasting proposals that have been put forward at the national level to create jobs and reduce unemployment.

Creating jobs presents all of us with a serious challenge. The current unemployment rate of 7.9 percent in October—up from the September figure of 7.8 percent—is nearly twice as high as any rate that most economists or businessmen would consider "acceptable." It means that more than seven-and-a-half million Americans out of our total civilian labor force of ninety-six mil-

lion people are looking for jobs and are not able to find them.

In saying this, I am not overlooking the fact that, despite the high rate of unemployment, more people are working today than ever before. About eighty-eight million Americans are now at work each day. This is five-and-a-half million more than were employed in early 1975, and fifteen million more than were employed in 1966. If one thinks back to 1956, just twenty years ago, the number of people employed has increased by a truly remarkable figure of twenty-four million. The steady rise in total employment speaks well for the long-range vitality of our economy and for the long-range prospect for jobs.

Nevertheless, at present we have an unemployment rate that is just too high. This is a problem now—and it requires a solution now—because we will not be able to pretend that we are out of the economic woods until it is solved. A thoroughly healthy economy and a high rate of unemployment are simply incompatible.

Two proposals to create jobs were presented to Congress this year. They were the Humphrey-Hawkins Bill, representing the public-sector or Big Government approach, and the Kemp-McClure Bill, which took what I believe to be the more progressive and productive private-enterprise approach.

It is particularly gratifying that James A. McClure, that wise and farsighted senator from neighboring Idaho, was the co-sponsor of this landmark legislation.

The Ninety-fourth Congress is now, of course, a matter of history, and these bills died with its adjournment. But it is generally accepted that they will be revived in much the same form in the Ninety-fifth Congress when it convenes after the first of the year. For the sake of convenience. I will continue to refer to them by the names that have become familiar to the public.

The Humphrey-Hawkins concept seems to me to represent one of those 1948 "Big Brother" schemes that would eat up taxes while offering, at best, only a temporary solution to the unemployment problem. In spite of recent window-dressing amendments that attempt to soften its devastating inflationary effects, the prime aim of the Humphrey-Hawkins Bill is still to provide a government-financed job to every person who is employable but who cannot find work in private business.

It seems to me that this approach is both old-fashioned and wrong-headed. It is old-fashioned because it is the same approach taken in the 1930s, nearly forty-five years ago. Back then, this country—along with the rest of the world—was plunged into a depression so deep it seemed unlikely that our economic system would survive unless extraordinary measures were taken. In 1933, for example, nearly thirteen-million Americans were unemployed—or more than 25 percent of the total civilian work force.

Certainly the times we live in now are very much different. We have come through a recession, and the economy is on the upswing—despite some pauses and hesitations.

In the economy of 1976, there must be—and there are—better ways of tackling our nagging unemployment problem than turning back to the kind of solutions devised in a different era now far behind us. To me it is ironic that those who are advocating the Big Government approach think of themselves as innovative and forward-looking, when, in fact, they are looking backward for all their answers.

The formulas of the past—some based on ideas that date back not just to the 1930s, but to the nineteenth century—have become weary economic cliches. The problems of this, the last quarter of the twentieth century, require a fresher, more hopeful and progressive approach. New times call for new ideas and new solutions that are right for today. And what is right for today is the creation of jobs in private business.

The public-sector approach is not only old-fashioned, but, as I said, wrong-headed. It turns things upside down. To put people to work in public service jobs—that is, to put them on the government payroll—requires a lot of government money—that is, tax money. To reduce adult unemployment to the 3-percent level, as required by even the amended Humphrey-Hawkins Bill, would mean putting some three-million people to work, according to estimates by the Congressional Budget Office. If each were to be paid $10,000 a year, the total cost to the taxpayers could be $30 billion. Many critics of the bill think it might cost far more.

There is no way this money could be provided except by raising taxes substantially or by printing more money. Private purchasing power would diminish, jobs in private business would decrease, the rate of capital formation would slow, and, if deficits were incurred by printing money, inflation would be stimulated enormously.

I submit that what we want to accomplish is just the opposite: the creation of jobs in private industry, as proposed by the Kemp-McClure Bill. This bill would provide more jobs by offering tax incentives to business to expand and modernize plants and equipment. And the kind of jobs created by the Kemp-McClure Bill would be real jobs that would help increase national productivity, as opposed to public jobs supported solely by taxes.

The Kemp-McClure Bill would change tax laws not only for businesses, but for individuals. To put it simply, individuals would be given tax credits on a percentage of that amount by which they increased their personal savings or investments. This would give people a powerful incentive to save, and thus would boost capital formation. One estimate is that this provision alone would provide capital for some two-million new jobs in the first year after the Bill's enactment.

Other provisions of the Kemp-McClure concept include:

1. Ending the double taxation of corporate earnings by excluding the dividends of domestic corporations from the taxable income of individuals;

2. Lowering the corporate tax rate;

3. Providing a permanent investment credit for smaller business; and

4. Changing depreciation provisions. Estimates of what this bill could accomplish are truly remarkable. In the first three years after its enactment, it could:

1. Create as many as twenty-eight million jobs in private industry;

2. Raise real Gross National Product by $600 billion;

3. Increase capital expenditures by $234 billion; and

4. Increase federal revenues by $45 billion.

Not everyone agrees with these estimates, to be sure—but if they turned out to be even 50 percent accurate, we would have taken a major step toward solving our unemployment problems for a long time to come.

The choice between these approaches is absolutely clear. The Kemp-McClure Bill would result in solid, sustainable growth in the economy. The Humphrey-Hawkins Bill would, in my opinion, institutionalize inflation.

As a businessman and as president of a major corporation, I freely admit to having a vested interest in a solution that would benefit all American enterprise, including Union Pacific. And why shouldn't I? Who has more experience with creating jobs than the businessman? Free enterprise is responsible for creating over 82 percent of the jobs in our country. Moreover, compassion is not the monopoly of the professional liberal, nor vision the monopoly of the bureaucrat.

Does a vested interest invalidate my argument? I think not. I favor a sound and healthy economy. I favor orderly growth. I favor a reduction in unemployment. I favor a sensible approach to taxation, one that makes possible the formation of the capital we need to move this country forward.

And let us remember that there are many others who have a vested interest in the growth and prosperity of the private sector. The millions of Americans who hold the capital stock and thus share in the earnings of corporations have this same interest.

It is significant that a major part of American business is now owned by working people. The pension funds of millions of working men and women in this country are now invested in large businesses. They represent a 30-percent ownership, and it is predicted that this will soon reach 50 percent. The idea of a "vested interest" thus goes far beyond the mere businessman. It reaches into every nook and cranny of modern society.

I believe that the Kemp-McClure concept deserves wide support. It should have a high priority on the agenda of the Ninety-fifth Congress, and it should be the centerpiece of President-elect Jimmy Carter's economic program for 1977. Its approach is the right one because it deals not only with unemployment, but also with capital formation, which will in turn create new jobs.

The economy's need for capital in the years ahead is truly astounding. Capital needs between now and 1985 have been estimated at between $4.6 and $4.9 trillion. Where is such a vast sum going to come from? I submit that it will not come from spending, but from saving.

There is widespread agreement that the only way to achieve the needed level of capital formation is to restructure the tax system so as to provide greater incentives for saving and investment. The Kemp-McClure Bill provides a start in that direction. It is a recipe for economic growth, not economic stagnation.

This is the creative, progresive approach to job creation. People who hold jobs in private industry are net producers—instead of net consumers—of tax revenues. When more jobs are created in private business, total tax revenues from both businesses and individuals rise, because the tax base has been broadened and earnings have been increased. It may seem daring to suggest that reduced tax rates can produce higher tax revenues. But in 1963, President John F. Kennedy proved that it could be done, and he had to do it over the strong objections of his own Treasury Department.

Using the resources of private enterprise to create jobs and thus reduce unemployment to manageable level would mean, of course, resuming the pattern of economic growth that has characterized this country through most of its history, right up until the early 1970's. At that time, certain economically secure and well-employed critics began to tell the world that growth was a bad word.

They claimed that a concept we had always assumed to be a good thing might instead be undesirable—even ruinous—not only to America, but to the whole world.

The "zero growth" concept was largely a product of the environmental concerns of the 1960s. It gained major impetus from meetings of the Club of Rome held in 1970 and from its book, *The Limits to Growth*. Now, six years later, the other side of the story has been presented by Herman Kahn and his colleagues at the Hudson Institute in their study, *The Next 200 Years*.

The Hudson Institute scholars assert that "the application of a modicum of intelligence and good management in dealing with current problems can enable economic growth

to continue for a considerable period of time, to the benefit, rather than the detriment, of mankind."

Whatever may be true of mankind in general, I am sure that a "zero growth" concept would work a disaster on America.

It is worth noting here that the idea of "zero growth" was enthusiastically embraced by many who call themselves "liberal." But it is hardly a progressive concept.

Stop economic growth, and you choke off the aspirations of millions of Americans who benefit from growth. The very groups which many no-growth advocates particularly champion—minorites, the poor, women, young people, workers hoping to move into the middle class—would be stopped in their tracks if there were no growth. Ironically, "zero growth" would benefit no one except those who have already gained all the benefits that growth might bestow.

I am convinced that sutained, moderate growth is what the vast majority of the American people not only want, but expect. They want an economy that continues to bring them the affluence and abundance they are used to. They do not want to accept the bleakness of a life of austerity and self-denial—a 1984 without sunshine and hope—that the no-growth advocates would force upon them.

For these reasons, I would like to see this nation re-embrace the philosophy of growth, to believe in it, and to make it work. I would like to see this country unlock the energy of the free enterprise system—or, as I like to call it, "the enterprise of free men"—and use it to create jobs. It seems to me that if we don't work to enlarge the size of the pie that we all share, we'll end up quarreling over the size of the evershrinking slices.

Let me summarize my main contentions.

To achieve goals such as sound growth, fuller employment, and adequate capital formation, we should look to the enterprise of free men, not to Big Government.

What is needed is growth in the private sector of our economy—growth nutured by tax incentives—growth that creates and maintains productive, permanent jobs.

This is not just a theory or an ideal that cannot be realized. It is a solid and progressive program that follows the private-enterprise philosophy. We know that it works, because this country, by the application of this philosophy, has produced a standard of living that is the envy of people all over the world.

Can we maintain it? Can we improve it? I believe we can, if we have the will and determination to do so, through orderly growth—and we can do it without "Big Brother" looking over our shoulder. But we can do it only if we are willing to look "Big Brother" straight in the eye—and knock him back where he belongs.

Thank you for honoring me this evening—and, through me, honoring the entire Union Pacific family. It has been a rich privilege for Mrs. Evans and me to be with you in these everlasting hills, and we hope you'll invite us back again soon.

DIPLOMATIC RELATIONS WITH THE REPUBLIC OF CHINA

Mr. TALMADGE. Mr. President, the Georgia House of Representatives, in session in Atlanta, has adopted a resolution which, for myself and my colleague, Senator NUNN, I bring to the attention of the Senate, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE RESOLUTION No. 382

A resolution urging the Government of the United States to maintain its diplomatic relations and the Mutual Defense Treaty with the Republic of China; and for other purposes

Whereas, the Republic of China was a founding member of the United Nations and has always been a law abiding member of the community of nations; and

Whereas, the people of the Republic of China have built a successful, prosperous, free economy out of the ashes of a half century of revolution, invasion and civil war and now serve as an important trading partner of the American people; and

Whereas, the Republic of China is of great strategic importance in the defense of East Asia and the Pacific and has always utilized its military power in the interests of the free world; and

Whereas, the people of the Republic of China have been among the most trusted friends and allies of the people of the United States since the founding of the Chinese Republic in 1912; and

Whereas, President Jimmy Carter has repeatedly stated that he will pursue an open and just foreign policy, based on morality; and

Whereas, President Jimmy Carter has also repeatedly stated that he will not compromise the freedom and security of the people of the Republic of China and will stand by the U.S. commitments to that country.

Now, therefore, be it resolved by the House of Representatives that this body strongly endorses the positions of President Jimmy Carter as stated above.

Be it further resolved that the Government of the United States and the Congress is hereby strongly urged to maintain its diplomatic relations and the Mutual Defense Treaty with the Republic of China.

Be it further resolved that the Clerk of the House of Representatives is hereby authorized and directed to transmit an appropriate copy of this Resolution to the President and the Secretary of State of the United States of America, the members of Congress from the State of Georgia and the Ambassador of the Republic of China to the United States.

COMMON SITUS PICKETING

Mr. THURMOND. Mr. President, I have before me a news release issued on Thursday, March 17, 1977, by the National Right to Work Committee on the common situs picketing matter which each Member of the Senate should study carefully.

A recent report of the Roper organization reveals that 77 percent of those questioned oppose common situs picketing. I am pleased to take note of this important poll, as it substantiates my feeling that the majority of Americans feel common situs picketing is a bad idea.

Mr. President, in order to share the results of the poll and the news release with my colleagues, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NEW ROPER STUDY SHOWS NEARLY 80% OF PUBLIC OPPOSES COMMON SITUS PICKETING

WASHINGTON, March 17.—The National Right to Work Committee today released details of a new nationwide opinion study showing that more than three-fourths of the American people—including 64 percent of all union members—feel building trades union officials should not have the power to picket an entire construction site.

Commissioned by the Right to Work group, the study was conducted by The Roper Organization, one of the country's most highly respected research organizations.

Overall, the study showed that 77 percent of the public feels that a construction union "should only be allowed to picket the work of the contractor with whom it has a dispute and not the whole building site." This opinion was expressed by 73 percent of the blue collar workers, 64 percent of the union members, 73 percent of the Democrats, 79 percent of the Independents, 84 percent of the Republicans, 80 percent of the people who describe themselves as being Conservative, 76 percent of the people who call themselves Liberal, and 78 percent of the self-identified Moderates.

Only 12 percent of the people questioned took an opposing point of view, that a union "should be allowed to picket the whole building site even if it stops work of all other contractors and employees."

The results will be presented to the Senate Human Resources Committee as part of the Right to Work Committee's testimony against legislation which would legalize this type of job site picketing, which is known as "common situs."

CONSISTENT WITH OTHER POLLS

Right to Work Committee president Reed Larson stressed in his testimony that the findings are consistent with every reliable and fair public opinion study that has ever been conducted on the issue. A similar study last year, for example, showed substantially the same opposition to "common situs"-type picketing. It was conducted by another nationally known research organization, Opinion Research Corporation, Princeton, N.J. That study showed 16 percent of the public favoring the expanded picketing power, while 73 percent said construction unions should only be allowed to picket the contractor with whom they have a dispute.

The more than 2,000 people who were questioned by the Roper Organization were asked the following question:

"On building sites many unions represent different kinds of employees of contractors working there—electricians, carpenters, plumbers, and so forth. When one of the unions is striking against one of the contractors, which of these two rules do you think should apply?

"Rule A.—The union should only be allowed to picket the work of the contractor with whom it has a dispute and not the whole building site."

"Rule B.—The union should be allowed to picket the whole building site even if it stops work of all other contractors and employees."

The respondents were handed cards containing the alternative answers, and were asked to choose. "By an overwhelming margin," Larson said, "the people decided that fairness dictates that the building trades unions should not have the power to coerce people with whom they have no real dispute."

JUST PLAIN UNFAIR

Larson stressed that the Right to Work Committee's objections to the bill were philosophical, as well as practical. Philosophically, he said, "It is just plain unfair for union officials to have the power to keep hundreds and maybe thousands of hard-working people from their jobs just because they have an alleged grievance with one of the employers. We are all very aware that the one 'grievance' which stands out among all the rest is the fact that some employers refuse to force their employees into unions. It becomes apparent, then, that what the union officials really want is the power to keep non-union work-

men from their jobs, and the power to turn the construction industry into a nationwide closed shop.

"On a practical vein, it is also quite clear that most construction workers are not going to be easily intimidated from their jobs without putting up some kind of resistance. It is our belief that passage of the situs bill will promote and encourage violence."

Larson said the poll findings should provide incentive for the large group of Senators who are planning to mount a campaign to defeat the bill with a filibuster (extended debate). "There is no way the Senate majority leader, officials of organized labor, or anyone else can claim that the extended debate is being used by a minority to block the will of the majority. It is precisely those Senators who will be participating in the filibuster who will be representing the majority. The others, and hopefully they will be few, will be telling the American people that all they really care about are the narrow special interests of top union officials."

Larson said union officials are trying to push the legislation through Congress at break-neck speed "because they know it is a bad, unfair, and unpopular piece of legislation. And the more it gets discussed, the more their political support erodes."

Headed by Burns Roper, The Roper Organization has had extensive experience conducting studies in the fields of social and political science—for a wide range of clients. including Harvard University, the U.S. Department of Health, Education, and Welfare, the Peace Corps, Metropolitan Life Insurance Company, Columbia University, and others. The organization maintains and supervises a large nationwide field force of experienced interviewers. For the Right to Work Committee study, the organization used a scientifically selected sample of 2,004 voting age adults.

Q.28.—WHETHER UNION SHOULD BE ALLOWED TO PICKET SPECIFIC CONTRACTOR IN A STRIKE OR THE WHOLE BUILDING SITE

MILITARY UNIONIZATION

Mr. GARN. Mr. President, the American Enterprise Institute, in its first defense policy review, has addressed itself to the controversial issue of the unionization of the military. Our colleague, Senator STROM THURMOND, discusses in this review the legislation he has introduced to prohibit unionization of the military and the reasons he so strongly opposes the idea.

Mr. President, the defense of our country must not be jeopardized by this movement to allow unions in our Armed Forces. I ask unanimous consent that Senator THURMOND'S statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MILITARY UNIONS: NO

(By STROM THURMOND)

In late 1975, it became clear to me that a strong effort would soon be made to unionize our military forces. I did not reach this conclusion quickly or lightly. I reached it after loud warnings from the media and after careful observation of the planning going on

within the American Federation of Government Employees union. The late Clyde Webber, the former president of the union, clearly signaled the intentions of the AFGE in his testimony before the Defense Manpower Commission on August 18, 1975.

The occasion had been preceded by ominous reports in the *Wall Street Journal* and the *Army Times* and in an interview that was printed in the *Times*'s magazine. But the transcript of his testimony before the Defense Manpower Commission convinced me beyond a doubt that this dangerous scheme was already under way and that something had to be done to stop it.

In his testimony, Mr. Webber said: "Since it appeared that AFGE and armed forces personnel would have a continuing mutual concern in pay adjustments in the future, I recommended to the AFGE National Executive Council—our policy board—that we consider offering membership within the AFGE to members of the uniformed military." Furthermore, at the same time AFGE was planning unionization of the military, two other unions were looking into the same possibility.

Prior to advocating legislative action, I communicated my concerns to the civilian leadership of the Defense Department and others in the government. In their responses, they flatly denied that legislation was needed and they suggested that AFGE was pursuing this matter only as a ploy for publicity. Underlying these responses, there seemed to be a feeling that I was unnecessarily alarmed, that AFGE was not serious, that other unions were not interested, that nothing should be done.

On March 4, 1976, together with twenty-four other senators who agreed that the unions should not enter the uniformed sector of our armed forces, I introduced a bill, S. 3079, which would have prohibited unionization of our military forces.[1] It included criminal sanctions against those in uniform, as well as civilians, who attempt to organize our military. The bill also included a provision empowering courts to fine any organization found guilty of making such attempts, with the penalty set at not less than $25,000 or more than $50,000.

Unfortunately, although I made a number of attempts to schedule hearings, S. 3079 was a victim of the election year. The bill died when the 94th Congress adjourned in 1976.

Two events which took place in the waning days of the 94th Congress should convince skeptics that unionization of the military is an issue which must be squarely faced in the 95th Congress. First, the Association of Civilian Technicians began to recruit military members from our reserve component forces. Then, in late September 1976, AFGE voted in convention to amend the union's constitution to permit recruiting of members of our military forces.

Early in the 95th Congress, on January 18, 1977, I introduced S. 274, a bill to prohibit unionization of our uniformed military forces. In addressing this subject, I repeated my previous assurance and that of the cosponsors: This is not legislation against unions; it is legislation for a sound defense force for our nation.[2]

MILITARY UNIONS IN EUROPE

Some people have argued that experience with military unions in several European countries should relieve any concern that might be felt over possible unionization here. The official line in those countries is that all is well with military unionization, but this is only to be expected. The leaders of these countries would hardly admit publicly that their policies had been a mistake.

Those who saw the presentation of the unionized Dutch army on "NBC Weekend" on August 28, 1975, will not be fooled. It was worth many thousands of words. To all appearances, the Dutch army today is responsible to the union as much as to the government. After a train hijacking in the Netherlands last year, Lt. Col. Hendrik Bjil, the Dutch battalion commander of the soldiers on the scene, was reported to have said: "I am speaking personally, you understand, but the best kind of army we can have is where a soldier can say, 'No, I will not do that because I do not believe in it.' Ideally, soldiers should have the right to elect—and dismiss—their officers."[3] He had few problems on this operation because the soldiers believed in their task, but in other circumstances, he stated, they might all disobey: "In a strike by a union, I cannot say that the army is fully prepared to fulfill its mission—and I am glad to say that."

General Marcel Bigeard, a legend in his own time in the French army and now France's secretary of state for defense, had this to say on the unionization of the European military services: "There is afoot an enterprise of demoralization of armies on a French and European level which has been going on for five or six years . . . the matter is serious . . ."[4] It certainly is. In several documented instances, members of unionized armies in Europe elected to demonstrate loyalty to the union at the expense of a mission.

Some of the so-called military unions in Europe that have the best record are not truly unions. They fit more into the pattern of our associations. They have no bargaining power.

The argument has been made that, in countries with different cultures, the expectations of the people are different and norms of behavior are different. According to this line of reasoning, a military union in the United States would not necessarily behave in the same way as one in Germany. This approach, however, is entirely too speculative. If military unions have proved irresponsible in other countries, we can hardly permit them to be organized in the United States on the flimsy hypothesis that they may possibly be more responsible here.

I draw a simple conclusion from the way unions work in European countries. Unionization of certain defense forces in Europe has not improved their readiness to defend their countries, which, after all, is the reason for the existence of a military force. The evidence points the other way. The division of authority between the government and the unions has left some European forces less ready and responsive. The all-important question of how a unionized military will perform in battle is yet to be answered. It must not be answered at the risk of American lives and liberties.

CONSTITUTIONALITY

Some have suggested that to prohibit military personnel from unionizing would be an unconstitutional deprivation of the First Amendment right to freedom of association. An examination of this proposition is in order.

The starting point is the Constitution. Article I, section 8, clause 14, specifically grants Congress the power "to make rules for the government and regulation of the land and naval forces."

In addition, in a decision upholding Articles 133 and 134 of the Uniform Code of Military Justice, the U.S. Supreme Court said: "This Court has long since recognized that the military is, by necessity, a specialized society separate from civilian society."[5]

Thus, while members of the military are not derprived of the freedom of association granted by the First Amendment, the different character of the military community and of the military mission requires a different understanding of this right. The fundamental need for obedience and the consequent need for discipline make it impossible for servicemen to do some of the things that civilians are entitled to do.

The "separate society" doctrine enunciated by the Court plainly suggests that prohibiting unionization of the military would be a valid exercise of legislative authority. Moreover, this doctrine prevents the application of cases involving civilian government employee unions to the question of military unionization. The distinction between military and civilian society is critical.

Without retracing the path of older decisions, two recent cases decided by the U.S. Supreme Court confirm the power of Congress to prohibit unionization of the military. In the first case, *Middendorf* v. *Henry*, the Court declared that members of the armed services may not be entitled to military lawyers in circumstances where a civilian defendant would have a right to appointed counsel. In the second, *Greer* v. *Spock*, the Court held that an armed forces post commander has substantial power to limit political activity on a military post—more than civilian authorities have in the civilian community.

Dr. Benjamin Spock brought this freedom-of-speech case against the commander of Fort Dix, New Jersey, after being refused permission to hold campaign rallies on the military post in 1972, when he was the Peoples Party candidate for President. Lower courts had ruled in favor of Spock, who challenged the ban as a violation of the First Amendment. The Supreme Court, however, reversed the lower courts and affirmed the political speech ban. In writing the opinion, Justice Potter Stewart said, "The military as such is insulated from both the reality and the appearance of acting as a handmaiden for partisan political causes or candidates. Such a policy is wholly consistent with the American constitutional traditions of a neutral military establishment under civilian control."

The underlying premise of these decisions is clear. The First Amendment rights of our uniformed military must give way to the extent that they conflict with the duties required by servicemen in accomplishing their mission. This small abridgement of rights is necessary to guarantee citizens the protection of a disciplined, responsive, and effective defense force.

Accordingly, Congress would be well within its constitutional authority in passing legislation that would prevent union activity within the uniformed part of our military. To split the authority over our servicemen between the President and Congress on the one hand and a union on the other would clearly undermine our national security.

THE NEED FOR LEGISLATION

There are already some legal barriers to military unionization. Such a barrier is implied by article 2, section 2, of the Constitution: "The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several states, when called into the actual service of the United States." Moreover, Presidential Executive Order 11491 precludes unions from engaging in contract and grievance negotiations with the armed services concerning uniformed servicemen.

In addition, the secretary of defense (under the authority given by Title 10, USC 133b) has declared, "Commanders are not authorized to recognize or to bargain with a so-called servicemen's union" (in Department of Defense Directive 1325.6).

There are also statutory provisions which would provide some restrictions on union activities in the uniformed military. The following crimes are punishable under Title 18 of the United States Code: enticing desertion (18 USC 1381); entering government prop-

Footnotes at end of article.

erty for any purpose prohibited by law or regulation (18 USC 1382); and striking against the government (18 USC 1918), though there is some question whether this statute applies to the military. In addition, a private citizen is prohibited (by 18 USC 2387 and 2388) from counseling a serviceman to mutiny, disloyalty, subordination, or refusal of duty.

Finally, the Uniform Code of Military Justice contains criminal sanctions which are relevant to the issue. Various articles prohibit the following: soliciting or advising another to desert, to mutiny, to misbehave before the enemy, or to commit sedition (Article 82); desertion (Article 85); absence without leave (Article 86); disrespect toward a commissioned officer (Article 89); insubordinate conduct toward a warrant officer, noncommissioned officer or petty officer (Article 91); disobedience of an order or regulation (Article 92); mutiny or sedition (Article 94); aiding the enemy (Article 104); malingering (Article 115); and riots or breach of the peace (Article 116). Article 134, the general article, prohibits disorders and conduct to the prejudice of good order and military discipline. Unionization would open the door to violations of any or all of these articles.

These laws and regulations are numerous and broad in scope. Taken together, they strongly discourage unionization. However, they do not forbid it. Given the seriousness of the possible consequences, we need a law which does forbid it—openly, flatly, and unchallengeably.

WHY UNIONS WILL NOT WORK IN THE MILITARY

The issue is not what is best for unions, individual servicemen, or, for that matter, any particular group or interest whatsoever. The military union issue must be considered in the context of what is best for our country.

The right of workers to form unions has been recognized in our nation for over a hundred years. The right to strike peacefully for higher wages and better working conditions is almost as old. Moreover, it is a lofty goal indeed that trade unions have pursued in becoming a national institution—to ensure the working man his fair share of economic benefits. In achieving this goal, the trade unions give a clear psychological and moral boost to the working man and, more importantly, an effective voice in bargaining. They also benefit society at large by counterbalancing the strong influence of industry.

But the valuable services of unions in civilian society are no argument for unions in the military. Civilian and military society, as we have seen, are simply too different from each other. Now let us consider other arguments that are made on behalf of military unions.

On September 23, 1976, the American Federation of Government Employees voted to change its constitution to permit recruiting of soldiers, sailors, airmen, and marines. The reasons for this course of action are presented in the transcript of a meeting of AFGE officers held in July 1976.

National Vice President Allen H. Kaplan had been charged with the responsibility, together with others of the leadership, of looking into the question of whether or not to unionize the military. His recommendation was affirmative, and his first reason was that unionization would give AFGE more power with Congress. As National Secretary Nicholson J. Nolan said bluntly, "What is important to the government and to our own status within the labor movement is that we have this weapon in the holster, and I think you should bear that in mind." A statement by the new AFGE president, Kenneth Blaylock, supported this line of thinking. As reported by the *Indianapolis News*, on September 25, 1976, Mr. Blaylock noted that other unions might attempt to organize the military, and it was important for AFGE "to be in a position to get a piece of the pie." AFGE has approximately 260,000 members. Mr. Blaylock's "pie" consists of the 2 million members of the uniformed military. This reason obviously carries little weight for those outside the union.

A second reason given by National Vice President Kaplan at the July 1976 meeting was that the military is tied to the classified pay system. He said, "We are carrying the military on our backs so to speak. And as long as we have got this system, it makes sense for them to pay their way." But who is carrying whom? As a practical matter, the military and veterans' associations consist of 5 million members. Their representatives are well informed and press their programs very successfully with the Congress. The AFGE can hardly claim to be the actual or rightful spokesman for the military. From a historical perspective, the members of our armed services have paid their way many times over. Their dues have gone not to unions but to the American people, and must be measured not in dollars, but in toil, sweat, and blood.

Another reason given by National Vice President Kaplan for organizing the military was to help the workers, a notion based on the false premise that uniformed military members are workers. There are similarities—just as workers have pride in their skills and jobs, members of our armed services have pride in their units, customs, and services. Again, however, we come back to the "separate society" doctrine, which has been sanctioned by the Supreme Court. Employment as a civilian, notwithstanding the rhetoric of union organizers, is not truly comparable to service as a uniformed member of our armed services. Distinctive features such as separations from family, the inability to quit, and, above all, the possibility of facing the enemy in battle make military service unique as a profession.

Just before the executive council voted, National Vice President Kaplan again spoke up, this time to state that by unionizing the military "we are really furthering the ideals of democracy." He went on to say, "We now have a professional army. It is subject to very little control. . . . The rank and file in the military have their associations which are quite broad and quite extensive, but they are weak. . . . The Congress have very little check on what happens in the military."

These surprising remarks require a second look to become clear. Apparently, Mr. Kaplan believes that the President, the Congress, and the civilian secretaries and their assistants have no effective control over our military. His idea is that, if AFGE gains control or a big share of control over our military, then civilians will be in charge, as they should be, and the country and the uniformed members of our military will be better served. He is wrong. Union control is not civilian control. Civilian control is nothing more or less than the system the Constitution calls for—command by the President and his deputies and appropriation and regulation by Congress. That system, regardless of what Mr. Kaplan says, is what we already have.

In my opinion, if the President and the Congress were to permit unionization of our military forces, both would be subject to attack in the courts for abrogating their constitutional responsibilities. Such an attack would not be difficult to support. If the President and the Congress should at any time fail to exercise their control over the military, the judicial branch of our government could step in to prevent any other person or organization from attempting to assume this power. The courts could act similarly to prevent any person or organization from sharing control. The President and the Congress are not at liberty to surrender or impair their constitutionally prescribed powers to an extent. This is particularly true of control of the military, for the language of the Constitution is exceptionally clear and precise.

So much for the reasons advanced by union leaders for military unionization. Where they are not false, these reasons are essentially self-serving. One reason that has not been mentioned, at least not openly, is the desire to see servicemen gain the right to strike. There are times, however, when true intentions may be learned less from words than from what has actually been done.

In September 1976, at the same time Mr. Kaplan was advocating military unions and AFGE was voting to open its rolls to the military, members of AFGE voted to remove the no-strike clause from its constitution. As reported in the *Washington Post* on September 25, 1976, "the fact that strikes or slowdowns against government are illegal did not seem to faze delegates here. There were constant reminders that nothing happened a few years back when 220,000 postal workers walked off the job."

The words of former AFGE President Clyde Webber are again helpful in determining what may be down the road. Before the debate became heated, he warned that the union could not guarantee control of a unionized military with respect to strikes: "The thing about it is that you cannot control individual elements of an organization, whether it happens to be the U.S. Army, as has been demonstrated a couple of times in the last three or four years . . . or the AFGE. People take into their own hands what they think they have to do." [6]

The prospect of a military strike is almost too horrible to imagine. Even if it did not exist, though—even if we could count on military union members to do without the traditional weapon of the labor movement—serious questions would be raised. For example, suppose AFGE civilian members voted to strike. AFGE civilian members and locals are located at installations throughout our defense establishment. If the military were unionized, would AFGE ask military members not to cross picket lines?

AFGE leaders and the rank-and-file members are all civilians. The primary interest of the union has been in federal civilian jobs. How would the unionization of the military affect the continuing differences between the manpower of the federal civilian establishment and the armed forces? Unions in the civilian sector have always had a considerable influence over the allotment and assignment of jobs. How much influence would AFGE demand over the people, positions and organizations in the military forces?

In view of all AFGE has won for civilian employees over the years, what benefits could we expect the union to demand for the military that have not already been won by the professional military associations? How much of an increase in the defense budget would result from military unionization?

If only combat support forces were organized, who would supply and administer combat forces in the event of a wildcat "sickout" by the union members in these support forces?

It has been suggested that the union would cease to represent the uniformed military in time of war. How would a military force accustomed to and trained with union representation function without it? Could the union withdraw that easily?

These questions, unanswered and perhaps unanswerable, point to only one conclusion. Add to them the possible catastrophe of a military strike and that conclusion becomes unassailable. The military must be protected from unionization.

Footnotes at end of article.

ATTITUDES OF THE MEDIA, THE PUBLIC, AND OTHERS

A question of great importance is how military unionization is perceived by the media, by our nation's civilian and military leaders, and by the public as a whole. The views they express give legislators valuable insights into the issue. What do the people of our country want?

The media

Excerpts from the most cogent articles I have seen on this subject are included at the end of this paper in Appendix A. For present purposes, it is enough to cite some of the far-flung and highly respected papers that published them. In my home state of South Carolina, we find opposition from the *News and Courier* of Charleston, the *State* of Columbia, the *Spartanburg Herald*, the *Aiken Standard*, and the *Sumter Daily Item*. Nationally, the notion of military unionization has received strong disapproval from the *Hartford Times* of Hartford, Connecticut, the *Bridgeport Telegram* of Bridgeport, Connecticut, the *Indianapolis News*, the *Washington Star*, and the *Dallas Morning News*.

Typical of the editorial outcry are these words of John Chamberlain in his column of April 23, 1976, in the *Richmond Times Dispatch:* "This sounds so idiotic that it is hard to write about. But the movement to unionize the armed forces of the U.S. has been gathering momentum. . . . The business of introducing a shop steward between buck privates and the non-commissioned officers may be closer than we realize."

Radio and television commentator Paul Harvey of ABC News used equally strong language on February 26, 1976, asking: "Can you imagine how our nation's potential adversaries must be responding to this national hara-kiri in the U.S.? . . . And now we contemplate subjecting our military leaders to the supervision of shop stewards with the inevitable potential for mass mutiny. One looks on and wonders." Commentator Ned Hinshaw of WTMJ television, WTMJ radio, and WKTI radio in Milwaukee, Wisconsin, made an important point on April 28 and 29, 1976: "Citizen control of the military has kept the army, navy, marines and air force out of politics in this country. It is imaginable that a unionized armed force who doesn't like the nation's leaders might try to take things into their own hands. It's a frightening thought."

Remember, these media reactions are representative, not exhaustive. Furthermore, I am not aware of a single newspaper, radio station, or television station that has supported military unionization. The public opinion polls that have come to my attention show the same consistent opposition to the idea. One conducted by Decision Making Information of Santa Ana, California, for the Public Service Research Council obtained resutls from a total of 1,529 in-home interviews across the nation between March 20 and March 30, 1976, which were summarized by the sponsors as follows:

"The survey reveals where Americans stand on unionization of the armed forces, with 82 percent opposed. The percentages are the same on permitting the armed forces to go on a strike. . . . The highest percentage of those opposed to military unions were among public sector non-union employees who were 87 percent against military unionization and 90 percent against strikes. This contrasted sharply with unionized public sector respondents who were only 71 percent opposed to military unionization and 72 percent opposed to strikes. Both union and non-union private employees likewise were overwhelmingly opposed to both unionization and strikes for the military."

A more detailed statistical breakdown is given in Appendix B.

Don G. Windle of Oxnard, California, conducted a more limited survey, mostly among servicemen. Of the 144 respondents, 131 of whom were members of the U.S. Navy, a majority of 89 percent proclaimed itself against military unionization. Alarmingly, though, 51 percent thought it possible that an attempt at unionization would be made.

A third poll was taken by Joseph D. Gleason, national vice president, second district, American Federation of Government Employees. Although Mr. Gleason's findings were based on only sixty-two ballots, his poll adds weight to the other two, since it was conducted by a member of the union that has been most outspoken about unionizing the military. Mr. Gleason found that 89.8 percent of those questioned were opposed to such an effort by his union and that 86.8 percent said that, if undertaken, it would not be successful.

The mail I have received on this issue provides yet another expression of public opinion on unionization of the military. In addition to many letters from associations and organizations, all opposing military unionization, some 262 letters on this subject have arrived at my office since I introduced S. 3079 in the United States Senate. Approximately a third of these letters came from my South Carolina constituents, and the rest from all other sections of the country. Only 19 were in favor of unionization of the armed services, and 243 opposed it.

Two trends appeared in the arguments of my correspondents. On the one hand, the general public is vehemently opposed to the unionization of our military forces. On the other hand, it is equally clear that some service members perceive an erosion of the benefits guaranteed to them, legally or morally, when they entered the service. Members of this group believe that leaders in Congress and the Defense Department have not protected their interests. I shall have more to say about this subject later.

Civilian leaders

Many civilian leaders have spoken out against unionization of the military. Secretary of Defense Donald Rumsfeld recently stated the position of the Department of Defense:

"The people of the military establishment are in fact the military establishment. They're fundamental to its importance and their morale and their treatment is of great importance. The idea of unionizing members of the armed services is fundamentally incompatible with the command structure of wonderful line from, I believe, H. L. Mencken, that for every human problem there's a solution that's simple, neat and wrong. That [unionization] is one." [7]

Through his campaign chairman, Rogers C. B. Morton, President Ford took a position in opposition to military unionization. Among members of Congress, vocal opposition has come from most of the best military experts [8] Congressman William Whitehurst, in a poll of his district in Virginia, found 93 percent opposed to unionization. The great number of military personnel in his district, which includes Norfolk, makes this figure particularly striking.

Congressmen Spence and Young have introduced bills in the House which, like my Senate bill, would ban military unionization.

Military leaders

Nor can there be any doubt that our military leaders, active and retired, oppose any union role in the uniformed military with almost a single voice.

Admiral James L. Holloway III, U.S. Navy, chief of naval operations, could speak for all: "I believe unionism in the sense that there would be collective bargaining to determine whether or not certain operations would be undertaken is unthinkable in a military sense." [9]

General Bernard W. Rogers, U.S. Army, recently sworn in as chief of staff of the army, said: "We don't need any unions to represent our soldiers—that is a responsibility of the Army leadership." [10]

General Russell E. Dougherty, the commander-in-chief of the Strategic Air Command of the U.S. Air Force, stated the same view in a speech in October 1976 to the Air Force Sergeants Association: ". . . As long as there are perceptive, responsible men and women administering the affairs of our nation and intense, professional responsible officers and noncommissioned officers working together to keep intact this unique miracle that is the armed forces of the U.S., I see no need for changing the relationship of our country with its servicemen and women." [11]

Military and veterans associations

The military and veterans associations, with over 5 million members, include almost all of our present and past military leaders. Also included are the soldiers, sailors, airmen, and marines who brought this nation through troubled times in the past. Many of these organizations are on record on the subject of unionization of our armed services. They are well worth listening to.

Veterans of Foreign Wars: "Unions would interfere with the chain of command—would impair discipline and response to orders." [12]

Fleet Reserve Association: "If all enlisted men belonged to military associations, they would be more effective and get better representation. The associations provide a viable alternative to unions." [13]

The Retired Officers Association: "Unions are alien to our defense system. We and all concerned Americans must stand firm against them." [14]

The list can go on almost indefinitely.[15] Associations of a nonmilitary character have also taken a stand against military unions. No association that I know of, military or nonmilitary, favors them.

The unions themselves

Finally, we come to the unions themselves. Apart from the hopes and intentions of AFGE, there seems to be significant opposition to military unions even among labor leaders. George Meany, president of the AFL–CIO, has gone on record against military unions as recently as November 1976, according to Clark Mollenhoff.[16] Perhaps the most important figure in the labor movement in the United States, Mr. Meany is a patriot through and through and knows that the interests of the country are paramount.

The rank and file well support Mr. Meany's position. In a letter I received recently, one local expressed itself as follows:

"We concur with the opinion that in the area of the armed forces, the trade union should not enter. As strong supporters of unions in the civilian sector of our country, we feel that the union has no role in the military. . . . The armed forces are our Defense Posture, which is one of the main arteries to the heart of our government and community; it assists and makes possible our democratic way of life."

Comments like these, taken in conjunction with other indications of public opinion, make one wonder just where the prounion sentiment is coming from. In other words, what is all the fuss about?

THE PROBLEM OF MORALE

In my opinion, this issue has emerged mainly because of the trend I mentioned earlier—servicemen regard their government as insensitive to their problems and unresponsive to their needs. Frustrated and disillusioned, they have become susceptible to the wiles of self-interested union advocates, such as the leaders of AFGE.

The Defense Manpower Commission has

Footnotes at end of article.

apparently observed the same regrettable development. After field visits last year, it made the following statement in its April 19, 1976, report: "Many members of the armed forces felt dismayed and disillusioned because of what they perceive to be neglect, disinterest, or a breach of faith on the part of their government; and there appears to be a significant communications gap between departmental policy-makers and troops in the units in the field."

Howard Flieger, in *U.S. News and World Report*, October 25, 1976, came to the identical conclusion in his second editorial opposing military unions:

"[My first] article produced a torrent of mail from readers. Most agreed with the central point, but many argued that the armed forces are being doublecrossed by Congress and the Department of Defense.

"That is, indeed, a serious charge. It is one thing to say that people who volunteer for a military service forego the "accepted rights" of civilian workers. But in so saying, it should be understood that management—in this case Congress and the Government—must keep faith with those they recruit. If that faith is broken, it is understandable that servicemen and women will feel cheated by the uniforms they wear. . . . A unionized armed force makes no sense as a front line of national security. But neither does a disillusioned armed force. It is a situation that needs urgent attention by Washington."

This is not news to those of us in Congress who take a serious interest in our armed services. On January 31, 1975, I wrote to the President to protest the erosion of military benefits, particularly a proposed reduction in commissary subsidies. My letter concluded:

"As you well know, our government has broken faith with our military community in many areas, especially our retired personnel, such as changing the long-established method of computing retired pay, slashes in the CHAMPUS program, and now medical and dental services and the commissaries are being chipped away.

"I strongly urge reconsideration of your proposal. In my view, the disadvantages far outweigh any possible limited and short-term advantages which might scarcely help our nation's economic ills."

My mail on S. 3079 has supported the findings of the Defense Manpower Commission and Howard Flieger, as well as my own position.

This problem of morale must be faced immediately. Loyalty must go from the top down as well as from the bottom up. Our military service members have a right to expect loyalty from the commander-in-chief, Congress, civilian leaders within the military departments, and the uniformed leadership of the armed services. If they do not get it, no legislation or directive will instill loyalty in them. What should the authorities do to reassure our servicemen that their interests are being protected?

To begin with, penny-wise and pound-foolish actions, which have affected our servicemen so adversely, must be defeated. The dispute whether service personnel, active or retirees, should be allowed to continue to buy goods at military commissaries provides a good example. Some leaders have tried to eliminate this benefit by using a technique I call bureaucratese. That is, although it is plain to see that something is being lost, they try to hide the loss in a fog of ambiguous or meaningless words.

Other leaders have said that salary increases have eliminated the need for some benefits, even though recruiting continues on the basis of those benefits, just as it has for years. Other techniques of equal guile have been employed at the expense of our servicemen. I have fought against such practices. Senator Barry Goldwater and others have also spoken out against them. Erosion or perceived erosion of benefits cannot continue if we are to have a well-motivated volunteer force.

The credibility of the leadership needs to be restored. Budget considerations must be given due weight, but keeping faith and telling the truth come first. When unpopular decisions must be made, we must be prepared to explain why. Honesty should replace guile. Our military people have always recognized, respected, and accepted the truth.

The military associations have a definite role to play in this endeavor. They have been heard with attention and respect. They must continue the activist role they have recently assumed, and they must continue to urge policies for the good of both our nation and our service members. They must keep their members informed and urge their increased participation in the electoral process. By so doing, they will help to dissipate whatever pressure may be felt for military unions. They will make our military union-proof.

SUMMARY OF THE ISSUE

To sum up, an effective defense force is built and maintained upon a foundation of discipline, patriotism, command authority, and quick responsiveness. This foundation cannot exist with loyalty divided between the chain of command and a union. Divide and conquer is one of the oldest maxims of war. Unionization of the American armed services would cause the enemies of freedom to rejoice all over the world. That is why I shall again introduce legislation prohibiting unionization of our armed services.

There is simply no substitute in the armed forces for unqualified obedience to authority. The security and tranquility of our nation in peace, and its defense in war, depend upon it. When our men are called upon to defend the country, a commander must have the unquestioned authority to order them into battle and the power to enforce his order. Any action that would weaken this power and authority would amount to a self-inflicted wound to our defense effort—one from which we might never recover.

FOOTNOTES

[1] Joining me as cosponsors of S. 3079 were Senators James B. Allen (Democrat, Alabama), Dewey F. Bartlett (Republican, Oklahoma), William E. Brock III (Republican, Tennessee), Lawton Chiles (Democrat, Florida), Carl T. Curtis (Republican, Nebraska), Pete V. Domenici (Republican, New Mexico), James O. Eastland (Democrat, Mississippi), Paul J. Fannin (Republican, Arizona), Jake Garn (Republican, Utah), Barry Goldwater (Republican, Arizona), Clifford P. Hansen (Republican, Wyoming), Jesse Helms (Republican, North Carolina), Roman L. Hruska (Republican, Nebraska), Paul Laxalt (Republican, Nevada), John L. McClellan (Democrat, Arkansas), James A. McClure (Republican, Idaho), Robert Morgan (Democrat, North Carolina), Frank E. Moss (Democrat, Utah), Sam Nunn (Democrat, Georgia), William L. Scott (Republican, Virginia), Robert Taft, Jr. (Republican, Ohio), Herman E. Talmadge (Democrat, Georgia), John G. Tower (Republican, Texas), and Milton R. Young (Republican, North Dakota). Soon after the bill was introduced, Senators Hugh Scott (Republican, Pennsylvania), Quentin N. Burdick (Democrat, North Dakota), Henry L. Bellmon (Republican, Oklahoma), James L. Buckley (Conservative/Republican, New York), Robert Dole (Republican, Kansas), and J. Glenn Beall, Jr. (Republican, Maryland) joined as cosponsors.

[2] Joining me as cosponsors of S. 274 were Senators James B. Allen (Democrat, Alabama), Howard H. Baker, Jr. (Republican, Tennessee), Dewey F. Bartlett (Republican, Oklahoma), Henry L. Bellmon (Republican, Oklahoma), Lloyd M. Bentsen (Democrat, Texas), Harry F. Byrd, Jr. (Independent, Virginia), Lawton Chiles (Democrat, Florida), Carl T. Curtis (Republican, Nebraska), John Danforth (Republican, Missouri), Robert Dole (Republican, Kansas), Pete V. Domenici (Republican, New Mexico), James O. Eastland (Democrat, Mississippi), Jake Garn (Republican, Utah), Barry Goldwater (Republican), Arizona), Clifford P. Hansen (Republican, Wyoming), Orrin G. Hatch (Republican, Utah), Jesse Helms (Republican, North Carolina), Ernest F. Hollings (Democrat, South Carolina), Paul Laxalt (Republican, Nevada), Richard G. Lugar (Republican, Indiana), John L. McClellan (Democrat, Arkansas), James A. McClure (Republican, Idaho), Robert Morgan (Democrat, North Carolina), Sam Nunn (Democrat, Georgia), Harrison H. Schmitt (Republican, New Mexico), William L. Scott (Republican, Virginia), Ted Stevens (Republican, Alaska), Richard Stone (Democrat, Florida), Herman E. Talmadge (Democrat, Georgia), John G. Tower (Republican, Texas), Malcolm Wallop (Republican, Wyoming), Milton R. Young (Republican, North Dakota), and Edward Zorinsky (Democrat, Nebraska).

NEWSPAPER COMMENT ON MILITARY UNIONIZATION

(From the News and Courier, Charleston, South Carolina, March 8, 1976:)

Literature coming into this office indicates that—despite what individual Members of Congress may say at the moment—military unionism is closer than most Americans think. Work has been quietly going on behind the scenes for a long time to set the stage. . . .

Our story of March 5 which announced Senator Thurmond's plan to try to forestall unionization also quoted a majority of the State's House Delegation as believing that unions have no place on the military scene. We hope that feeling, tested as the unionization debate is just beginning, will continue to hold up as the argument gets hotter, which it surely will. . . .

To be for military unionism is to be for a reduction in discipline and hence efficiency. Anybody who doesn't believe that should consult the occasions in American history when military affairs were a matter of bargaining between troops and leaders. The inevitable outcomes of such a system are, first, disaster; next, an eager return to discipline. The American army learned the lesson in the Civil War. The Soviet army learned it in Finland. Other armies—and navies—which are trying collective bargaining on for size will learn it when they go to war.

(From the State, Columbia, South Carolina, March 10, 1976:)

The prospective of a unionized army is chilling and bizarre. . . . There is no way a democratized military force can function efficiently in its ultimate mission, which is too close in combat with an enemy. . .

Most American unions, of course, are anything but pro-communist. In fact, they contain some of the staunchest anti-communists in the world today. We suspect with Senator Thurmond, that many U.S. labor leaders and their members are cool to the plans of certain unions to invade the military arena. Why shouldn't they be? Continuance of the precious rights of the American workingman might well depend on day on an effective defense force, a force whose discipline, command authority, and responsiveness might be impaired by union activities.

Still, we will be watching to see what approach organized labor as a whole will take on this bill. Many Senators and Congressmen are beholding to the union leaders and labor's attitude could be critical. We urge labor to put patriotism and its real self-interest ahead of its apparent self-interest on this occasion and support the Thurmond bill.

(From the Hartford Times, Hartford, Connecticut, May 29, 1976:)

The talk of unionizing the nation's military forces is disturbing and has frightening implications that this nation cannot afford to risk. . . . Unionization is by no means a dirty word. The vital gains which have been made on workers' behalf by labor unions are widely recognized and acclaimed. But there is absolutely no room for unions in the U.S. military services.

Some hard questions must be addressed to those unions seeking military unionization. The first must be the question of the role of the military in a free society. The military does not represent just any job. The military is totally unique in our society. No other occupation compares in mission and purpose. . . .

The allegiance that a citizen in the military has to a country is again by necessity, more rigid than the non-military individual. This rigidity is necessitated by the fact that, as Senator Thurmond writes in the Congressional Record "an effective military force is built and maintained upon a foundation of discipline, command authority, patriotism and quick responsiveness." In order to effectively fulfill its duties as a defender of a free society, it must not be allowed to embrace the misguided notion that it is the same as "any other job." It is not.

Yet it is a voluntary force. Unfortunately, military recruiting occasionally borders on misrepresentation, but in spite of that, the contractual arrangement can be allowed to lapse after a relative short period of time if the individual is not satisfied with the situation.

Another question which must be directed to those unions involved relates to the purpose behind their action. Is the action being taken out of altruistic concern for the individuals involved, or, is it, as is more likely the case, that the motivating force is the irresistible presence of more than 2 million "potential" members for unions seeking to vastly increase the riches and power of their coffers?

Either way, the military and U.S. do not need unionization. There are, no doubt, flagrant abuses within the military which drastically need attention. The on-going Congressional investigation into the recruitment and training practices of the Marine Corps is an excellent example of how discrepancies must be handled.

This country is a free democracy. It is governed, at least ideally, by the people. The military assumes a vitally unique role in the preservation of this style of government. This uniqueness demands differences in organization and mission. And one of the differences is the fact that it is not a democratic organization, and must never lose sight of its role. This definition excludes all talk of unionization of the military services.

The military must remain efficient, strong, and under control. Unionization would not provide this stability.

The Congress should enact, without further delay, Senator Thurmond's legislation banning military unionization as a threat that would seriously undermine the ability of this nation's fighting forces.

(From the Bridgeport Telegram, Bridgeport, Connecticut, June 2, 1976:)

Strong opponents of unionization vehemently warn that diluting the single-purpose of a national defense force would inevitably undermine the military chain of command and invite complexities involving picketing and picket lines and temptation for insubordination and strikes. They argue that although a union initially might focus on pay and benefits, it would certainly widen the scope of its concern to include disciplinary procedures and working conditions. . . .

There is nothing in the 200 year history of the nation and its armed forces to suggest any excuse for the measures the unions are considering. Such unionization would be an intolerable and profound menace to the nation's welfare, and Congress has only one choice—ban it promptly.

(From the Indianapolis News, Indianapolis, Indiana, September 25, 1976:)

The unionization of the U.S. armed forces came a step closer to being a reality Thursday when the national convention of the American Federation of Government Employees voted to make military eligible for membership in the union of Federal Employees.

In addition to approving this change in the union constitution, the AFGE elected the aggressive Kenneth Blaylock of Montgomery, Alabama, as its new President. Observers in the unions have predicted that he will bring a "Jerry Wurf" type of militancy to the AFGE.

Jerry Wurf is the President of the American Federation of State, County, and Municipal Employees. Strikes by AFSCME affiliates have shut down police, fire, sanitation and transit services in numerous cities over the last few years.

That union militancy of this kind might become a part of the Federal labor relations is disturbing. The possibility that it might be extended to the military is down right alarming, and legislative prohibitions are clearly in order. The threat of an active organizing effort, it is clear, will also be used as a club to extract concessions from the government in other areas. In the words of one AFGE official, it is something "the establishment would have to deal with."

While union leaders may pledge that nothing destructive of military discipline and effectiveness will be done, there is little reason to take such pledges seriously. In defending the proposal, President-elect Blaylock pointed out that other unions, notably, the Teamsters, may attempt to unionize the military and it was important for AFGE "to be in a position to get a piece of the pie."

That remark illustrates much of what is wrong wtih unions in both the private and public sectors—a tendency to view workers and the public they serve as a piece of the pie to be divided up.

While the union literature claims that servicemen are mistreated and clamoring for some kind of union representation, there is little actual evidence of such sentiments. To the contrary, a poll of both civilian and military personnel in AFGE's largest district, the fifth, showed a preponderance of opinion to be against it.

The President of the fifth district noted that the only support for unionization came from the younger, lower-ranked military personnel who resent such characteristically military regulations . . . saluting and rules about beards and hair lengths.

He observed that unionization is backed only by those temporary, non-career personnel who have no commitment to the effective functioning of the military.

They are, of course, entitled to their preferences, but our elected officials have a very definite commitment and we call on them to pass promptly a bill sponsored by Senator Strom Thurmond (R-S.C.), forbidding unions in the armed services. We also call on the Presidential candidates—despite the endorsement of Carter by the AFGE—to declare the unqualified opposition to military unions.

(From the Washington Star, Washington, D.C., October 2, 1976:)

The idea of unionizing the armed services is so preposterous that it is difficult to believe that the AFGE was serious last week when it authorized such a move.

But the AFGE, which seems steadily to be getting more militant, is not one to play games. So we have to assume that it is earnest about trying to put the union label on members of the Army, Navy, Air Force, Marine Corps and Coast Guard.

The military cannot be compared to private industry, or even to Federal civilian employment. Rules that govern bargaining between management and labor in industry or in federal civilian employment cannot be imposed on military organizations which are necessarily authoritarian.

Discipline is the indispensable ingredient in military operations. The military is not, and cannot be, a democratic organization. There is no room for negotiation or vote on whether commands are to be followed. National security requires that military orga-

nizations be able to count on instant obedience to orders.

Imagine the situations that might develop in a unionized military. Union negotiators and military leaders might haggle over the weight of the soldier's pack, how much paint a sailor should chip off in a day, how many miles a drill sergeant can make a marine march, whether a G.I. has to slog through the mud on maneuvers or can wait for a dry day, how many times hash can be served for breakfast, whether a recruit can be assigned K.P., or be required to pick up cigarette butts around the barracks, whether soldiers can be required to live in a barracks or at least in non-air-conditioned ones.

In combat situations, perhaps union leaders would demand a vote on whether units should assault this hill or that, or whether it should assault any hill. Suppose enemy ships were posed off the U.S. coast ready to put soldiers ashore; wouldn't it be a good time for U.S. union troops to demand a pay raise? . . . While we presume the AFGE has intentions of pursuing the matter (Why else would it have changed its constitution to allow servicemen as members?), we also presume that some authority—the courts or the Congress—will have the good sense to stop such a unionizing effort before it gets off the ground.

(From the Dallas Morning News, Dallas, Texas, October 7, 1976:)

A union, any union, looks to the strike as the ultimate weapon to enforce its demands.

But with the military matters, it would be infinitely more serious. The armed forces depend on obedience to superior authority; there can be no resort by dissatisfied infantrymen to the mediation of shop stewards. An order is to be carried out because it is an order. As for the Dutch Army, which has become a rabble, unionization would destroy discipline.

But should there be a military strike! That is the truly awful possibility. Such a strike would constitute mutiny. It will lay the whole country open to physical danger.

Not for a moment can such an eventuality be discounted—and never mind the glib assurances of the American Federation of Government Employees. These assurances are as ephemeral as gunpowder smoke. We cannot build a strong military upon them—nor should we even try unless as a nation, we have gone stark staring mad.

EDUCATION OF HANDICAPPED CHILDREN

Mr. WEICKER. Mr. President, I would like to bring to the attention of my colleagues a notable speech by Senator BROOKE of Massachusetts on the subject of education of handicapped children and the implementation of Public Law 94–142. This speech was made to the international conference of the Association for Children with Learning Disabilities here in Washington on March 11, and will be of interest not only to the parents of handicapped children, but also to school boards and administrators across the country. Senator BROOKE's speech deals with the regulations issued in compliance with Public Law 94–142 and more importantly with the question of appropriations for the education of handicapped children in fiscal year 1978. As a fellow member of the Appropriations Committee, I was particularly interested in Senator BROOKE's call for an absolute minimum increase in these funds of $120 million rather than the $50 million increase requested by the President. I am sure that the members of the Appropriations Committee will find this speech most useful in their deliberations. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR BROOKE

It is good to be here with you today as yet another step in the collaboration between those of us in the Congress who work for the advancement of handicapped children and organizations like yours which have led the fight and continue to lead the fight for their right to equal opportunity. And I appreciate this opportunity to discuss with you the challenges and priorities remaining and to celebrate with you the victories we have won in the past few years after decades of shameful neglect. For we cannot forget that the increasing national concern for the needs of handicapped children, including the learning disabled child, is of recent origin.

Perhaps the main impetus for establishing the right of the handicapped child to an equal education opportunity came in 1954 in *Brown* v. *Board of Education*, the historic Supreme Court decision on school desegregation. Relying on the legal principles of the *Brown* decision, parents of handicapped children sought to secure their constitutional rights in the courtroom. They argued that their children, regardless of handicap, were entitled to a free and adequate education.

The federal court responded to their arguments in 1971 in *Pennsylvania Association for Retarded Children* v. *Pennsylvania*, holding that all mentally retarded children have a right to a free public education, and in *Mills* v. *The District of Columbia* extended that right to *all* handicapped children in 1972.

At the time of these decisions there were approximately 8 million handicapped children in our country. Yet less than half of these children were receiving an appropriate education. And tragically, one and three-fourths million handicapped children were not receiving any education at all.

The shocking statistics, reflecting the nation's neglect and waste of human potential, compelled the Congress to act. The legal rights established by the courts compelled the Congress to act. And most tellingly you, and others who joined with you compelled the Congress to act. The impact of your important work cannot be overstated. For it was your hope, your time, your effort, and your resources that began to end the centuries of isolation of our handicapped children.

As you know, the first major breakthrough which you brought about in Federal support for the education of handicapped children and children with learning disabilities came in 1965 with Title VI of the Elementary and Secondary Education Act. The second breakthrough came with the passage of the Education of the Handicapped Act in 1970.

This legislation provided that children with specific learning disabilities receive educational services. Unfortunately, it also stated that more educational and medical research would be needed before the specific learning disabilities term could be included in the official Federal definition of the handicapped.

But despite this serious deficiency, the Education of the Handicapped Act did establish the basis for more comprehensive Federal attention to learning disabled children. It initiated a new Part G of the Education for the Handicapped Act entitled "Special Programs for Children with Specific Learning Disabilities." Part G has to this day provided an excellent program of demonstration models. These high quality centers deliver specialized services to children with specific learning disabilities. The Learning Disabilities Program is presently supporting 40 Model Demonstration Centers in rural and urban settings and a Technical Assistance Project in Merrimac, Massachusetts, of which I am particularly proud. That project has helped the 40 Centers develop by providing staff and program development assistance through workshops and consultations, by disseminating Model Center programs, by aiding in the development of materials and publications, and by establishing an effective communications network between the Model Centers and their constituencies.

The Education of the Handicapped Act is now before the Congress for reauthorization until 1982. However, this extension proposes to drop Part G. There are those who claim that Part G can be eliminated because learning disabled children have been covered by subsequent legislation. I think Part G has been invaluable. And I am by no means ready to accept the proposal that it be eliminated. It must not be dropped under any circumstances unless we can be sure that its splendid work will be fully carried on by its successor.

In 1975, as a result of our united efforts, we scored an even greater breakthrough with the passage of that landmark legislation, the Education for All Handicapped Children Act. In all the years I have been in the Congress, there is no bill which I have been prouder to support.

Frequently characterized as the "Bill of Rights for Handicapped Children," PL 94–142 embodies the major features of the overall Federal commitment to handicapped children in the fundamental areas of rights and revenue. It sets in place the permanent Federal financial contributfon, a gradually escalating monetary commitment which is fixed permanently in 1982, and sets forth those guarantees of educational rights that must be adhered to by the States and their local school districts.

As a citizen of Massachusetts, I must again note with a great sense of pride that the Massachusetts Comprehensive Special Education Act of 1972, better known as Chapter 766, served as a model for the Federal Education for All Handicapped Children Act. Both laws focus on the needs of children rather than labelling or categorizing them. Both laws:

Guarantee a free, appropriate public education for all handicapped children.

Order the development of individualized education programs to meet the unique needs of each exceptional child.

Seek a remedy against the evaluations of children which may prove racially or culturally biased by ordering comprehensive team assessments.

Guarantee full due-process procedures for parents and their children in all matters of educational assessment and placement.

Emphasize the critical importance of the parent-teacher partnership throughout.

Seek to guarantee that handicapped children are educated in the least restrictive environment, in the regular classroom with their non-handicapped peers, unless that simply cannot be done to meet their particular educational needs.

To those who doubted that all handicapped children could be educated, Chapter 766 offers proof that PL 94–142 can work. For in contrast to the 80,000 handicapped children who were being served in Massachusetts prior to the passage of 766, 152,000 are now successfully being educated.

And finally, it is in PL 94–142 that the special educational needs of children with specific learning disabilities are clearly and forthrightly brought under the larger umbrella of funding support and educational rights protection belonging to other children requiring special education and related services.

However, despite its advantages, we all know that PL 94–142 is not a cure-all for children with learning disabilities.

I am aware of the concern of so many in your association with the ceiling that has been placed on the number of children with learning disabilities that can be counted under PL 94–142 for purposes of the Federal fiscal entitlement. This ceiling provides that not more than one-sixth of the school-age children aged five to seventeen, who may be counted as handicapped children served, may be children with specific learning disabilities.

But, the statutes do provide a basis for removing this ceiling in the near future without the necessity of further legislation. I am hopeful that with your assistance, we can resolve this particular problem.

In addition, Congress in PL 94–142 required that regulations relating to handicapped and learning disabled children be published by November 29, 1976. And this has been done.

However, there are several difficulties with the published regulations. First, it appears that the regulations might mandate labelling children, a practice which sensitive organizations like yours have long fought against.

Second, according to the regulations, parents would not be part of the evaluation process, which I find unacceptable.

And finally, a difficulty lies in the regulations' definition of a learning disabled child as one who has a "severe discrepancy between academic achievement and intellectual ability." To accomplish this, the regulations propose the use of a mathematical formula based primarily on the child's age and I–Q. This would be most unfortunate. As one expert comments, "The history of services to children with disabilities is filled with countless tragic instances of children educationally abused by being excluded from programs because of IQ scores." It is a well known fact that IQ tests discriminate against non-white and non-English speaking children, the very children whose parents are least able to pay for a special education. And in addition, IQ tests present dangers you have long recognized, dangers of tracking and segregation.

The use of such a formula might have drastic results. One informal survey suggests that as many as 55 percent of the learning disabled now being served by the Part G Centers could not be served under the severe discrepancy formula.

Since the publication of the proposed regulations, six public hearings have been held throughout the country, and the Bureau of Education for the Handicapped is receiving 20 letters of comment each day.

The comment period on these proposed regulations ends on March 28. The revised regulations then come to Congress for final approval. Therefore, I urge you to share with us in the Congress, as well as with the Bureau, the benefits of your experience and concern in this area. The intent of Congress was to sensitively reflect the needs of each handicapped child. And that intent must be carried out.

I turn now to a discussion of the crucial matter of appropriations for PL 94–142. For as we veterans of Washington know, authorizing legislation is only the first step in the legislative process.

For we fail if we establish the right of every handicapped child to an appropriate public education and then do not appropriate adequate funds to enable states and local school districts to provide that education.

Thus we must realize that we have only just begun. And we must realize the need for increased vigilance. For when we see attacks upon the rights of women and minorities, which like the rights of the handicapped have so recently been established, we recognize that there can indeed be back-tracking upon national commitments. We must not allow this to happen with the education of handicapped children. We must persevere in the fight, and that fight is now largely one of funding.

And when we speak of funding for education of the handicapped, we are by necessity speaking of substantial amounts of money. For the education of a handicapped child is on the average one and a half times more expensive than that of an ordinary child. We must never forget, however, that education of the handicapped is an investment in human resources. And when it succeeds, in addition to fulfilling the hopes of parents for their children, it pays us back many fold in economic and social benefits to the entire community.

However, the costs of special education do weigh heavily upon the financial capacity of the states and local school districts. The financial needs will be still greater by 1978 when PL 84–142 mandates total compliance with the requirement to provide an appropriate public education to each handicapped child. Indeed it is estimated that by that date several billion more dollars will be required.

It would be naive to hope that these funds will or can be raised by local and state governments alone. For even if we were to put special education aside, states and local school boards would still be hard pressed to meet their escalating expenses, ordinary and extraordinary.

We need only look at the effects of our severe winter to see how vulnerable local school budgets are. The extreme cold temperatures drastically increased school fuel costs in the East, and in many parts of the West drought is depressing property values and hence, the property taxes on which education depends.

Neither can we ignore the pressures to end other educational inequities. For example, funds are, of course, still needed for Title I of ESEA. And with just cause there is growing pressure for states to cqualize the present disgraceful discrepancy in funding between school districts. California, for example, is now under court order to equalize its school district funding—a compliance which will cost that state an estimated $1 billion. And it is entirely possible that other states will be ordered or will decide to follow suit in this matter.

The paramount question is who will, or indeed who will be able, to pay the costs of special education for our handicapped. Few local school districts have the luxury of being able to assume substantial new expenditures without substantial assistance. In too many school districts, property taxes are already at the straining point. And the states are unable to do the job alone. Again, if you will pardon my personal reference, my own state of Massachusetts gives indication of what is involved. In 1974 when Massachusetts Chapter 766 went into effect, the state was spending $40 million on special education out of a total of $425 million state aid in education. Only two years later, in 1976, Massachusetts spent $133 million on special education out of a total of $453 million. Thus special education funds went up dramatically from 10 percent of total state aid to more than 25 percent. However, there is in Massachusetts, evidence of mounting trouble ahead, for this year there is a deficit of $27 million in state funds for special education which must be made up next year. And this will result in cuts in general education to 241 towns and cities in the state.

I focus on Massachusetts and its funding crisis for special education only because Massachusetts will probably be the first state to comply with PL 94–142, and thus may well be the portent of things to come.

The choices are clear, if for the most part, unacceptable. If we are to comply with the requirements of the law to provide each handicapped child with an appropriate public education, either state taxes must be increased, local property taxes raised, general or special education programs cut or more federal funds appropriated. As I have said, the first two choices have limited viability. And it would be tragic if either general or special education programs were cut.

I must also stress that it would be even more tragic if we began to experience bitter conflicts between the financial claims of special and general education. It would also be disastrous if cities were forced to choose to fund either bilingual education or special education, to fund either sorely needed compensatory programs for the disadvantaged or equally sorely needed special education programs for the handicapped. Such conflicts must be avoided if we are to avert a potential backlash against special education.

I believe the first three funding choices are untenable. And therefore, suggest we must do all that we can to assure that the Federal Government keeps the commitment it made when it passed almost unanimously the Education of all Handicapped Children Act. The passage of that Act was a Congressional promise to be kept. It is our job to see that it is honored.

Therefore I have, first as a member and then for the past two years as ranking minority member of the Labor-HEW Appropriations Subcommittee, made adequate funding of education programs for the handicapped a personal priority.

I am pleased with the record of the Congress during these years. In fiscal 1973, under the old Education of the Handicapped Act, Congress appropriated only $37½ million. For fiscal year 1975, Senator Mathias of Maryland and I fought for—and obtained—$100 million.

With the passage of PL 94–142 in 1975, the Federal Government promised to assume a more realistic share of the cost of educating our handicapped, and by 1982 Congress has authorized $3.16 billion in federal funds.

With your unstinting support, we on the Senate Labor-HEW Appropriations Subcommittee have thus far been able to fulfill much of the promise of PL 94–142. In FY 1976 $200 million was appropriated, doubling the appropriations of the preceding year. And in the current fiscal year, 1977, we appropriated $315 million, another substantial increase. I would also like to point out more specifically

that I was able to increase the 1977 funds for the Specific Learning Disabilities program from $5 to $9 million over the appropriations for 1976.

But we must now look ahead to fiscal year 1978 and prepare to work together again. Based on the child count formula, $570 million is authorized for FY 1978. However, despite Candidate Carter's declared support for education of the handicapped during the campaign, President Carter has requested only $365 million for this program in his budget requests. This is only $50 million above this year's appropriation and over $200 million short of what the formula allows.

I believe that this Presidential budget request is clearly inadequate considering the crisis state of funding for special education in too many states and school districts and the heavy start up costs in states with little or no special education programs. PL 94–142 established a partnership between the states and the federal government. The role accepted by the federal government was not an unreasonable one, for the total federal financial commitment is finally to assume only 25 percent of the total cost of special education.

We must adhere to the terms of the partnership between the federal government, the states, and the local school districts.

Therefore I want to assure you today that I shall seek adequate funding for PL 94–142 for FY 1978. It is estimated that based on the child count of this year as much as $70 million in this year's funds will not be expended. At the very least, we must see that this $70 million is added to the Carter budget request of $365 million, for a total of $435 million. But in addition, I will work for an appropriation above that amount for I know how much these funds are needed by our school districts all across the country.

To achieve this goal I need your help, I need your active assistance. I urge you to make your support for increased appropriations known to your Senators and Representatives, particularly those who serve on the Appropriations Committees.

And I urge you to make your wishes known to the President as well.

Please know that I am fully aware of the many constraints upon our federal budget in these difficult days. And, be assured that I am even more aware of the many legitimate and worthy claims upon that budget. But I would remind you of the lines of Stephen Spender who said:

"No cause is just unless it guards the innocent
"As Sacred trust: no truth but that
"Which reckons this child's tears an argument."

I believe that our nation wants our handicapped children to receive the best education possible, an education to make them as free as possible, and an education which will allow them to go as far as possible. And they can get that education if we work together in the days and years ahead.

EXCELLENT CHOICE FOR ASSISTANT SECRETARY OF AGRICULTURE: CAROL FOREMAN

Mr. PERCY. Mr. President, I noted with great pleasure recently that President Carter is nominating Carol Foreman to be an Assistant Secretary of Agriculture. Her responsibilities will be for consumer services and nutrition, managing about $9 billion of the Agriculture Department's $14 billion budget. Food stamps, school breakfasts and lunches, meat and poultry plant inspection, and produce grading are among the important programs she will administer.

Mrs. Foreman is an outstanding selection for the position. For the last 3 years she has been executive director of the Consumer Federation of America. She has earned a reputation for indepth knowledge of her subject and effective dealings with others. Those who know Mrs. Foreman have respect for her abilities, her judgment, her persuasiveness, and her integrity.

Before working with the Consumer Federation, Mrs. Foreman served as a congressional liaison officer for the Department of Housing and Urban Development. That experience will certainly be useful as she consults with the Congress in her new position.

Mr. President, anyone who has followed Mrs. Foreman's career knows that she is extremely capable and energetic. She represents the best in public service. I fully anticipate that she will be fair in her determinations and will be responsive to the felt needs of farmers, consumers, and everyone else involved in the distribution chain of foodstuffs. I wish her every success as she applies her considerable talents and energies to her new role.

Mr. President, I ask unanimous consent to have printed in the RECORD a release issued by the Department of Agriculture on March 7, and an article about Mrs. Foreman appearing in the Washington Star on March 12, 1977.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the U.S. Department of Agriculture News]

PRESIDENT NOMINATES CAROL TUCKER FOREMAN TO HEAD FOOD, CONSUMER SERVICES

WASHINGTON, MARCH 7.—President Carter today nominated Carol Tucker Foreman, former executive director of the Consumer Federation of America, to be assistant secretary of agriculture for food and consumer services.

Mrs. Foreman, 38, with headquarters in Washington, also is executive director of the Paul Douglas Consumer Research Center and a member of the board of three organizations: the National Committee on Household Employment; the Secretary's Advisory Council, U.S. Department of Commerce; and the advisory committee on national growth policy processes of the National Commission on Supplies and Shortages.

She formerly was president of the Women's Equity Action League, executive director of the Citizens Committee on Population and the American Future, director of policy development of U.S. Commission on Population Growth, and member of the staff of Planned Parenthood-World Population, and of the D.C. Council on the Status of Women. She also formerly was an aide to Rep. James Roosevelt of California and Sen. John McClellan of Arkansas.

Born May 3, 1938 in Little Rock, Ark., Mrs. Foreman attended William Woods College, Fulton, Mo., and graduated from Washington University, St. Louis, Mo. She has done graduate work at American University here.

As assistant secretary, Mrs. Foreman would direct the Food and Nutrition Service, the meat and poultry inspection activities of the Animal and Plant Health Inspection Service, and six functions presently performed by the Agricultural Marketing Service: meat grading, poultry grading, inspection and grading of dairy products, egg products inspection, fruit and vegetable grading and so-called "Section 32" commodity purchases. She also will serve as a director of the department's Commodity Credit Corporation.

Mrs. Foreman is married to Jay H. Foreman and they have two children.

CAROL FOREMAN—STATUS FOR THE CONSUMER MOVEMENT

(By Goody L. Solomon)

Less than a year ago, consumer advocates criticized the Department of Agriculture's plan for consumer representation. They called it "vacuous" and "a fraud" because it had no provisions for a consumer spokesperson in a policy role.

Now, President Carter has reached into the ranks of consumer advocates and appointed Carol Foreman, executive director of the Consumer Federation of America (CFA), to be an assistant secretary of agriculture. Foreman will be right up there in a position of power. She will head the department's nutrition and feeding programs, which include foods stamps, school lunch and breakfast programs, among others. Altogether they absorb $9 billion or two-thirds of USDA's $14 billion budget. She will also head meat and poultry plant inspection and grading of meat, poultry, fruits and vegetables.

Beyond her immediate duties, she will be a member of Agriculture Secretary Robert S. Bergland's policy council, which is composed of all six assistant secretaries. There, "she could influence decisions touching on all the department's responsibilities," said a Bergland staffer. He added that "Bergland clearly wants to have an effective consumer voice throughout the department, not just in an isolated area." Judging from the secretary's own words of praise for Foreman's intelligence and ability, her views might well carry some weight. Bergland, of course, had submitted her name to Carter.

Mike Pertschuk, general counsel of the Senate Commerce Committee, a leading proponent of consumer legislation, called the appointment the "maturation of the consumer movement." He said. "First came Ralph Nader, next the growth of institutional consumer advocacy when the advocates demonstrated their own credibility and were no longer Nader's people, and now one generation, beginning with Foreman, has moved into statesmanship and a position of responsibility in government."

Foreman, 38, is from Arkansas. She is married to Jay Foreman, an attorney who is special assistant to the president of the Retail Clerks International Assn., AFL–CIO. They have two youngsters, Tucker, 9, and Rachel, 6, who attend a Montessori school.

Foreman has an enviable slight and wiry figure that reflects her love of athletics—especially tennis, golf and running—but belies her love of cooking.

She came to Washington in 1960 for graduate work in government at American University. After a year, she decided that she "wanted to get involved instead of study." She went to work for Sen. McClellan, D-Ark. Then she became a lobbyist for a company that represented trade associations and small businesses and in that job met Jay, who was counsel for the House Education and Labor Committee. They married in 1964 and went to California to campaign for the Johnson-Humphrey ticket.

Before joining CFA in December 1973, Foreman's experience also included a congressional liaison job at the U.S. Department of Housing and Urban Development. During her three years directing the country's largest consumer organization, she won a reputa-

tion as a hard worker who studied her facts and acted with reason plus a touch of tact.

In Congress, particularly, where she spent a great deal of her time as a lobbyist, she disproved the once-popular notion that consumer activists were emotional, brash and tactless. Many on the Hill describe Foreman with the same glowing terms as those of Sen. Jacob Javits' aide, Brian Convoy. He called her "an extraordinarily effective lobbyist . . . very reasonable . . . not dogmatic." He also said, "She has a great deal of credibility around here. Her opinions are sought as much as she comes to us. She is as well prepared on the facts as the best people who come up to talk to us representing labor, business or what have you. And while she is clearly pro-consumer, she knows how to do that without being anti-business."

Sen. James Abourezk, D-S.D. said, "She's a first rate person. Very competent and very tough." In an attempt to create a dialogue between small farmers and consumers, he arranged for Foreman to spend some time in South Dakota, talking to farmers and living on a farm for a brief time. Abourezk said the farmers all were quite taken by her.

Within the consumer movement and notably within CFA, which is composed of numerous disparate interests including labor, farm and consumer groups, Foreman is lauded for her skillful handling of internal politics and cross-currents.

At USDA, Foreman will need all her tact and diplomacy and then some. As she put it herself, "I will be an administrator, not a paid advocate. I hope the agency will be more responsive to consumer interests than it has in the past. But all government involves a balancing of interests. I expect to be in an advocacy role with some of the consumers some of the time. Someone said to me the other day, 'I am one of your former friends'."

Viewing the effect on the consumer movement, Pertschuk said, "another generation must take over to prod Foreman."

Prodding she'll surely get. From all sides. Her job has a bucketful of difficulties. In the food stamp program alone, she will take on one of the most inefficient, problem-ridden areas of the federal bureaucracy. Among the complex questions facing her are the extent of fraud within the system and how to correct it; who should be eligible for food stamps, how to reduce administrative costs and errors, how to enroll the most needy who often don't know about and therefore don't apply for food stamps.

School lunch and breakfast programs aren't in much better shape. Among other things, they've been attacked for serving poor quality, bad tasting and inadequately nutritious meals.

In her domain, as well, fall such hotly contested matters as nitrites in cured meats and the marketing of products containing mechanically deboned meat (MDM), which has been criticized as containing finely pulverized bone.

Foreman is optimistic. She thinks the odds are in her favor. USDA will be more sympathetic with public needs, she said, not only because of the new regime coming on board. "As I look at the list of nominees for assistant secretaryships, I see a vast change from what has run the department in the last eight years. I don't anticipate being under a siege situation internally," she said.

But Foreman isn't in the post yet and no one is clinking champagne glasses. Senate confirmation comes first. Although she has the votes, the hearings won't be a piece of cake. Making sure of that are some agricultural people who aren't keen on her selection. In fact, because of intense opposition from certain farm groups, Foreman's job is not the one for which she was originally recommended to Bergland. This is what happened:

Traditionally, USDA has an assistant secretary for marketing and consumer services. When word got out during the transition period that the incoming Carter administration had Foreman's name on the list for that job, agriculture groups mustered an onslaught against her. Commodity groups headed the brigade. These are the producers of fruits, vegetables, grain and milk—items that are regulated by complicated marketing order systems. While consumer groups have criticized those marketing systems for keeping retail prices high, Foreman hasn't. Nevertheless, Alan Lambert of the National Milk Producers Federation (NMPF) said there was fear that she might. NMPF and other groups claimed that Foreman lacked expertise to handle marketing responsibilities.

Bergland hit upon a compromise: dividing the traditional post into two, one for consumer services and nutrition, to be held by Foreman, and one for marketing, to be held by Robert H. Meyer, a California farmer.

Most of the commodity groups say they're satisfied with the compromise. But the meat industries are worried. They, too, hit hard at her inexperience, particularly on technical matters germane to plant inspection. but what really troubles them is Foreman's past criticism of agribusiness and what one spokesperson called her "built-in biases." Richard Lyng, president of the American Meat Institute (AMI), a trade group of packers and processors, said his members are "skittish like cats when a new dog enters the family. In time, they may learn to get along."

Neither AMI nor the American National Cattleman's Association (composed of producers) intend to testify against the appointment. They've been advised not to by the Senate Agriculture Committee, whose members, according to a staffer, largely believe Foreman is a reasonable person; and they hesitate voting against a woman.

However, individual packers and producers have been talking to their senators. The game plan is to see to it that the committee throws her some tough questions.

In the meantime, Foreman has been working as a consultant to Bergland, learning about her job and boning up for the confirmation hearings. If past is prologue, she'll come through with flying colors.

NUCLEAR POWER STUDY

Mr. HART. Mr. President, a report entitled "Nuclear Power Issues and Choices" sponsored by the Ford Foundation and administered by the Mitre Corp. was released today by the Nuclear Energy Policy Study Group. As indicated in the preface to the report, the study was prepared in the hope that it would help to clarify the issues underlying current debate on nuclear power. The year-long study brought together individuals with a wide variety of expertise, experience, and viewpoints, none of whom had taken a strong position for or against nuclear power.

Mr. President, the Senate Committee on Environment and Public Works' Subcommittee on Nuclear Regulations, which I chair, will be considering many of these critical issues in the months ahead. I believe this report can make a substantial contribution to our deliberation of those issues, I hope that my colleagues who will have to deal with nuclear issues in other committees and on the Senate floor will take the time to review this report before taking action on vital national energy policy issues.

The report is a balanced one and cannot be characterized as being biased either for or against nuclear power. While it recognizes that conventional light water reactors do offer an economically and environmentally attractive alternative to coal fired power plants, the report also makes recommendations against current programs and plans for breeder reactors and plutonium recycling.

Mr. President, rather than try to summarize the further conclusions reached by this report, I ask unaimous consent that the summary overview section of the report be printed in the RECORD so that it might be easily available for my colleagues and their staff to review.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NUCLEAR POWER ISSUES AND CHOICES

OVERVIEW

The debate over the future of nuclear power has become increasingly dominated by dedicated advocates and opponents of this source of energy. While polemics may focus attention on the problem, they do not provide a sound basis for public understanding of the issues or for national decisionmaking. In this study we have tried to take a fresh and independent look at the role that nuclear power should play in the United States and the rest of the world in this century. We have sought to develop a framework for assessing the difficult problems relating to nuclear power now before the U.S. government. Imminent decisions with far-reaching domestic and international consequences must be made on the following issues: (1) the reprocessing and recycle of plutonium. (2) the breeder reactor program, (3) the management of nuclear wastes, (4) the expansion of uranium enrichment capacity, and (5) the export of nuclear technology and materials.

In assessing the role of nuclear power, we have examined a broad range of difficult and controversial questions, including:

How important is nuclear power to the economic growth and prosperity of the United States, of our major allies and other advanced countries, and of developing countries?

How do the economics of nuclear power compare with those of coal and other alternatives?

What are the extent and distribution of the world's uranium resources, and how do they affect the future of nuclear power?

What are the economic prospects and developmental time scales of energy sources such as solar and fusion energy that may be alternatives to nuclear and fossil energy?

What are the effects of nuclear power on the environment and human health as compared with those of coal and other alternatives?

How safe is nuclear power, and how does the possibility of accidents affect the comparisons between coal and nuclear power?

Can nuclear wastes be disposed of in an acceptable manner?

How serious are the possibilities of sabotage to nuclear facilities, or of the diversion of materials to make nuclear weapons?

What is the relationship between the worldwide growth of nuclear power and the

proliferation of nuclear weapons, and how can the decisions of the United States affect the likelihood of proliferation?

While such questions are now being debated most actively in the United States, they are relevant to the rest of the world as well. Even in this country these questions have until recently been largely ignored by the public and, to a disturbing extent, have been treated complacently by the government itself. For more than twenty years, it has been the clear and almost unchallenged policy of the government to promote the development of peaceful nuclear energy at home and abroad.

The intense debate of recent years between those who emphasize the promise of nuclear energy and those who fear its consequences has identified but generally failed to clarify the underlying issues. Many critics attack nuclear power as an unacceptably dangerous source of energy that is being forced on the public despite unfavorable economic prospects. They question its economic benefits by pointing to escalating costs of nuclear construction and fuel, poor reactor performance, and hidden subsidies. They emphasize the gravity of the health hazard inherent in the nuclear fuel cycle, pointing to the possibility of catastrophic accidents and to a persistent threat from nuclear wastes, which may endanger civilizations thousands of years in the future. Finally, they assert that nuclear power will lead inevitably to the proliferation of nuclear weapons throughout the world and that every reactor and fuel cycle facility is a potential target for terrorists interested in sabotage or materials for bombs. Some critics conclude that the only solution to these dangers is a moratorium on further construction of nuclear plants.

Its proponents advocate nuclear power as a safe, clean source of energy that is indispensable to the future U.S. and world economies. They assert that it can generate baseload electricity at significantly lower cost than any fossil fuel alternative and that without it the rising demand for electricity cannot be met. They argue that it is demonstrably less dangerous to the environment and to human health than fossil fuel alternatives. They point to the excellent safety record of reactors and calculate that, while an accident could be serious, the probability of its occurence is vanishingly small. Nuclear wastes, they assert, can be handled in ways that essentially eliminate the possibility of future accidents. They emphasize that nuclear power is an essential component of energy independence. Finally, they maintain that the hazard of nuclear weapons proliferation exists independently of American nuclear power and warn that restrictions on programs or exports would simply turn potential markets over to foreign competitors and reduce U.S. influence over nuclear power developments abroad. Some advocates conclude that future energy demands can only be met by a massive government-supported program to accelerate nuclear power, including early introduction of plutonium reprocessing and recycle and the plutonium breeder.

The "energy crisis" arising from the oil embargo of 1973 and the subsequent large increase in OPEC oil prices introduced a new and confusing element into the debate. Although these events did call attention to the limits of oil resources, they did not themselves define—much less determine—the much larger and more complex issues of long-range energy policy.

In our study, we have found merit in many of the points raised by both the advocates and the critics of nuclear power, but we have not been persuaded by their conclusions as to the future role of nuclear power. We have also been concerned about broader economic and security issues raised by the current "energy crisis" but we believe that great care must be taken to relate these issues properly to the question of nuclear power.

To put nuclear power in some perspective, it must be recognized that the world is not running out of energy. Although the relative contribution that oil and gas make to the world's energy supplies will diminish before the end of the century, substantial amounts of these fossil fuels remain. Coal resources are vast, and uranium resources are probably much larger than currently estimated. Further in the future, solar energy, probably fusion energy, and possibly geothermal energy can provide essentially unlimited sources of power. If these options are successfully pursued, the world can have plenty of energy in the future, although probably at costs significantly higher than those of 1976. Thus, the long-range energy problem is one of higher costs rather than one of absolute limitations on energy availability.

Over a reasonable period of time, the impact of increased energy costs on the world's economy in general, and the U.S. economy in particular, will not be as great as is often assumed. Sudden sharp increases in the price of energy can cause serious temporary hardships and dislocations, as was demonstrated by the post-1973 quadrupling of oil prices. Permanently higher real energy costs will reduce the economic resources available for other needs—an effect of particular importance in developing countries. The cost of energy, however, is a small enough factor in the overall economy that long-term cost increases of the magnitude we foresee will not cause major changes in the economic or social future. Economic growth can be sustained even with large increases in the price of energy. In any case, higher future energy costs, which are probably inevitable, are largely independent of the rate at which nuclear power is developed and deployed over the next twenty-five years.

Our analysis indicates that nuclear power has and will probably continue to have a small economic advantage on the average over coal, the closest alternative for the generation of electricity in the United States. Regional and other variations in the cost of electricity from nuclear power and coal, however, are sufficiently large that coal is and will continue to be a competitive source of energy in many areas. Moreover, the ranges of possible social costs, such as health and environmental impacts, associated with coal and nuclear power also overlap to such an extent that neither has a clear advantage. We find such large uncertainties and unknowns in both the economic and social costs that the average comparative advantage could shift either way in the future.

In these circumstances, we believe that there is time for a broad and sustained approach to energy problems. While nuclear power is one of the options that should be pursued, it is not as critical to future economic development as its advocates claim. There is time therefore to assess carefully the potential risks as well as the benefits of nuclear power and to avoid hasty and uncritical decisions.

At present, the range of uncertainties in the comparative costs of coal and nuclear power is such that a mix provides a useful hedge against uncertainties. Since there is considerable overlap in the present costs of coal and nuclear power, economic forces may be expected to produce such a mix of coal and nuclear plants. For the longer term, a balanced research and development program should develop additional options based on improved use of coal and nuclear power as well as solar, geothermal, and fusion energy. These energy sources should play a role in the future when and where they can compete economically.

In general, this analysis also applies to the role of nuclear power in other advanced nations. However, countries that lack domestic supplies of coal, as well as oil and gas, face a more difficult problem than the United States in obtaining assured, diversified energy sources and in dealing with balance of payments problems. While complete dependence on nuclear power is not a solution for such countries, they may have, or may think they have, a special interest in nuclear power.

Nuclear power, with its large, complex, capital-intensive plants poses special problems for developing economies. The higher capital costs per unit of generating capacity of small nuclear plants, suitable for small power grids and limited demands, would tend to eliminate the economic advantage of nuclear power even against imported fossil fuels. Nevertheless, some fifteen to twenty developing countries may find economic justification for nuclear power in this century.

By far the most serious danger associated with nuclear power is that it provides additional countries a path for access to equipment, materials, and technology necessary for the manufacture of nuclear weapons. We believe the consequences of the proliferation of nuclear weapons are so serious compared to the limited economic benefits of nuclear energy that we would be prepared to recommend stopping nuclear power in the United States if we thought this would prevent further proliferation. However, there are direct routes to nuclear weapons in the absence of nuclear power, and the future of nuclear power is not under the unilateral control of the United States. Most advanced countries are now actively developing and utilizing nuclear power, while less developed countries count it among their expectations. In fact, abandonment of nuclear power by the United States could increase the likelihood of proliferation, since the United States would lose influence over the nature of nuclear power development abroad. With continued nuclear power development, however, the U.S. government must give greater weight to the proliferation problem in its decisions on nuclear matters and its relations with other nations.

Nuclear energy is now a fact of international life and will provide a significant portion of the world's electricity by the end of the century. At the same time, nuclear power is only one of several energy options, and decisions about it should be made on the basis of sound national and international economic considerations, realistic accounting of social costs, and a paramount concern to avoid further proliferation of nuclear weapons.

THE CURRENT STATUS OF NUCLEAR POWER

Nuclear power is a present reality, not a future prospect. In mid-1976, nuclear power plants in the United States accounted for about 40,000 megawatts of electric capacity (MWe), or about 8 percent of total national capacity. Abroad, nuclear power totaled about 35,000 MWe. In the United States, some 170,000 MWe of additional nuclear capacity are under construction or on order and scheduled to begin operation by the mid-1980s; abroad, construction and orders are reported to amount to about 130,000 MWe. While there has been a substantial cutback in plans for both U.S. and foreign nuclear power plants in the past two years, this reduction appears to be primarily the result of economic recession and reduced projections of electricity demand rather than a rejection of nuclear power.

Projections of U.S. nuclear power capacity for the year 2000 vary greatly, and have been sharply reduced recently. In 1975 the Energy Research and Development Administration (ERDA) estimated that nuclear power capacity could be as high as 1,250,000 MWe by the year 2000. These estimates were revised

downward by ERDA in July 1976, to range from 450,000 to 800,000 MWe, and in September 1976, were further reduced to range from 380,000 to 620,000 MWe.

Measured against the total use of energy, the present contribution of nuclear power is still small, amounting to about 2 percent in the United States. For the foreseeable future, nuclear power will only be used for generation of electric power, which currently consumes some 28 percent of the primary energy used in this country. In contrast, fossil fuels can be used not only for electric power but also for transportation, industry, residential heating, and petrochemicals. It is generally expected, however, that the use of electric power will grow more rapidly than overall energy consumption. Moreover, in producing electricity, nuclear power releases some oil for other purposes. In the future, it could also release coal for other uses such as the production of synthetic oil and gas if there are constraints on the utilization of coal.

Nuclear power has become international. Thirty countries, in addition to the five nuclear weapon states, have nuclear power plants in operation, under construction, or on order. There is now highly competitive international commerce in reactors, uranium (natural and enriched), and supporting equipment. The principal suppliers in addition to the United States are West Germany, France, the United Kingdom, Canada, Japan, South Africa, and the Soviet Union.

The principal motive for this interest in nuclear power is the desire for a cheaper source of energy. Although the original promise of abundant nuclear electric power at a fraction of the cost of other sources has faded, the more modest belief persists that economic benefits will accrue over the lifetime of current plants. Buying into nuclear technology is widely believed necessary to share in future economic payoff. This economic rationale, which is central to the nuclear power debate, is examined in detail in the following section.

Considerations other than economic have also undoubtedly influenced some nations' interest in nuclear power. One of these is the desire to develop a diversified energy base to increase the security of supply. While a reliable energy supply is an objective to which most nations must give attention, only a few countries have the resources for total independence or self-sufficiency. Since much of the present world economy relies on oil and gas and since nuclear power cannot directly substitute for oil in such areas as transportation and petrochemicals, an assured supply of nuclear power would not eliminate the need for other fuels. Substitution of electricity for other energy uses would be a lengthy and gradual process involving major changes in capital equipment. In the next few decades, nuclear power can do little to reduce the impacts of sudden changes in energy supplies such as oil. Principal reliance during this period must be placed on stockpiles, resource sharing, and other measures. However, concern about the long-term security of energy supplies, particularly of oil, will probably lead to a preference of nuclear power, particularly in Japan and Western Europe.

In the longer term, nuclear power may present advantages in guarding against interruption in supply since uranium stockpiles are more manageable and less costly than comparable stockpiles of oil or coal. Some countries may see breeder reactors as providing greater independence from external fuel supplies for electricity. Countries seeking independence through the breeder, however, would have to be able to reprocess plutonium and fabricate new fuel within their own borders, and aside from Japan and Western Europe, would still be dependent on a few outside suppliers for reactors and critical equipment. The level of economic and political cost individual nations may be prepared to bear in pursuit of energy independence is a hard choice each will have to make for itself.

Another motive for acquiring nuclear power is prestige. The status accorded nuclear power as a high technology industry was initially stimulated in large part by U.S. promotion of the Atoms for Peace program, beginning in 1955. Today, even in less developed nations for whom the investment may be disproportionately large and the benefits questionable, nuclear power may be politically attractive for its perceived glamour.

A final motive for the development of nuclear power is to acquire a technical base for a nuclear weapons option. Even if a country has no present plans to manufacture weapons, it may want to be in a better position to acquire a nuclear weapons capability in response to a future threat. That a shortened lead time toward a potential nuclear weapons capability may be a motive for acquiring nuclear power indicates the close tie between energy policy and foreign policy.

ECONOMIC CONSIDERATIONS

The principal argument for nuclear power has been that it would produce cheaper electricity than alternative energy sources. The present worldwide level of investment in nuclear power may suggest that nuclear power has achieved a clear economic advantage. The charge is frequently made, however, that if costs were properly accounted for and subsidies stripped away, nuclear power would not be competitive. To clarify this fundamental issue, we have examined the economics of nuclear power as compared with coal, the closest competitor, and with other alternative energy sources. We have also considered the broader significance of the differences in cost between nuclear power and alternative sources to general economic growth and prosperity.

Comparison of coal and nuclear power

Like so much else in the nuclear debate, the comparative economics of nuclear power and other energy sources for electric power has become shrouded in controversy. The comparative economics of coal and nuclear power is a genuinely complex problem about which there can be honest differences of opinion. Plants committed today will not begin operation until 1986 and are intended to have a useful life of thirty years. On such a time scale, the projection of lifetime costs is a very speculative business. Not only have construction costs of both coal and nuclear power plants escalated substantially in recent years but so too have the prices for uranium and coal. Moreover, stricter environmental controls on nuclear power and fossil fuels could have far-reaching economic effects. Finally, new scientific information on long-range environmental effects or events relating to safety or nuclear proliferation could lead to decisions that would have major economic effects. In such an uncertain environment, projections must be made with considerable caution.

Despite these large uncertainties, our analysis leads us to the conclusion that nuclear power will on the average probably be somewhat less costly than coal-generated power in the United States. However, coal will continue to be competitive or preferable in many regions since there are large regional cost differences and wide variations even within a region. The advantage for nuclear power is likely to be most significant in New England and in parts of the South. In large areas of the West, containing a small fraction of the country's population, coal-generated power is likely to be less costly than nuclear power. In much of the country, however, the choice is so close and the uncertainties sufficiently large that the balance could easily shift either to increase or to eliminate the small average advantage that nuclear power presently enjoys.

Conclusions on the comparative economics of coal and nuclear power depend on estimates of future capital charges, which include construction costs and interest, and the cost of uranium and coal. Each of these cost factors involves special problems that contribute to the uncertainty and possibility of different interpretations.

Capital Charges

The cost of electricity from nuclear plants is dominated by the capital charges for the plant.[a] At present, more than 70 percent of the cost of electricity from a light-water reactor (LWR) is attributable to capital charges. Over the past decade, construction costs of nuclear power plants have risen markedly faster than the rate of inflation. In addition, as a result of outages and reduced operation, the average capacity factor[b] for nuclear plants has been less than expected, particularly for the large new 1,000 MWe plants. Reductions in the capacity factor have the same effect on power cost as increases in capital charges.

Analysis of capital charges of nuclear power is complicated by the surprisingly wide range in the construction costs of plants of similar design, depending on the location, the builder, and the method of doing business. If one starts with high-cost examples and assumes that costs will continue to rise as they have in the past, it is indeed possible to conclude that nuclear power will become economically noncompetitive. Our analysis indicates, however, that construction costs (in constant dollars) will tend to level off in the future. Costs of labor and materials have escalated more rapidly than the general rate of inflation. The regulatory process has lengthened the construction period and necessitated numerous design changes and retrofits. The rate of escalation in costs should not continue to diverge from the regular rate of inflation, and the construction and licensing period (now typically ten years) should not continue to lengthen and may be shortened. With experience and standardization, design changes and retrofits should be brought under progressively better control. Finally, although aging factors not yet encountered might further reduce the capacity factor, it seems more likely that the somewhat disappointing operating experience to date is part of the shakedown experience typical of a new technology and that capacity factors will improve in the future.

Capital charges are a smaller fraction of the total cost of electricity from coal than from nuclear power plants. Nevertheless, these charges still represent a substantial portion of the cost of coal-generated electricity (35 to 65 percent depending on location). Construction costs of coal plants have also increased in recent years for some of the same reasons as for nuclear plants. In addition, the use of new equipment (scrubbers) to reduce sulfur emissions may increase construction costs as much as 20 to 25 percent. In view of evolving pollution standards and technical responses, the uncertainties in construction costs of coal plants are probably as great as for nuclear plants. Nevertheless, with

[a] Costs are for electricity at the point of generation; distribution costs add 50 to 200 percent to the price to the consumer.

[b] The "capacity factor" of a plant is the ratio of electric energy actually delivered during the year to that which would have been delivered if the plant operated 100 percent of the time at full capacity.

experience the construction costs of coal plants should also level off and capacity factors should improve.

Uranium. At present, uranium accounts for only 5 to 10 percent of the cost of electricity at the powerplant. The recent rapid rise in the price of uranium from around $6 per pound in the early 1970s to spot prices reportedly as high as $40 per pound has further clouded the economic picture. Although the increase from $8 to $40 per pound (if sustained) would only increase the cost of electricity by around 20 percent, such a rapid advance in prices raises basic questions about the future price and availability of uranium. If uranium is indeed in short supply and becomes very expensive, the current generation of light-water reactors (LWRs) will have difficulty competing with coal plants. This asserted future shortage of uranium is the principal argument advanced for early introduction of breeder reactors, which in theory might expand the power produced by a given supply of uranium by a factor of as much as 100.

Our review convinces us that current official estimates of uranium reserves and resources substantially underestimate the amounts of uranium that will be available at competitive costs. We believe that there will be enough uranium at costs of $40 (1976 dollars) per pound to fuel light-water reactors through this century and, at costs of $40 to $70 per pound, well into the next century.

While mineral reserves are commonly understood to be identified resources (i.e., known in location, quantity, characteristics, and economically recoverable with current technology), uranium reserves are specified over a range of estimated costs, which at the higher end will only become of commercial interest in the future. Indeed, early estimates of uranium reserves reflected industry judgment on how much uranium could be produced profitably at the government-set price of $8 per pound. Consequently, there was little commercial interest in more expensive uranium, and presently identified higher cost deposits represent principally the by-product of exploration for low-cost reserves. In the past two years, uranium prices have risen sharply in response to an anticipated expansion in demand, present low production levels and doubts about the pace of expansion, and the increase in oil prices. It is difficult to estimate the increased supplies that will become available at higher prices. This is not unusual, since mineral reserves estimates almost always lag when prices rise and markets expand.

It is not enough to wait for market forces to press firming up of potential resource estimates and the discovery of these "new" reserves, since more reliable estimates are needed for long-range decisions on future energy policy and technical programs. Although the National Uranium Resource Evaluation (NURE) program has been established for this purpose, we do not believe it will produce better estimates soon enough, since it is almost entirely dependent on private efforts to locate, define, and report reserves. This program should be reoriented with higher priority assigned to improving estimates of uranium reserves and resources.

Coal

In a coal-fired electric power plant, the cost of mining and transporting the coal accounts for 30 to 60 percent of the total cost of the electricity. This wide spread in fuel charges reflects differences in costs of transportation, of the sulfur content of coal, and of mining methods. The price of coal increased in response to OPEC's increase in the price of oil and is now about twice the pre-embargo level. The real cost of coal mining, however, has not increased very much in spite of increased labor and envioronmental charges.

Unlike uranium, U.S. coal reserves are definitely known to be very large. Reserves are estimated at more than 400 billion tons in place with 50 to 80 percent recoverable, compared with an annual production in 1975 of just over 600 million tons. Total coal resources are estimated at some 4 trillion tons, most of which would be available only at higher costs since it is contained in seams too thin or deep to qualify as reserves. In view of the enormous coal reserve, the real cost of mining coal should not increase substantially until well into the next century. Cost increases due to increased mining safety standards, environmental controls, or more difficult deposits should be at least partly offset by technological improvements in mining and transportation.

Recent official policy has projected a doubling of coal production by 1985. Although production has not expanded significantly in the past three years, we believe that it should be possible to achieve this production by the 1985–90 period and to double it again by the turn of the century if the demand appears. Doing so would require an increase in production of some 6 percent annually, a rate we judge achievable if basic problems are resolved. Large investments will be required to open new mines and to improve transportation. Public conflicts will have to be resolved on environmental and land use issues before adequate commitments will be made by private investors.

Three years after the Arab embargo, the coal industry is still not operating at full capacity; and in the absence of new demand, coal prices have fallen from their peak. Nevertheless, the prospects for coal should not be underestimated since coal will be generally competitive with nuclear power for a long time to come and will in all probability become the material from which synthetic gas and oil will be manufactured. A larger role for coal exports in the international energy trade is also foreseeable and desirable. In these circumstances, the priority and expectations for coal should not be less than for nuclear energy. Both government and the private sector should demonstrate this priority by increased efforts to develop more efficient mining technology, improved transportation systems, better control of sulfur oxides and other emissions, radically improved long-distance electrical transmission, and development of more efficient, lower cost synthetic gas and oil conversion. Equally important is a climate of confidence with regard to land use regulation, public energy policy, and federal-state regulatory relations.

Comparative economics in other countries

The foregoing comparison of coal and nuclear electric power is based on expectations in the United States. Most other countries have fewer resources and less access to technology and investment capital. Nevertheless, the arguments concerning the comparative costs are similar in all countries, as long as fossil fuels and uranium can be relied on as items of international commerce.

Considerable emphasis on nuclear power has developed in Western Europe and Japan. These countries have experienced a gradual reduction of coal reserves and persistent difficulties with their coal industries. As a result, following World War II they turned to low-cost Middle East oil, which, together with natural gas, became their principal energy source. These countries are now planning extensive nuclear power programs to reduce their reliance on oil, which is no longer cheap and constitutes a far larger share of imports for them than for the United States. For most of them, a shift to heavy reliance on coal would require increasing dependence on imports from the United States and Eastern Europe. The political acceptability of such dependence is not clear. There is also a question as to how large a foreign market this country could supply and still meet its own growing domestic demand. For these reasons, a greater preference for nuclear power should be expected in these countries than in the United States. While official pronouncements affirm this preference, there are also indications of increasing public opposition to nuclear power in these countries. On balance, a diversified energy program appears to be the best choice for Western Europe and Japan both economically and politically.

In less developed countries, the share of future energy demands that will be supplied by nuclear power is very uncertain. Nuclear power may be competitive in some twenty developing countries by the year 2000, and others may install it for noneconomic reasons. As a practical matter, the large 1,000 MWe nuclear power plants now being built to achieve economies of scale are not matched to the small power grids of most developing countries. More suitable, smaller plants (less than 600 MWe) would have significantly higher capital costs per kilowatt and, in the absence of demand, are no longer being built. For these reasons, nuclear power may be ruled out as an economic energy option for many developing nations.

Alternative sources of energy

It is frequently argued that solar, geothermal, or fusion energy would be viable alternatives to nuclear power if they received a fair share of the research and development funds. It is our judgment that these forms of energy cannot compete with nuclear, coal, or other fossil fuels as major sources of electric power until well into the next century. We believe, however, that vigorous research and development should be carried out in these fields to develop the long-range options and to provide a hedge against possible unforeseen problems with fossil or nuclear power.

For the long run, solar energy is especially interesting, since it is essentially unlimited. It takes many forms, from direct radiation to energy stored in the ocean, waves, winds, and vegetation. Applications such as house heating will be practical in the near future in favorable situations and, in conjunction with improved insulation and other conservation measures, can reduce the growth in demand for electricity. However, solar electric power will become competitive only after considerable research and development and a large increase in the cost of electricity. While we favor a continuing effort to develop solar electric power, we see little prospect, given the state of the technology and the high capital costs, that solar electricity can compete with nuclear and coal plants in this century.

Geothermal energy, which is being exploited on a very limited scale at a few unique locations, constitutes a huge potential resource. Most of this energy, however, will be very difficult to exploit. We see little prospect therefore that geothermal energy will prove competitive for electric power on a large scale in this century.

Fusion, like solar energy, offers the promise of practically unlimited energy. Important scientific progress has been made recently in this extremely sophisticated technology. Although it is still premature to predict success, we believe that fusion reactors will probably demonstrate a useful energy output by the year 2000. There is little prospect, however, that fusion will supply electricity on a competitive basis in the next fifty years. Fusion reactors will involve large capital costs and complex systems with unknown capacity factors, and it remains for future generations to see when they will become competitive.

Despite our pessimistic assessment of the near-term prospects of these alternative energy sources, they support our optimistic assessment that in the longer view of human affairs, adequate energy will be available—at a price.

In the search for new sources of energy, a variety of proposals have been advanced that make use of the energy in nuclear explosives. The proposed applications of Peaceful Nuclear Explosives (PNEs) range from the stimulation of gas and oil and "in-situ" retorting of oil shales to the direct heating of steam for power plants. The economic merit of these proposals ranges from highly dubious to clearly noncompetitive. All of the proposals that could have any serious impact on the energy situation would require a frequency of nuclear explosions and the production and transportation of nuclear devices on a scale that would dwarf nuclear weapons activities. For example, two 50 kiloton explosions per day would be required for a single hypothetical 1,000 MWe power plant. The security implications are staggering since PNEs are fundamentally indistinguishable from military explosives. We believe, therefore, that the now dormant U.S. PNE program should not be reviewed even as a research and development effort and that the United States should discourage interest in PNEs abroad, since they provide a convenient cover for weapons development.

Long and expensive research and development efforts will be required before advanced technologies can be commercially competitive. With such time horizons, there is little prospect that the private sector will support these activities. Energy research and development is currently funded by the government at over $3 billion per year, about 4 percent of the current value of the energy output. Further development of nuclear power, particularly breeders, and improved utilization of fossil fuels, compete for these funds. While these more developed technologies deserve a large share of the government effort, we believe that a serious effort should continue on advanced technologies to provide assurance of long range energy supplies and to provide a hedge against the possibility that limitations may have to be placed on either fossil or nuclear energy for some reason.

The research and development chain includes the following steps: fundamental research, basic applicable research, applied research, development, and finally commercialization. Costs increase dramatically as one moves from fundamental research to commercialization. Since the advanced technologies aim at targets as far as fifty years away, the decision to go forward with full-scale development should be taken with great care. The transition from federally supported programs to unsubsidized commercial use can be achieved only if the private sector finds investment in plants economically attractive. Thus there is little value in demonstrating clearly noncompetitive technology unless the demonstration substantially advances the engineering of the technology at a cost commensurate with the value of the advance. If the demonstration takes place before it is economically justified, the government may have to subsidize the program at a high level for a long time after demonstration, and the ultimate product may also be inferior to that which would have resulted from continued development. In addition, premature commitment to expensive demonstration programs can distort the balance of the federal energy program. We believe that the government must exercise greater care in the future before moving into the very costly phases of the development chain.

The economic significance of nuclear power

Whatever is done about nuclear power over the next few decades, real energy costs will continue to increase into the next century. We have considered the likely effects of this overall cost increase on growth, income and employment, and have estimated the differences that would result from possible variations in the timing and character of the U.S. nuclear future. We find that nuclear power choices have limited bearing on these larger social and economic conditions.

Energy is an important factor in an economy, and any unexpected interruption in supply, such as an oil embargo, will have serious disruptive effects. But the cost of energy is less critical than assured supply. Even after OPEC quadrupled oil prices, primary energy costs are only about 5 percent of the U.S. GNP. Another doubling in real energy costs would result in the shifting of up to 5 percent of the economy from the production of final products to the production of energy or of goods to pay for imports. If such a shift occurred rapidly, it could be accompanied by serious, short-term dislocations in the economy, including increased unemployment, loss in output, and a reduction in growth. The rate of investment might have to be increased permanently from 10 percent to 12 or 13. percent of GNP to provide the larger amounts of capital needed, and current consumption expenditures would be reduced by 2 or 3 percent. In the long run, however, the economy should be able to absorb higher energy costs with little effect on growth or employment.

In actual practice, the impact of higher energy costs on income and capital needs will probably be reduced significantly by the market response to the higher prices and by other energy conservation actions. Energy-saving industrial processes such as the cogeneration of electricity with process heat, energy-efficient building designs and transportation systems, and less energy-intensive consumption habits are widespread in other developed economies where higher energy prices have long prevailed. Now that even higher energy costs are expected everywhere, new conservation opportunities will be developed and exploited as an alternative to expansion of supply. Market forces will produce most of these conservation measures, but the government must play an important role by helping market forces to operate, by providing information and leadership, and by modifying policies which may uneconomically encourage greater energy use.

Although we anticipate that the market response will significantly reduce the growth of energy use, there are hazards in formulating long-range energy policy on specific predictions based on such inherently uncertain factors, Projections of U.S. energy demand in the year 2000 differ by a factor of 2. For example, the Institute for Energy Analysis has estimated that U.S. energy demand, which was about 70 quads (one quad is 10^{15} BTU) in 1975, would grow to 101–124 quads by the year 2000, while the Edison Electric Institute has estimated a demand of as much as 194 quads by then. Because of the large uncertainties in demand determination, we attach little credence to long-term projections that rely on extrapolations from historical experience. Although there has been historical correlation between energy and economic growth, there is no reason to believe that the same relationship will hold under conditions of rising rather than falling energy prices. Fundamental energy policy decisions should therefore be designed to meet a broad range of possible future conditions.

Whatever the income loss due to higher energy costs, nuclear power can do little to reduce it in this century since nuclear power will at best have only a small cost advantage over coal. To understand the ranges of the economic benefits associated with nuclear power, we have used a simple computer model of the U.S. economy to explore the effects of various economic assumptions and program decisions. Even with assumptions favorable to nuclear power, the benefits from the continued growth of light-water reactors (LWRs) and the early introduction of the breeder are very small in this century (a small fraction of 1 percent of GNP), and only 1 or 2 percent in the next century. Relatively conservative assumptions for the reduction in demand in response to higher energy prices were used in the calculations. If, as we anticipate, demand reduction turns out to be easier than assumed in this formula analysis, the income effect of higher energy costs will be even less. Even though it will not affect the long-range economic growth of the country, 1 or 2 percent of the large GNP anticipated for the next century is a large absolute dollar amount of income and should be given up only if there are strong noneconomic reasons for doing so.

The desirability of maintaining or changing any particular style of life has not entered into our analysis. Some critics of nuclear power include among their arguments disapproval of industrial society and of continued economic growth. The broad range of issues relating to the style of life of our society is not, however, central to nuclear power. These issues should be addressed directly on their merits. The style of life that evolves in the future will depend on many factors other than the existence of nuclear power or central power stations or the price of energy. Increases in the price of energy may gradually modify attitudes toward specific energy-intensive activities relative to other activities. But in themselves, higher prices for energy need have relatively little effect on the evolution of the basic style of life of the future.

We have analyzed the impact of energy on the economy from a long-range perspective that smooths out short-term effects. While substantial changes in energy prices can be accommodated in the long run, sudden stoppages or sharp increases can indeed force severe temporary cutbacks in industrial operations with attendant unemployment and hardship. The level of economic activity will be affected since individual and institutional plans and attitudes take time to adjust. The amount of nuclear power available will have little to do with the cause, severity, or duration of such events. The choice made between coal and nuclear power will have little or no effect in insulating the United States from the short-term effects of sudden changes in oil prices and availability. The response to these situations must be by other means.

Although our analysis has focused on the U.S. economy, the same conclusions are broadly applicable in other industrialized countries willing to rely on world markets for fuel supplies and to assume the associated foreign exchange costs. The situation in less developed countries is more serious. In these countries, economic growth is more dependent on expansion of the industrial base, which requires capital and energy, particularly for industry and transportation. Higher energy costs may therefore have a more serious effect on their economic growth. Moreover, the already stringent balance of payments problem of many less developed countries will be further aggravated by the necessity of importing fuel at higher costs. This constraint immediately affects their prospects for economic growth. Nuclear power, however, is not well suited to the needs of many of these countries, since it is capital-intensive and limited to the production of large amounts of electricity. Moreover, the need for increased energy for transportation, industry, and agriculture implies the use of nonelectrical energy that cannot be supplied by nuclear power. The extent to which nuclear power is an economic response to high world oil prices will therefore depend on the circumstances of individual countries.

The assessment of the economic impact of

nuclear power has been dominated by market considerations. Responsible policy decisions must also consider the external social costs of risks to public health and the environment and the implications for national security and world peace. In the following section, we consider the social costs that are not included in ordinary market calculations.

HEALTH, ENVIRONMENT, AND SAFETY

Nuclear power has been widely attacked as a threat to human health. Critics are primarily concerned about the possibility of catastrophic reactor accidents and the health and environmental problems associated with nuclear wastes and plutonium. These risks are real and must be considered in any assessment of nuclear power.

As with market economics. the risks and social costs of nuclear power should be compared with those of coal, which is the principal energy alternative for electric power in this century. This comparison is not an easy task. The possible social costs of coal and nuclear power involve such diverse health effects as prompt and delayed deaths, genetic diseases, illness, and discomfort; the environmental effects range from land use problems to the possible modification of the atmosphere leading to worldwide climatic changes. Some of these social costs (such as the costs of improving the safety of reactors, reducing pollution from coal, and payments to miners with black lung disease) are reflected in the market economic comparisons between coal and nuclear power since they are included in the cost of electricity. However, the general effects of emissions from coal and nuclear power plants are not included in such cost comparisons.

Analysis of social costs raises difficult and controversial methodological problems in valuing human life and health now and in the future. The greatest difficulty, however, is the uncertain state of knowledge regarding the effects on health and the environment of low levels of chemical and radioactive pollution and regarding the probability of nuclear accidents. Since there is little operating experience with nuclear power, it is impossible to estimate accident probabilities with any precision. Some risks may be unknown. In the case of coal, several hundred years of experience have not produced quantitative understanding of the health consequences and even less understanding of the possible effects on the world's climate of the carbon dioxide and particulates released during coal combustion.

The range of uncertainty in social costs is so great that the balance between coal and nuclear power could be tipped in either direction with resolution of the uncertainties: It is unlikely, however, that the principal uncertainties will be resolved in the near future. We do not believe therefore that consideration of social costs provides a basis for overriding our conclusions, based on economic analysis, of the comparative attractiveness of the two technologies and the desirability of maintaining a mix.

Public health—normal operations and accidents

In principle, one can compare the impact on public health of coal and nuclear power directly in terms of the deaths and illness they cause. In normal operations, a 1,000 MWe nuclear power plant has been estimated to produce roughly one fatality per year from occupational accidents and radiation risks to workers and to the public. A comparable new coal plant, meeting current new source standards, has been estimated to produce from two to twenty-five fatalities per year. Accidents in coal mining and transportation account for roughly two fatalities per year, and the rest of the range is attributed to the health effects of sulfur-related pollutants. This wide range results from the very large uncertainties in the actual effects on human health of the pollution chains resulting from sulfur oxides and from significant differences resulting from plant location with respect to population. The analysis of the risk at specific locations is complicated by uncertainties in meteorology, chemistry, synergistic effects involving other pollutants, and existing backgrounds. In addition to fatalities, pollution from coal plants contributes to large-scale nonfatal illnesses and discomfort for which there is no nuclear counterpart. There may also be significant effects from nitrogen oxides, carcinogenic hydrocarbons, and heavy metals for which a quantitative basis has not yet been established.

Thus, in a comparison of normal operations, nuclear power has smaller adverse health costs than coal. However, in an overall comparison of health effects, the possibility of accidents must also be taken into account. The possibility that nuclear accidents could have very serious consequences for public health has long been recognized as a unique problem associated with nuclear power. It is difficult to compare such rare but extremely severe events with the continuous health burden due to fossil fuels, but some perspective is gained from averaging the consequences of estimated accidents over an extended period. This requires knowledge of the probabilities and consequences of a spectrum of possible nuclear accidents.

To date, the safety record of nuclear power reactors in the United States has been excellent, at least as far as public health is concerned. However, the experience of some 200 reactor years of commercial nuclear power does not provide an adequate statistical basis for risk predictions covering the 5,000 reactor years expected during the rest of this century. Probabilistic judgments must be made on related technical experience and theoretical computations. Such an analysis of the current light-water reactors was undertaken in The Reactor Safety Study (WASH–1400, frequently referred to as the Rasmussen Report), published by the Nuclear Regulatory Commission (NRC) in October 1975. This report examined in a systematic fashion a large number of possible paths that could lead to an accident, estimated the overall probability of a nuclear core meltdown and breach of containment, and developed a probabilistic assessment of the consequences of such an accident, averaged over location and weather. Although WASH–1400 is a valuable resource for the study of the safety problem, we believe that it seriously underestimates and has methodological flaws that are discussed in our report.

Without attempting to duplicate the massive analysis of WASH–1400 but taking its uncertainties into account, we have attempted to gain some perspective on the possible social costs of reactor accidents by considering the following questions:

How does the predicted rate of reactor accidents affect the average rate-of-loss comparison between nuclear power and coal?

How serious might the consequences of a reactor accident be?

How likely might an extremely serious nuclear accident be if the associated uncertainties are all viewed pessimistically?

The average rate-of-loss due to reactor accidents calculated in WASH–1400 is only about 0.02 fatalities per year for a 1,000 MWe nuclear power plant. This rate is very low compared with the one fatality per year predicted for normal nuclear operations or the two to twenty-five fatalities per year attributed to a comparable new coal plant. Although we have not made an independent estimate of this average value, for losses due to nuclear accidents, our analysis indicates that with extremely pessimistic assumptions the WASH–1400 estimate might be low by a factor of as much as 500. On the other hand, it could be on the high side as well. In the most pessimistic case, which we consider very unlikely, the average rate-of-loss could be as high as ten fatalities per year for a 1,000 MWe nuclear power plant. However, even in this extremely unlikely situation, the average fatalities would not exceed the pessimistic end of the range of estimated fatalities caused by coal. Thus, on an average rate-of-loss basis, nuclear power compares favorably with coal even when the possibility of accidents is included.

An extremely serious accident under very adverse conditions is estimated by WASH–1400 to kill as many as three or four thousand people over a few weeks, cause tens of thousands of cancer deaths over thirty years, and cause a comparable number of genetic defects in the next generation, as well as more than $10 billion in property losses. Despite large uncertainties in biological effects, this appears to be a reasonable assessment of the potential consequences. While such an accident would clearly be a major disaster, the consequences would not be out of line with other peacetime disasters that our society has been able to meet without long-term social impact. For example, the United States has experienced a number of hurricanes that have taken over a thousand lives, produced physical damage in the billions of dollars, and required massive evacuation. In such a nuclear accident, the delayed deaths from cancer would not be an immediate effect but might result in a 10 percent increase in the incidence of cancer in the exposed population over a period of thirty years. It must be emphasized that a nuclear accident would probably have much less severe consequences than those estimated for this extremely serious accident and that most nuclear accidents would result in few, if any, fatalities.

The most serious accident considered in WASH–1400 is assigned an exceedingly low probability of occurrence (only one chance in 200 million years of reactor operation). This calculation is based on the combination of a number of low probability estimates for a series of events, most of which are extremely uncertain. When the uncertain factors are viewed in the most pessimistic light, there is a significant chance that such an event might occur during this century if the nuclear program grows at the projected rate. While it is very unlikely that this pessimistic assessment correctly describes the probability of such accidents, it does place an upper bound on the problem.

Having examined nuclear accidents from each of the above perspectives with very pessimistic assumptions, we have concluded that, even when the possibility of reactor accidents is included, the adverse health effects of nuclear power are less than or within the range of health effects from coal. At the same time, this analysis underscores the importance of continuing efforts to reduce the probability and consequences of accidents by improved safety designs and siting policies.

A foreign reactor accident would not necessarily be evidence of risk in this country, since some foreign reactors may be less safely constructed or operated than those in the United States. Nevertheless, a foreign nuclear accident could have a major psychological impact in this and other countries. A high premium should be put on reducing the probability and consequences of reactor accidents wherever they might occur.

Nuclear wastes

The potential health hazards of radioactive wastes and plutonium produced during reactor operation are unique to nuclear power. Plutonium and other waste components present special problems since they decay very slowly and remain dangerous for hundreds of thousands of years. Critics of nuclear power question the morality of creating this threat to future generations or even to future civilizations.

We are convinced that nuclear wastes and plutonium can be disposed of permanently in a safe manner. If properly buried deep underground in geologically stable formations, there is little chance that these materials will reenter the environment in dangerour quantities. Even if material were somehow to escape eventually in larger quantities than seems possible, it would not constitute a major catastrophe, or even a major health risk, for future civilizations.

Despite our confidence in the feasibility of permanent disposal, nuclear wastes remain a very serious potential health problem until isolated from the environment. We are, therefore, more concerned about the current worldwide management of nuclear wastes before they are sequestered permanently than we are about the unlikely prospect that they will affect society subsequently. Inadequate management of wastes from the nuclear weapons and earlier civilian power programs here and abroad has already created potential contamination problems that can only be overcome at considerable cost.

Until very recently, all decisions on waste disposal were deferred apparently in anticipation that the problem would be resolved as a by-product of the assumed early introduction of plutonium reprocessing and recycle. As a consequence, it is widely believed that reprocessing is a necessary stage in waste management and disposal, when in fact it may simply complicate the process. If spent fuel is reprocessed to recover plutonium, the possibilities of waste management failure increase because of the additional steps involved. The risks in permanent waste disposal, however, appear to depend little on whether reprocessing has occurred. The impact of reprocessing on waste management is that it substitutes a larger immediate contamination risk for a small reduction in the long-term hazard from permanent disposal.

Environmental effects

In addition to direct effects on human health, the generation of electricity by either nuclear power or coal has environmental effects on air, land, and water, and potentially on global climate as well. On balance, however, nuclear power has significantly less adverse environmental impact than coal.

Local thermal pollution is common to both sources, although somewhat more severe for nuclear power. In other respects, however, the coal cycle presents the more serious problems. Coal mining has a more disruptive effect on the land than uranium mining and milling, although this difference will diminish as lower grades of uranium ore are mined. Coal mining results in acid runoff that pollutes waterways, and combustion of coal leads to acid rain that damages land and crops.

The most serious potential environmental impacts from greatly increased power generation are changes in global climate. The thermal output of both coal and nuclear power plants contributes directly to the long-term heating of the atmosphere. A much more immediate atmospheric heating problem, however, results from the carbon dioxide produced when coal is burned. The carbon dioxide, which probably cannot be prevented from entering the atmosphere, heats the earth by the so-called greenhouse effect since it is transparent to incident solar radiation but absorbs some of the heat that the earth reradiates. It has been estimated that the carbon dioxide from fossil fuels burned in the last two centuries has increased the mean temperature about 0.3° C above what it would otherwise have been. However, the extent of the actual heating is complicated by the uncertain, possibly compensating, effects of particulates and other pollutants that are also emitted by coal combustion. More fundamentally, the current unpredictability of natural climate variations, which can be significant over relatively short periods, makes an empirical assessment of the actual impact of increased use of fossil fuels very difficult. Moreover, since short-term fluctuations would generally mask any trend for a number of years, these questions are not likely to be resolved for some time.

Despite these uncertainties, major increases in the use of fossil fuels could have a significant effect on climate. Whether the impacts of carbon dioxide will combine with natural changes in climate to the net disadvantage or advantage of mankind or to particular regions such as the United States cannot be judged at this time. On the basis of greater knowledge, however, this effect could take on overriding significance in a comparison of coal and nuclear power. This factor argues against putting complete reliance on coal power at this time.

Risk reduction

Much better information is needed for the comparative assessment of the social costs of coal and nuclear power. There is little prospect, however, that this information will be available soon. While it is being developed, much can be done to reduce the risks of both coal and nuclear power.

For nuclear power, we have been particularly impressed by the variability of risk with location in case of accident. The predicted consequences of accidents at different sites can vary a hundredfold depending upon the distribution of population and prevailing weather. A more restrictive siting policy would increase somewhat the costs of nuclear power in some locations, but we believe it is warranted by the uncertainties in the probabilities of accidents and by the large risk reductions that are possible. Special measures such as underground siting should be considered if nuclear power is to be sited at high risk locations.

We believe that in research and development more emphasis should be placed on actually improving safety as compared with proving that reactors are "safe enough." The present government safety program, which is oriented toward the latter confirmatory approach, will ultimately narrow the range of uncertainty, but it is unlikely to reduce the probability of accidents. Steps should also be taken to ensure that the regulatory process does not inadvertently create disincentives to improvements in safety design.

For coal, stricter regulations have greatly reduced occupational hazards in mining and substantially reduced the levels of pollutants. Improvements in current technology such as scrubbers and new combustion technologies such as fluidized-bed combustion can further greatly reduce the health hazards to the public. With scrubbers, for example, the health effects from sulfur-related pollutants could be reduced by as much as a factor of 10 below present levels for new plants if low-sulfur coal were also used. The land damage from strip mining can be largely eliminated with only a small increase in the cost of coal. With these and other measures being taken on their own merit, the comparison between the social costs of nuclear power and coal will present a constantly evolving picture.

NUCLEAR PROLIFERATION

In our view, the most serious risk associated with nuclear power is the attendant increase in the number of countries that have access to technology, materials, and facilities leading to a nuclear weapons capability. The growth and diffusion of nuclear power thus inevitably enhance the potential for the proliferation of nuclear weapons. If widespread proliferation actually occurs, it will prove an extremely serious danger to U.S. security and to world peace and stability in general. By 1985, most advanced and many industrializing countries will have nuclear power plants in operation and be only a few steps from a weapons capability.

Expectations, knowledge, and trade in nuclear facilities and materials are so widespread that the United States is not in a position to stop the expansion of nuclear power. Moreover, advanced countries, and some developing countries, are not dependent on nuclear power to produce nuclear weapons. None of the present nuclear weapon states developed its weapons through nuclear power. Each followed the direct path of producing the fissionable materials for its weapons in facilities designed specifically for the purpose.

Despite this somber appraisal of the technical situation, nuclear weapons are not an inevitable consequence simply because the technical capability has been achieved, as West Germany, Japan, Canada, and Sweden demonstrate. The perils of proliferation are recognized by most countries. For most, nuclear weapons offer little advantage and considerable risk. There is widespread though not complete support for the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) and the international safeguards on peaceful nuclear programs administered by the International Atomic Energy Agency (IAEA). These institutions, which reflect an international consensus against the acquisition of nuclear weapons by additional states, provide a framework for a nonproliferation policy and legitimize bilateral and multilateral restraints of nuclear trade.

Not all nonweapon states have foresworn nuclear weapons, and some may seek a nuclear weapons capability. Their possible motives are understandable if questionable: achieving prestige and status for some; overcoming isolation and insecurity for others. The response to these motivations is to give such countries confidence and standing, internationally and regionally, without recourse to nuclear weapons, and to limit the desires for nuclear weapons by regional settlements and easing of tensions and by security alliances and support for insecure states.

The motivations and responses to states seeking weapons capability underscore the essentially political nature of the nuclear proliferation problem. A strategy to constrain proliferation must be complex and comprehensive. U.S. nuclear power policies and programs can be shaped to support such a strategy, but they can be only partially effective unless they are meshed with broader political actions and international arrangements.

Some of the elements of a U.S. nonproliferation strategy that are broader than nuclear power are: a foreign policy in support of international security, peace, and stability; security commitments to reduce the perceived need for nuclear weapons; use of influence to discourage apparent preparatory moves for a nuclear capability; arms limitation agreements (e.g., a comprehensive test ban) to build additional barriers to proliferation; deemphasis of nuclear weapons in military policy, particularly doctrines that present nuclear weapons as acceptable and necessary armaments for limited application or political pressure; and cooperation in international development of the full range of energy resources.

Other measures more specifically related to nonproliferation include: support of the NPT and encouragement of present nonparties to adhere, and increased financial and technical support of the IAEA as it undertakes the increased burden of applying safeguards to a rapidly expanding, worldwide nuclear power industry. IAEA safeguards play a limited, but important, role in the effort to control proliferation. These safeguards cannot prevent proliferation but can discourage it by providing a system for warn-

ing that material has been diverted from proper peaceful uses. Such a system, while not foolproof, is a valuable deterrent. It would not be an attractive choice, for most states, to base a nuclear weapons program on clandestine diversions in violation of a formal international treaty.

There are also actions and policies that relate directly to nuclear power and the nuclear fuel cycle that would help to control nuclear proliferation in important ways. The nonproliferation system will inevitably be flawed and unstable if plutonium and highly enriched uranium, materials suitable for nuclear weapons, and the facilities to produce them become increasingly widespread. The time required for achieving a nuclear weapons capability would be greatly reduced and the temptation to make an irreversible decision to fabricate, and even use, nuclear weapons might be difficult to resist in a crisis. Facilities for plutonium separation and enrichment of uranium are thus particularly sensitive.

Fortunately, current reactors do not require plutonium or highly enriched uranium and instead use slightly enriched or natural uranium that cannot be used directly for weapons. These reactors do generate plutonium as part of normal operation, but it is mixed with highly radioactive fission products in the spent fuel and requires separation before it can be used in weapons. If this plutonium is chemically separated (reprocessing), it can be used again (recycled) in current reactors. The plutonium breeder reactor, which produces more plutonium than it consumes, requires reprocessing and recycle of plutonium for fuel. The potential danger of these technologies to proliferation is abundantly clear.

Current uranium enrichment facilities, located in the five weapon states, use gaseous diffusion technology, which inherently requires large capital investment and consumes large amounts of electricity. New methods that can be applied on a smaller scale are in various stages of development. Centrifuge plants, suitable for smaller programs and easily modified to produce highly enriched material, are beginning operation in Western Europe; most other countries would need to import the main equipment. Laser separation, which could prove successful in the 1980s, may permit production of highly enriched uranium on a small scale for relatively little capital investment and very small amounts of electricity. If not controlled, these new technologies will further complicate the proliferation problem.

International arrangements to control the nuclear fuel cycle are imperative to buttress the NPT and its safeguards system. Continued adherence by the United States to its long-standing policy of banning export of reprocessing and enrichment facilities is one contributing measure. Coordination with other suppliers of nuclear technology and materials is also essential. A few suppliers, however, cannot impose an enduring fuel cycle arrangement on the rest of the world. There must be developed a significant consensus among buyers as well as suppliers that it would be in their common interest to control the nuclear fuel cycle and thus establish physical constraints against a chain reaction of proliferation that could undermine international stability. Within the framework of such a common appreciation, it should be possible to develop effective constraints on the export of sensitive technologies.

The early introduction of plutonium recycle and plutonium breeders has been widely believed to be critical to the economic use of uranium and nuclear power. These beliefs have been encouraged by the emphasis on these programs in the nuclear development activities of the United States and the other principal nuclear suppliers. If the nuclear fuel cycle is to be controlled internationally, other countries will have to be convinced that there are no significant economic penalties in deferring these technologies. This will be hard to do if the United States is proceeding with reprocessing and breeder commercialization. While deferral of these programs would not necessarily convince all others that they should foreswear trading or acquisition of such facilities, it probably would convince some and would seriously influence the thinking of all countries. Deferral would also remove the appearance of discrimination in asking developing countries to forego these technologies and in achieving common supplier action to ban the export of such technology. Conversely, a decision by the United States to proceed with plutonium reprocessing and recycle would probably ensure worldwide movement to incorporate plutonium in the fuel cycle.

Postponing plutonium recycle and the plutonium breeder will increase concern about the availability of slightly enriched fuel for the present generation of light-water reactors. Conversely, assured supplies of such fuel from the United States and other suppliers will reduce the pressure for the new technologies directed at extending fuel supplies. Assured supplies of slightly enriched uranium at reasonable prices will also greatly reduce the economic rationale for other countries to build indigenous enrichment plants. The fact that a number of countries will be able to furnish enrichment services should provide further confidence of assured supplies.

Within such a framework of national and international constraints on the nuclear fuel cycle, we believe that, with concerted efforts by the United States and the international community to meet national security concerns and to reduce international tensions, the risk that nuclear power will lead to proliferation can be substantially reduced. The specific nuclear power decisions that the United States will have to take to accomplish this objective are considered below under "Issues for Decision."

Terrorism

A particularly disturbing aspect of nuclear proliferation is that it could extend to subnational terrorist groups. While a completed nuclear weapon would be a more convenient target, a highly organized terrorist group might have the capability to fabricate a crude nuclear weapon from stolen plutonium or highly enriched uranium. Since neither of these materials is available in the present fuel cycle, this threat will only emerge if plutonium is reprocessed and recycled or if reactors requiring highly enriched uranium are introduced.

The difficulty and danger of designing, planning, and constructing a crude weapon from reactor-grade plutonium should not be underestimated. Although it would not prove as easy as sometimes suggested, it is conceivable that a well-organized group supported by knowledgeable individuals could construct a device that might have a yield equivalent to a few hundred tons of TNT. When one considers that the largest conventional bombs of World War II contained only a few tons of TNT, the destructive potential of such a weapon is apparent.

A terrorist group might sabotage a nuclear facility in an attempt to inflict damage or threaten sabotage of a seized facility to blackmail authorities. The most serious target would be an operating nuclear reactor, where trained and knowledgeable saboteurs could cause a major accident. This threat cannot be qantified, but it clearly adds to the probability of an accident. Whatever that additional probability is, it can be reduced by measures designed to prevent or deter sabotage.

We believe that additional measures should be taken to reduce the possibility of terrorist acts to divert materials or sabotage facilities. Physical and personnel security should be improved at nuclear power plants and fuel cycle facilities. At present, the responsibilities of federal, state, and local agencies with respect to jurisdiction over crimes involving nuclear facilities are ill-defined, a situation that could lead to an inappropriate response to an emergency. The federal government should lead in developing improved security practices, coordinating procedures for law enforcement, and making expertise available.

We are convinced that measures to improve security substantially can be taken without infringing on the civil liberties of employees of the nuclear industry and the general public. Overzealous and ill-conceived measures, however, could endanger civil liberties and set dangerous precedents. The government should, therefore, be particularly sensitive to the broader legal implications of measures undertaken to improve security against, or the ability to respond to, terrorist activities.

Nuclear terrorism is international in scope. Terrorist acts in the United States could result from materials or devices seized abroad and smuggled into this country. The United States thus has a critical interest in the improvement of nuclear security and should encourage the development and implementation of effective physical security measures in all countries.

INSTITUTIONAL FRAMEWORK

Formulation of policy on nuclear power is affected by the institutional framework within which decisions must be made and implemented. Nuclear power interacts with public health and safety, the environment, foreign policy and national security as well as the economy. At the same time, nuclear power is, or should be, part of overall national energy policy, which in turn should be part of broader national economic policy. As a result, the complex issues have increasingly cut across institutional lines within the Executive Branch, regulatory agencies, Congress, state and local government, and the private sector.

In some respects, this institutional complexity is characteristic of energy in general. In other respects, nuclear power presents unique institutional problems arising from the original government monopoly in nuclear energy, the special risks of accidents and theft, the risks of nuclear proliferation, and the complex of treaties and agreements that have developed in the field. Until 1974, the government's role in nuclear power was largely the monopoly of the Atomic Energy Commission (AEC), which served as both promoter and regulator of the industry. This arrangement, while effective in developing nuclear power as an energy alternative, tended to make nuclear energy an end in itself, isolated from broader energy policy and potentially out of balance with other domestic and international considerations.

In a major organizational reform, the AEC was abolished in 1974 and the Nuclear Regulatory Commission (NRC) was created to deal with the regulatory aspects of nuclear power. The Energy Research and Development Administration (ERDA) was given responsibility for all research and development in energy including nuclear power. This action eliminated the anomalous situation where the same institution was both promoter and regulator, and placed the development of nuclear power in a common framework with all energy development activities, Although these institutional reforms have corrected some of the obvious problems with the AEC, the decision process remains fragmented. Despite its new charter, ERDA has to some extent continued to place emphasis

on nuclear energy, in part because it inherited the substantial organization and facilities of the AEC.

Despite the extensive reorganization of energy institutions and the intense interest and activity in the field since the 1973 embargo, the government has not formulated a clear national energy policy. We believe that such a policy is necessary to provide a basis on which the various agencies concerned with energy can establish priorities and make and implement specific decisions. Such a policy need not, and we believe should not, be a highly structured long-range plan but rather a strategy for developing choices for the future. The policy should establish consistent and achievable objectives and priorities in areas such as the development of new energy supplies, conservation, energy independence, emergency supplies, and the weight to be given to nonproliferation.

We are convinced, after a year's exposure to the range of problems involved, that the President must be directly involved in the formulation of both overall energy and nuclear energy policy. There is no lower level that can have the authority to resolve the diverse domestic, foreign policy, and security interests. While not attempting to advise the President on how to organize the Executive Office, we believe that some arrangement should be devised to assist him directly in this area. Although this approach can be criticized as establishing a pattern that would break down if extended, as will be suggested by some, to many other complex areas such as resources and food, we believe the energy problem does merit priority attention.

Even where energy policy has been established, there is no clear mechanism for implementing it within the Executive Branch, and agencies are often left to interpret government policy independently. The Executive Office must play a stronger role in seeing that policy is understood and carried out responsibly by each lead agency and coordinated with other agencies having responsibilities for various aspects of the nuclear power problem.

With the demise of the AEC, the Joint Committee on Atomic Energy lost its unique position and has now been abolished. Other Congressional committees have acquired increased responsibilities for separate aspects of nuclear power. This has been a useful process in developing broader Congressional and public understanding of the issues. However, Congressional responsibility for nuclear power has become too diffuse, and there should be some consolidation so that Congress can deal effectively with nuclear power in the broader perspective of overall energy and foreign policy. In the final analysis, the ability of Congress to contribute to the policy-making process and produce constructive legislation will depend on the presentation of an overall energy plan to Congress by the President.

In a narrower sense, there are important institutional problems affecting nuclear power in the relations of the federal government with state and local governments. Regulatory authority over nuclear energy facilities is widely dispersed among federal, state, and local authorities. The licensing of a power plant requires dozens of separate permits and approvals. Each authority considers the question not only in a limited geographical setting, but also from a narrow functional perspective—economic, safety, environmental, or aesthetic. The licensing process can become an obstacle course, resulting in delays and increased costs and frustrating sound decision-making.

Under the Constitution, Congress could pass legislation establishing federal control over the whole licensing process, but the variety and intensity of local and regional interests argue strongly against wholesale displacement of their authority. Short of this, it would be desirable to act at the federal level to simplify and rationalize this process by reducing the number of separate hearings and proceedings required before final approval. Federal statute could provide for a single consolidated proceeding at which all aspects of the problem could be covered with all interested parties having an opportunity to appear and present evidence. This would produce a consolidated record on which local, state, and federal authorities could make decisions which could be reviewable in a single appeal to a Federal Court of Appeals.

From the perspective of a rational overall energy policy, one might argue that provision should be made for federal preemption over decisions by state or local authorities. However, in keeping with our conclusion that economic factors and appraisals of social costs should lead to an appropriate mix of coal and nuclear power plants, we believe that it is desirable to allow considerable leeway for local preferences. If it should develop that the cumulative effect of local preferences would endanger a reasonable national mix of coal and nuclear power plants, the case for federal preemption would be stronger.

Government-industry relations in the nuclear power area are currently in some disarray. The government has historically taken the leading role in nuclear development, originally a government monopoly. Private firms were initially contractors or chosen instruments. Even today, nuclear power is not really a private industry in the normal sense, since the government retains a dominant role in such areas as uranium enrichment, waste management, and research and development.

It is in the interest of a sound U.S. energy economy to let the market establish the rate of nuclear power growth. This does not mean, however, complete private ownership of the fuel cycle in view of the large capital requirements, technical and economic uncertainties, and security sensitivity of facilities such as those for uranium enrichment, plutonium reprocessing, or permanent waste disposal. Siting policy is also an appropriate area of government responsibility in view of the strong dependence of accident risks, affecting large and widely dispersed populations, on the specific location of power plants. Working out a government-industry relationship that is economically and managerially sound and provides a clear basis for planning is an important national objective; doctrinaire assignment of proper roles for government and the private sector is not warranted.

In sum, we do not believe nuclear power can be treated as just another industry. Utility choices between coal and nuclear plants should be based on market considerations, within a regulatory framework that deals adequately with social costs external to the industry. At the same time, the special security implications of nuclear power demand continued close government control and participation in critical stages of the nuclear fuel cycle.

ISSUES FOR DECISION

The United States faces a number of early decisions having an important bearing on the future of nuclear power and on the worldwide risks in the nuclear fuel cycle. These decisions, which are closely interrelated, must be considered in the context of the economic, energy supply, social costs, and international security issues discussed above. From this broader perspective we have examined the pending decisions: whether to proceed with plutonium reprocessing and recycle; how to conduct a breeder program most appropriate to long-term energy needs; how to manage and dispose of nuclear waste; when and how to expand enrichment capacity; and how to develop a nuclear export policy which minimizes threats to international peace and stability.

The significant common thread in these decisions is the question of whether plutonium should be introduced into the nuclear fuel cycle. We have concluded that there is no compelling reason at this time to introduce plutonium or to anticipate its introduction in this century. Plutonium could do little to improve nuclear fuel economics or assurances here or abroad. This conclusion rests on our analysis of uranium supply, the economics of plutonium recycle in current reactors, and the prospects of breeder reactors. In the longer term, beginning in the next century, there is at least a possibility that the world can bypass substantial reliance on plutonium. If this is not the case, the time bought by delay may permit political and technical developments that will reduce the nuclear proliferation risks involved in the introduction of plutonium.

Plutonium reprocessing and recycle

The principal immediate issue affecting nuclear power is whether the United States should proceed with the reprocessing and recycle of plutonium. Until recently, it was generally assumed that spent fuel from light-water reactors (LWRs) would be reprocessed to recover the plutonium produced during operation and that the plutoinum and any unused uranium-235 would be recycled as fuel in LWRs. The expectation was that this process would take place on a commercial scale as soon as the nuclear power industry had expanded to the point to justify the large facilities needed for economic operation. The decision whether to license this activity is now before the NRC. Statements by both candidates during the 1976 Presidential campaign indicated, however, that these assumptions are being challenged on a bipartisan basis and that a consensus is emerging not to proceed at this time with reprocessing.

In a major statement on nuclear policy on October 28, 1976, President Ford announced that "reprocessing and recycling of plutonium should not proceed unless there is sound reason to conclude that the world community can overcome effectively the associated risks of proliferation." This does not, however, constitute a decision on reprocessing but rather an identification of the issue. Although the Administrator of ERDA was directed not to assume that reprocessing would proceed, he was also directed "to define a reprocessing and recycle program consistent with our international objectives." During his campaign, President Carter stated in San Diego on September 25 that he would "seek to withhold authority for domestic commercial reprocessing until the need for, the economics, and the safety of this technology is clearly demonstrated."

The risks associated with reprocessing and recycle of plutonium weigh strongly against their introduction. The use of plutonium in the commercial fuel cycle would expose to diversion and theft material directly usable for weapons. With widespread adoption of the plutonium fuel cycle, there would be increased pressures for independent national reprocessing facilities. The proliferation of such facilities would reduce the time necessary for a national decision to develop weapons.

Despite these widely recognized problems, it has been argued that the economics of reprocessing and recycle of plutonium in LWRs is so compelling as to make their introduction inevitable. Although plutonium and unburned enriched uranium have substantial value, the recovery of these materials from the highly radioactive wastes in spent fuel has proven to be much more difficult and expensive than anticipated. As reprocessing and recycle have moved closer to commercial practice, cost estimates have escalated rapidly. The first two U.S. commercial reprocessing ventures failed, one for eco-

nomic and the other for technical reasons. The Allied Chemical plant at Barnwell, South Carolina, the only remaining U.S. commercial venture in this field, is likely to incur substantial losses and is seeking government support. European ventures are not yet operating on a commercial basis and are unwilling to contract except on a cost-plus-fee basis.

The most recent government analysis of reprocessing and recycle shows at best a 1 or 2 percent reduction in the cost of electricity in the latter part of the century. These estimates, however, are based on assumptions that appear to underestimate some elements of plutonium fuel cycle costs. Our own analysis of the costs indicates that any net economic benefit during this century is questionable.

Even if plutonium recycle proves of little economic importance, some countries may consider the plutonium inventory in spent fuel reassuring in view of the uncertainties in future uranium supply. In the case of the U.S. program, however, recovery of plutonium and unburned enriched uranium from spent fuel would only reduce uranium fuel requirements by some 20 percent. The incremental value of recycle would be largely irrelevant if access to reasonably priced supplies of fuel can be assured. Specific measures to accomplish this are discussed below.

It has been argued that early reprocessing of LWR fuels is important to build up plutonium inventories for future breeders. Our analysis indicates that the time when breeders may be economically competitive is sufficiently distant, that the present value of establishing plutonium inventories now for future breeders is very small and thus recovery of plutonium is not economically justified for many years. Furthermore, spent fuel can be stored retrievably, so that the plutonium could be recovered if plutonium breeder reactors are actually deployed in the future.

An incentive to defer reprocessing and recycle also comes from the complexity it introduces into the waste management problem. Wastes are converted in these operations from relatively easy to manage spent fuel to a number of new forms—high level waste, acidic liquid waste, cladding hulls, process trash contaminated by plutonium, and others. As experience with reprocessed military and civilan wastes has shown, these operations introduce opportunities for waste management failures. While it has been commonly believed, particularly abroad, that reprocessing to remove plutonium decreases the long-term hazards of waste, we have concluded that any reduction in long-term risk is small in comparison with the more immediate risks potentially arising in reprocessing and in the use of plutonium in the active fuel cycle.

On the basis of our analysis of plutonium reprocessing and recycle, we have concluded that the international and social costs far outweigh economic benefits, which are very small even under optimistic assumptions. We believe therefore that a clear-cut decision should be made by the U.S. government to defer indefinitely commercial reprocessing of plutonium. Although the question of plutonium reprocessing and recycle is now before the NRC, we believe that, in view of the important international implications, the President should make the decision to defer plutonium reprocessing. If a decision to postpone this technology indefinitely is articulated and carried out effectively, it can have a major influence on the assessment of costs and benefits of reprocessing and recycle by other countries that are, or soon will be, facing similar decisions. Conversely, a U.S. decision to go ahead with reprocessing or actions that appeared to foreshadow such a decision would accelerate worldwide interest in the plutonium fuel cycle and undercut efforts to limit nuclear weapons proliferation. For this reason, we conclude that the government should not take over or subsidize the completion and operation of the Barnwell facility.

The Breeder Reactor program

The priority and timing of the plutonium breeder is inevitably a central budget and policy issue since the commitment to this program currently dominates federal energy research and development activities. The plutonium breeder, which produces more plutonium than it consumes in operation, can in principle improve the utilization of uranium by a factor of as much as 100. When used in light-water reactors (LWRs), current estimated uranium reserves would provide only one-tenth the energy of coal reserves; in breeders, these same uranium reserves could in principle provide ten times the energy of coal reserves. The breeder thus opens up a vast additional energy resource and answers the criticism that nuclear power will price itself out of the market as soon as low-cost uranium is exhausted.

The Liquid Metal Fast Breeder Reactor (LMFBR) has become the centerpiece in the U.S. energy research and development program. The LMFBR program is focused on the early commercialization of a power plant to compete with the current generation of LWRs. ERDA has estimated that this program will cost at least $12 billion to complete, assuming utilities will be able and willing to start buying breeders within ten years without government subsidies.

The plutonium breeder involves a full commitment to the plutonium fuel cycle and would introduce tremendous quantities of plutonium into national and international commerce. In these circumstances, the pressure for indigenous plutonium reprocessing facilities would grow rapidly and be difficult to oppose. The breeder would thus greatly complicate the proliferation problem and increase the possibility of theft or diversion of material suitable for weapons. The economics of the breeder have generally been considered so persuasive that this serious disadvantage has until recently been largely dismissed in government planning.

Past government policy on the LMFBR has been predicated on a belief that nuclear power would exhaust reserves of low-priced uranium in a few decades, making breeder introduction economically attractive by the early 1990s. Our analysis, however, indicates that the early economic potential of the breeder has been significantly overstated. The LMFBR, as presently envisaged, will have higher capital costs than the LWR and must therefore operate as a significantly lower fuel cycle cost to be economically competitive. There appears to be little prospect that these fuel cycle costs can be reduced to a point that would give the LMFBR a significant economic advantage over the LWR in this century or the early decades of the next century. The current assessment of uranium reserves probably substantially understates the supplies that will become available; uranium, at prices making light-water reactors competitive with breeders, will be available for a considerably longer time than previously estimated. New enrichment technologies may also extend these supplies. Moreover, coal available at roughly current costs will look increasingly attractive if the costs of nuclear power rise. Finally, demand projections on which breeder economic assessments have been made in the past were unrealistically high and have already been substantially reduced. These considerations lead us to the conclusion that the economic incentive to introduce breeders will develop much more slowly than previously assumed in government planning.

This conclusion applies to other countries, as well, provided that they have access to low-enriched uranium to meet their nuclear fuel requirements. Moreover, the contribution of breeders to energy independence is questionable for most countries since the complexity and scale of the breeder fuel cycle would make an autonomous breeder system too costly for all but the largest industrial economies. Therefore, the prospect of a large export market for breeders in this century is illusory.

Despite this negative assessment, we believe that a breeder program with restructured goals should be pursued as insurance against very high energy costs in the future. This situation could develop if additional uranium reserves do not become available, environmental problems place limits on the utilization of coal, and other alternative energy sources do not become commercially viable at reasonable prices in the first decades of the next century. The present U.S. program, directed at the early commercialization of the LMFBR, is not necessary to the development of the breeder as insurance. The ultimate success of the breeder may even be compromised by telescoping development stages to meet an early deadline, freezing technology prematurely. We believe therefore that the breeder program should deemphasize early commercialization and emphasize a more flexible approach to basic technology. In such a program, with a longer time horizon, the Clinch River project, a prototype demonstration reactor costing $2 billion, is unnecessary and could be canceled without harming the long-term prospects of breeders. In fact, premature demonstration of a clearly noncompetitive breeder could be detrimental to its ultimate prospects.

Although long lead times are required for a project as complex as the breeder, we believe that the decision on commercialization, now set for 1986, can safely be postponed beyond the end of the century. The cost, if any, of such postponement will be small, and there is a strong possibility that postponement will help in restraining large-scale, worldwide commerce in plutonium and buy time to develop institutions to deal with this problem. The option of bypassing the plutonium breeder altogether should not be prematurely foreclosed since there is at least a possibility that the plutonium breeder may never become necessary, or even economically competitive, compared to other energy sources that may become available in the next century.

Nuclear waste management

The United States must greatly improve the management of its rapidly growing accumulation of nuclear wastes and decide soon on the strategy for its disposal. This long-deferred action is closely related to decisions on plutonium reprocessing and the timing of the breeder program. The need for action on this problem was recognized by President Ford in his directive on October 28, 1976, calling on ERDA to undertake an accelerated program to demonstrate all components of waste management technology by 1978 and a complete disposal repository by 1985. However, the question as to what strategy should actually be followed in managing and disposing of wastes has yet to be resolved.

As indicated in the earlier discussion, we are persuaded that nuclear wastes can be disposed of permanently with acceptable safety by deep burial in salt and other stable geological formations that are isolated from ground water intrusion. This conclusion holds equally whether the nuclear wastes are contained in spent fuel or in processed form. Until they are securely isolated from the environment, however, nuclear wastes are potentially extremely dangerous.

In the past, the waste disposal problem has generally been approached on the as-

sumption that spent fuel would be reprocessed to recover plutonium for recycle. Decisions on disposal were continually deferred pending successful introduction of plutonium recycle. As a consequence, it is widely believed that reprocessing is a necessary stage in the waste disposal process. However, if plutonium is not recycled in light-water reactors or used eventually in breeders, there is no reason to reprocess spent reactor fuel. In fact, reprocessing potentially increases short-term risks associated with management of nuclear wastes and does not significantly reduce long-term risks after disposal. Spent fuel can be disposed of directly, and probably at costs comparable to those for reprocessed wastes. Therefore, if plutonium reprocessing for recycle in LWRs is deferred indefinitely as we recommend, waste disposal is made no more difficult.

The breeder, which we believe should continue as insurance against the uncertainty of future energy needs, presents a more difficult problem since large inventories of plutonium (or highly enriched uranium) would be required to start a commercial breeder program. The time scale of commercially competitive breeders is sufficiently distant, however, that separation of plutonium for this purpose will not be justified economically for some time. Nevertheless, as part of the breeder insurance program, some portion of the spent fuel should be retrievable and not disposed of permanently. The retrievable fraction should depend on the evolving time schedule of breeder development.

In the immediate future, spent fuel can be kept in the cooling ponds at nuclear power plants where it is presently stored. These facilities can easily be expanded when necessary. While this arrangement is acceptable as a temporary measure, it is not satisfactory for extended storage of large quantities of material that can be anticipated with the growth of the nuclear power industry. Therefore, we believe that the waste management and disposal program should develop both permanent and retrievable and irretrievable storage for spent fuel in stable geological formations. While security of storage will have to be balanced against ease of retrieval, the emphasis should be placed on security since retrieval may be long delayed or perhaps unnecessary.

We believe that liquid wastes accumulated from the military program and the abandoned West Valley commercial plant should be disposed of permanently to eliminate a potential safety hazard and to demonstrate the seriousness of the government's concern about the waste management problem. Experience gained in this activity could be applied to handling and disposal of wastes from future reprocessing plants if a decision is made eventually to use breeder reactors.

Our confidence in the ability to manage spent fuel is sufficiently high that we believe the United States should be willing to take back spent fuel from countries lacking waste facilities for retrievable storage or disposal if this will reduce risks to international health or of proliferation of nuclear weapons.

Expansion of uranium enrichment capacity

The United States must have a clear policy on its long-term role in providing enriched uranium fuel to both domestic and foreign nuclear power programs. If future requirements are to be met, present facilities will eventually have to be expanded. The timing and magnitude of this expansion depend not only on the anticipated growth of domestic demand for enriched uranium fuel but also on the extent to which this country wishes to be able to assure fuel for others. The issue has become entangled in the question whether expansion would best be carried out by the private sector or the government. At present all enrichment facilities are owned by the government but operated under contract by private firms.

An assured supply of uranium fuel is a major factor in limiting worldwide proliferation capabilities. The assured availability of fuel at reasonable prices limits the pressure on other countries to seek indigenous enrichment facilities that would provide a capability leading to weapons. An assured fuel supply also reduces the incentive to recycle plutonium or to develop breeders in an attempt to stretch available fuel supplies.

In 1974, when projected demand appeared to call for more enriched uranium than the United States could supply, this country stopped entering into long-term commitments to supply fuel for new reactors abroad. This unwillingness to guarantee supply (even when the purchaser was willing to supply natural uranium for "toll" enrichment) is reportedly the main reason for Brazil's 1975 agreement with West Germany that provides for Brazil's eventual purchase of both enrichment and plutonium reprocessing facilities.

Present U.S. plans for new enrichment capacity are still based on earlier demand projections that are now being revised sharply downward. Cutbacks in nuclear construction plans here and abroad have delayed the time when additional fuel facilities will be required. Requirements recently estimated for the mid-1980s now seem unlikely to be reached before 1990. The ongoing program to upgrade existing U.S. enrichment plants will increase capacity by more than 50 percent in the mid-1980s. By the mid-1980s, Eurodif, in France, and URENCO, a West German/British/Dutch consortium, plan to have a combined capacity approaching, and possibly greater than, present U.S. capacity. The new private and government facilities proposed in legislation submitted to Congress in 1976 would be equal to or greater than the total present U.S. capacity. This would bring the total free world capacity in the mid-1980s to three or four times present levels, well beyond currently projected needs. The Soviet Union also has excess capacity and is selling toll enrichment services on the world market. In short, no shortage of enriched uranium need occur in the 1980s, and there is ample time to meet the needs beyond 1990.

The rapid pace of technological development further complicates decisions on expansion of uranium enrichment since new separation techniques may significantly reduce the cost of enrichment. While two of the proposed U.S. plants would employ the same gaseous diffusion technology as existing plants, three others would employ the centrifuge technology which may prove less expensive. More significant is the prospect that laser isotope separation will reduce drastically the cost of enrichment. If, as we anticipate, this new technique proves commercially feasible, both the construction and operating costs of an enrichment plant will probably be much less than those of either the new gaseous diffusion or centrifuge plants. Laser separation may also stretch uranium supplies and reduce costs by making the extraction of a larger portion of available uranium-235 economically feasible. In these circumstances, it would appear to be prudent to let the technology of centrifuges and lasers evolve further before making major new commitments unless they are urgently required.

While centrifuge and laser technology may support nonproliferation objectives by making enriched fuel available at lower costs, they also create proliferation problems since they make possible much smaller plants that can be converted to the production of weapons-grade enriched uranium. This could prove to be a particularly serious problem with laser enrichment plants, although it may be somewhat compensated by the very high technology and special lasers associated with some of the approaches to laser isotope separation. The inherent size and capital cost of gaseous diffusion plants have provided something of a natural barrier to the spread of indigenous enrichment facilities.

We believe the United States should maintain adequate uranium enrichment capacity to meet worldwide nuclear power requirements. However, in view of rapidly changing demand projections and the possibility of radical technological developments, decisions in this area should not be taken hastily. Nor should the United States attempt to monopolize the world market, since availability of alternative suppliers of safeguarded fuel will enhance confidence in fuel supply. Decisions on expansion should therefore take account of worldwide enrichment capabilities, which should be looked on as an added resource.

The present argument for private ownership of new capacity is not persuasive. Proposals involve extensive government guarantees and few of the advantages of a competitive market. Although we favor the principle that nuclear energy should be judged by unsubsidized competition with other energy sources, we believe that the government should at this time retain control of both enrichment facilities and new enrichment technologies. If this is done, the U.S. government will be in a stronger position to use this resource in support of its nonproliferation policy and in dealing with the security problems that may be created by new enrichment technologies.

Export policy

Most countries have access to nuclear facilities and fuel only through imports from a small number of supplier states. The terms of such trade can contribute significantly to nonproliferation objectives. The United States cannot, however, unilaterally determine international nuclear trade policy, since a growing number of countries are competing for the nuclear export market. Attempts to restrict trade in nuclear fuel cycle facilities msut take into account the U.S. commitment in the NPT to facilitate the peaceful use of nuclear energy in exchange for the commitment of other states to forgo nuclear weapons. Moreover, attention must be given to the impact of export policies on the political concerns of the few key countries that must reach their own decisions not to develop nuclear weapons.

Despite these limitations and complications, U.S. export policy can significantly support its nonproliferation objectives. As the long-time leader in the field, the United States has considerable influence with other suppliers, most of whom are allies. Although the ultimate response to proliferation is political, important actions can be taken in the export field in conjunction with a broader diplomatic effort to develop a consensus on the merits of a nuclear fuel cycle without plutonium.

From the nonproliferation standpoint, the focus of concern must be on exports of facilities that can separate plutonium or produce highly enriched uranium. Such facilities provide a capability for all but the final steps in the production of weapons. This capability might significantly influence a nation's political decision to develop nuclear weapons in a time of crisis. Such facilities also greatly increase the threat that material suitable for weapons might be stolen by terrorists.

Fortunately, at the end of 1976, other major nuclear suppliers seemed to be moving in the direction of U.S. policy, which has always refused to license exports of these sensitive facilities. The United States should build on these emerging attitudes to develop a consensus among supplier and consumer nations alike against the spread of national plutonium separation and uranium enrichment facilities. This agreement should be built upon a common recognition that it is more in the interests of both suppliers and consumers to reduce the possibility of nu-

clear proliferation than to pursue marginal economic gains or status from the sale or acquisition of these sensitive facilities. The success of such an effort will depend largely on the extent to which it is widely recognized as a major U.S. priority with strong Presidential support.

A U.S. proposal for international reexamination of the economics of plutonium recycle and breeders will hardly be credible unless the United States is itself prepared to defer its own plutonium recycle and breeder commercialization programs on valid economic and energy supply grounds. Such cation will not necessarily convince all countries but will certainly influence their thinking and will preempt charges of discrimination or of failure to honor NPT commitments.

If plutonium reprocessing and recycle and attempts to commercialize breeders are postponed, there will be increased concern about the future availability of enriched fuel for light-water reactors. U.S. export licensing procedures should permit the United States to make credible guarantees of fuel supply to countries that are in compliance with the NPT or other agreements in the operation of their nuclear programs.

Although safeguards cannot prevent a nation from developing a nuclear weapons capability, they can help to deter it and provide assurances to others that it has not done so. The value of safeguards is obviously greatly weakened if they do not apply to all of the nuclear facilities in a country and, in particular, to any indigenous facilities for reprocessing plutonium or enriching uranium. While the NPT obligates nonnuclear weapon states that are members to place all their nuclear facilities under safeguards, the United States and other suppliers have interpreted their treaty obligations on exports to nonNPT members as requiring that the nonmembers place under safeguards only the exported facilities or materials and not *all* their nuclear facilities. To strengthen safeguards, the United States should seek in future agreements with nonNPT members to have all nuclear facilities placed under IAEA safeguards. An effort should also be made to renegotiate existing agreements to include this provision and to persuade other suppliers to adhere to a similar policy. To emphasize that inspection is not intended to serve a discriminatory purpose, the United States should move promptly to implement its offer made in late 1967 in connection with the negotiation of the NPT to put all U.S. peaceful nuclear facilities under IAEA safeguards. The United States should give generous financial and technical assistance to the IAEA so that it will be in a position to handle its rapidly growing responsibility for safeguards.

Above all, in approaching the energy problem, the United States should discard the promotional approach to nuclear energy that has characterized so much of its program since the initiation of the original "Atoms for Peace" program. In all countries, but particularly in developing countries, the United States should encourage realistic assessments of energy needs and options and not press the nuclear option.

In this overview, we have endeavored to put nuclear power in realistic perspective relative to broader economic, social, and security objectives and to develop a framework for considering the current policy decisions on nuclear power. In the body of the report, we examine the elements of the nuclear power problem in greater detail. The report is divided into four parts: Part I deals with the economics of energy, energy supplies, comparative costs of nuclear power, and potential alternative energy sources; Part II deals with the impact of nuclear power on human health and the environment in normal operations and the potential effects of reactor accidents and nuclear waste; Part III examines the relationship of nuclear power to the proliferation of nuclear weapons and nuclear terrorism; and Part IV presents a more detailed analysis of the specific decisions currently facing the U.S. government.

TIME TO OVERHAUL FEDERAL ENERGY APPARATUS

Mr. PERCY. Mr. President, on October 21, 1976, the Washington Post carried a very perceptive editorial entitled "Criticism of the FPC." The editorial comments on recent criticism of the Federal Power Commission by a House subcommittee. The subcommittee attacks the Commission for "conscious disregard of its statutory mandate" in approving price increases for natural gas.

The Post points out, however, that:

The FPC has not consciously disregarded its legislative mandate . . . but rather that mandate has become impossible to fulfill in a way that squares with the economic facts of life.

The point is a significant one. The world has changed tremendously since the FPC was given its legislative mandate in 1930. Today's technology would be unrecognizable to even the best scientists of 1930. We have new power sources, new power uses, and new power problems. It is time we took a long, hard look at the FPC legislative mandate. To intelligently deal with 1977's energy issues, we must have agencies equipped with 1977's legislative tools.

The need to rethink our Government's approach to energy is not limited to the FPC. Energy has become such a critical issue that wide-scale restructuring of the entire Federal energy apparatus is warranted. Too often we have created agencies with ill-defined relationships to one another and society as a whole. This may have worked when energy was abundant and cheap. Indeed, the agencies' structures may have been ideal for the times in which they were created. But Government's energy authority today is a "Rube Goldberg" contraption that works only part of the time.

To address this problem I have introduced S. 591, The Omnibus Energy and Natural Resources Reorganization Act of 1977. It is an attempt to make sense out of our contorted energy hierarchy. I have also cosponsored the administration bill introduced by Senator RIBICOFF to create a new Department of Energy.

S. 591 is no panacea nor is it an administration bill. They are meant to be a first iteration toward intelligent energy structure. But it is only if we take such first steps that we can be on our way toward resolving our energy problems.

Mr. President, the Washington Post editorial is thoughtful journalism on an important issue, and I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CRITICISM OF THE FPC

It is not surprising that a House subcommittee has rated the Federal Power Commission the worst federal regulatory agency. A majority of the subcommittee, chaired by Rep. John E. Moss (D-Calif.), wants to keep the price of natural gas low, and the FPC has been attempting to raise it. The antagonism between the two groups is deep, and it shows through in the subcommittee's report.

The subcommittee contends that the FPC has departed from its traditional decision-making method in recent years and is now approving price increases based on flimsy economic and legal analyses. There is considerable justification for this view, and it may well be true that the $1.42 price placed on "new" gas by the FPC last summer will be overturned by the courts. But we think the subcommittee has gone too far in charging that the FPC "has demonstrated a conscious disregard of its statutory mandate to protect the consuming public from exploitation, especially by natural gas producers."

Undoubtedly, the FPC could have avoided the wrath of Rep. Moss and his colleagues by keeping the price of natural gas low. But it can be argued fairly that by doing so the FPC would have been jeopardizing the other part of its mandate—that of ensuring adequate supplies. Thus, it seems to us, the subcommittee has failed to grasp the fundamental problem of the FPC. The task assigned the FPC—given the law it has to work with—is impossible. The commission is required to base the prices it sets on the cost of production. But in almost 40 years of existence, the FPC has never been able to come up with a formula for determining costs that works equitably. And this basic problem has now been compounded by the energy crisis and the inflation rate.

So the story of the FPC as laid out by the Moss subcommittee tells us something about the regulatory process that is quite different from what the subcommittee thinks it is. The FPC is a disaster as a regulatory agency. But it is a disaster not because it has consciously disregarded its legislative mandate, as the subcommittee contends, but rather because that mandate has become impossible to fulfill in a way that squares with the economic facts of life. The committee is wrong in believing that the need now is for new commissioners selected "in accord with the Commission's statutory mandate." The need is for a reform of that mandate as part of a national energy policy. At the moment—and in large part because of Congress' default—there is no such policy.

THE CENTRAL ARIZONA PROJECT IS NEEDED

Mr. DECONCINI. Mr. President, the Arizona delegation testified at a public hearing this morning on President Carter's proposal to eliminate funding in fiscal year 1978 for the Central Arizona project. The Arizona delegation is solid in its support of the Central Arizona project even though we are split by party affiliation and geographic base. We are, Mr. President, just as committed to this project as the constituents whom we represent.

If we had no information other than that supplied by the President and the press, the conclusion might be drawn that the Central Arizona project was enacted on a whim by irresponsible legislators rolling the pork barrel. The truth, however, is far different. Neither the Congress of the United States nor the people of Arizona have acted precipitously. The Central Arizona project was first discussed in Congress in 1947 after the State of Arizona had considered its impending water crisis for many years.

It was not until 1968 that the legislation authorizing the Central Arizona project was signed into law by President

Lyndon Johnson—21 years after Congress first began its examination of the project. I think we can dismiss both the innuendo and the allegation that this was a hastily and ill-conceived undertaking that was not seriously considered by the Congress. The Central Arizona project has probably been scrutinized more closely than any proposal of this type ever authorized by Congress.

I must express to my colleagues the tremendous sense of disappointment I feel at President Carter's precipitous decision to cancel funding for the CAP. To the best of my knowledge, the President's decision did not follow a long and careful examination of this project, such as the one which preceded its enactment. In fact, no Member of the Arizona delegation was brought into the confidence of the President. Each of us learned of his decision in the press. The public hearings today are not public hearings in the proper sense. They are de facto—called after the decision was announced; presumably, they are designed to respond to the tremendous outpouring of opposition from the people and the elected officials of my State.

At the hearings today, Congressman UDALL, chairman of the House Interior Committee, and Gov. Raul Castro presented the case for the Central Arizona project. In their testimony, they review, once again, the reasons why the Central Arizona project is needed. Since the final decision on this matter will ultimately be resolved in the Senate and in the House of Representatives, I ask my colleagues to review the testimony anew. I ask them to judge for themselves if the Central Arizona project does not stand on its merits. Toward that end, Mr. President, I ask unanimous consent to have Congressman UDALL's and Governor Castro's testimony printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF RAUL H. CASTRO TO THE DEPARTMENTAL WATER PROJECTS REVIEW TEAM

Mr. Chairmen and members of the Committee; Ladies and Gentlemen: As Governor of the State of Arizona I welcome the opportunity to defend the CAP before this committee.

The delegation from Arizona here today is a united delegation—united by a dedication to the orderly economic development and growth of our state, the well-being of our citizens, and the preservation of our unique environment.

Regardless of partisan political differences among our delegates on other issues, we stand united in defense of the Central Arizona Project. Without the CAP we believe our State's economy, our people's well-being and our unique environment will be imperiled.

GOALS OF THE CAP

Specifically, we count on the CAP:

1. To provide sufficient water to sustain present and projected population growth and increased economic activity;

2. To relieve demands on groundwater supplies in order to slow or stop depletion of aquifers in excess of their recharge capacities;

3. To provide water for energy and copper production;

4. To sustain agriculture, one of Arizona's most important industries; and

5. To provide needed flood control.

6. To ensure continued economic development for Indian tribes.

These goals are consistent with Title III, Section 301 of the original Colorado River Basin Project Act, Public Law 90–537 of 1968, which clearly states that the Central Arizona Project was designed:

"For the purposes of furnishing irrigation water and municipal water supplies to the water-deficient areas of Arizona and Western New Mexico through direct diversion or exchange of water, control of floods, conservation and development of fish and wildlife resources, enhancement of recreation opportunities, and for other purposes. . ."

Implicit in that statement of purpose is the statement of need-summed up in the five words "water-deficient areas of Arizona." Nine years have passed since Congress recognized our need, and in these nine years our need has grown not less but more! The need will continue to grow in the future.

ARIZONA'S WATER SUPPLY SITUATION

Arizona has been a water-deficient state since the 1940's, when it was acknowledged that withdrawals of groundwater exceeded the natural recharge. This resulted in water tables dropping at rates of up to 17 feet a year.

In 1949 there was an attempt to deal with the overdrafting of groundwater supplies in the State Legislature. Legislation was enacted for critical groundwater areas which prohibited the drilling of any new wells without a permit from the State, and limited expansion of farm land to situations in which other farmland was retired from production. But legislation of this type, although helpful, has fallen far short of resolving Arizona's groundwater imbalance.

To begin with, most Arizonans live in a desert, where annual precipitation may be as low as four inches. By a curious quirk of nature, Arizona was provided with generous groundwater supplies beneath her desert soils. However, it took 2 billion years to create this valuable underground resource. And, like the fossile fuels which took equally long to form it is difficult to treat such a resource as "renewable" when we are depleting supplies faster than nature can replenish them. Once water is mined, for all practical purposes, it is gone. We need the CAP to alleviate the situation.

THE DEMAND FOR WATER IN ARIZONA

Arizona has a population of 2,270,000 of which 1,779,800 or 79 percent live in Pima, Pinal and Maricopa Counties—the three counties to be served by the CAP.

The demands from agricultural, municipal and industrial users on available water supplies are much greater than can be supplied without over-drafting groundwater reserves. A dangerous imbalance exists amounting to a perpetual water crisis which could lead to eventual water bankruptcy.

Only by constantly drawing on our groundwater reserves—these 2-billion-year-old reserves—can we meet the demands of water users. To expect Arizona to give up CAP and to continue to deplete groundwater reserves until they are gone is comparable to expecting Americans to develop and consume all available fossil fuels as quickly as possible with no alternative energy resources in sight.

Arizonans, statewide, are presently consuming approximately 2,200,000 acre-feet more water annually than is being replenished. In the three counties to be served by CAP, the combined overdraft is 1,800,000 acre-feet or 82 percent of the statewide total. Economic, hydrologic and demographic characteristics of these three counties explain their large share of the overdraft and justify their choice as the target area for the CAP.

As you probably know, Arizona has the fastest growing population in the United States. The three counties in the Central Arizona Water Conservation District accounted for 79 percent of the population growth rate during this same period was 28 percent.

AGRICULTURE AND MINING

It was part of the original intent of CAP to save agriculture in our state. In these times of worldwide food shortages we cannot ignore the contributions that Arizona agriculture makes to the state and national economies.

Arizona in fact contributes significantly to the national economy in many ways. Arizona's water was used to help produce approximately 63% of the nation's newly mined copper in 1976. Arizona is also the nation's fourth largest cotton producer. Statewide agricultural employment of 23,600 is nearly equal to employment in our mining sector. In the CAP Service Area agricultural employment is approximately 14,200 and mining employment stands at about 15,760. Agriculture made a significant contribution to the State's economy and the CAP cannot be considered in isolation of these facts.

We recognize and accept the intent of the CAP legislation to limit non-Indian agriculture to lands currently in production. Non-Indian farmers will be required to decrease their pumping of ground water by the amount of CAP water they receive.

Besides serving as a major source of income for our state, agriculture also helps to preserve the natural character of our landscape which is a primary basis of our tourist industry. For while the Grand Canyon is undeniably Arizona's greatest tourist attraction, a significant portion of domestic and international travelers and retired citizens come to our state because of the open spaces. Agricultural land tends to serve as a desirable buffer between the deserts and our urban developments. While tourists contribute significantly to Arizona's economy they add one more pressure on Arizona's limited water supply.

INDIANS

While there are disputes in regards to the water to be allocated to the five central Arizona Reservations, the CAP will be the delivery vehicle for whatever allocations are agreed upon. The Project will permit the development of new agriculture and a new economy on these Indian Reservations. The Indians desire to be self-sufficient and the water resources of the CAP will help them to achieve that desired goal.

CONSERVATION

Over the past four months I have sponsored a series of public water hearings throughout the state. It was reassuring to witness the heightened public awareness and concern for Arizona's water problems.

These hearings were valuable in revealing many in-state water conflicts, inequities, and misunderstandings. They also revealed a willingness on the part of our citizens to make personal sacrifices for water conservation.

As a result of the hearings, a Legislative Task Force has been established to work with my staff on revision of Arizona's antiquated water laws. This will strengthen our water conservation efforts and lead to more equitable water distribution policies.

We fully recognize the urgency of practicing sound water conservation principles. I have, accordingly, directed the Arizona Water Commission to prepare a state water conservation plan within 90 days and I have called upon the citizens of Arizona to use water prudently.

With or without CAP we have every intention of improving water conservation practices in Arizona. I intend to encourage conversion from flood-irrigation to drip and sprinkler mechanisms, conversion of some agricultural production to less water-inten-

sive crops, and research into efficient wastewater recycling.

ENVIRONMENT

I am well aware that a balance must be maintained between economic development and environmental degradation. Having lived in the Southwest most of my life, I am fully cognizant of the fragile nature of a desert ecology.

One environmental benefit that the CAP will bring that has not received adequate attention is the prevention of accelerated ground subsidence. This ground subsidence is a problem when groundwater levels are lowered at too rapid a rate. The CAP will help to alleviate this problem.

Another environmental issue that has received much publicity concerns the Orme Dam. Orme Dam is the most cost-effective way to provide water storage and flood control for the CAP. However, there is major opposition to the construction of Orme Dam, including some from the Ft. McDowell Mohave-Apache Indian Community whose position should be respected. Alternatives to Orme Dam are under study. Let me emphasize that it is not necessary to make a final decision on Orme Dam now.

If Orme Dam is not a viable project, there are adequate alternatives. In any event—and I cannot emphasize this point enough—CAP is a strong and viable project with or without Orme Dam.

In sum, the Central Arizona Project is central to Arizona's plans for the future.

A decision to stop construction of the Central Arizona Project would not save tax payers of these United States money in the long run. The CAP is not funded by a grant, but by a loan—an investment in the nation's future. The people of Arizona have already entered into a contract with the Secretary of the Interior guaranteeing repayment of all reimbursable costs. We have agreed to amortize these costs over a 50-year period and we shall do so. In addition, the economy supported by the water supplies made available to central Arizona by the Project will return to the federal treasury billions of tax dollars. The CAP, will pay for itself many times over.

The CAP commitments that have been made over the past decade span Democratic and Republican administrations in both Arizona and Washington. To date the effort has been truly non-partisan, and will continue to be so. We pledge our future efforts to make the CAP more beneficial economically, socially and environmentally. We also pledge our efforts to conserve existing water resources in Arizona, so that the CAP will help us protect and preserve our most precious natural resource for future generations.

STATEMENT OF CONGRESSMAN MORRIS K. UDALL, DEPARTMENTAL WATER PROJECTS REVIEW TEAM

INTRODUCTION

Governor Castro has outlined in graphic terms the dimensions of Arizona's water problems. He and the delegation have asked me to present the reasons why we believe the Central Arizona Project is a necessary part of any response to our water needs. My portion of the presentation will include the historical events that led to project authorization, and will outline the repeated scrutiny it has undergone at the federal level; I will show the impact of CAP operations on our water situation; and I will give attention to the critical environmental considerations which have played a major part in my decision to support continuation of the project.

A couple of points at the outset: The first is that I do not pretend that the Central Arizona Project is a panacea. There are many other steps that need to be taken to improve the water outlook for the three-county area and the State of Arizona as a whole. Indeed, significant progress to this end is already being made. But, under any reasonably foreseeable combination of legal reforms, conservation programs, and other measures, we will continue to face serious water overdraft unless the population and agricultural centers of central Arizona have access to the Colorado River water to which we are entitled by act of Congress, by Supreme Court decision, and by interstate agreement.

Second, I want to urge you, as you consider the testimony of both supporters and opponents of this Project, to remember that the Central Arizona Project is not a single structure. It is a project, a complex program involving several distinct elements—the intake and pumping station, the Granite Reef Aqueduct, the Orme Dam, the Salt-Gila Aqueduct, and the Buttes Dam. In my presentation I will distinguish between impacts of the Project as a whole, and impacts of specific elements; and I will stress that supporters of the Project have been from the start—and remain—eager to accommodate valid criticisms of any component.

HISTORY-BACKGROUND

At the turn of the century the Federal Government invested approximately $13 million in the construction of the Theodore Roosevelt Dam, a feature of the Salt River Project. This was one of the very first projects completed under the new Reclamation Act of 1902. On the basis of this modest investment we have seen develop a multi-billion dollar economy and one of the 25 largest metropolitan areas in the country. Over a million people now live and work where only a handful were able to subsist before. The Government's initial investment has been repaid by the water users and, in addition, many times over through the federal taxes that flow from the economic activity which the Salt River Project made possible.

Pioneer Arizonans recognized, however, that water supplies developed by Roosevelt Dam would not indefinitely satisfy Arizona's thirst. Even before Arizona achieved statehood, they began to plan to import Colorado River water in a second Reclamation project. They recognized, of course, that the introduction of Colorado River water to central Arizona would be an expensive and difficult undertaking. But as hundreds of thousands of Americans migrated to the southwest, and greater quantities of groundwater were pumped from ever increasing depths and it became obvious that our storehouse of groundwater was being used at a rate much greater than nature was replacing it, the plans for this Project became more definitive. During the period of construction of Hoover Dam on the Colorado River, Congress allocated 2,800,000 acre-feet of river water annually to the State of Arizona.

By 1944, importation of Colorado River water had moved beyond the speculation stage; the Arizona Legislature appropriated $200,000 to be used with matching federal money by the Bureau of Reclamation to develop a plan for delivering about a million acre-feet of Colorado River water into central Arizona. In 1947, plans were presented to the Congress and Arizona Senators Carl Hayden and Ernest McFarland conducted the first committee hearings on the CAP. Although the Senate twice approved the CAP, California challenged Arizona's claim to the right to 2,800,000 acre-feet of mainstream Colorado River and the House of Representatives in 1951 directed Arizona and California to settle their argument either by negotiated agreement or by submitting the question to the U.S. Supreme Court.

Arizona took its case to the Supreme Court in 1952 and during the 12 years of litigation that followed CAP was placed under microscopic judicial scrutiny. Availability of water supply was the major issue, along with interpretation of the Colorado River Compact, the Boulder Canyon Project Act and all other laws, contracts and court decrees that constitute what is called "the law of the River."

After extended argument before the Supreme Court, the Court in 1963 ruled that Arizona did indeed have the right to beneficially consume 2,800,000 acre-feet of the first 7½ million acre-feet of mainstream water available for consumption in the three lower basin states. Arizona immediately returned to the Congress seeking authorization of the CAP.

Another five years of detailed study and extended hearings followed. Numerous modifications were made in response to the interested parties. For example, at the suggestions of environmentalists the controversial Bridge Canyon and Marble Canyon hydroelectric dam proposals were scrapped, and coal-fired Navajo Power Station was built to provide both revenues and energy for the CAP. Finally, the legislation authorizing the Central Arizona Project was enacted by Congress and signed by President Johnson in September of 1968. It looked like we were on the way.

With passage of the National Environmental Policy Act in 1969 the Project was once again subjected to exhaustive study. This restudy continues today and will not be completed for several more years when the final environmental impact statement is to be submitted on the last feature of the Project to enter construction. An overall environmental impact statement on the Project was filed with CEQ in final form in September of 1972. This statement is being supplemented by detailed environmental impact statements on a feature by feature basis. Final statements have already been filed for the Navajo Project; the Havasu Intake Channel, Havasu Pumping Plant and Buckskin Mountain Tunnel; the Granite Reef Aqueduct and the Granite Reef Aqueduct Transmission System. The draft environmental impact for Orme Dam and Reservoir has also been filed.

The actual construction of the Project began in 1970. To date, $390,000,000 have been appropriated by the Congress, the Power Plant at Page has been completed, and when the appropriated funds are expended, 50 percent of the 190 miles of aqueduct between the River and Phoenix will either have been completed or be under construction. The Project is approximately 20 percent completed.

I cite this history to demonstrate that the decision to construct the Project was not lightly arrived at. CAP has had a quarter century of intense scrutiny in a number of forums. As a front-line participant in the last fourteen years of congressional consideration of the CAP, I assure you that all steps in this decision have been reasoned and deliberate.

As a believer in continued oversight and reassessment, I welcome this opportunity to review with you the merits of the Project. I firmly believe that an objective examination will once again demonstrate that this Project is a worthwhile federal/state undertaking.

Certainly the desirability of the Central Arizona Project, like most other significant political, economic, or environmental questions, is one on which reasonable people disagree. Opponents of the Project include some of my oldest friends and political supporters, and I respect the considerations that led them to their positions. But I can assure you that the great majority of Arizonans have supported the Project since its inception. They recognize the great need for additional water supplies in central Arizona and the importance to the State of the 50 percent augmentation of our supply that the CAP will provide.

I think most Arizonans would agree that the Tucson area I represent is a major center of environmental concern in our State. Yet even here, solid majorities are in favor of the Project. For example, some 15,000 of my constituents responded .ast July to a detailed legislative questionnaire. Asked if they believed we could maintain both a strong economy and strong environmental laws, 88 percent said "yes." More than two-thirds felt that we should toughen safety regulations on nuclear power plants "even if such efforts raise costs and cause delays." That questionnaire also asked whether CAP construction should be continued—and the response, by a margin of 3⅔ to 1, was "yes."

A statewide survey of registered voters conducted during 1976 by the Institute of Government Research at the University of Arizona gave similar results with 69 percent agreeing that the CAP should be completed, 6 percent disagreeing and 25 percent not sure.

ECONOMIC JUSTIFICATION

The benefits of the Central Arizona Project will be widespread and will ultimately impact directly on at least five million people at all economic levels, including the Indians who reside on five reservations in central Arizona. By bolstering our water supply, as Governor Castro has explained, the Project will permit orderly growth of our economy without unduly disrupting our standards of living. Together with reform of water laws, a phasing-in of water conserving technologies, and the other kinds of steps I mentioned a few moments ago, the CAP will enable us to balance our water account, continue supplying high quality food and fiber to American and global markets, and assure both economic opportunities and the intangible "quality of life" for our children and for the thousands of newcomers who arrive every year.

More specifically, the Project will provide to Arizona some 60 million acre-feet of water during its first 50 years of operation—water Arizona owns but cannot presently use. Municipal and industrial water will be utilized by 75 to 100 different cities, towns and industrial users. This water will not only fill our drinking glasses, but it will be used to generate electricity, to mine copper and to extend the life of our agricultural economy. In the case of my own home, Tucson, the Project will rescue the City and mines that produce one-fourth of the nation's copper from an intolerable overdraft situation and will permit our area of the state to continue as a vibrant part of the state's economy.

Cancellation of CAP would result in severe constraints on Arizona's economy. The Bureau of Reclamation tells us that on large scale reclamation projects such as CAP, each million dollars in construction expenditures provides 37.3 man years of employment. Based on this figure, ($26,800/man year) Dr. Timothy Hogan of Arizona State University has calculated that cancellation would cost Arizona 46,000 man years of employment. The total loss in personal income to the State during the construction period, alone, would be about three-quarters of a billion dollars. During this same period, over $11 million in State taxes would be lost. Dr. Hogan also calculated that Arizona unemployment in 1978 would increase by 15 percent if CAP is not funded. The Bureau tells us that annual benefits from the Project would total about $250 million dollars. Dr. Hogan suggests that the true benefits might range as high as $350 million dollars per year. Most of these benefits would accrue directly to Arizona and Arizonans. The prospect of losing them is not a particularly happy one.

Construction of the Central Arizona Project will provide additional jobs for workers here in Arizona and elsewhere in the nation at a time when the addition of jobs is critical. When completed, the Project will have created a permanent asset that will help maintain a high level of economic activity and will help conserve existing resources—our groundwater "bank"—for future generations. Darwin Aycock, Secretary-Treasurer of the Arizona AFL-CIO will discuss this with you in greater detail later in our presentation.

The dikes constructed to protect the aqueduct system will also provide substantial flood control benefits to home owners, businessmen and farmers along much of its course. The construction of Orme Dam, or a suitable alternative on the Salt and Verde Rivers, would protect the cities of Mesa, Tempe and Phoenix—home to more than a million people—against potentially devastating floods.

The Project will provide about four million visitor-days of additional recreational opportunity per year within ready access of our urban centers. It is true that the nature of water oriented recreation that is currently available will be modified but the importance of recreational opportunity added by the Project must not be underestimated.

THE STAKES FOR ARIZONA INDIAN TRIBES

The Project, under water allocations made by the Secretary of the Interior to the Indian tribes, will permit the development of some new agriculture and a new economic base on the five central Arizona reservations. The Indians desire to be self-sufficient and see the water resources of the Central Arizona Project as a means of achieving that position. As you will hear directly from them, the five tribes are not entirely satisfied with the allocations promulgated by the Secretary. Two of the tribes have filed legal actions seeking to set the Secretary's allocation aside and to obtain substantially greater quantities of water from the Project. But whatever allocation is finally determined, one thing is clear: if there is no CAP, there is no water for Indians or non-Indians. These reservations need CAP.

The authorizing legislation provides numerous benefits in addition to water supply to the central Arizona Indian reservations. They include the right to develop and operate recreation facilities along the Orme Reservoir shoreline adjacent to both the Salt River and Fort McDowell Indian Reservations. The Fort McDowell Reservation is also given the opportunity to select 2,500 acres of adjacent land to be added to the reservation. The Act authorizes $20 million (subject to escalation) of non-reimbursable funds to construct irrigation distribution systems on Indian lands. The Act authorizes deferred repayment under the Leavitt Act of all costs allocated to Indian lands.

A recent study conducted by the Natleson Company of Los Angeles indicates that significant losses in personal and tribal income and severe setbacks in tribal attempts to achieve self-independence on the reservations would result from failure to complete the CAP. At delivery levels established by the Secretary of the Interior—assured to the tribes regardless of the outcome of their lawsuits—CAP would become the water source for approximately 55 percent of the 100,000 acres which would be farmed by the tribes. In the case of the Ak-Chin Reservation, CAP water would support 76 percent of the total farming operation (if the present rate of use from the local supply is maintained.)

From use of this water a personal income of between 2 and 2.5 million dollars a year would be realized by the Indians of the five reservations. Per capita personal income on the reservations would increase about 10 percent and the income of 175 families would be raised above the poverty level. In addition to personal income, the tribes would realize $150 million to $250 million in tribal income over the first 20 years of project operation. This money is desperately needed to achieve the tribal goals of self-determination and self-sufficiency. Removing CAP water from the tribes' future would drastically slow the attainment of these goals.

BENEFIT-COST RATIO

At the time that the Central Arizona Project was authorized by the Congress, the discount rate used in Project evaluations was 3¾ percent. The benefit-cost ratio based on direct benefits only at that time was 1.5 to 1.0. The benefit-cost ratio based on both direct or indirect benefits was 2.5 to 1.0. In 1974, Congress enacted PL 93-251, Section 80(b) of which requires that "the discount rate to be used in the computation of benefits and costs for projects authorized before January 3, 1969, shall be the rate in effect immediately prior to December 24, 1968, and that rate shall continue to be used for such project until construction has been completed. . . ." This may or may not be good policy, but it is the law of the land.

Nevertheless, we have been advised that the current evaluation will be made on the basis of evaluation of remaining costs and benefits at a discount rate of 6⅜ percent. On this basis, the benefit-cost ratio for direct benefits alone is 1.6 to 1 and for both direct and indirect benefits is 2.0 to 1. Obviously the CAP is not just "marginally justified" as reported by CEQ. Its economic justification is above dispute in that its benefit-cost ratio exceeds the 1.9 to 1 criterion established by the Review Team by at least 50 percent. CAP comfortably passes the test of economic justification.

Incidentally, the benefit-cost ratio computed for the Project do not include quantification of the social benefits that will occur from the Project. In making his allocation to the Indians, the Secretary cites the fact that the Supreme Court's decision in *Arizona* v. *California* noted that the allocation of a limited water supply has significant public welfare consequences. The Secretary acknowledged these public welfare consequences as a reason for giving the Indians a "moderate advantage" over non-Indian irrigators in the allocations he finalized late last year. I am confident that the Department will observe the same criterion, over and above the very favorable benefit-cost ratio, in the present review and decision-making process.

WATER SUPPLY

A central argument of CAP opponents is that there isn't sufficient supply in the Colorado River to justify the Project. Some even go so far as to claim that the aqueduct will be dry from the beginning and will never carry water at all. The U.S. Supreme Court in *Arizona* v. *California* ruled that over 900,000 acre-feet per year of water presently being diverted by southern California belongs to Arizona. This water will be transferred from California to Arizona the first day CAP goes online. It represents almost 75 percent of the CAP water supply. The other 25 percent will come from waters being stored in Lake Powell and Lake Mead.

It is fact that the Colorado River for a number of years has been experiencing a drought. But this does not support a contention that the River is somehow "bankrupt." Even though flow has been below normal during the past 14 years, reservoirs on the River have stored an additional 35,000,000 acre-feet. This is water surplus to present needs. This storage demonstrates beyond question that the flow of the River is not being utilized fully even during years in which flows are significantly less than normal. To put it more graphically, without taking any water away from users who are now exceeding their entitlements, you could have operated two Central Arizona Projects

for the last 14 years and still not have taken a drop out of then-existing storage.

The 35 million acre-feet that have been added to storage during the last 14 years—years of subnormal runoff—coupled with the water supply to be withdrawn from California use assures a water supply sufficient to satisfy average deliveries to CAP for 117 years even if there were no flows in the future surplus to needs—an unlikely prospect. On the basis of studies of future reservoir operations, the Bureau of Reclamation has already begun to warn people and governments along the Lower River that all reservoirs on the River will probably fill and spill before CAP goes on-line and serious flooding conditions may occur.

As I indicated earlier, the water supply of the Colorado River and of the Central Arizona Project has been the subject of repeated, lengthy, detailed, meticulous, painstaking consideration by the U.S. Supreme Court, the Congress, this Department and the states of the Colorado River Basin. All have found the supply adequate to justify construction of the CAP.

As a member of the Congressional committee that considered the CAP under the zealous stewardship of Chairman Wayne Aspinall of Colorado, I can assure you that the Congress would not have authorized a project of this magnitude if there were any substantial doubt as to the adequacy of the water supply. We were well aware of the differing opinions as to the availability of water for the Central Arizona Project. The House Interior and Insular Affairs Committee, report[1] on the bill authorizing the CAP stated:

"* * * so as far as the history of modern civilization is concerned, the record is full of controversies over the water supply of various river systems. It is doubtful that any other river system in the world—and certainly no other river in the western hemisphere—has been the subject of so many disputes of such wide scope during the last half century as the Colorado River of the southwest."

The report goes on to discuss several studies of the water supply situation. As its last conclusion on water supply, the report states:

"Notwithstanding the anticipated water shortage on the Colorado River, if there is no augmentation, the committee finds that the Central Arizona Project is feasible with the presently known water supply."

This report was not produced by the Bureau of Reclamation, or by the Arizona Water Commission, or by any other group which might have a self-serving interest in the Project. Chairman Aspinall exercised very close control of the committee and spent many days developing the record relative to the Colorado River water supply. As a zealous guardian of Upper Basin rights, he was not inclined to overestimate streamflow or to underestimate upstream diversions. Only after he was assured that the Upper Basin was protected and that water remained for a feasible project did he move the CAP legislation.

Both the Bureau of Reclamation and the Arizona Water Commission have made detailed studies which demonstrate the adequacy of water supply for the CAP. These studies were made for three future levels of projected development throughout the basin. They utilize the Colorado River water supply period 1906 to 1970 with an average annual virgin flow at Lee Ferry of 14.95 million acre-feet. The River and reservoir systems were operated through the entire 65-year runoff period under the conditions and constraints estimated to be in effect in each of the future development periods with the level of development projected for that period of time. The studies incorporated the very important provisions of the "Criteria for Coordinated Long-Range Operation of Colorado River Reservoirs" adopted by the Secretary of the Interior on June 10, 1970, and utilized much of the basic river flow and water use data that were developed during the preparation of these criteria. Upper Basin development and accompanying water depletions are assumed to increase by more than two-thirds—from present levels of approximately 3.4 million acre-feet per year up to the same maximum of 5.8 million acre-feet per year used by the Bureau of Reclamation in its studies. Reservoir storages were maintained at or above minimum power operating levels at Lake Mead and Upper Basin reservoirs at all times, even though the "law of the River" gives water supply a higher priority than power production and permits the reservoirs to be drawn down below minimum power-head when needed, to produce additional water supplies.

The accompanying table shows Arizona's estimates, based on these conservative assumptions, of the water supply available to the State and to the CAP from the Colorado River for development years 1985, 2005, and 2035. Average annual diversions from the Colorado River for CAP range from 1.67 million acre-feet in 1985 to 1.05 million acre-feet in year 2035. Average annual Project deliveries, including 50,000 acre-feet per year that would be developed by CAP facilities on the Gila and San Pedro Rivers, are estimated at 1.55 million acre-feet in 1985, 1.20 million acre-feet in 2005 and 0.98 million acre-feet in 2035. The resulting 50-year average annual delivery for the 1985–2035 period is 1.21 million acre-feet.

The above quoted averages for water available for CAP in any particular development year include years of surplus diversions, years of normal diversions (2.8 million acre-feet for Arizona), and years of reduced or shortage diversions. The studies showed conclusively that a firm delivery of 550,000 acre-feet per year could be sustained each and every year without violating any of the operating criteria rules mentioned previously even under conditions in which both the most critical drought period on record, and development levels assumed for the year 2035, coincide.

ARIZONA WATER COMMISSION

SUMMARY OF COLORADO RIVER OPERATION AND WATER SUPPLY STUDIES

[Averages for 1906–70 period, in thousands AF]

Item	Year 1985	Year 2005	Year 2035	50-yr average
Glen Canyon releases	10,224	9,467	9,268	9,559
Net gain, Glen Canyon to Hoover	820	800	777	797
Lake Mead:				
Inflow	11,044	10,267	10,045	10,356
Evaporation	818	714	708	733
Spills	505	204	122	240
Regulated releases	9,721	9,349	9,215	9,383
Net losses, Hoover to Mexico	605	555	555	565
Delivery to Mexico	1,500	1,500	1,500	1,500
Available for use in United States	7,616	7,294	7,160	7,318
California	4,545	4,516	4,522	4,524
Nevada	161	196	286	216
Arizona	2,910	2,582	2,352	2,578
Other than CAP:				
Rights prior to CAP	1,186	1,220	1,230	1,216
Rights assumed equal to CAP	54	84	84	78
Central Arizona project diversion (3,000 cfs aqueduct maximum)	1,670	1,278	1,038	1,284
System losses (10 percent)	167	126	104	128
percent)	167	126	104	128
Supplied from Colorado River	1,503	1,150	934	1,156
Supplied from Gila River	50	50	50	50
Project deliveries	1,553	1,200	984	1,206

There is one more very important consideration in any study of Colorado River water supply that deserves further comment. That is the estimated rate of growth of water depletion in the Upper Colorado River Basin. The Bureau of Reclamation in the past has made a number of estimates of the level of future Upper Basin depletions. These estimates have been made both before and since authorization of the CAP. In every instance, the actual rate of growth has lagged behind the projections. Each new set of forecasts, however, has shown the same or slightly higher levels in future time frames. In other words, despite slower-than-expected growth in Upper Basin use, each successive projection has posited greater growth rates in the early years of the future period. This can be seen on Attachment 1.

Both the 1965 and 1968 Bureau schedules represent estimates of future depletions measured at the Lee Ferry Compact point, the dividing point between the Upper and Lower Basins. The Congress authorized the Central Arizona Project on the basis of the 1965 schedule of estimated Upper Basin depletions. The 1968 schedule was developed for use in formulating the operating criteria. Both projections forecast about the same level of depletions for the year 1975. The results are now in, and actual depletions as computed by the Bureau of Reclamation for 1975 were approximately 650,000 acre-feet below those projected for that year. The Arizona Water Commission's water supply studies are based on the 1968 U.S. Bureau of Reclamation schedule adjusted 5 years into the future.

In other words, the Water Commission assumes that the 1975 consumption level forecast by the Bureau 9 years ago will actually come to pass in 1980. On the chart it is still apparent that this results in a high estimate of Upper Basin use and a correspondingly conservative estimate of the amount of water that will be available to the State and to the Central Arizona Project. This shift of 5 years is the principal reason for the differences between estimates of CAP water supply by the Bureau of Reclamation and the Arizona Water Commission.

We believe Arizona's estimates of CAP water supply are reasonable, on the conservative side, and adequately demonstrate the feasibility of the Project from the standpoint of water supply.

WATER QUALITY

Another frequent objection to the CAP is that the waters of the Colorado River are too salty for municipal use. One simple response is the fact that these same waters have been used for years along the River and in the Los Angeles-San Diego metropolitan areas. One might also ask why southern California fought Arizona so desperately over the waters of the Colorado River if they are, in fact, unusable. However, a more positive response is in order.

Currently, the salinity of the Colorado River at the CAP diversion point on the Bill Williams arm of Lake Havasu averages 750 milligrams per liter. The Environmental Protection Agency has established water quality standards on the Colorado River to assure that the salinity content does not rise above this level.

In comparison, mixed streamflow from the Salt and Verde Rivers available at the Granite Reef diversion structure has an average salinity of about 470 milligrams per liter. Blended with Colorado River water at Orme, this will produce an average mineral content of approximately 512 milligrams per liter.

By way of comparison, 76 percent of the water now used in the three-county Project service area comes from the ground, where the weighted average quality of water pumped is 1,000 milligrams per liter—that is, one-third more saline than the Colorado River. The supply that will be available from

[1] House Report 1312 of the 90th Congress, 2nd Session in support of H.R. 3300, April 1968.

the CAP conforms to all applicable state and federal standards and for most water users, the CAP water supply will represent an improvement in quality.

The summary information released by CEQ, on which the President's decision to delete funding for the CAP appears to have been based, erroneously reports that CAP would result in increased salinity of the Colorado River downstream from Lake Havasu, the CAP diversion point. There will be no return flows to the Colorado River from uses in central Arizona. Waters pumped into the aqueduct system at Lake Havasu will include a proportionate share of the salt load of the River source. The supply for CAP will consist in substantial part of waters now being diverted from the other side of Lake Havasu to southern California. The balance of the supply for the Project will come from waters now being stored in the reservoir system on the main stem. The flow in the Colorado River below Parker Dam will not change when the CAP goes on-line except that rare floods may be of slightly less intensity and shorter duration. Hence, it can be said with some certainty that the CAP will not adversely affect the salinity of waters received by users downstream in the United States or the Republic of Mexico.

SAFETY—ORME DAM

The summary information released on February 23 by the Council on Environmental Quality, which has been cited as one factor in the preliminary decision to delete funding, states: "A study by the Arizona Bureau of Mines questions the safety of the Orme Dam." This is simply not the case.

The Bureau of Mines in commenting on the draft environmental statement for Orme Dam, did state, that there were geologic conditions including faults in the vicinity of the Orme Dam site that should be discussed in the environmental statement. This memorandum has been misconstrued as questioning the ability to construct a safe structure at the Orme site. Such concern is understandable in the wake of tragedies such as Teton Dam and Buffalo Creek. But if those incidents hold any lesson, it is that there is no substitute for careful, concise, factual analysis and design—with a full appreciation of all relevant information and all potential consequencees.

The unfortunate misunderstanding was identified and the position of the Bureau of Mines clarified in a subsequent memorandum from its Director, Mr. W. H. Dresher, dated July 16, 1976. In a letter of July 15, 1976, to Mr. Wesley E. Steiner, Executive Director of the Arizona Water Commission, Mr. Dresher further clarified the position of the Bureau of Mines. Following a review of geologic investigations of the Orme site conducted by the Bureau of Reclamation, Mr. Dresher concluded: "that the Bureau of Reclamation personnel have been thorough in the preliminary examination of the geological aspects of the Orme Dam site and that they are fully aware of potential problems of the site and that they recognize the need for additional investigations before a final decision is made on how the dam should be designed. Our only point of disagreement with the Bureau personnel is how much and what geological information should be included in the EIS. Lastly, we deplore the conclusion of the news media that the presence of fractures or faults automatically precludes the competency of any dam structure. This is a decision which ultimately must be made by engineers based on the engineering aspects of the site with respect to the structure to be built on the site. The important thing, however, is to have in hand the geologic criteria essential to overall project viability."

Copies of the two memorandums and the letter from Mr. Dresher are attached to my statement as Attchment 2.

Most dam sites involve some kind of geologic "fault." As indicated in the quotation from Mr. Dresher the faults at the Orme Dam site are known and have been mapped as a part of the geologic drilling and mapping program of the Bureau of Reclamation. At the request of the Arizona Water Commission, William A. Wahler, internationally renowned consulting engineer and geologist and dam design expert, has reviewed the site geology and preliminary design concepts. A copy of his letter report to the Arizona Water Commission appears as Attachment 3. He finds, "The geology of the area is complex but not particularly adverse." Concrete deterioration which currently exists in the Stewart Mountain Dam "is a potential problem but it should not be exaggerated by the Orme reservoir inundation and operation."

Mr. Wahler also states: "The possibility of a hazard potential to Orme Dam in the event of a failure of the Stewart Mountain Dam exist but should be minimal and not of a potentially catastrophic nature. Under a failure hypothesis it is my opinion that the most likely mode would be the rapid drawdown of the Orme reservoir at which time there would be sufficient capacity in the combined reservoirs for the liberated water."

He continues: "... There is currently no evidence to indicate that particularly difficult design or construction problems exist at the site. Remaining questions are not related to either economic or safety feasibility but are design detail question." And again: "There is no evidence of major geologic hazards at the site that could pose serious technical feasibility questions."

I want to recall what I said at the outset. These geological questions relate only to the dam site. No question of safety has been raised for any other feature of the Project. Abandoning the Project in its present condition, however, would create some safety and environmental problems. Neutralizing the hazard and aesthetic incompatibility of empty canal sections would in itself be an expensive task. Furthermore, unless a new, separate outlet structure were constructed for the flood detention reservoirs lying above the canal section through Paradise Valley and North Scottsdale as a replacement for programmed discharge into the Granite Reef Aqueduct and thence into Orme reservoir, these structures would constitute a definite hazard to the residential and commercial areas downstream.

ENVIRONMENT

Permit me a personal word. As the members of this Review Team may be aware, I consider myself—in fact, I take some pride in being—sensitive to the environmental considerations in government actions, policies and projects. I have tried to be objective in this dispute. I have listened with care to the criticisms of the CAP raised by my friends in the conservation community. I have studied their objections carefully, and I have scrutinized once again the arguments of CAP supporters. I have concluded that the adverse environmental effects—and there are some—have been exaggerated. I believe, on balance, the Project should not be set aside on environmental grounds.

There is a great deal of confusion surrounding the environmental ramifications of the CAP. This confusion stems primarily from (1) a lack of understanding of the whole picture concerning the Project and (2) to a tendency to ascribe environmental effects of certain features of the CAP to the Project as a whole. The first misunderstanding creates an impression that the Project results only in adverse environmental consequences, which is manifestly not the case, and that no attempt is being made to mitigate these adverse impacts. The second misconstruction creates an impression that certain claimed adverse impacts concerning a particular feature of the CAP will be felt over the entire length and breadth of the Project. For example, it is claimed by some that the construction of Orme Dam and reservoir will destroy critical habitat for two of only seven pairs of nesting bald eagles in Arizona. Quite apart from the merits of this claim, which I shall discuss presently. it has absolutely no bearing on the aqueduct system from the Colorado River to Tucson.

In an effort to set the record straight on what the environmental impacts of the CAP are in fact, a brief summary of the net effects of the Project is in order. But first let me urge once again that you recognize in your evaluation of the Project that the CAP is viable and economically justified with or without Orme Dam, the most controversial feature of the Project from an environmental standpoint; the State believes that the CAP is a better project with Orme than without, but it could accomplish most of its water supply objectives without Orme and would still maintain a benefit/cost ratio of 1.2, calculated at a discount rate of 6⅜ percent and based on direct benefits only.

In the discussion that follows, then, I would urge that you isolate Orme from consideration of the rest of the Project. As you know, comprehensive studies of alternatives to Orme are underway. A rational decision on the construction of Orme or an alternative cannot be made until these studies are completed. Since the CAP is justified without Orme or an alternative regulatory structure, the decision should be made to proceed with construction of the aqueduct features while reserving to the Secretary or the Congress the decision on Orme or Orme alternatives, once the studies have been completed.

WILDLIFE HABITAT

Of the 57,000 acres needed for the Project, some 47,000 are typical southwestern desert, sparsely vegetated and containing a low wildlife population. The 20,000 acres required for the aqueduct system would include only 25 acres designated as riparian, and 21 of those 25 acres would be restored. Restoration is possible because the primary impact on riparian habitat is temporary disruption during the construction of siphons under the major watercourses.

Only six acres of wetland would be eliminated or substantially modified by construction of all proposed features of the Central Arizona Project, and only three of these acres are attributable to construction of the aqueduct system.

The most significant impact on riparian vegetation would be at Orme, and this fact is high on the list of considerations being examined now in evaluating Orme's alternatives. Bringing water to the desert would induce habitat growth and increase wildlife merely by the existence of open water and the seepage incidental to normal aqueduct and canal operation even if no further steps were taken. The Bureau of Reclamation and the Arizona Department of Game and Fish, however, are pursuing definite programs along the aqueduct system to enhance wildlife and there is no reason to doubt that they will be successful.

STREAM EFFECTS

Some 58 miles of streams and rivers will be affected by the Project. None of this, however, is attributable to the aqueduct system. Some 27 miles on the Salt and Verde Rivers would be affected by Orme Dam if constructed. It should be noted, however, that these streambeds are already affected by the six reservoirs upstream on the Salt and the Verde, even to the extent that there are periodic dry-ups below the reservoirs. The entire flow of these rivers is diverted some 3½ miles below their confluence to the cities and farms of Maricopa County.

Were Orme constructed as proposed some 27,000 fisherman days of stream fishing on the 27 miles inundated would be eliminated and in a 36-to-one switch approximately

980,000 fisherman days of lake fishing substituted. Again, this exchange is being evaluated in assessing Orme and its alternatives. Arizonans are aware that the Salt and Verde Rivers below the reservoirs are heavily used for recreation. Against this must be balanced the fact that construction of Orme Dam would nearly quadruple the available amount of recreation time for Maricopa County residents and visitors from other counties and other states. The aqueduct system alone will add one million days of recreation to the opportunities available in central Arizona. CAP as a whole would increase available recreation days in the Project area by a factor of 8. Gross numbers alone cannot tell the whole story, of course. The final decision will include such non-quantifiable factors as the quality of the recreational experience and the need to offer a choice among diverse forms of activity.

ENDANGERED OR THREATENED SPECIES

There has been considerable concern over the adverse effects of CAP on endangered or threatened species. The only endangered species for which such a claim has been made against the aqueduct system is for the species of bird known as the Yuma clapper rail. While this bird remains at present on the endangered species list, the Bureau of Reclamation's careful conservation and enhancement of marsh areas on the Colorado River has actually increased its habitat and numbers in Arizona to the point that it is now a candidate for removal from the list. In fact, the Yuma clapper rail situation has improved so much that it now appears that these valuable birds may be migrating to various parts of central Arizona where appropriate water and marsh habitat conditions exist. CAP might create more of such habitat!

The greatest amount of controversy has focused on the potential impact of the Project on the southern bald eagle. May I assert that this Arizonan and other Arizonans who favor CAP are also Arizonans who cherish this grand bird and are concerned for its continued well being. However, at the risk of being tiresome, I stress again that if the claim of adverse impact on the bald eagle has any validity, it cannot be attributed to the aqueduct system but is primarily attributable to Orme Dam.

There is some dispute among scientists knowledgeable about eagles as to whether or not a "southern" bald eagle in fact exists as differentiated from its northern relative. There is considerable scientific doubt as to whether bald eagles in the United States should be treated as a single species or as geographically separated northern and southern subspecies.

As related to CAP, the bald eagle is claimed to be endangered by Orme Dam because floodwaters backed up in the Verde River arm of the reservoir would inundate one cottonwood tree in which one pair of bald eagles nest. I am told that unfortunately age has taken the tree and it has blown down. The eagles formerly resident there apparently have moved to another nest on a cliff. But the entire eagle situation concerning Arizona has been based on some premises that have been called into serious question. For instance, it was assumed that the eagle population in the State of Arizona was on the decline and was a remnant of a former much larger population. Bureau of Reclamation studies being performed as a part of the environmental evaluation of Orme and alternatives now indicate that this may not be the case. Rather, as information is collected and developed, it appears that bald eagle populations are on the rise in Arizona and that the species is, as biologists put it, "invading." Second, it has been assumed that eagles and people cannot coexist. This, too, has been placed in doubt by information gathered about eagle populations around reservoirs which are subject to recreational uses in other parts of Arizona and in other states.

It has also been assumed that, in Arizona at least, eagles require a streamside habitat. Study has shown, however, that eagles actually seem to prefer lake or reservoir habitat. The absence of eagle population in certain stream or reservoir areas appears to result from a lack of places to perch to wait for their staple diet: dead or dying fish. Indeed, the availability of perches and nesting sites around artificial and natural lakes in other areas has allowed eagles to coexist alongside man. I direct your attention to Attachment 4, a letter from Professor Alfed H. Grewe, a nationally recognized expert on eagles for confirmation of this fact.

The Bureau of Reclamation has already undertaken a program of erecting artificial perches along the Verde River in an attempt to enhance the habitat of the bald eagle in central Arizona and is continuing in its investigation of Orme and suitable alternatives to consider ways of enhancing eagle habitat regardless of what decision is made on Orme.

ARCHAEOLOGY

Arizona's long history of Indian habitation has created an area rich in archaeological resources. As the CAP aqueduct system has been constructed, very careful study has been made of archaeological resources that may be in the path of aqueduct construction. These resources have been investigated and cleared by competent professionals before being disturbed. In some cases, the Project has been redesigned around such sites. In relation to its length and the acreage involved, the aqueduct system itself will have, and has had, a very small impact on the archaeological resources of the State. Indeed, investigations of these resources, especially between the Phoenix metropolitan area and the Colorado River, has turned up data of prehistoric Indian movement between those locations not previously thought possible. In short, the Project has provided an impetus through its financing for considerable archaeological study that would not otherwise have been possible. This of course applies as well to studies of wildlife habitat and other environmental considerations stimulated by the CAP planning process.

It is not surprising that more archaeological sites are found along watercourses in our desert environment than out in the open desert. Nor should it be surprising that the four dams proposed for the Project would impact on more archaeological sites than the entire aqueduct system. These comparisions can be misleading because they do not relate to the significance of the sites. The area behind the proposed Buttes Dam and reservoir appears to have more archaeological significance in many respects than that behind Orme, although Orme reservoir would be many times larger. In any event, the Bureau of Reclamation is committed to a program of mitigating damage to archaeological sites by providing funds available from Project appropriations under the Reservoir Salvage Act for investigation and retrieval of data and artifacts. The ceiling Congress has placed on the amount of funds available from Project appropriations limits the investigation that can take place. Recognizing this, the Bureau has studied those areas where archaeological sites could be protected rather than excavated, and it has established an advisory committee to recommend additional sources of funds to assist in the archaeological recovery process. This too is part of the evaluation system of Orme and its alternatives as well as of the evaluation of the other proposed reservoirs. We believe that optimum protection of archaeological resources will result from this program.

LAND USE

The Project will require some 57,000 acres of land. Of this amount 20,000 acres is required for the aqueduct and the remaining 37,000 acres is involved in the four authorized reservoirs. Of the lands needed for the aqueduct system, Indian lands make up only 3 percent; private lands in non-Indian ownership, 30 percent; and State lands, 27 percent. The owners of private lands, both Indian and non-Indians, are compensated when the property is taken and State lands are either exchanged or credited against later in lieu selection. Land use impact from the aqueduct system is minimal. Land use impact on the Fort McDowell Indian Reservation would be high if the decision is eventually made to construct Orme Dam—and I do not believe such a decision should be made without the clear approval of the majority of the Indians affected. This and other impact areas are being carefully scrutinized under the NEPA process in weighing the impacts of Orme against those of its alternatives.

Bear in mind, moreover, that 60 percent of Arizona lands are in public ownership and an additional 26.7 percent are held in trust by the Federal Government for Indian tribes. Only 16.5 percent is privately held. By and large our residences must occupy and our job opportunities must take place on this 16.5 percent. Most of the 60 percent in public ownership remains for non-development—for wildlife, for national and State parks and for wilderness experience. Small increments of the public domain may be needed from time to time to maintain the habitability of the 16.5 percent on which we must live and work. For all features of the CAP all that is needed is 0.13 percent of public lands. Given the public benefits this Project would confer, this is not too much to ask.

There is no doubt that the building of the Central Arizona Project, like any public works project, will have adverse environmental consequences on the area of construction during construction. Some adverse impacts undoubtedly will persist thereafter. Most of the permanent impacts are attributable to the commitment of lands to project purposes. Right-of-way for the aqueduct system and reservoir areas will require changes in use of lands from existing desert and riparian vegetation to aqueduct and reservoir. These kinds of impacts cannot be avoided if the benefits to be achieved from CAP are to become a reality for the people of central Arizona.

The recognized adverse impacts of the CAP are under serious study at the present time, as ways are sought to mitigate them and to enhance the human and natural environment in central Arizona. I reject any claim that these matters are not being given serious consideration. The Congress has established standards by which environmental matters must be considerd and has dictated processes that must be accomplishd before action can be taken. The National Environmental Policy Act, Endangered Spcies Act, and the National Historic Preservation Act have provided significant opportunities for review of environmental consquences, impacts on endangered species and consideration of historic and archaeological resources. These processes are rigorous and demanding, as can easily be seen by the number of impact statements and other reports that have been generated on the Central Arizona Project already. The protection for environmental consideration in these statutory schemes is buttressed by the continuing Congressional oversight and appropriations processes, and by administrative reviews such as this hearing.

I am convinced that the net impact of this Project on man's environment in central Arizona will be one of enhancement. The

CAP will permit us to maintain and enhance our standard of living, it will permit us to maintain agricultural greenbelts around our cities for a much longer period of time than would otherwise be possible without the Project and will assure sufficient time for adequate reclamation of lands eventually withdrawn from production. It will increase our recreational opportunities and will permit support of additional wildlife.

The overdrafting of groundwaters in central Arizona has resulted in rapidly lowering water tables and the demise of mesquite basques and other varieties of desert vegetation as groundwater levels fell below the plant root zones. This phenomenon continues and will continue until overdrafting is alleviated. Extended overdrafting results in subsidence of the land surface as water pressures are relieved and the aquifers compress. Up to 12 feet of subsidence have been experienced in some parts of Arizona. Environmentally destructive earth fissures are associated with this subsidence. To date these cracks in the earth, by and large, have been confined to agricultural areas.

With continued mining of groundwater by the cities, however, it is only a matter of time until the effects of differential subsidence and earth cracking are experienced by urban dwellers. The cost of city government, to residents and businesses will be enormous and must be avoided if at all possible. I believe that we can avoid some of these consequences with the introduction of Central Arizona Project water and the attendant relief of groundwater overdrafting. The water supply and repayment contract for the CAP entered into with the Secretary of the Interior requires that agricultural users decrease their pumping of groundwater by the amount of CAP water they receive. In addition, allocations of municipal and industrial water will be made on the basis of effecting a balance between water supply and demand, city by city. These provisions will have a material impact on reducing overdraft, particularly if coupled with the kind of groundwater law reform I believe Arizona must enact.

Before leaving the subject of environment I would discuss the alternative to CAP advocated by some of its opponents, that of moving the farms of central Arizona to lands lying closer to the Colorado River. I cannot believe that a serious environmentalist would not strongly oppose such a move were it in the offing which, of course, it is not. The environmental consequences of such a move are staggering. In the first place, farms abandoned take a very long time to heal and to blend back into the desert. In most cases, complete restoration probably can never be achieved. In the meantime, abandoned farms constitute a dust and aesthetic problem. On the other hand, virtually all lands that could be diverted to agriculture in the vicinity of the lower Colorado River are in public ownership and are undisturbed desert. I can well imagine the clamor that would arise from environmentalists from all over this nation if we were to suddenly propose carving 350,000 acres out of the public domain and out of the remaining desert habitat to subject it to the plow.

Furthermore, the development of new agriculture close to the Colorado River would be accompanied by highly saline return flows to the river as the salts in the desert lands were leached to permit the production of crops and as excess water was applied in subsequent operational years to maintain salt balance within the crop root zone. The Republic of Mexico could be expected to protest vigorously such development. The current agreement with Mexico, Minute 242, involving the salinity of waters delivered to that nation is based on the understanding that there will be no additional agricultural development along the Lower Colorado River.

Transfer of central Arizona's farms to the Colorado River is not a very desirable alternative to the CAP for many reasons, including the undeniable fact that central Arizona needs the water to alleviate current rates of overdraft and to provide the water supplies necessary to support growth of central Arizona's cities and industries.

CONCLUSION

I was born and raised in Arizona. In my youth it was small in population, isolated, little subject to change. Frankly, I liked it better that way. But times change and events overtake us. My State is now the fastest growing in the union; that growth is accelerating. I wish it were not so; I wish our growth patterns had given us smaller, more diverse population centers.

But Arizonans can do little to stop the flow of people who seek its climate and special way of life. We can only try to be farsighted, to shape as best we may, the quality of our environment. Water is life in the desert. We have not always used our water wisely, but we are moving to correct our mistakes.

The Central Arizona Project is a very old dream. I first heard of it from my grandfather. It will not solve all our problems, but it will help. A large majority of our people support it. It can stand this additional review.

Our bi-partisan unanimous Congressional Delegation, our Governor, our Legislature, the elected officials of our cities all support it. We ask that the President lift this cloud from its future.

[From the University of Arizona, Arizona Bureau of Mines, Tucson, Ariz., June 29, 1976]

MEMORANDUM

To: State Clearinghouse, Arizona.
From: W. H. Dresher, Director, Arizona Bureau of Mines.
Re: State Clearinghouse Document No. 76–80–0031 (Draft Environmental Statement, Orme Dam Site).

Inasmuch as the Arizona Bureau of Mines is concerned with "geologic hazards," we have examined the subject draft environmental impact statement for the Orme Dam site as regards the general geology as depicted on our Maricopa County Geologic Map*. We were not able to locate a geologic map in the EIS as presented so we have enlarged a section of the map so as to emphasize some apparent (not to say obvious) relationships that we think should at least be recorded. Perhaps some questions are in order if only because they are not disposed of in the EIS.

Even a cursory look at the County map suggests that there are at least seven possible fracture trends that project through or very close to the proposed site. The rivers themselves, especially straight segments, likely are controlled by weakness zones. Independent from the question of presently viable seismicity is the ground condition inherited from the past tectonic activity. The dam abutments are in two different rock types of diverse ages. The contact between these is a weakness zone that the river already has located. If the contact is a fault, which it might be, the extent of shattering beneath the site is an important question. If the contact is near vertical then this possible trouble zone could extend to depth beyond the limits of excavation, grouting, etc. This is but one contact question. When grouped with the other trends the site appears to be a focus of fracture intersection. This is emphasized by the fact of intersection of two major regional drainages, the Verde and Salt River systems. Ground condition, then, seems very important, especially when its relevant characteristics are buried from view. It would scem to be essential to ask whether or not the site study budget and effort was sufficient to evaluate the geologic complexities that appear to be involved.

Regarding seismicity, the youngest rocks, other than alluvium, are volcanic rocks—basalts. Because magma finds its way to the surface via fractures these volcanics provide two types of information: (1) possible directional trends, and (2) the date of the magmatic event. There is no indication in the EIS that any dating was done on these volcanics.

At the very least it seems logical to conclude that there has been more than one tectonic event in the general dam site region, that is, there is a sense of repetition in the past.

In summary, the Orme Dam site, from a cursory and generalized review, represents a site with sufficient geologic complexity to warrant considerable sensitivity on the part of the site investigators. The EIS gives no indication that there are any abnormal geologic conditions worth mentioning. Indeed, the EIS gives no indication that a geologic hazard analysis was even considered for the project!.

*This map is available to the public for $0.75.

THE UNIVERSITY OF ARIZONA,
ARIZONA BUREAU OF MINES,
Tucson, Ariz., July 15, 1976.

Mr. WESLEY E. STEINER,
Executive Director,
Arizona Water Commission,
Phoenix, Ariz.

DEAR MR. STEINER: This letter is in response to your questions by phone of 7/14/76 concerning the details of our statement to the Arizona State Clearinghouse regarding State Clearinghouse Document No. 76–80–0031, "Draft Environmental Statement, Orme Dam Site", and our findings resulting from subsequent discussions with the Bureau of Reclamation, U.S. Department of the Interior, concerning their professional evaluation of the geologic aspects of the Orme Dam Site.

First, by way of background, the Arizona Bureau of Mines is an agency of the State of Arizona and exists as a division of The University of Arizona. Among other functions, the Arizona Bureau of Mines has historically served as the geological survey of the State. Such surveys exist in nearly every state of the nation under various organizational formats. The principal value of these organizations is their knowledge and interpretive capability of the geological environment of their respective states. The Arizona Bureau of Mines is a participant in the State Clearinghouse review process and generally reviews project proposals with a view to either the mineral potential or the geological hazard potential of the region to be involved in the project. The Arizona Bureau of Mines employs professionally trained people in the fields of geology, mineralogy, mining and mineral processing. Part of the function of these people as part of the review process is to render an opinion based on their technical knowledge of the subject of the document submitted for review. These opinions are ultimately examined and consolidated by my office and the reply made to the State Clearinghouse over my signature.

The Orme Dam Site Draft EIS was reviewed by Dr. H. Wesley Peirce, the staff geologist who is responsible for environmental geology (which includes geological hazards). I have appended a copy of our review statement dated 6/29/76 as prepared by Dr. Peirce. Basically, the review statement submitted to the

Clearinghouse states it is our opinion that the subject draft EIS was deficient in its treatment of the geologic setting of the dam site as regards possible problems worthy of detailed investigation as well as a summary of the general results of any detailed studies made in this regard. This opinion was based upon data in our files and generally available to the public which indicates that the Orme Dam site is potentially significantly fractured and may contain one or more faults lying between the two abutments of the dam.

We included a general geologic map of the area surrounding the dam site and emphasized on it faults and fracture trend possibilities indicated on the Maricopa County geologic map as prepared by Dr. Peirce and others of our staff in 1957. The EIS contained no geologic map, therefore there was no way for us to evaluate the level of the Bureau of Reclamation's sensitivity to potential geologic problems. Our review statement was mailed to the State Clearinghouse. No copies other than our file copies were made and no press release was made. It was our belief that our review of the EIS would be compiled with others received by the Clearinghouse and submitted to the Bureau of Reclamation for their consideration and, hopefully, inclusion and discussion in their Final Environmental Statement on the project.

We now know that a citizen visited the offices of the State Clearinghouse sometime the week of July 4th and asked for and received copies of the submissions of the various respondents to the Orme Dam Site Draft EIS. This individual then singled ours out, apparently fed it to one or more of the Phoenix newspapers. Subsequently, at 5:15 PM, July 9th, Mr. Tom Kuhn of the Arizona Republic phoned my office and requested the content of our "press release". I informed Mr. Kuhn that we had made no press release and that our only public comment on the Orme Dam Site project was to the State Clearinghouse. Inasmuch as Mr. Kuhn seemed to be ignorant of the State Clearinghouse review process I explained it to him. I then dictated the text of our review statement to him. I also indicated that it was my opinion that even if fracturing or faulting was found at the site an engineering evaluation would have to determine if the site was feasible or not, i.e., the presence of fractures and/or faults does not necessarily preclude the construction of a dam. A simple comparison of Mr. Kuhn's articles in the Arizona Republic on July 10th, the Arizona Daily Star on July 12th and 14th, with the Arizona Bureau of Mines review statement reveals the "journalistic license" of the news media in describing the situation.

On Monday, July 12th, Mr. Tom Clark, of your office, phoned me to discuss the situation and to assure me that he was certain that the Bureau of Reclamation had performed test borings at the proposed site but had considered their data to be sufficiently technical, and that it wasn't appropriate for the Draft ETS. He then invited either me or Dr. Peirce to accompany him on a visit to the Bureau of Reclamation on the following day.

On Tuesday, July 13th, Dr. Peirce met with Mr. Clark and accompanied him to the Bureau of Reclamation offices in Phoenix. Mr. Pugh and several of his Bureau of Reclamation staff, including geologists, discussed their status and position on the subject with Mr. Clark and Dr. Peirce. The conversation was open and friendly with mutual appreciation of the professional aspects of the problem. Dr. Peirce reports the following findings: 1) the Bureau of Reclamation was aware of the most important of the possible geologic problems described by Dr. Peirce; 2) the Bureau of Reclamation has focused on these problems in the past and intends to conduct additional studies of certain of the geologic conditions. Apparently time, money, and lack of cooperation of the local Indian tribe has impaired their progress to this point; 3) at the time the Draft EIS was drawn up it had been the opinion of Mr. Pugh and his staff that technical matters such as pertained to the geologic conditions of the site would not be the concern of the public and therefore the Bureau's knowledge and considerations of this matter was not included in the Draft EIS; 4) a single sentence expressing their concern for faulting at the site had inadvertently been omitted from the Draft EIS sometime during or prior to printing the document.

It is our conclusion that the Bureau of Reclamation personnel have been thorough in their preliminary examination of the geological aspects of the Orme Dam site and that they are fully aware of the potential problems of the site and that they recognize the need for additional investigations before a final decision is made on how a dam should be designed. Our only point of disagreement with the Bureau personnel is how much and what geological information should be included in the EIS. We contend that such information is not too technical for public understanding (if for no other reason, we too are members of the "public") and that potentially hazardous situations caused by geological phenomena or conditions can be a significant impact on the environment inasmuch as physical and mental health and safety should also be a part of environmental considerations, especially those who are downstream from a large reservoir!

Lastly, we deplore the conclusion of the news media that the presence of fractures or faults automatically precludes the competency of any dam structure. This is a decision which ultimately must be made by engineers based on the engineering aspects of the site with respect to the structure to be built on the site. The important thing, however, is to have in hand the geologic criteria essential to overall project viability.

Sincerely yours,

WILLIAM H. DRESHER,
Director.

[From the University of Arizona, Arizona Bureau of Mines, Tucson, Ariz., July 16, 1976]

MEMORANDUM

To: State Clearinghouse Agency, Arizona.
From: W. H. Dresher, Director.
Regarding: A supplemental statement applicable to State Clearinghouse Document No. 76–80–0031 (Draft Environmental Statement, Orme Dam Site).

The Arizona Bureau of Mines first commented on the subject document in a response dated June 29, 1976. This original commentary was directed to the Bureau of Reclamation via the Clearinghouse. From the Clearinghouse, a copy was obtained by an individual and used in a manner not originally intended by us. Newspaper headlines wholly distorted our position, therefore we feel compelled to insert clarification to accompany our original comments.

Our initial effort was a response to the draft (preliminary) Environmental Impact Statement. It was our intention to encourage the Bureau of Reclamation to render a more complete statement regarding geologic phenomena known to be a part of the local geologic scene. A clear distinction should be made between what Bureau of Reclamation geologists actually know and what little was shared in the Environmental Statement.

By personal contact with staff members of the Bureau of Reclamation on July 13, 1976, (including two geologists) we were able to ascertain that the Bureau of Reclamation not only is aware of the geological factors we cited but plans to conduct a more thorough investigation of these factors.

In summary, the Arizona Bureau of Mines has no criticism to make of the program of geologic investigation of the Bureau of Reclamation. However, we do think that it is important for the Bureau of Reclamation to render a more complete statement as to the nature of the local geology and to especially point out the more important geologic influences that affect the design of a dam at this site as part of their environmental impact statement. We urge them to do so in this Final Environmental Statement. Additionally, we should like a review of any known geologic factors that might influence the escape of significant quantities of water beyond the immediate confines of the dam.

ATTACHMENT 3

PALO ALTO, CALIF.,
March 12, 1977.

Subject: Review of status and findings of Orme Dam and Reservoir site evaluation and preliminary design concepts.

Mr. WESLEY STEINER,
State Water Engineer, Arizona Water Commission, Phoenix, Ariz.

DEAR MR. STEINER: At the request of the Arizona Water Commission I have reviewed various general and specific documents pertaining to the Orme Dam and Reservoir site investigations which have been curtailed pending a reevaluation of the projects viability. In addition to various general documents, state and federal maps, etc. which discuss regional geology, seismicity and similar matters I have specifically studied the following:

1. Geologic Exploration—Resume for McDowell Orme Damsite, dated 1976.

2. Maxwell Project, Maxwell Dam and Reservoir, Geologic Data for Feasibility Estimates, U. S. Bureau of Reclamation, Robert A. Vehrs, dated January 1963.

3. Draft Environmental Statement, Orme Dam and Reservoir, U. S. Bureau of Reclamation Lower Colorado Region.

In addition I have discussed the project in the office and at the Orme and Stewart Mountain Dam sites. In addition I have been driven over much of the reservoir area with Mr. Benson Scott (Engineer), and Mr. Gerald Cox (Geologist) from the Arizona Water Commission, and Messrs. Joe Kreutz (Engineer), Richard Raymond (Geologist), and Paul D. Wold (Geologist) from the U.S. Bureau of Reclamation.

At present, the completed investigations have only proceeded to the feasibility and environmental statement level. Design studies which were being initiated to provide additional needed detail have been temporarily curtailed.

The reservoir area has relatively gentle topography with a stable parameter from both the shore stability and seepage loss potential standpoints. The reservoir is surrounded by a thick mass of relatively impervious high elevation bedrock around the reservoir perimeter except at the dam and dike sites. The reservoir water retention capability has been adequately proven for the site therefore, no real additional concern for this factor should be involved except to determine the detailed information necessary to design and construct a water tight dam and dike.

The geology of the area is complex but not particularly adverse. The dam site is broad and topographically gentle. There is plenty of working space for construction and river diversion, therefore, with the existing upstream reservoir storage capacity available there should be relatively few construction site or schedule problems. The geologic information to date does not indicate any particularly difficult or expensive safety or seepage control requirements for the dam or the dike. Although considerable additional surface and subsurface exploration and

analysis will be prudent to minimize the possibility for unforeseen problems affecting the construction schedule and costs, the available data establish to a reasonable degree for the present stage of investigation that a safe dam and dike can be developed at the site without any major unusual or expensive provisions.

The presently conceived design of the dam and dike as compacted earthfill structures with positive cutoffs to bedrock is proper. Provided that any bedrock fractures and/or openwork fault breccia are grouted. With adequate investigational data, analysis, and design coupled with proper monitoring of construction and operations the safety of the dam and dike can be assured.

Because the dam and reservoir are in a moderately seismic area continued consideration of the seismicity of the project is necessary. The faults at the dam site should be further defined, however they appear to be a Tertiary Age and long inactive.

Because the flood pool could impinge on the Stewart Mountain Dam and Power House we visited this facility to review the Bureau of Reclamation studies of the probable problems associated with its occasional inundation. This dam is buttress arch structure with a gated spillway on the left abutment. There are potential safety problems involved with raising the reservoir level above the conservation level, however, they are all amenable to economical solution. Chief among the problems being addressed are drainage provisions in the abutments to preclude the development of high pressures in the rock downstream of the dam which could conceivably cause instability upon rapid drawdown of the Orme reservoir. Equally important is the reconsideration of the operation of the spillway chute during flood discharge due to high backwater occasioned by the downstream reservoir pool level which will change the spillway operation from that contemplated in the original design. Concrete deterioration which currently exists in the dam is a potential problem but it should not be exaggerated by the Orme reservoir inundation and operation. The spillway chute should however, be redesigned.

The possibility of a hazard potential to Orme Dam in the event of a failure of the Stewart Mountain Dam exists but should be minimal and not of a potentially catastrophic nature. Under a failure hypothesis it is my opinion that the most likely mode would be the rapid drawdown of the Orme reservoir at which time there would be sufficient capacity in the combined reservoirs for the liberated water.

On the basis of my studies of available data, discussion with knowledgeable professional engineers and geologists working on the project, and my personal site inspection and observations, I believe that the site investigations have been progressing well for the present stage of development and that they should be carried to completion as a basis for final evaluations because there is currently no evidence to indicate that particularly difficult design or construction problems exist at the site. Remaining questions are not related to either economic or safety feasibility but are design detail questions. This does not mean that the studies that are still required are unimportant or can be shortened. I mean that the geomorphic and engineering geology work must be completed to permit final cost evaluations to be made and final designs to be undertaken. There is no evidence of major geologic hazards at the site that could pose serious technical feasibility questions.

ST. CLOUD STATE UNIVERSITY,
COLLEGE OF LIBERAL ARTS AND SCIENCES,
St. Cloud Minn., January 7, 1977.

JACK B. WOODY,
Endangered Species Coordinator, U.S. Department of the Interior, Fish and Wildlife Service, Albuquerque, N. Mex.

DEAR MR. WOODY: In response to your letters of July 20, August 6, and December 16, 1976, I am submitting comments on the recommended critical habitat proposed for Bald Eagles in Arizona. These comments are based on:

1. Memoranda dated May 14 and July 2, 1976, from the acting regional director, Bureau of Reclamation, Boulder City, Nevada.

2. The Southern Bald Eagle in Arizona. Endangered Species Report #1. 1976 U.S. Fish and Wildlife Service, Albuquerque, NM.

3. An undated compilation entitled: Recommended Critical Habitat for Southern Bald Eagles in Arizona.

4. My own knowledge of eagle behavior and ecology in the northern portions of the eagle ranges. I am at a disadvantage in that I do not have, and have not read, the document upon which the comments of Mr. Robert Jantzen, Mr. William D. Hurst, and Mr. Fred Wirth apparently have been made.

I. I do not, at this time, wish to enter into a dialogue on the subspeciation of Bald Eagles. Let it be enough to acknowledge that the possibility of one, two or more forms exists, that some populations are in greater danger of extirpation. Whatever the causes, than are others, and that all populations should be maintained for as long as possible for their aesthetic benefits to the human population. At the same time it must be recognized that the disappearance of an eagle population anywhere, anytime, is due, entirely, to the activities of, by and for those same human populations.

II. Description, enumeration and/or evaluation of habitat requirements is difficult, even when a great amount of field data has been collected. I realize that a standard distance from a river's edge or a nest site is the most practical way to establish a protected area. However, requirements more important than boundaries must be met, i.e. food, in the form of fish primarily, and fishing sites; suitable nest sites; an abundance of loafing sites; and, unfortunately, isolation. This latter not, however, because it is called for by the eagles, but because it is the only way to protect them from what is, I think, the number one destroyer of these populations—rifles and shotguns.

The several proposals indicate that all areas within (a) 500 miles, (b) ¼ mile, (c) ½ mile of the rivers are to be included in the critical area. From what I have observed, that much space is not necessary for most eagle pairs, and for a rare few pairs that would not be nearly enough. In all raptors, including the nocturnal species, there is a great variation in individual pair behavior and even between members of a pair so far as their protection of nest sites and eggs, attention to young, fleeing the site, abandonment, etc.

Behavior also changes constantly during the nesting season. There may be a long period of residency at a site prior to the actual nesting or almost none, and attention to the nest may continue long into the summer, and even into late fall. Especially, nests may be repaired in fall.

A wide area along a river is not necessary, even when/if it is economically possible, and nothing will be wide enough to keep gunners out! (I am a hunter; I don't dislike guns.)

III. Last winter during our visit in Arizona we saw only a relatively few miles of river vegetation. We suggested that many of the trees being used by eagles were apparently quite old and would not last long and that there were not many potential nest tree replacements. I've been told that one nest tree did fall later in the year. Fortunately Arizona eagles do use cliffs and pinnacles which are in many ways safer and certainly, if the records are correct, the nests last longer. But, any long range plan should have a nest-loaf tree replacement project as part of it.

I am a firm believer in artificial nest site and loafing site construction, especially where these structures may hold a population or a pair of birds in an area until natural sites can be developed. An artificial nest, constructed by my students and me in Wisconsin, was utilized by a pair of eagles and was successful to hatching. Other workers in Michigan, Ohio and California are attempting to make use of them in special situations. (An engineer or prop man who can build a giant shark or a King Kong or even a domed stadium can surely build fake trees.)

IV. Some persons have suggested that reservoirs are not used by eagle populations. I believe that large impoundments may be much like large Minnesota lakes which are heavily utilized by resident-breeding eagles. As many as fifty pairs may be nesting around Winnibigoshish and Leech Lakes. The necessities are there: fish, nest trees, loaf trees.

Extensive fishing in the winter by large numbers of eagles is common below the dams forming the Missouri River reservoirs in South Dakota. Recent reports from friends suggest much use of several large reservoirs in the Western states. I admit published communications to support this are not easy to find. I also suspect that the waterfowl which are attracted to these areas and which have a high mortality are part of the attraction for the eagles.

V. Feeding and food supplies should be no problem—so long as the fish are free of biocides. Fishing in many reservoirs is very good so far as sport fishermen are concerned—why not as well for eagles—especially since eagles do not disdain carp and shad and other rough fish as many fishermen do.

Fish, dead or injured and discarded, or hooked and lost by fishermen provides a large part of the food of many eagles on heavily fished lakes in Minnesota, Wisconsin and Michigan. Dozens of baits, leaders, bobbers and other gear are found in eagle nests and hooks have caused the death of more than one individual.

I do not believe a shortage of prey species is likely and the size utilized does not seem to be important. I've seen hundreds of 3–5 inch and 6–10 inch fish being eaten each year. Eagles will also use large individuals, or in some cases, where fisheries have refuse, i.e. heads and guts, only these parts when placed out for them will be eaten.

If necessary, on a temporary basis, carp could be provided as forage fish in shallow ponds as has been done for breeding wood storks in Florida. However, I do not think it is a good idea to feed any species in this way.

VI. I do not believe that most human disturbances are a factor in nest success, or winter population concentration, or nest location. There is a great amount of documentation of eagle-human compatibility. Nesting territories in the Chippewa Forest in northern Minnesota are rarely isolated, and eagles live in downtown Prescott, Wisconsin and Yankton, South Dakota all winter.

Boats do not bother, nor do fixed wing aircraft, but I view with great alarm the use by your survey crews (and others too) of helicopters. Eagles are afraid, possibly terrified by them. At the Bald Eagle symposium held in Ohio in 1965, all eagle biologists agreed not to use helicopters in their investigations and to my knowledge none of them do. I am reasonably certain that my own artificial nest with piping eggs, as well as a near-

by osprey nest, was abandoned because of low-flying helicopters on military maneuvers. (By the way, Todd, 1971 is not included in the literature reference section of my copy of the Endangered Species Report.) Whatever happens in Arizona, I honestly believe all helicopter flights within a mile of eagle nests should be banned. I know nothing about aircraft safety, maneuverability and speed, but it seems to me that if the aerial checks necessary for eagle studies can't be done in fixed-wing aircraft they ought not be done.

Visits by foot or by boat to a nest site, and up into a nest for banding purposes or other checks, even weekly for the whole of two seasons in one case, have not caused abandonment in any of my studies.

In our area operation of snowmobiles in the early part of the nesting period, especially at night, is suspected of being detrimental. It may be below zero here when eagles have eggs, at least below freezing. It would seem likely that A.T.V.s or O.R.V.s would also be disrupting especially early in the incubation period. Use of chain saws in the close vicinity of eagle nests might be detrimental too.

VII. I have read and re-read all of the documents provided. I am in agreement with the Bureau of Reclamation statement. "The future of the bald eagle in Arizona would seem to rest not on the locking up of vast areas of land under the label of critical habitat, but in learning just what factors within the habitat are actually the limiting ones and developing those factors where deficient." and with the following excerpt, "It offers no explanation of how the criteria used were arrived at and no basis for why the land so selected is critical to the survival of the species. In fact, it contains no biological information whatsoever. What are the habitat requirements of the Southern bald eagle? How are these requirements satisfied by the lands proposed for critical habitat designation? Why is this the most important and the minimal amount of habitat the species needs for survival as set forth in the recommendation?"

Further, I urge that the Fish and Wildlife Service join with as many other agencies and individuals as is necessary to carry out the "Program for Bald Eagle Conservation" as proposed by the Bureau of Reclamation. Especially, points 2, 3, 6, 7 of the inventory segment; points 6, 7, 8, 10, 11, 12 of the research segment and 1, 2, 5, 7 of the management segment should be carried out immediately.

Thank you for allowing me to make these comments.

Sincerely,

ALFRED H. GREWE,
Professor.

NEED

In Arizona we are using water almost twice as fast as the natural replenishment rate to support the State's existing population and economy. This is possible only by overdrawing our groundwater bank account. In the service area of the Central Arizona Project, we are overdrawing our groundwater resources at a rate of 1.8 million acre-feet per year. Obviously, this is a practice that cannot continue without limit. Unless we find a way to balance supply and demand a catastrophic day of reckoning lies ahead.

Phase II of the Arizona State Water Plan is at the printer's and should be available for distribution later this month. As soon as it becomes available I would like to file a copy as a part of the record of this hearing. In Phase II the Arizona Water Commission has attempted to articulate the alternative futures available to Arizona.

At this time I would like to show you in chart form some of the conclusions of the Phase II study as they relate to the counties that make up the principal service area of the Central Arizona Project. Those who oppose the CAP contend that we don't need the Project, that we have plenty of water without it. I believe that the charts that I will show you from the Phase II effort demonstrate the absurdity of this claim.

First let's look at the water supply situation in Pima County for the period 1970 to 2020. Bear in mind that Arizona's second largest city, Tucson, is located in Pima County and that one-quarter of the nation's copper is produced within its boundaries. The upper line marked Alternative I shows the water requirements associated with population projections of the Arizona State Office of Economic Planning and Development. This projection was selected by the Arizona Water Commission to represent the upper limit of what might be anticipated in the way of growth. Alternative II represents a median level of growth as projected by the Arizona Department of Economic Security. Alternative III represents median growth with a reduction in agricultural acreage to effect a balance between water supply and use.

The blue line, the lowest line on the chart, represents the dependable water supply. The difference between this line and any of the others represents the amount of overdraft or deficiency. The surge in the water supply line, the blue line, between 1985 and 1990 represents the supply added by the CAP.

In Alternative III for Pima County, all agricultural acreage has been retired by year 2000. Currently, use is occurring at a rate equal to 4.7 times dependable supply and results in an overdraft of approximately 270,000 acre-feet per year. In year 2000, were all agricultural uses of water retired the use rate would still be 3.3 times dependable supply. By year 2020, with modest growth and zero agriculture this imbalance would increase to 3.7 times dependable supply and an annual rate of overdraft of approximately 200,000 acre-feet per year would prevail. Under these circumstances, absent Central Arizona Project, there is no way that the water resources of the area can be managed to meet needs over a long period of time, short of retiring all agriculture and closing down all major industrial users of water. The only other alternative would be to move out a substantial number of those people living there today.

The next chart shows that with the Central Arizona Project delivering anticipated supplies to Pima County, balanced conditions are achievable with the retirement of agriculture. The introduction of this additional supply enables management of water resources and demands to achieve a balance. Without the introduction of CAP imports an acceptable management plan is impossible.

The third chart presents the water supply use situation in Pinal County where water today is being used 3.3 times as fast as Mother Nature replenishes it and an annual overdraft of 620,000 acre-feet per year is being experienced. With the importation of CAP water, overdrafting will be eliminated and a recharging of groundwater reserves will be experienced for a number of years, with the length of the period of recharge depending upon the actual growth rate experienced in the county. The chart shows that with the importation of CAP water and a retirement of agricultural lands under Alternative III, a balance between water supply and demand can be maintained throughout the study period. By year 2020 existing harvested acreage would have been reduced by approximately 40 percent.

The fourth chart shows the situation in Maricopa County. Currently, Maricopans are using water almost twice as fast as the replenishment rate so that an annual overdraft of slightly over 900,000 acre-feet per year results. With the importation of Colorado River water and a 61 percent reduction in harvested acres, it is possible to achieve balance between supply and use in Maricopa County.

A comparison of supply and use for the County as a whole, however, masks a multitude of institutional constraints to making existing agricultural supplies available for municipal use. Most of the dependable supplies available to Maricopa County attach to lands in the Salt River Project, the Roosevelt Irrigation District, and the Salt River Indian Reservation. The water rights to these supplies belong to the water users and landowners lying within the district and reservation boundaries and under existing laws and/or contractual constraints, these supplies cannot be moved to areas lying outside those boundaries. In any event, the studies of the Water Commission indicate that the full supplies available to the Salt River Project and Roosevelt Irrigation District will be required to meet the needs of urbanization within district boundaries.

As depicted on the next chart, the areas of Maricopa County that lie outside the Salt River Indian Reservation and the service areas of the Salt River Project and the Roosevelt Irrigation District have a very limited dependable supply. Current uses are over six times dependable supply and an annual overdraft of 770,000 acre-feet persists. Even if all agricultural lands were retired as shown under Alternative III a balance could not be achieved and an overdraft of 125,000 acre-feet per year would prevail by 2020.

The last chart shows that with the importation of Central Arizona Project supplies to the areas of Maricopa County that lie outside the boundaries of the Salt River Project, Roosevelt Irrigation District and Salt River Indian Reservation it is possible to balance supply and demand with a 66 percent reduction in the harvested acreage of agriculture. The 84,000 acres of harvested cropland remaining in year 2020 will permit maintenance of greenbelts in the major metropolitan areas of Maricopa County.

There is no practicable way of meeting the needs of this large area in Maricopa County or of the Tucson metropolitan area in Pima County other than completion of the CAP and importation of Arizona's remaining entitlement in the Colorado River.

Opponents of the Central Arizona Project argue that there is sufficient water available in central Arizona to support a population of 10 million people. Even if it were possible to disregard legal water rights, and it is not, and to collect and transfer at enormous costs the dependable water supplies currently in use by agriculture, the total annual dependable water supply of 1,245,000 acre-feet per year available to meet all uses within the three-county service area of the Central Arizona Project is clearly insufficient to meet the needs of 10 million people. At current per capita rates of use, this supply if devoted entirely to municipal needs would support only 3,713,000 people, a population which is rapidly being approached.

If existing use habits are changed and efficiencies of use improved to effect a one-third reduction in a per capita use rate from 300 gallons per day to 200 gallons per day, approximately 5½ million people could be supported by the supply currently available to central Arizona were all other uses eliminated. Of course we cannot eliminate water supplies necessary to support our industries or our jobs. Neither would it be desirable to eliminate our agricultural economy and the greenbelt environment that it provides.

The Central Arizona Project will increase Arizona's dependable water supply by 50 per-

cent. It will permit a two-thirds reduction in the current rate of overdraft in its service area. It will put us within reach of a balance between supply and demand, a balance that can then be achieved through the institution of changes in types of use and use habits.

With completion of the Central Arizona Project, 60 percent of Arizona's dependable supply will come from the Colorado River. Is it any wonder that every Governor, every Congressman, every Senator from the State of Arizona has supported the CAP and has worked tirelessly for its early completion? All members of Arizona's Delegation are here with me today; we are united in our commitment to do everything possible to see that funding is restored and that the Federal Government keeps its commitment to the people of our State.

[Charts attached not reproducible in the RECORD.]

SUPPLEMENTAL APPROPRIATION FOR THE CHALLENGE GRANT PROGRAM OF THE NATIONAL ENDOWMENT FOR THE ARTS

Mr. BROOKE. Mr. President, in a few days we shall be voting on the first supplemental appropriations bill for this fiscal year. Part of that measure provides increased funds for the National Endowment for the Arts and, most particularly, $12 million for the Endowment's vitally needed new challenge grant program.

The Endowment richly deserves these funds. It has participated, partnered, encouraged, and helped to guide a renaissance in the arts in our country with wisdom, discretion, and insight.

During this growth period, there has been a marked increase in the size of audiences and in the number and scope of cultural activities. And there has also been a growing recognition of the arts as a necessary prerequisite for a life of fullness and quality. That recognition is underscored by the fact that, for the first time in our history, both President Ford and President Carter in the last election campaign took an affirmative, active posture about the problems facing the arts and the need to make the arts more widely available to all Americans.

They knew when they took that stance what the cruel fiscal facts were. For there has been a frightening acceleration of costs in meeting the interest and demands of the American people in the arts. The earnings gap—the difference between the revenues from all sources and the operating costs of institutions and the exhibitions and productions they mount—has widened despite greater box office revenues, houses sold out almost continually, a shift in corporate and foundation giving to the arts, the enactment of municipal funding formulas to promote cultural activities, and substantial increases in State appropriations for the arts. In this last respect alone, State appropriations for the arts nearly doubled, from $34 million to $61 million, in the 2-year period between 1974 and 1976. And legislatures are proposing and expected to enact additional increases in 1977.

In the past 2 or 3 years it has become starkly apparent that these deficits of and in our great arts institutions are the overwhelming problem facing the arts in America today.

The litany of adverse examples mounts. We have all read of major dance companies in New York City who were forced to curtail their season because of rising costs which they simply could not absorb. And the problem of overwhelming deficits is not endemic to New York City alone.

The plight of arts institutions in my home State of Massachusetts is another poignant reminder of the precarious state of such institutions all across our country. One Bay State institution alone, the Boston Museum of Science, illustrates the problems faced by our cultural institutions. In the last 10 years, attendance at the museum has increased from 528,000 a year to 820,000. Yet at the same time, operating expenses more than doubled, increasing from $1.049 million to $2.476 million—the net result of which leaves a total deficit from $500,000 to $700,000 per year. Another major venerable cultural institution in Boston, the Museum of Fine Arts, is operating at a deficit of more than a half million dollars a year. The world renowned Boston Symphony Orchestra has a difference between earned income and operating expenses of $2½ million a year and even after fundraising drives and grants, has a yearly deficit of almost $750,000. These are some of the oldest, most established, and best managed institutions in the country. What is true of their finances is equally true of younger and less generously endowed institutions in Massachusetts and all the other 49 States.

And these deficits are occurring despite herculean efforts by the institutions themselves to hold expenses down in the face of inflation and increased demands. Staff has been reduced. Needed salary increases have been drastically cut or deferred. Physical plant repairs have been postponed. Admission prices have been increased. And in the cases of museums, hithertofore free to the public, admission charges have been instituted.

Often services have had to be cut, as the case with museums closing certain days and curtailing the evening hours which made it possible for more working people to enjoy the privilege of appreciating fine art.

But, only so much can be done to hold down costs. It is not possible simply to lop off a cellist or a couple of violinists in the Boston Symphony Orchestra without a corresponding cut in quality. It is not possible to remove guards from a priceless art collection. It is not possible for these often vast physical plants to avoid increased energy costs, which have quadrupled in Massachusetts in the last 4 years.

And I feel, with a conviction I cannot too strongly state, that there is one more alternative which is also not possible, and that alternative is further raising the price of admission to our arts institution. Indeed I fear, no I know, that too many people are already discouraged from attending arts performances because of the prices that are now being charged.

We cannot make enjoyment of the arts an elitist recreation, a byproduct of wealth. We must instead make it possible for those who love the arts, who want the joy and fulfillment they bring—of any and all incomes—to participate in cultural activities in America. And to insure this we must attack the problem of deficits and assure greater financial stability for our Nation's cultural institutions.

This problem of financial stability was the great challenge facing the Senate and House Education Subcommittees when the National Endowment for the Arts was reauthorized last year. And to solve this dilemma the Congress authorized a new Endowment program, the challenge grants.

Challenge grants will be one-time grants for up to 3 years. Their purpose is to help our cultural institutions mount campaigns which reach into their communities to encourage new contributors. And such campaigns do offer permanent succor, for pilot studies show that 75 percent of new contributors continue to give after the initial fund raising drive is over. That regenerating fact cannot be overemphasized.

Unlike most Endowment grants which require a dollar to dollar match, challenge grants will require three non-Federal dollars to match each Federal dollar. Thus, if the Congress appropriates the full $12 million of the Endowment's request for challenge grants in fiscal year 1977, that amount will generate $36 million in the first year and, according to fund-raising experts, $27 million in succeeding years. Very modest amounts of Federal money will therefore go a very long way in addressing the problem of negligible cash reserves which affects most of our cultural institutions and makes them particularly vulnerable to economic pressures.

Our cultural institutions have traditionally relied on many sources of financial support, and this pluralism must be sustained if they are to remain independent and vital. Challenge grants will strengthen these independent sources of funds and will put institutions on notice that they must be more concerned with long-range stable funding sources and in digging roots deeper into their communities. And the constituents of these institutions will be forced to recognize what a loss it would be in their lives if the cultural activities they enjoy and too often take for granted were no longer a part of their lives.

The need for the new challenge grant program is very immediate and very real. More than 350 applications have been received at the National Endowment requesting nearly $126 million in grants. Twenty-six institutions in Massachusetts alone have applied for challenge grants.

The first Endowment review, which eliminated those applications requiring more work, still brought total requests of $80 million. Even limiting funds to the very best applications, the Endowment's proposed funding of $12 million will fall far short of demand.

The challenger grant program is not intended to require more and more Federal dollars year after year. The program

is now authorized for 4 years and Nancy Hanks, Chairman of the Endowment, has testified that the job of providing our great cultural institutions with some measure of financial security can be accomplished within this 4-year timespan.

However, unless we act now, in a few years the situation will be so drastic that our arts institutions will be turning to the Congress in need of massive infusions of Federal funds.

That is why I truly believe it is essential that we appropriate at the very minimum the budget of $12 million for the new challenge grants. Regretfully, the House of Representatives has denied $3 million of the Endowment's request for challenge grants for fiscal 1977. Considering the overwhelming need for these funds, I urge my fellow Members of the Appropriations Committee and the Senate as a whole to restore the $3 million. I shall actively support the full $12 million both in committee and on the floor.

There are few programs, if any in government, that have rewarded Federal investment as well as moneys appropriated for the Arts Endowment—in terms not only of encouraging matching funds but also in creating and making it possible for new audiences to enjoy the arts all across our country, in the inner city as well as the wealthier suburbs, in small towns as well as larger cities. We have built in the Johnson, Nixon, and Ford administrations a magnificent beginning. A faltering Federal commitment at this time will jeopardize much of the good work that has been done and endanger the viability, if not the very existence, of some of our most treasured cultural and arts institutions. We must not allow this to happen.

LAWRENCE APPLEY AND THE AMERICAN MANAGEMENT ASSOCIATION

Mr. PERCY. Mr. President, in 1967, Finance magazine interviewed me and asked for my opinion of a prominent American on whom they were preparing a cover story and to whom they referred as "Management's Manager"—Lawrence A. Appley. Here is what I told them:

> There are few men in American business who have had a greater influence on me early in my career than Larry Appley. I attended the first president's seminar conducted by AMA and was greatly impressed with the philosophy that he espoused, his wisdom and his vision. He reaffirmed my own feeling that a corporation is more than bricks and mortar, but is essentially people, and it is the difference many times between a successful and an unsuccessful company.
>
> Under Larry Appley's guidance, AMA has helped convince American business that knowledge is power and that management is a profession.
>
> And now AMA has increasingly turned its attention to taking these principles abroad to strengthen the free world. AMA's impact has been great in the past and with the foundation laid by Larry Appley, will be even greater in the future.

On July 1, 1974, Lawrence A. Appley retired as chairman of the board of trustees of the American Management Association. He is now chairman emeritus. During his 26 years of leadership in this organization and his 46 years in the management profession he has made incalculable contributions to the philosophy and practice of management around the world.

Larry Appley became a member of AMA more than three dacades ago, when he left a faculty position at Colgate University for the Socony Mobil Oil Co. At that time AMA had only 45 employees and about 9,000 members, but it had already established a reputation for bringing together those who believed in—to use Larry Appley's words:

> The conscious, organized, systematic, and human approach to the performance of management responsibility as contrasted with a day-in-day-out, hit-or-miss, rule-of-thumb approach."

It was clear that AMA attracted Mr. Appley because it emphasizes making professional managers out of those who were merely running things.

One clear concept shaped his rise to the presidency of AMA and his subsequent rise to chairman of the board:

> Certainly, leaders are born, but so are they made, and there are not enough of them born. . . . There is a discipline of management that can be taught, and it not only will be taught—it has to be taught.

A seasoned practitioner of management in governmental as well as industrial settings—he served on various Presidential commissions—he stressed that "management is to be found in any segment of human activity," not just in business and industry.

His belief in the professionalization of management led to the establishment of a management course, an executive action course and a presidents' course, with which I was personally involved—as well as a unique program exposing young adults to the facts and realities of our system. All of these benefitted from Larry's personal involvement, although he tried never to forget the maxim that "management is getting things done through other people."

Those who attended the Appley lectures in the late forties and early fifties, and who read his books and columns, were hearing about the problems of the seventies. For example, in his very first "Scratchpad" column in the AMA's Management News—Now Manager's Forum—in 1948, he discussed a pressing issue of the times: inflation. "The causes of the inflation that now grips our economy are open to argument; it has been variously blamed on high wages, profiteering, the Government debt, and on combinations of these and other causes," he wrote. Then he zeroed in on the key question for AMA readers: "What is management's responsibility for inflation?" The answer: "The greatest potential for the defeat of inflation—is the power to produce more."

In 1951, he said:

> The emphasis now is on provision of human satisfactions out of work . . . This is attained by greater attention to human values, dignity, motivation and productivity.

He also wrote:

> An executive can no longer operate independently of the community in which he exists.

His decisions were always made with a firmness that caused one member of his family to remark on an occasion, "Dad may sometimes be wrong, but he's never in doubt." His strong personality often concealed his sensitive nature, and as a result, like all of us, he has had some detractors, but in his case also a host of devoted friends and admirers through the years—and I would not want to take second place to anyone in this category. Larry Appley was—and is—a humanist as well as a producer of results. As busy as he was, Larry never missed an opportunity to give recognition to his beloved wife Ruth, who became as dedicated to the AMA as he and whose passing last week brought both sorrow and recollections of happy times together to so many of us who knew and respected her.

In retirement, Larry Appley continues to keep an active and productive schedule, and he retains an intense interest in what he refers to as the management movement. In that movement, he himself has played an extremely significant part. I am pleased to pay tribute to him today in the U.S. Senate.

JAPAN'S AMBASSADOR TOGO'S VISIT TO ALABAMA

Mr. ALLEN. Mr. President, I view with optimism the visit to Washington this week of Prime Minister Takeo Fukuda of Japan who is discussing with President Carter economic and political problems of mutual concern and interest.

Alabama and Alabamians are directly concerned with these problems because the South traditionally has depended in great part on international trade for our livelihood. Alabama's interest in continuing good trade relations with our Japanese friends is heightened today because Japan has played a long-standing role as a top world customer for Alabama coal and agricultural exports, and in recent years Japanese companies have joined the growing list of businesses with industrial plants in our State.

Mr. President, just a few weeks ago Japan's Ambassador to the United States, Fumihiko Togo, and his wife, spent 3 days touring Alabama as the guest of Gov. George Wallace and the people of Alabama. On February 23, Ambassador Togo spoke at the annual dinner meeting of the Huntsville/Madison County Industrial Development Association in Huntsville, Ala. His remarks are pertinent to the talks now going on between President Carter and the Prime Minister and should be recommended reading for all Members of the Senate.

Mr. President, in order to make that possible. I ask unanimous consent that Ambassador Togo's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

JAPAN AND ALABAMA: PARTNERS IN ECONOMIC DEVELOPMENT

(Address by His Excellency Fumihiko Togo, Ambassador of Japan)

Only ten days after the inception of the new Administration in Washington, Vice

President Mondale was in Tokyo and had a very good talk with the new Prime Minister of Japan. The importance that President Carter attaches to the relations between our two countries is well understood and highly appreciated in Japan.

Japan and the United States have come a long way in the last three decades. This evening I should like to review with you where we stand in the economic partnership between my country and the State of Alabama.

We are honored to be guests this evening of your Industrial Development Association and to be able to see with our own eyes the remarkable results of your one-third-of-a-century of industrial-development efforts. We are especially pleased to see that Japanese private investment is beginning to play a partnership role in Alabama's economic development, in addition to Japan's long-standing role as a top world customer for Alabama coal and agricultural exports.

I have done some home-work before coming here and learned that Huntsville is a handsome and thriving city, the home of many diversified industries, elegant old landmarks, and a growing modern skyline. One statistic which caught my interest was that, between 1953 and 1973, per capita incomes in this city grew by 400 percent. That happens to be exactly the same as Japan's per capita income growth for that same period.

Even with this high growth rate, however, you have managed to avoid the blight which affects many industrial cities, including too many Japanese cities. You have also made yourselves one of the great medical and educational centers of the region, and a lively cultural center.

All these achievements are monuments to the quality of the people of this county, and of your leadership. I can say this with sincerity because I know that Japan's achievements also flow from the imagination, skills and energy of her own people, rather than from any accidents of nature. In fact, in our mountainous and crowded islands, we lack both the natural resources to feed our industries and sufficient arable land to feed our 115 million people. We must trade to survive, let alone to maintain our hard-earned position as the world's third most-productive economy, after the United States and the Soviet Union.

Whether in Alabama or in Japan, successful economic development requires an educated people, willing to work hard, take risks, and welcome competition in the pursuit of a better life for all. We call it free enterprise in both our countries, and it works well for both of us. It is also an important reason why we are partners in each other's economic development.

There are several levels at which this Japanese-American economic partnership works. The level closest to your interests is, of course, right here in the State of Alabama. Being an Ambassador, I am in no position to forecast whether, when, or how much, new Japanese investment will come to Alabama. These are private-sector decisions, made on hard-headed and competitive grounds. Besides, as you know, the outlook for new investment is still cloudy throughout the industrialized world, as we all struggle together to recover from the recent global recession and inflation.

But I can say, on the basis of talks I have had with Japanese industrialists who have visited Huntsville and other parts of Alabama and the Southeast, that the new American South holds great attractions for them. As Japanese manufacturing wages approach American levels, Japanese industry can consider more seriously your other assets of plentiful land, water, natural resources, energy and transportation, and your new-investment incentives. In addition, you demonstrate a free-enterprise spirit which is most appealing to Japanese businessmen.

I am confident about the future of the broader Japanese-American partnership, and for some of the same reasons, I have devoted a considerable portion of my diplomatic career to Japanese-American relations, the downs as well as the ups. I was involved in such uncomfortable problems as the textile dispute or other difficulties several years ago. But I also had a part in much happier developments, such as the reversion of Okinawa to Japanese administration, the most welcome visit of President Ford to Japan—the first such visit by an incumbent President—and the equally unprecedented visit to the United States of Their Majesties The Emperor and The Empress of Japan.

Viewed in the perspective of several decades, it is gratifying to note the steady strengthening of our ties. We have come to know each other better. We have learned to communicate with each other more easily. We have developed habits of consultation and cooperation which give power and effectiveness to our alliance, not only in our relations with each other, but also in the world at large.

There are problems or disagreements between us that have to be attended to. Our trading partnership is the largest and most diversified trade between any two overseas partners in history, doubling in value every five years or so. We have occasional frictions, such as the recent difficult negotiations over offshore fishing, and current complaints about the surge in American imports of color TVs and steel. Yet we have learned to deal with such problems responsibly and without passion, looking for mutually satisfactory solutions.

On the American side, there is now much wider appreciation of the fact that Japanese competition is no longer based on low wages and cheap prices. In fact, some of the best-known Japanese TV imports—along with Japanese cars, cameras and many other consumer products—actually sell at higher prices than comparable American products. American consumers, in other words, are willing to pay a premium for Japanese quality, design and performance.

I should add as a footnote that Americans ought to be very happy that the wage gap between this country and Japan is closing rapidly. This means that affluent Japanese consumers are demanding more American meat and food and feed grains—including Alabama soybeans. Greater Japanese leisure is creating a boom market for American sporting goods, and larger Japanese apartments have made room for American-scale home appliances.

On the Japanese side, there is now greater appreciation that it is not always good business to press a competitive advantage too far. Japanese exporters must be sensitive to the impact of any sudden increases in the volume of exports to a particular country. This is especially true in a period of general economic uncertainty and high unemployment throughout the industrialized world.

Both sides have learned one other vital lesson in recent years. This is the fact of our growing interdependence, not only with each other, but also with the rest of the global economy. It is no longer possible for any country, even the richly endowed United States, to go it alone. We all must turn somewhere else for material goods that are essential to our survival—oil, minerals, other industrial raw materials, food, and even the advanced technologies which form an increasingly important part of international trade. And we need each other's markets, under a free and fair division of international labor. The world economy is rapidly becoming indivisible.

This is the ultimate dimension of the partnership between Japan and the United States, the two largest and most dynamic economies in the free world. We have the responsibility to work together to insure that the future world economy will be an open trading system, where all nations will have fair access to each other's raw materials, manufactured goods, technologies, and markets. It must be a world system where people, ideas and capital can move freely, and where freedom itself is secure for future generations.

These are some of the topics that will probably be on the agenda when my Prime Minister, Mr. Fukuda, meets a month from now in Washington with President Carter. The same topics will also be pursued in a few months' time when the leaders of the largest industrial democracies—from Western Europe, North America and Japan—meet in the third West-plus-Japan summit in less than two years. The common challenge facing all of us is how to work harmoniously together to build a more stable, peaceful and prosperous world in which all peoples may share fairly in the Earth's resources, and the fruits of their own labor.

There is a direct connection in other words, between the partnership that is developing between Japan and Alabama, and the wider world mission of our two countries. On the basis of shared values, our two peoples are working together toward common goals of world economic development, and world peace and stability. With this common purpose, ours is a natural partnership between two vigorous, productive and freedom-loving peoples.

TESTIMONY ON DOMESTIC COMMUNICATIONS COMMON CARRIER POLICIES

Mr. GOLDWATER. Mr. President, although I did not appear as one of the witnesses at this morning's hearing by the Senate Subcommittee on Communications relative to the effect of and difficulties raised by domestic communications common carrier policies, I did submit a written statement for the committee record. I ask unanimous consent that the text of my statement may be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RESTORING THE FIRST PRINCIPLES OF THE COMMUNICATIONS ACT OF 1934

(Statement of BARRY GOLDWATER)

Mr. Chairman, I welcome your hearings into domestic communications common carrier policies.

Now, I see that one of your major purposes is to examine difficulties raised by these policies. Well, I can tell you that there are serious difficulties which you can look into.

One which is of tremendous importance to the entire nation and to millions upon millions of telephone users in this country is what effect new policies of the Federal Communications Commission will have upon the excellent system of universal, low-cost telephone service which the United States presently enjoys.

What will these decisions do to the quality of telephone service citizens now receive?

What will happen to the telephone rates of the vast majority of Americans if these policies continue?

What will the long term effect of such decisions be upon the general public's expectation of newer and improved products and services that they have begun to take for granted in their telephone service?

What will the impact be upon the 1,618 independent telephone companies that now serve a fifth of our population and half of our territory?

Mr. Chairman, I am referring to experiments with a very selective type of competition which the FCC began in the late 1960's.

The FCC first opened up the terminal equipment market in 1968 and then the inter-city private line market in 1969. The Commission promised that this would uniquely benefit certain customers by bringing new services to meet new needs. This, I say, is the theory behind the FCC's decisions.

However, the actual and potential consequences of those decisions is exactly the opposite. Competition is the wrong word. It is a propaganda word that diverts attention from what the FCC policy really does. For the "competitors" are unregulated and can pick and choose whom they will serve. They can cut or raise rates at will.

Actually, the competition has for the most part duplicated inter-city private line routes and services that were already supplied by the telephone companies. A somewhat larger variety of terminal equipment might have become available, but the overwhelming majority of this equipment is presently imported and may even have had an adverse effect on jobs in this country.

But, Mr. Chairman, the real problem is not in what has been done by the FCC to date. The serious question which must be confronted by this Committee is what effect these experimental policies will have on the telephone service and rates of the general public in the future.

Mr. Chairman, I have studied voluminous materials on this issue. I am convinced from this personal review that the almost totally universal system of low-cost telephone service, which is now available to Americans of all income groups and to residents of the most isolated places, is gravely threatened by the trend of FCC decisions.

Mr. Chairman, it is my feeling that there has been a sudden and giant shift in the direction of our nation's telecommunications policy. As I understand it, the purpose of the original Communications Act of 1934 was to provide the widest possible availability of high quality telephone service at the lowest feasible price to all of the public. If I am correct in this interpretation, then it is clear that the direction of recent FCC policies is contrary to this aim.

For this reason, I believe it is essential for Congress, as the elective representatives of all the people, to consider what is going on. Do we, the law-makers, want to change the course of national telecommunications policy—as is being done by the FCC? Do we wish to reaffirm the original purpose of the Communications Act of 1934?

We must focus on this issue. We must not allow an unelected agency to alter the future of the telecommunications industry beyond change without our approval.

Mr. Chairman, I personally want to reaffirm the 1934 law. But whatever the decision, it is the Congress as an institution who must make it.

Now, there are many factors which cause me to feel strongly on this issue. Not the least of them is proof that the average home telephone bills of Arizona's 2.3 million citizens may go up by more than 75 percent if the trend of FCC decisions is not halted. Also, I am shocked at evidence that rates in rural areas may increase even more, to over 85 percent. On top of that, I might note, there are taxes imposed on telephone service by some local goevrnments that will make these bills even higher.

Mr. Chairman, I am also surprised that anyone—be it a Federal Commission or any other body—would want to tamper with a telephone system that is far superior to anything seen in any other nation. Americans who have visited abroad will have a standard of reference and will know what I mean.

Advances have been made in the quality, convenience and even appearance of telephone service in the United States on a steady basis. These accomplishments have been accompanied by small price increases that have stayed far below the rises in the Consumer Price Index. In fact, average Arizona home telephone rates have gone up only by a total of 19% since 1954.

In fact, I believe it is fair to say that the telephone industry as a whole has performed exactly as proponents of a competitive, free-enterprise system would expect at its best. Costs have stayed low; reliability is outstanding; service is guaranteed without limit; and service is provided on a nearly universal basis.

Mr. Chairman, in view of the importance of the subject, I will discuss briefly the most common arguments used for the FCC policies and my answers to them.

First, it is said competition in terminal equipment and private line services will have an insignificant effect on telephone company revenues.

My answer is that FCC policies have not been fully felt at this time because the major portion of the terminal interconnection program has been stayed by the courts. Also, the more formidable, giant competitors have not yet entered the field.

Second, it is claimed the FCC policies are "pro-competition."

My answer is that what is happening is not competition. Other firms are being permitted to take only the profitable part of service without any obligation to furnish *all* services to *all* the public.

Moreover, this kind of unregulated competition would destroy many of the 1,618 independent telephone companies who now connect to the Bell System for long-distance service. There are seven independents operating in Arizona alone. If several of these independents go out of business, there will be *less* competition than exists in the industry today and *less* service available to home users.

Third, It is charged the telephone industry has arrogated to itself the decision to tax business and long-distance customers and allot the tax to home users.

Now, I believe this is a badly misinformed claim. For the present rate structure has evolved over a great many years and was not dictated by the telephone industry, but by various State regulatory Commissions. In my opinion, the telephone industry does wish to encourage the widest possible availability of service by keeping local rates low; but this aim has been mandated not by them but by official orders of State Commissions directing the telephone companies to derive most of allowed rate increases from their business users, rather than residential users.

Fourth, it is argued unregulated competition will promote a wider and better variety of services and equipment.

My answer is that, in fact, the predictable result of dividing up the most lucrative of the telecommunications market to competition by unregulated companies, who can pick and choose what business they wish to provide and who their customers may be, will hinder the introduction of high-capacity, and thus cost-saving, technology.

And, let us remember, it is the telephone industry who introduced electronic switching, satellite, communications, direct overseas dialing, Touch-Tone calling, and other advances. The telephone industry has not been a slouch in bringing forth innovations, and the implication is not substantiated that unregulated competition could do any better for the public than the telephone industry has already done.

Fifth, the charge is made that growth in the market will increase telephone company revenues faster than competition will cut into them.

My answer is that the only way telephone industry revenues could increase or keep pace with wide open competition from unregulated companies is by a *restructuring of rates* that will bring much higher phone bills to home customers and the likely destruction of numerous independent telephone companies.

This is the real question. What will unregulated competition do to the existing rate structure? And, how will home telephone service be priced if the trend of FCC decisions continues?

Sixth, it is argued there is no evidence residential service is supported by other services.

My reply is that the telephone industry has presented voluminous evidence that business and long distance service now help to offset the costs of home service.

Mr. Chairman, these studies prove that increased competition from unregulated companies would force the telephone companies to lower the price of services in these specialized fields. In turn, this would result in lower contributions from these services to home rates.

It is true that large businesses and higher income families who do a lot of long distance calling may gain, but charges will increase dramatically for the great bulk of telephone users with home phones. In fact, almost 90 percent of all home phone customers would pay more due to these policies! This is 60 million households.

Moreover, the payments independent telephone companies now receive from the Bell System for their part in handling long distance calls would be cut so drastically that many of these companies would be forced to go out of business. The independents typically depend upon the flow-through of toll payments for 70 to 85 percent of their revenues. For example, the Arizona independent telephone company which serves the most isolated Indian people in America, the Havasupai Indians who live at the bottom of the Grand Canyon, testified before Congress that it "could lose everything" if the trend of FCC decisions is not corrected.

Mr. Chairman at least eight different studies verify the potential for sharp rises in home telephone rates and the damaging impact of unregulated competition on independent telephone companies. These studies have been reviewed by several independent auditors and economists who verify the truthfulness of these conclusions and the reasonableness of the study methods.

These reports include a study by Systems Applications, Inc., a research firm previously used by the FCC. It was commissioned by the United States Independent Telephone Association and is entitled "Regulatory Policy Changes and the Future of the Independent Telephone Industry." The Final Report Abstract is dated January, 1976. It concludes that industry wide losses to independent telephone companies caused by FCC policies will grow to nearly $2.4 billion in 1985.

Also, Walter S. Baer and Bridger M. Mitchell, independent consultants to the Continental Telephone Corporation, have published a significant study bearing upon this issue. It is entitled "The Economic Impact of Competition on Telephone Operations in the Continental Telephone System" and is dated March, 1975. The study uses a methodology based on principles prescribed by the FCC and State regulatory commissions.

This study proves beyond any doubt that local residential service among Continental's two million customers required $59 of support from business and other services in 1974. This is a conservative estimate. Using

tions, the contribution required for residential customers is $68 annually, a major help in reducing home phone bills.

The Committee on Communications of the National Association of Regulatory Utility Commissioners, a body representing the State officials who are responsible for regua different approach followed by Dittberner Associates for the Office of Telecommunicalating local rates, also issued a report which accepted the conclusion that unregulated competition will have "a substantial adverse economic impact of local exchange telephone subscribers." This paper is called the Report After Investigation of May, 1974. The State Commissioners also adopted a resolution in March of 1976 declaring that recent FCC policies "serve to divert revenues which would otherwise flow to the benefit of the local basic telephone service consumer."

Then, there is the Arthur D. Little Study relative to the impact on technological progress of multiple suppliers in the telecommunications industry.

Also, we have the finding made by the Western Governors' Conference that the FCC is pursuing a policy of extending its jurisdiction in such a way as "to divert revenues that would otherwise flow to the benefit of the local basic residential telephone service customers." This appears in the Resolution for Support of Basic Telephone Service passed by the Western Governors' Conference in September of 1976.

And finally, there are the 1975 Residential Cost Study, the Business Exchange Cost Study, and the study relative to the Impact of Cost Pricing on Home Telephone Customers by the Bell System and the Bell Laboratories Multiple Supplier Network Study.

Mr. Chairman, I urge that you hold full scale hearings on this specific FCC policy. And, I believe the bill S. 530, which I am sponsoring with the Senator from Wyoming, Mr. Hansen, would be an ideal subject for those hearings.

THE GENOCIDE CONVENTION: A FUNDAMENTAL HUMAN RIGHT

Mr. PROXMIRE. Mr. President, for years now I have had difficulty understanding why the Senate will not ratify a human rights statement as fundamental as the Genocide Convention.

The treaty condemns the intent or attempt to eliminate the members of a particular race, religion, nationality, or ethnic background. It is a simple statement upholding the sanctity of life and human dignity for all people, regardless of their beliefs.

The world today has more people, more societies, and more conflicting beliefs than ever before. As our population continues to increase and life becomes increasingly complex, the need for mutual consideration and respect between nations becomes more and more urgent. Over 80 other nations have ratified the Genocide Convention, affirming their respect for life and the rights of individuals. Can we not do the same?

We are not faced solely with being one of many nations; we are a major world power. Our responsibility as a powerful economic leader is also to be a moral leader. As former President John F. Kennedy said, the United States "cannot afford to be materially rich and spiritually poor." What can be said for our spiritual strength if we fail to condemn such abhorrent acts as mass murders?

Mr. President, we must ratify the Genocide Convention at once. It is an embarrassment that we have not used our moral influence to advocate this fundamental human right.

"THE UNFINISHED AGENDA" OF ENERGY CONSERVATION

Mr. PERCY, Mr. President, Marquis Childs recently authored an article entitled " 'The Unfinished Agenda' of Energy Conservation." The article appeared in the February 15 issue of the Washington Post.

Mr. Childs describes a recent book published by the Rockefeller Brothers Fund entitled "The Unfinished Agenda." The book explains that "the energy well is running dry," and we must endeavor to become a "conserver society." Laurence Rockefeller has long been a prominent advocate for energy conservation, and I am very pleased that he is a member of the advisory board of the Alliance to Save Energy.

Mr. President, the imperative of energy conservation is unavoidable. Mr. Childs' analysis and comments deserve attention, and I ask unanimous consent that his article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"THE UNFINISHED AGENDA" OF ENERGY CONSERVATION

(By Marquis Childs)

No other family in America can remotely parallel the Rockefellers. The founding father, John D., used the most ruthless means to establish the Standard Oil Company, a nationwide monopoly subsequently broken up into regional and state Standards. The promotion of oil and gasoline by this giant monopoly helped to feed the auto economy that in one way or another has come to dominate at least a third of the nation's economic life.

Now the grandsons of John D., the beneficiaries of the ever-accumulating wealth that the founder established, have initiated a propaganda to conserve on basic energy sources, with oil and gas at the head of the list. This means drastic cutbacks toward a "conserver society," the phrase used in "The Unfinished Agenda," a 184-page book launched here with great fanfare and the presence of Laurence Rockefeller.

"The Unfinished Agenda" was financed by the Rockefeller Brothers Fund, a private philanthropy of the four Rockefeller brothers. The fund is only one of a number of Rockefeller philanthropies that cover just about every field of human endeavor from medicine to agricultural production.

One can speculate on what it was that led the conservation drive which has long been Laurence's speciality. Was it a carryover of the Baptist conscience that old John D. professed to the end of his long life? Or was it a realization that the sources of energy squandered in such reckless waste by American users are coming to an end? Or was it a combination of these motives that inspired the brothers to launch with their private fund propaganda for the "conserver society?"

In all probability it was a combination of motives such as have led the third generation of Rockefellers into public life, Nelson the conspicuous example, and a variety of good works. Certainly in the short book, the cornerstone of what will presumably be a continuing conservation effort, no doubt is left that the energy well is running dry.

Nor is any hope held out that the growing deficit can be made up by nuclear power. Quite on the contrary, according to the report. No safe means of storage has been found for the large amounts of radioactive waste that have very possibly a life of up to hundreds of millions of years. Already there are many examples of leakage of high level wastes in the 30 years that nuclear plants have tried to cope with the problem.

The nuclear materials now created by the ton may in a few more decades be created by the thousands of tons. They are readily available to those willing to take risks, the report points out, including subnational groups, terrorists and criminal syndicates. This is true not only in the U.S. but in countries the U.S. has encouraged and subsidized in nuclear technology.

The Rockefeller Brothers report takes a glancing blow at television, pointing out that the commercial message over 121 million television sets is that happiness is yours if only you could consume more. In this is a fine irony. The smooth voice of the Exxon commercial, Exxon being the biggest of the grandchildren of old John D.'s Standard Oil, is, "We're finding new forms of energy all the time and there's no reason for you to worry."

The tocsin has been sounded so often on the perils of pollution, waste, the drying up of the resource well, that one may ask whether the public has not long since grown indifferent to cries of alarm even though they come from such authoritative sources as were enlisted in preparation of "The Unfinished Agenda." But the example of the hardships inflicted in this bitter winter by the shortage of natural gas may hit harder than any words.

The report warns of an impending shortage of electricity with the likelihood of brownouts next summer. Even if it were not for the risks of accident or theft in nuclear power plants, the large amounts of capital required for nuclear development are a handicap hard to overcome in light of the drain on the capital market resulting from the huge Federal deficts.

It is hard to envision a nation of wasteful affluence converted to cautious scarcity. That would mean a radical change in national habits. There was loose talk about conservation after the oil embargo of 1973—car pooling or public transportation instead of the one passenger, one car. But little came of it, as the Federal government continued, in effect, to subsidize gasoline prices and the flow of oil, greatly increased in the past three years, from the Middle East, was resumed. But if the well is really running dry there will be no choice.

ENERGY ACTION NO. 10, FEA'S STRATEGIC PETROLEUM RESERVE PLAN

Mr. JACKSON. Mr. President, the Federal Energy Administration's strategic petroleum reserve plan is currently before the Congress for review under procedures specified in sections 159 and 551 of the Energy Policy and Conservation Act. This proposal, energy action No. 10, will become effective on midnight April 6, 1977, the 45th day after transmittal to the Congress, unless one House passes a resolution of disapproval.

The Senate Committee on Energy and Natural Resources held a hearing on the FEA plan on February 4, 1977, and materials further clarifying aspects of the plan generated as a result of that hearing were inserted in the RECORD of March 7, 1977, at page S3614. In addition, the General Accounting Office on February 16, 1977, released a report entitled "Issues Needing Attention in Developing the Strategic Petroleum Reserve." I subsequently asked the FEA to review the GAO report and provide the committee with comments on the questions GAO raised.

In the interest of providing Members of Congress and the public with the most complete information with respect to this issue, I ask unanimous consent that copies of my letter to FEA requesting an analysis of the GAO report, the GAO report itself and FEA's reply be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,
February 22, 1977.

Hon. JOHN F. O'LEARY,
Administrator, Federal Energy Administration, Washington, D.C.

DEAR MR. O'LEARY: On February 16, 1977 the Comptroller General transmitted to the Committee on Interior and Insular Affairs a report entitled "Issues Needing Attention in Developing the Strategic Petroleum Reserve". A copy of this report is enclosed.

GAO believes that the Strategic Reserve Plan submitted to Congress raises questions which require further analysis. As you know, the plan will be before the Congress for review as specified in the Energy Policy and Conservation Act for 45 days beginning March 22, 1977.

I believe that FEA should respond to the questions raised in the GAO report. Moreover, this response should be available for review by members of Congress well in advance of the effective date of the plan.

Therefore, I am requesting that you direct the appropriate personnel at FEA to carefully review the GAO report and provide the Committee with a full analysis of the points it raises.

In addition, your response should indicate the parts of the present plan—whether discussed by GAO or not—which, in your view, will require amendment at a later time and an assessment by you of the probable timing of submission of such amendments.

I expect you will agree that this matter deserves your prompt attention.

Sincerely yours,

HENRY M. JACKSON,
Chairman.

ISSUES NEEDING ATTENTION IN DEVELOPING THE STRATEGIC PETROLEUM RESERVE

FEDERAL ENERGY ADMINISTRATION

GAO's monitoring of the Strategic Petroleum Reserve Program has raised questions which need further analysis in three key areas.

FEA expects to spend up to $8 billion to establish a Reserve of 500 million barrels of crude oil—90 days of oil imports—by 1982. Unanswered questions regarding the relationship between the type of Reserve outlined by the agency and the 120-day reserve in industry crude oil and product stocks previously reported by the Government to the International Energy Agency need further analysis.

FEA plans to fill the Reserve by purchasing oil on the open market. There are options to the agency's planned open market purchases. Specifically, under certain circumstances oil produced from Outer Continental Shelf and onshore Federal leases—on which royalties are paid—and oil from the Naval Petroleum Reserve at Elk Hills could offer substantial cost savings to the Government.

The Reserve will be financed from general tax revenues. There are alternative ways of financing. Imposition of a user fee such as a tariff on imported oil or an excise tax on gasoline would result in those benefiting from the Reserve paying for it.

B–178205.

WASHINGTON, *D.C.*

To the President of the Senate and the Speaker of the House of Representatives:

This report discusses a number of issues pertinent to the effective development of the Strategic Petroleum Reserve. The authorization of this reserve is the major action which has been legislated so far to lessen U.S. dependence on imported oil. This report is intended to aid the Congress in its consideration of the Federal Energy Administration's Strategic Petroleum Reserve Plan which was submitted for congressional approval on December 15, 1976.

We made our review pursuant to the Budget and Accounting Act of 1921 (31 U.S.C. 53), and the Accounting and Auditing Act of 1950 (31 U.S.C. 67).

Copies are being sent to Mr. James R. Schlesinger, Assistant to the President; the Director, Office of Management and Budget; the Administrator of the Federal Energy Administration; the Secretaries of Interior, State, Defense, and Navy; the Chairman, Senate Committee on Interior and Insular Affairs; the Chiarman, House Committee on Interstate and Foreign Commerce; the Chairman, Subcommittee on Energy and Power, House Committee on Interstate and Foreign Commerce; and the Chairman, Subcommittee on Interior, House Committee on Appropriations.

ELMER B. STAATS,
Comptroller General of the United States.

ISSUES NEEDING ATTENTION IN DEVELOPING THE STRATEGIC PETROLEUM RESERVE—FEDERAL ENERGY ADMINISTRATION

DIGEST

By law, the Federal Energy Administration must create a Strategic Petroleum Reserve containing an estimated 500 million barrels of crude oil and/or petroleum products by December 1982. The purpose is to diminish U.S. vulnerability to the effects of a severe interruption in energy supplies and provide short-term protection from the consequences of interruptions in petroleum product supplies.

As part of the Reserve, an Early Storage Reserve is to be established to contain at least 150 million barrels of oil or products by December 1978. The Energy Policy and Conservation Act also gives the agency the authority to establish an Industrial Petroleum Reserve and a Regional Petroleum Reserve. The quantities of oil to be contained are to be part of, and not in addition to, the Strategic Petroleum Reserve.

The Federal Energy Administration submitted its Strategic Petroleum Reserve Plan to the Congress for approval on December 15, 1976.

The proposed Reserve will contain only crude oil which will be stored underground in salt dome caverns or in mines, primarily along the Gulf Coast. The agency expects to purchase the oil through normal Federal procurement procedures at near the national average composite price. The agency does not believe establishment of industrial and regional reserves to be necessary at this time. The estimated cost to design, construct, fill, and maintain the 500 million barrel Reserve through 1982 will be between $7.5 and $8 billion.

GAO recognizes the newness and complexity of the Strategic Petroleum Reserve Program and the time constraint placed on the Federal Energy Administration to develop its Plan.

In this report GAO identifies several issues which require further analysis and warrant consideration by the Congress before it formally approves the Plan. The issues relate to three basic questions.

Is a Strategic Petroleum Reserve of the type outlined in the Federal Energy Administration's Plan needed?

If so, how will the oil be purchased to fill it?

What ways other than general tax revenues are available to finance a Strategic Petroleum Reserve?

GAO plans to continue its monitoring of this Program because of its magnitude and importance as a cornerstone of national energy policy.

Is there a need for the type of strategic petroleum reserve as outlined in the Federal Energy Administration's Plan?

A Government-owned 500 million barrel Strategic Petroleum Reserve as planned by the Federal Energy Administration may not be needed because the potential exists for using industry crude oil and product stocks for the Reserve at significant dollar savings. As reported by the Government to the International Energy Agency, U.S. industries maintain commercially held stocks of crude oil and products equivalent to 120 days of oil imports. (See p. 3.) GAO has not determined the extent to which these stockpiles can be used to satisfy the objectives of the Strategic Petroleum Reserve. Such a determination should be made and adjustments made as necessary in the Strategic Reserve Program as currently planned.

In order for these inventories to be used effectively as part or all of a Strategic Reserve, the Government must impose controls so that specified quantities of oil are maintained and appropriately used in the event of an embargo. This system would be similar to the Government controlled and industry owned oil storage programs of France and Japan.

The Federal Energy Administration agreed that further analysis is needed regarding the extent to which industry inventories can be used during a severe supply interruption and is studying the matter. However, the agency stated that it would be inconsistent with the Energy Policy and Conservation Act to designate existing industry inventories as part of the Reserve and not develop any new Storage.

GAO believes that, if these inventories are usable the Federal Energy Administration should determine the extent to which they are legally available. If additional authority is neeed to allow their inclusion in the Reserve, the agency should seek such authority.

How should the Strategic Petroleum Reserve be filled?

The Federal Energy Administration intends to fill the Strategic Petroleum Reserve through purchase of oil on the open market at a price near the national average composite price. However, other options exist for acquiring the oil in addition to open market purchase.

Oil produced from Outer Continental Shelf and onshore Federal leases, and oil from the Elk Hills Naval Petroleum Reserve, under certain circumstances, offer substantial cost

savings to the Federal Government. If price controls remain in effect, significant savings can be incurred if such oil—on which royalties are paid—were purchased for the Reserve. For the approximately 356 million barrels of oil which could be purchased by the end of 1982, a savings of $3.08 a barrel totaling about $1.1 billion would result.

In its Plan the agency said a major reason for rejecting the purchase of such oil was because it would have an adverse financial impact on small refiners. However, such oil could be acquired with little or no adverse financial impact. Generally, the cost of crude oil to refiners is equalized by the agency's pricing regulations, regardless of the actual purchase price.

If the price of crude oil is decontrolled, the purchase of Elk Hills oil for the Reserve is a viable option. The Federal Energy Administration ruled against purchasing Elk Hills oil because during price controls its cost would be higher than the national average composite price and there would be little or no budgetary benefit compared with purchases at world prices. For January 1977, although the average Elk Hills selling price of $12.31 exceeded the projected national average composite price of $11.73, it is below the projected world price of $14.47. The agency maintains that under decontrol of oil prices, the price of domestic oil will rise to the world price. Based on information obtained by GAO, however, it appears that Elk Hills oil will remain below world oil prices under decontrol.

The Federal Energy Administration believes that using royalty oil for the Reserve is undesirable, but has no objection to using Elk Hills oil. The agency's position on royalty oil is that its use would result in indirectly passing some of the Reserve costs on to petroleum users since higher cost foreign oil would have to be obtained by the private sector as a substitute. The Federal Energy Administration points out that a particularly large share of the Reserve costs would be placed on a relatively few small refiners now obtaining a significant benefit from royalty oil.

Passing some of the Reserve costs to petroleum users should not preclude the agency from using royalty oil when it will result in reducing the costs of the Reserve. Minimizing Reserve costs is an objective of the Energy Policy and Conservaation Act. GAO disagrees that relatively few small refiners now obtaining royalty oil would bear a particularly large share of the Reserve costs.

How should the strategic petroleum reserve be financed?

The plan does not specify how the Reserve is to be financed; it implies that general tax revenues, largely personal and corporate income taxes, will be the source of financing. Consideration should be given to having those who will benefit directly from the Reserve bear its cost. This could be accomplished through imposing a user fee.

The benefits of the Reserve accrue to those who buy imported crude oil and the products derived therefrom by providing protection against the economic costs they would incur in the event of a supply interruption. GAO has not analyzed all available options for imposing a fee; however, it has identified two options—a tariff on imported crude oil and an excise tax on gasoline. (See p. 15.) Fees collected should be placed in the general funds of the U.S. Treasury and remain subject to congressional oversight.

The Federal Energy Administration stated that, as pointed out in the Plan, it is studying several options for financing the Reserve, including the options discussed by GAO.

CHAPTER 1—INTRODUCTION

The 1973–1974 Arab oil embargo demonstrated U.S. vulnerability to interruptions in imported petroleum supplies. FEA has estimated that the embargo and accompanying oil price increases resulted in a loss of up to $45 billion in gross national product and 500,000 jobs. Of the loss in the gross national product, FEA attributes up to $20 billion directly to the embargo. Future interruptions would likely have more severe impacts on gross national product, employment, and price indices than the 1973–1974 embargo since the economy has become increasingly dependent on imported oil and would likely be less able to adjust to a sharp decline in petroleum supplies.

The major action taken by the U.S. to provide protection against future oil embargoes has been the creation of a Strategic Petroleum Reserve under the Energy Policy and Conservation Act (P.L. 94–163). The Act requires FEA to develop a national plan, which must provide, by December 22, 1982, a Strategic Petroleum Reserve equal to the amount of crude oil imported into the U.S. during the three consecutive highest import months of 1974 and 1975—approximately 500 million barrels. The purpose of the Reserve as stated in the Act is to diminish U.S. vulnerability to the effects of a severe energy supply interruption and provide limited protection from the short-term consequences of petroleum product supply interruptions.

The Act also requires FEA to create an Early Storage Reserve and gives the agency authority to create an industrial and a regional reserve. The quantities of oil to be contained in these reserves are to be a part of, and not in addition to, the Strategic Petroleum Reserve.

The Early Storage Reserve is to contain at least 150 million barrels of petroleum products by December 22, 1978. FEA submitted its Early Storage Reserve Plan to the Congress on April 22, 1976.

On December 15, 1976, FEA submitted its Strategic Petroleum Reserve Plan to the Congress for approval as required under the Act. The Plan details FEA's proposals for designing, constructing, and filling the Reserve. The Plan calls for the Reserve to contain only crude oil to be stored in underground salt dome caverns or in mines, primarily located along the Gulf Coast. FEA expects to purchase the crude oil to fill the Reserve through normal Federal procurement procedures at near the national average composite price. FEA does not plan to establish industrial and regional reserves at this time. FEA estimates that through 1982, the cost to design, construct, fill, and maintain the 500 million barrel Reserve will be between $7.5 and $8 billion.

We recognize the newness and complexity of the Strategic Petroleum Reserve Program and the time constraint placed on FEA to develop its Plan for submission to the Congress. On April 26, 1976, the Administrator, FEA, formally requested GAO to monitor the agency's efforts in developing the Strategic Petroleum Reserve Program. GAO has been closely monitoring FEA's planning and development activities. In carrying out its work, GAO has received excellent cooperation from FEA's Office of Strategic Petroleum Reserve.

In our review of the Plan, we have identified several issues which we believe require further analysis by FEA and warrant consideration by the Congress in its deliberations over approving the Strategic Petroleum Reserve Plan. The issues identified by us relate to three basic questions.

Is a Strategic Petroleum Reserve of the type as outlined in FEA's Plan needed?

If so, how will the oil be purchased to fill it?

What ways other than general tax revenues are available to finance a Strategic Petroleum Reserve?

Scope of review

We interviewed FEA officials, reviewed the Strategic Petroleum Reserve Plan and related FEA records, and reviewed legislation pertinent to the Strategic Petroleum Reserve Program. We also interviewed officials of the Department of the Interior; Central Intelligence Agency; and Office of Naval Petroleum and Oil Shale Reserves, Department of the Navy.

GAO plans to continue its monitoring of the Strategic Petroleum Reserve Program because of its magnitude and importance as a cornerstone of national energy policy.

CHAPTER 2—IS THERE A NEED FOR THE TYPE OF STRATEGIC PETROLEUM RESERVE AS OUTLINED IN FEA'S PLAN?

GAO has supported the concept of a system of national emergency energy reserves to guard against future disruption of oil imports. GAO continues to support the concept. However, at this point, we believe unanswered questions still exist regarding whether the Strategic Petroleum Reserve Program as outlined in FEA's Plan is the most efficient approach. FEA's approach calls for the creation of a new centralized, Government-owned and controlled Reserve. With 500 million barrels of oil, this Reserve would make the U.S. essentially invulnerable to a loss of 45 percent of its imports for approximately six months. FEA cost estimates for such a Reserve are between $7.5 and $8 billion.

We believe that another approach may be available for creating a Reserve which was not given sufficient consideration by FEA. This approach relates to the use of industry crude oil and product stocks. To the extent that industry stockpiles could be used to offset the purchase of 500 million barrels of oil and related storage facilities, significant savings would result to the Federal Government.

Entirely separate from the new Strategic Petroleum Reserve Program, U.S. industries maintain commercially held stocks of crude oil and products equivalent to 120 days of oil imports. The U.S., through the Department of State, reported these stocks to the International Energy Agency, founded in November 1974 by 19 industrial oil-consuming nations. These nations entered into an Agreement on an International Energy Program to reduce members' vulnerability to oil supply interruptions through emergency allocation planning, encouragement of energy conservation measures, and the maintenance of oil stockpiles. Under the agreement, member countries are required to maintain emergency reserve stockpiles equivalent to at least 60 days of oil imports and are to increase these stockpiles to an equivalent of 90 days of oil imports by 1980. The U.S., however, has reported its stockpiles to be well in excess of these requirements.

According to the agreement, the oil stockpiles may be satisfied by

Oil stocks,

Fuel switching capacity, and

Stand-by oil production.

Oil stocks include crude oil, major refined petroleum products, and unfinished oils stored in refinery tanks, bulk terminals, pipeline tankage, barges, intercoastal tankers, oil tankers in port, inland ship bunkers, and storage tank bottoms. They also include working stocks and stocks held by large consumers as required by law or otherwise government controlled. Stocks excluded are crude oil not yet produced and crude oil, major refined petroleum products, and unfinished oils held in pipelines, rail and truck

tank cars, sea-going ship bunkers, service stations, retail stores, and tankers at sea. Also, excluded are stocks held by other consumers and the military.

Fuel switching capacity is defined as normal oil consumption that can be replaced by other secure fuels in an emergency. In addition, this capacity must be (1) subject to government control in an emergency and (2) able to be brought into operation within one month.

Stand-by oil production is defined as a member country's potential domestic oil production in excess of normal oil production. This production must be subject to government control and be able to be brought into use during an emergency.

We did not analyze in detail the 120-day oil stockpile reported by the U.S. to the International Energy Agency nor the extent to which it can be used to satisfy the objectives of the Strategic Petroleum Reserve Program.

FEA maintains that it is misleading to assume that U.S. industry has inventories equal to 120 days of oil imports because much of industry inventories are not usable and are required just to keep the distribution system functioning, e.g., oil in pipelines, domestic ships and barges in transit, tank botttoms, etc. However, FEA's position is questionable, unless the U.S. has reported emergency energy reserves to the International Energy Agency that are not in fact usable as reserves. It is questionable to consider the 120-day stockpile as reserves for the purpose of meeting the requirements of the International Energy Agency and then disregard it in making a decision on the nature of a domestic Strategic Petroleum Reserve.

To the extent the stockpiles and the facilities included in the 120-day stockpile are usable, Government costs of the Strategic Petroleum Reserve Program would decrease. Additionally, it would appear that the Program would be accelerated and environmental problems associated with facility construction reduced.

At present, the Government has no control over industry inventories. However, if these inventories are to be used for the Strategic Reserve, then Government controls must be imposed to insure that specified quantities of oil are maintained and that they will be appropriately used in the event of an embargo. During the 1973–1974 oil embargo, industry stocks increased rather than decreased. This was likely due to the anticipation that oil prices would rise once the embargo was lifted. The prices did, in fact, rise substantially; and, unless the Government can require industry to draw down its stocks during future embargoes, it is possible that industry will increase stocks again rather than draw them down to offset the impact of an embargo.

While such authority does not now exist, the concept of a government controlled/industry owned oil storage program is not new. Government controlled/industry owned oil storage programs currently exist in other countries, but responsibility and control of these programs involve a variety of relationships. While West Germany is a combination of government and industry control, France and Japan control the storage facilities with industry owning and operating them. By contrast, the Strategic Petroleum Reserve Program as proposed by FEA will be owned and operated by the Federal Government.

The U.S. would have to adopt a relationship similar to that of the programs of France and Japan if it chooses to use the industry stockpiles in lieu of, or as a part of, the Strategic Petroleum Reserve Program.

In comenting on a draft of this report, FEA agreed that further analysis is needed regarding the extent to which industry inventories can be used during a severe supply interruption and stated that it is no undertaking a major study for this purpose. FEA stated this analysis may impact future decisions regarding the ultimate size of the Reserve if it is concluded that more or less reliance should be placed on industry inventories as a partial substitute for the Reserve. FEA expressed concern, however, that the draft report suggested that it should have considered existing industry inventories for part or all of the Reserve.

FEA stated that it believes the intent of the Energy policy and Conservation Act is to provide for additional petroleum storage over and above the amounts normally maintained by industry. FEA further believes it would be inconsistent with the Act to simply designate existing industry inventories as part of the Reserve and not develop any new storage.

As discussed above, and as agreed to by FEA, GAO believes that further analysis is needed to determine the extent to which the 120-day industry stockpile, as reported to the International Energy Agency, is unusable in lieu of, or as part of, the Strategic Petroleum Reserve. If these inventories are usable, FEA should determine the extent to which they are legally available consistent with the requirements of the Energy Policy and Conservation Act. If additional authority is needed to allow their inclusion in the Reserve, FEA should seek such authority.

The Energy Policy and Conservation Act requires FEA to establish a Reserve equivalent to 90 days of crude oil imports—500 million barrels. FEA assumes that the 500 million barrels would make the U.S. essentially invulnerable to a loss of 45 percent of its crude oil imports for approximately 180 days. However, to the extent the industry stockpile equivalent to 120 days of total oil imports could be used, the need for a Government-owned Reserve would be reduced or eliminated.

CHAPTER 3—HOW SHOULD THE STRATEGIC PETROLEUM RESERVE BE FILLED?

FEA intends to fill the Reserve by purchasing oil on the open market at a price near the national average composite price through sale proposals from all potential oil sellers—both foreign and domestic. We believe that other opportunities exist in addition to or in lieu of open market purchase. We have identified the following:

Acquisition of royalty oil produced from Outer Continental Shelf and onshore Federal leases, and

Acquisition of oil from the Elk Hills Naval Petroleum Reserve.

Acquisition of royalty oil

Royalty oil from Federal Outer Continental Shelf and onshore oil leases could be used—directly or through exchange agreements—for filling the Reserve. Under applicable laws, the Federal Government may collect all royalties in kind, i.e., as oil or natural gas, from Outer Continental Shelf and onshore Federal oil producing properties. According to officials of the Department of the Interior, the Federal Government presently collects less than 50 percent of its oil royalties in kind. These officials advised us that for fiscal year 1976, if the Federal Government had collected all of its oil royalties in kind, it would have collected about 74 million barrels. Royalty oil production is expected to remain about the same through 1982.

During fiscal year 1976, the Federal Government collected about 34 million barrels of oil in liue of royalty payments. It sold this oil to small refiners at an average price of $7.95 a barrel—the average price for total royalty oil production. As of September 1976, the most current information available, the average price for a barrel of royalty oil was $7.66. As of January 1977, 55 small refiners had contracts with the Department of the Interior to purchase royalty oil. Most of these small refiners do not physically take possession of the royalty oil because they are not located near the royalty oil producing properties. Instead, they enter into exchange agreements with other refiners to exchange their royalty oil for oil which is more accessible to them.

FEA considered acquiring royalty oil for filling the Reserve and concluded that it is not as desirable as the currently planned oil purchase policy. Reasons for this conclusion as stated in the Plan were:

It would adversely impact financially on small refiners now relying on access to royalty oil.

It would be necessary to terminate existing Interior Department royalty oil contracts to use this oil.

The supply of royalty oil is not sufficient for the Strategic Reserve, and even if this approach were adopted, other oil would be required.

Transportation costs for moving this widely dispersed oil to any market will be substantially greater than the cost of unloading ocean tankers into Reserve facilities.

The reasons cited by FEA, in our opinion, do not adequately reflect the royalty oil situation, as discussed below.

Adverse financial impact on small refiners

We believe that royalty oil could be used for the Reserve with little or no adverse financial impact on small refiners. Generally, the cost of crude oil to refiners is equalized by FEA pricing regulations, regardless of the actual purchase price.

FEA's crude oil pricing regulations are designed to substantially equalize average crude oil costs at the refinery level through the use of entitlements which permit refiners to share the benefits associated with access to price controlled crude oil. Under the regulations, all refiners report monthly to FEA their volume of crude oil processed and the volume of price controlled oil included in the refiners' crude oil receipts. FEA issues each refiner enough entitlements to permit it to process the national average ratio of price controlled oil to total crude oil processed. Generally, refiners with a ratio of price controlled oil higher than the national price controlled oil supply ratio must buy entitlements to cover the excess; whereas, refiners with a lower ratio must sell entitlements for the amount they are under the national ratio. Therefore, the average cost to refiners with less than the average amount of price controlled oil is reduced because of the money they receive from the sale of entitlements. On the other hand, costs to those who process more than the average price controlled oil ratio are increased because they must purchase entitlements.

The regulations also contain an entitlement adjustment for small refiners in addition to the entitlements otherwise issued to which grant them access to price controlled crude oil. According to an FEA official, this adjustment allows small refiners to acquire oil, on the average, for $.54 a barrel less than the cost of oil to other refiners after entitlements.

The sales price of entitlements is determined by FEA each month based on the difference between the weighted average cost of decontrolled oil (imported oil, stripper well oil and oil produced from the Naval Petroleum Reserves) less $.21[1] less the weighted average cost of price controlled oil.

[1] The $.21 is the amount fixed by FEA regulation to give domestic oil a price advantage over imported oil (and decontrolled oil) and thus provide refiners an incentive to purchase domestic oil.

FEA, however, grants to small refiners "exceptions relief" from the regulations when they can demonstrate that compliance with the program would cause them financial hardship. Exceptions relief means that these refiners do not have to buy entitlements if they have more price controlled oil than the national ratio. As a result, their crude oil costs, on the average, are lower than those of other refiners.

Currently, there are 19 small refiners who are getting full or partial exceptions relief. As of mid-January 1977, 13 of these refiners had contracts with the Department of the Interior to purchase royalty oil. These contracts are all scheduled to expire in mid-1979 and total 32,399 barrels a day or about 12 million barrels a year. It is apparent, therefore, that only the refiners getting exceptions relief and having royalty oil contracts would be adversely affected—13 of 55 small refiners—if royalty oil were not available to them and they could not obtain comparable priced oil elsewhere. Other refiners with royalty oil contracts would not be adversely affected—42 of 55 small refiners—because their prices are, in effect, equalized by FEA's pricing regulations.

Termination of existing royalty oil contracts

In its Plan, FEA stated that use of royalty oil would require the termination of existing Interior Department royalty oil contracts with refiners. As pointed out above, of the 74 million barrels of royalty oil produced in 1976, only 34 million barrels were sold under contract to small refiners. All of these contracts are scheduled to expire by mid-1979. Until mid-1979, the royalty oil not under contract—40 million barrels—could be used for the Reserve. After mid-1979, the additional 34 million barrels could be used, making the total annual royalty oil production of 74 million barrels available for use.

Royalty oil supply

FTA in its Plan stated that the supply of royalty oil is not sufficient for the 500 million barrel Strategic Petroleum Reserve, and even if this approach were adopted, other oil would have to be purchased. We agree with FEA on this position. However, in our view there is a substantial supply of royalty oil available and to the extent that royalty oil is acquired, significant cost savings to the Federal Government would result as discussed below.

Assuming the 13 small refiners' contracts totaling 12 million barrels a year are not terminated before their mid-1979 expiration date and not renewed; royalty oil could provide 356 million of the 500 million barrels for the Reserve by the end of 1982, based on FEA's schedule for filling the Reserve. If, on the other hand, their contracts were renewed after mid-1979, royalty oil could provide 314 million barrels.

The cost savings associated with the purchase of royalty oil are very significant when compared to the purchase of oil at the national average composite price and are greater still when compared to the world price. Comparing costs for September 1976—the most current month for which royalty oil prices are available—the per barrel savings associated with acquiring royalty oil rather than acquiring oil under FEA's current plan would be $3,08. This is the difference between the price FEA would have paid to acquire oil in September 1976 under its current plan ($11.04) and the price of royalty oil plus transoprtation costs ($7.68+$.30). Applying this $3.08 savings to the 314 or 356 million barrels of royalty oil that could be provided by the end of 1982 (depending on the treatment of the 13 small refiner contracts), savings would range from about $967 million to $1.1 billion.

It should be pointed out, however, that the savings are contingent upon royalty oil remaining under price controls. Royalty oil is priced significantly below the national average composite price because it is subject to price controls. Therefore, as long as price controls remain in effect, acquiring royalty oil for filling the Reserve will result in significant savings.

Transportation costs for royalty oil

In its Plan FEA stated that transportation costs for moving royalty oil to any market will be substantially greater than the cost of unloading ocean tankers into Reserve facilities because royalty oil is more widely dispersed. In our view, the more valid approach would be to compare the costs of transporting royalty oil to storage facilities on the Gulf Coast with the costs of transporting the oil FEA plans to purchase to the same storage facilities. In any event, as pointed out above, the total cost of purchasing royalty oil including transportation costs of $.30—FEA's estimated average transportation cost for domestic oil—is substantially less than the natonal average composite price of oil. Additionally, if royalty oil were acquired for the Reserve, the Federal Government would not be precluded from entering into exchange agreements with other refiners to trade the royalty oil for oil which is more accessible to the storage sites.

Acquisition of Elk Hills oil

Elk Hills Naval Petroleum Reserve contains estimated reserves of 1.2 billion barrels of oil. Under its current developmnet plan the Navy expects Elk Hills to reach its maximum efficient rate of production of 300,000 barrels a day by April 1979. Elk Hills oil is free of price controls under the Naval Petroleum Reserves Production Act of 1976 (P.L. 94–258), and is sold competitively on the open market. In our view, contingent upon decontrol of oil prices and Elk Hills oil remaining below the world oil price, Elk Hills oil has the potential for filling a portion of the Reserve at considerable cost savings to the Federal Government.

FEA does not expect to use Elk Hills oil to fill the Reserve because it would have higher budget costs than the national average composite price during price controls and would have little or no budgetary benefit compared with purchases at world market prices.

Based on pricing data obtained from FEA, the projected national average composite price of crude oil for January 1977 is $11.73 a barrel. This is below the Navy's average January 1977 selling price for Elk Hills oil of $12.31 a barrel. Therefore, at this time, Elk Hills oil is more expensive than oil purchased at the national average composite price.

FEA stated in its Plan that use of Elk Hills oil would have little or no budgetary benefit compared with oil purchased at world market prices. Elk Hills oil, however, is priced blow the world price. The projected January 1977 world oil price is $14.47 a barrel compared to the average Elk Hills January 1977 sale price of $12.31 a barrel.

FEA has stated that, if domestic prices are decontrolled, domestic oil will rise to the world price. However, based on information obtained by us, it appears that Elk Hills oil, under decontrol, will remain below world prices. We were advised by an official of the Office of Naval Petroleum and Oil Shale Reserves, Department of the Navy, that West Coast decontrolled crude oil prices have historically been below average domestic decontrolled crude oil prices and are expected to remain lower primarily due to the excess oil supply on the West Coast. Given that excess, Elk Hills oil would be expected to be priced below the world price. According to Navy and FEA officials, California producers have been complaining that they have had to shut in producing wells because refiners were canceling contracts with them and purchasing Elk Hills oil.

FEA, in commenting on a draft of this report, stated that although using royalty oil to fill the Reserve is undesirable, it has no objection to purchasing Elk Hills oil.

With respect to royalty oil, FEA stated that the issue of whether to use royalty oil is not really a question of how to fill the Reserve but part of the question of how the Reserve should be financed. FEA commented that using royalty oil would be an undesirable approach because of the inequitable distribution of the impact and the potential disruption of established supply relationships for small refiners. FEA's position is that using royalty oil for the Reserve would be an indirect way of passing some of the Reserve costs on to petroleum users since higher cost foreign oil would have to be obtained by the private sector as a substitute. In this case, FEA points out that a particularly large share of the Reserve costs would be placed on a relatively few small refiners now obtaining significant benefits from royalty oil.

FEA's statement that use of royalty oil would indirectly pass some of the Reserve costs on to petroleum users may be true; however, this should not preclude the agency from using royalty oil when it will result in reducing Reserve costs. In this connection, the Energy Policy and Conservation Act requires that FEA, to the greatest extent practicable, acquire petroleum products for the Reserve with the objective of minimizing its costs. We believe that royalty oil, when purchased at costs less than FEA would otherwise have to pay, is consistent with that objective.

As far as the indirect financing issue which the agency believes would exist, we believe it to be part of a broader question of how the Reserve should be financed which is discussed in Chapter 4. FEA's position that use of royalty oil would be undesirable for the reasons stated appears inconsistent with its Plan which concludes that if changes in the availability or the cost of royalty oil make it attractive, FEA will use it to meet a portion of Reserve requirements. This conclusion was reaffirmed by the Administrator, FEA, on February 4, 1977, in hearings on the Plan before the Senate Committee on Interior and Insular Affairs.

Contrary to FEA's position that use of royalty oil would result in inequitable distribution of the impact and place a large financial burden on a relatively few small refiners, we believe this not to be the case. As discussed on page 8 of this report, royalty oil could be used for the Reserve with little or no adverse financial impact on small refiners. Royalty oil contracts for the 13 small refiners receiving exceptions relief from FEA's entitlements program need not be terminated. In addition 40 million barrels of royalty oil are produced annually which are not being sold under contract to small refiners. In any event, all contracts that small refiners currently have with the Federal Government to purchase royalty oil are scheduled to expire in mid-1979.

With respect to use of Elk Hills oil, FEA stated that it has no objection to purchasing Elk Hills oil, to the extent it is suitable for storage and it costs no more than other available oil. FEA further stated that it would make cost comparisons as it proceeds with the purchase of oil for the Reserve.

We agree that cost comparisons should be made. Additionally, we believe that Elk Hills oil is suitable for Reserve storage. We were advised by an official of the Navy's Office of

Naval Petroleum and Oil Shale Reserves, that 75 percent of Elk Hills oil production will be of the quality specified by FEA in its Plan as being the most desirable for Reserve storage.

CHAPTER 4—HOW SHOULD THE STRATEGIC PETROLEUM RESERVE BE FINANCED?

FEA's Plan does not explicitly state how the Reserve will be financed; however, it implies that the Reserve will be funded from general tax revenues. We believe that consideration should be given to having those who will benefit directly from the Reserve bear its cost. In our view this can be accomplished through imposition of a user fee, such as a tariff on imported oil or an excise tax on gasoline.

If the Strategic Petroleum Reserve Plan is implemented the costs will be great. FEA estimates that the 500 million barrel Reserve will cost between $7.5 and $8 billion. As discussed in Chapter 3, the costs could be reduced by acquiring royalty oil or Elk Hills oil to fill the Reserve. Even if Government-owned crude oil is used, substantial cost will be involved to create the Reserve.

FEA's Plan implies that general tax revenues, largely personal and corporate income taxes, will be the source of financing for the Reserve. However, it is both efficient and equitable to pay for public services through "user fees" when the users of a service can be identified and the fee collection is administratively feasible. The Strategic Petroleum Reserve is an insurance policy for all U.S. buyers of imported crude oil and through them, all consumers of petroleum products. It "insures" those who buy imported crude oil (and products derived therefrom) against the economic costs they would incur in the event of a disruption in supply. It may also prevent embargoes from occurring at all. The benefits of this insurance and protection are directly received by the users of imported crude oil and petroleum products. We believe that it is reasonable to tax users of imported crude oil and the products derived from it to pay the costs of the Reserve. While we have not analyzed all available options for imposing such a fee or tax, we have identified two such options for consideration—a tariff on imported crude oil and an excise tax on gasoline.

There may be several ways to establish a user fee. Perhaps the simplest would be a flat rate indexed to inflation. A flat rate could be imposed for a set period, i.e., five years, and be renewed only if collections were insufficient to cover actual Reserve Program expenditures plus any expected additional costs. For instance, if imports averaged 2.5 billion barrels annually over the next five years which is slightly less than 1980 projections, a tariff of $.60 a barrel would result in $7.5 billion being collected over a five-year period. In the case of an excise tax on gasoline, if gasoline consumption were to remain at current levels—105 billion gallons annually—over the next five years, an excise tax of 1.5 cents a gallon would result in over $7.5 billion being collected in a five-year period. Actual collections would depend both on the amount of the tariff or excise tax and the quantity of oil imported or gasoline consumed. It is our view that the fees collected should be placed in the general funds of the U.S. Treasury and remain subject to congressional oversight.

A tariff of $.60 a barrel would cause about a 4 percent rise in the cost of imported crude oil. Under FEA's entitlements program, this increase would, in effect, be spread equally among refiners purchasing domestic as well as imported crude oil, and the additional costs would be passed through ultimately to all users of petroleum products. This price increase would have a modest upward impact on domestic prices of petroleum products, probably about 0.8 cents a gallon.

Both a tariff and an excise tax are advantageous in that they are administratively feasible to collect. A tariff on imported oil would be more equitable than an excise tax on gasoline. The tariff would ultimately be paid by all consumers of petroleum products and, therefore, by those who would directly benefit from the Reserve. However, the excise tax would place the cost burden only on consumers of gasoline. The tariff is an indirect tax on consumers; whereas, the excise tax is a direct tax and more visable to the consumer.

In commenting on a draft of this report, FEA stated that, as pointed out in the Plan, it is now studying several options for financing the Reserve, including the two options discussed by GAO.

CHAPTER 5—SUMMARY

FEA is required to create a Strategic Petroleum Reserve containing an estimated 500 million barrels of crude oil and/or petroleum products by December 1982. On December 15, 1976, FEA submitted its Strategic Petroleum Reserve Plan to the Congress for approval. This Plan details FEA's proposals for designing, constructing, and filling the Reserve. The Plan states that the Reserve will contain only crude oil which will be stored underground in salt dome caverns or in mines, primarily along the Gulf Coast. FEA expects to purchase the crude oil through normal Federal procurement procedures at near the national average composite price. FEA states in the Plan that the estimated cost to design, construct, fill, and maintain the 500 million barrel Reserve through 1982 will be between $7.5 and $8 billion. These funds will be generated from general tax revenues.

We believe reasonable questions exist as to the need for a Reserve of the type outlined in FEA's Plan. In our view, far more serious consideration needs to be given to the potential for using industry crude oil and product stocks for the Reserve.

The U.S. Government, through the Department of State, has reported to the International Energy Agency that U.S. industries have crude oil and product stocks equivalent to 120 days of oil imports. We do not know the extent to which it is feasible to use the entire 120-day industry stockpile for the Reserve. However, we believe the extent to which these reserves could be used should be determined and adjustments made as necessary in the Strategic Petroleum Reserve Program as currently planned by FEA. In order for these inventories to be used effectively as part or all of a Strategic Reserve, the Government must impose controls to insure that specified quantities of oil are maintained and that they will be appropriately used in the event of an embargo.

FEA agrees that further analysis is needed regarding the extent to which industry inventories can be used during a severe supply interruption and is studying the matter. However, FEA believes that it would be inconsistent with the Energy Policy and Conservation Act to designate existing industry inventories as part of the Reserve and not develop any new storage.

We believe that, if these inventories are usable, FEA should determine the extent to which they are legally available. If additional authority is needed to allow their inclusion in the Reserve, FEA shoud seek such authority.

FEA plans to purchase oil for the Reserve at near the national average composite price. We believe that alternative oil purchase options should be considered; specifically, royalty oil produced from the Outer Continental Shelf and onshore Federal leases and oil from Elk Hills. We believe that as long as price controls remain on domestic oil, royalty oil could be acquired to fill the Reserve and would result in significant dollar savings with little or no adverse financial impact on small refiners currently contracting for royalty oil.

At current prices, acquisition of Elk Hills oil to fill the Reserve is a more costly approach than oil acquired under FEA's current plans. However, if domestic oil is decontrolled and reaches the world price, we believe Elk Hills oil is a desirable alternative if its price continues to remain below the world price.

FEA believes that using royalty oil for the Reserve is undesirable, but has no objection to using Elk Hills oil. FEA's position on royalty oil is that its use would result in indirectly passing some of the Reserve costs on to petroleum users since higher cost foreign oil would have to be obtained by the private sector as a substitute. FEA points out that a particularly large share of the Reserve costs would be placed on a relatively few small refiners now obtaining a significant benefit from royalty oil.

Passing some of the Reserve costs to petroleum users should not preclude FEA from using royalty oil when it will result in reducing the costs of the Reserve. Minimizing Reserve costs is an objective of the Energy Policy and Conservation Act. We disagree that relatively few small refiners now obtaining royalty oil would bear a particularly large share of the Reserve costs.

FEA plans to finance the Reserve from general tax revenues. We believe that it may be more efficient and equitable to have those who will benefit directly from the Reserve bear its costs. This could be accomplished through imposing a user fee such as a tariff on imported oil or an excise tax on gasoline. In addition, it is GAO's view that the fees collected should be placed in the general funds of the U.S. Treasury and remain subject to congressional oversight.

FEA is studying several options for financing the Reserve, including the options discussed by GAO.

FEDERAL ENERGY ADMINISTRATION,
Washington, D.C., February 10, 1977.

Mr. MONTE CANFIELD, Jr.,
Director, Energy and Minerals Division,
General Accounting Office, Washington, D.C.

DEAR MR. CANFIELD: This letter is to confirm the key comments that we provided to your staff on February 9, regarding the General Accounting Office's draft report on the Strategic Petroleum Reserve (SPR).

Our principal comments are as follows:

1. Use of Industry Inventories:

The draft report suggests that the Federal Energy Administration (FEA) should have considered using existing industry inventories for part or all of the SPR. FEA believes that the intent of the Energy Policy and Conservation Act was to provide for additional petroleum storage, over and above the amounts normally maintained by industry. We believe it would not be consistent with the Act to simply designate existing industry inventories as part of the SPR and not develop any new storage.

We agree, however, that further analysis is needed regarding the extent to which industry inventories can be utilized during a severe supply interruption. We are now undertaking a major study of industry inventories for this purpose. This analysis may impact future decisions regarding the ultimate size of the Reserve if it is concluded that we should place more or less reliance on industry inventories as a partial substitute for the Reserve. The current SPR Plan

proposes to place considerable reliance on industry inventories, as discussed in Chapters II and V.

2. Use of Royalty Oil:

The issue of whether to use royalty oil is not really a question of how we fill the Reserve. It is a part of the question of how the Reserve should be financed. If FEA were to use royalty oil for the Reserve it would simply be an indirect way of passing some of the SPR costs along to petroleum users. If FEA used the low cost royalty oil, higher cost foreign oil would have to be obtained by the private sector as a substitute. In this case, a particularly large share of the SPR costs would be placed on a relatively few small refiners who now obtain a significant benefit from the royalty oil.

We are now studying several possible options for financing the SPR, but we believe that using royalty oil would be an undesirable approach because of the inequitable distribution of the impact and the potential disruption of established supply relationships for small refiners.

3. Use of Elk Hills Oil:

As explained to your staff, FEA has no objection to purchasing Elk Hills oil, to the extent it is suitable for SPR storage, if it costs no more than other oil available for storage. We will make these cost comparisons as we proceed with the purchase of oil for the SPR.

4. Financing the Reserve:

As we stated in the SPR Plan, FEA is now studying several options for financing the Reserve Program, including the two options suggested in your report.

We appreciate the opportunity to comment on the draft report, and we look forward to the continued useful input from your staff on this important Program.

Sincerely,

THOMAS E. NOEL,
Assistant Administrator Strategic Petroleum Reserve.

PRINCIPAL OFFICIALS RESPONSIBLE FOR ADMINISTERING ACTIVITIES DISCUSSED IN THIS REPORT

FEDERAL ENERGY ADMINISTRATION

Administrator, and tenure of office:

John F. O'Leary, February 1977 to present.

Gorman C. Smith (Acting), January 1977 to February 1977.

Frank G. Zarb, December 1974 to January 1977.

John C. Sawhill, April 1974 to December 1974.

William E. Simon, December 1973 to April 1974.

FEDERAL ENERGY ADMINISTRATION,
Washington, D.C., March 16, 1977.

Hon. HENRY M. JACKSON,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your letter of February 22, 1977, concerning the General Accouting Office's (GAO) report dealing with the Strategic Petroleum Reserve (SPR).

The GAO analysis raised three major issues, which are addressed below in the order of their presentation in the report.

Is there a need for the type of Reserve as outlined in the Federal Energy Administration's (FEA) Plan?

GAO cites the commercially held stocks of crude oil and product which have been reported to the International Energy Agency (IEA) by the United States, and suggests that FEA consider use of these stocks to the maximum extent possible, thereby possibly reducing the need for Government reserves.

In analyzing the requirement for the reserve, FEA reviewed the commercially held stocks and estimated that about 60 million barrels of crude oil stocks could be used to assist in responding to an interruption. No use of refined product stocks was planned because of the uncertainty regarding the impact on the industry and the economy of such use.

FEA was directed by the Energy Policy and Conservation Act (P.L. 94–163) to establish a reserve to reduce the impact of severe energy supply interruptions. FEA's interpretation of this mandate is that impacts on the economy should be minimized to the maximum extent practicable.

Based on preliminary studies that FEA was able to do last year, it was estimated in the SPR Plan that only about 20 percent of the crude oil inventories could be relied upon as a partial substitute for the SPR. It was concluded that we needed to thoroughly analyze the ability to draw down industry inventories without causing significant economic impacts before deciding whether any additional inventories could be utilized as a partial substitute for the SPR. A major study is now being undertaken by FEA to try to obtain a better understanding regarding the ability to draw down those inventories. If our analysis indicates that substantial industry inventories are available to assist in offsetting an interruption, this will be reflected in future recommendations or Plan amendments on the size of the Reserve.

Conceptually, there are three classes of inventories in the petroleum industry: absolutely unavailable inventories; inventories to maintain deliveries under normal conditions; and buffer stocks.

Unavailable stocks include tank bottoms (i.e., sludge and water which have dropped to the bottom of tanks over a period of years) and pipeline charge and line fill. Both of these represent inventories which cannot be used during an embargo. Tank bottoms, of course, are not usable for any purposes, while pipeline charge cannot be used without shutting down operations or eventually interrupting the flows of crude and product. They must be recharged if the system is to work.

The last estimate of unavailable inventories made by the National Petroleum Council in 1974 estimated that 70 percent of crude and 32 percent of refined product inventories are absolutely unavailable.

Inventories are also required to maintain delivery schedules under normal and known conditions, e.g., if demand, supply, and delivery schedules could be known with absolute certainty. Because many demands in the petroleum industry, e.g., refinery feedstocks, are relatively constant over time, while deliveries are made in large quantities at specific points in time (crude tankers), inventories can be expected to fluctuate at any one site from the largest delivery quantity to zero, while, on average over time, the inventory level is one-half the delivery quantity. This inventory is required at every point in the distribution system, from crude deliveries to refineries through bulk plants, and represents the largest portion of all inventories. Further, these inventories can be expected to fluctuate on a seasonal basis. For example, distillate inventories would be expected to be higher in November than in May, in order to meet home-heating delivery requirements during the winter.

If these normal, delivery-time related inventories were used during an embargo, severe impact would occur after their use. Premature or accelerated use at one time would eventually result in shortages and stockouts later on in the delivery system. The only way to prevent these stockouts, once these normal inventories had been used prematurely, is to make deliveries in smaller quantities in shorter periods of time. The ability to do this is unknown.

Finally, the petroleum companies maintain buffer or safety stocks, over and above normal inventory requirements, to deal with uncertainty. A stockout means a lost sale and a potential lost customer for the oil companies. Thus, these safety stocks guard against vagaries such as colder-than-normal winters, frozen rivers, etc. These safety stocks may be available during an embargo if the other uncertain events do not come to pass.

It has not been possible to estimate how much safety stock might exist and be available during an embargo, since the analysis is required on a site-by-site basis. However, to approximate the amount of safety stocks, a range estimate of the maximum possible safety stock was made. To do this, we reviewed inventory data from 1972 to the present. By month and by product, the lowest inventory and the highest inventory were noted. We assumed that the lowest inventory recorded represents that amount of inventory which is necessary to allow smooth functioning of the distribution system, while the difference between the highest and lowest represents the maximum amount of safety stock ever available under the most favorable circumstances. Even this estimate may be very optimistic. The low inventory levels are almost all for 1973 and 1974, when spot shortages developed. Thus, the low inventory values may be less than that required to adequately maintain the distribution system. Similarly, the high inventory levels for each product occur at different years; never were all the high figures simultaneously reached. As a result, the high side is an overstatement.

The results of this rough analysis show that the maximum crude buffer stock, under optimum conditions, is in the range of 41 to 74 million barrels over the course of a year. For products, the range is from 79 to 124 million barrels.

These inventories would only be available under "favorable" conditions preceding an embargo (e.g., warm winter, an unpredicted slowdown of the economy), and it may be risky to rely upon them to avoid economic impacts.

The fact that the United States has reported all of these inventories to the IEA does not mean that they can be considered a strategic stockpile. Rather, as required under IEA rules, all oil stocks are reported using IEA defined criteria. With these criteria, the member countries report oil stocks—including crude oil, major refined petroleum products, and unfinished oils stored in refinery tanks, bulk terminals, pipeline tankage, barges, intercoastal tankers, oil tankers in port, inland ship bunkers, and storage tank bottoms. It is commonly accepted among the member countries of IEA that the days of reserve calculated using this aggregate data greatly overstate the actual days a country could continue normal operations based on these reserves.

Enclosure 1 contains a more detailed explanation of the industry inventory levels reported to the International Energy Agency, and the basis for that system.

In analyzing inventory availability, we have reviewed the changes in inventory levels during the 1973–1974 embargo. The data indicate that industry inventories during that crisis did not substantially differ from normal operations. There were no dramatic drawdowns of products, despite the shortages experienced. Data on industry inventory levels are shown in the first table in Enclosure 2, comparing in detail the embargo period of 1973–1974, with the winter of 1975–1976. The simi-

larity of stock levels is marked. The second table in Enclosure 2 shows a complete monthly history of crude and major product stocks from 1969 through our most recent reporting month, November 1976, and we see no major changes of primary inventories in terms of days-of-supply in any product compared with the years prior to the 1973–1974 embargo. The table does show that inventories of some products were relatively low just prior to the 1973–1974 embargo, which may have affected the ability of the industry to make further reductions at that time.

How should the SPR be filled?

The second question raised by GAO concerns how the SPR should be filled. Both Elk Hills oil and royalty oil are suggested by GAO as sources for filling the reserve.

Elks Hills oil is being considered for the reserve, and will be used if it is found to be cost effective. Steven's Zone oil is compatible with the types of oil planned for storage in the reserve, but transportation costs to the Gulf Coast may make the use of this oil more expensive than selling it in West Coast markets and using the revenues to buy oil that is more accessible to the SPR. The Navy recently sold Elk Hills oil for an average price of $12.31 per barrel. with higher bids for some of the more desirable oil. With transportation costs to the Gulf Coast, this oil may be more costly than obtaining other oil at world market prices, and it would be substantially higher than the national composite average price.

The possible use of royalty oil for the SPR is a much more complex issue. It is discussed in some detail in Enclosure 3. In brief, FEA continues to believe that the use of royalty oil would have an undesirable impact on small refiners as well as significantly disrupt established supply relationships and create an administration burden for the Government.

The use of royalty oil would be one means of passing a portion of the SPR costs along to petroleum users. If the Government takes that oil, the private sector will have to replace it with higher priced imports. It now appears that there are more appropriate and less disruptive ways to finance the SPR. The GAO report suggested two options, an oil import tariff or an excise tax on gasoline, which would remove any reason to use royalty oil. The SPR Plan proposes to revise the Crude Oil Entitlements Program to permit purchase of the SPR oil at the national composite price and pass a portion of the SPR costs along to petroleum users. This approach achieves all of the benefits of using royalty oil, while avoiding the impact on small refiners and the disruption of established supply arrangements.

FEA believes that any further consideration of the possible use of royalty oil should be in the context of options for financing the SPR, and we will be studying this further as part of the review of alternatives for financing the reserve, as discussed below.

How should the SPR be financed?

The third major issue discussed in the GAO report concerns financing the reserve. The report questions the use of general tax revenues, and suggests that the cost of the reserve should perhaps be paid by the beneficiaries of the program.

FEA does not disagree with the arguments for this type of financing. On the other hand, there are precedents for financing major strategic programs of this type by means of general tax revenues. We also have found in our study of this question that it is very difficult, if not impossible, to identify the real beneficiaries of the SPR. As we have informed GAO, we are now studying alternatives for financing the reserve, including the import tariff and excise tax options discussed in the GAO report. We expect to provide a review of our analysis and conclusions in the Annual Report to the Congress on the SPR Program in December.

Possible Amendments to the SPR Plan.—You requested information on the parts of the present SPR Plan which, in my view, will require amendment at a later time, and my assessment of the probable timing of submission of such amendments.

At this time I have made no final decisions regarding specific amendments to the Plan now being reviewed by the Congress, but several amendments are likely:

The President has decided to propose an accelerated schedule for developing the reserve. This proposal would provide for 250 million barrels in storage by the end of 1978, and 500 million barrels by the end of 1980. This is expected to result in some amendments to the Plan, which would likely be submitted in the next couple of months.

The Plan will be amended to include more details regarding the Distribution Plan, including more specific transportation plans. We now plan to be able to submit the amendment by December 15, 1977.

Upon completion of the above details of the Distribution Plan and a reexamination of the need for regional product storage and storage in noncontiguous areas, there may be a need to submit a Plan Amendment regarding regional or noncontiguous area storage. We expect to be able to submit a report on the results of this reexamination by December 15, 1977.

When the final storage sites have been selected for the SPA, a Plan Amendment or Amendments will be submitted, with full descriptions of the selected sites. We expect that most or all of the sites will be selected by early 1978.

I appreciate this opportunity to comment on the GAO report and to inform the Committee of our plans. We will be pleased to respond to any further requests you may have for elaboration or other information.

Sincerely,

JOHN F. O'LEARY,
Administrator.

AN ANALYSIS OF INDUSTRY RESERVES AS REPORTED BY THE UNITED STATES TO THE INTERNATIONAL ENERGY AGENCY

Under an international agreement of November 1974, which includes the United States and 18 other industrial oil-consuming nations, members have agreed to three commitments designed to help reduce the effects of a petroleum supply interruption. These commitments include:

1. Building emergency reserves consisting of oil stocks, fuel-switching capacity, and standby oil production;

2. Developing demand restraint programs; and

3. Allocating total available oil supplies (domestic production and imports, but would not include the Strategic Petroleum Reserve) in order to share a shortfall evenly among member nations.

This paper addresses the first commitment listed above, building emergency reserves, which has consisted exclusively to date of measuring oil stocks. At the present time, IEP members are expected to maintain emergency reserves of at least 70 days. By 1980, these reserves are supposed to increase to 90 days. The latest United States report to the International Energy Agency would indicate that as of September 1976, the U.S. had oil reserves in excess of 120 days.

The General Accounting Office (GAO) in a recent report to the Congress on the Strategic Petroleum Reserve (SPR) questioned the need for an SPR as proposed in the plan submitted to the Congress by the Federal Energy Administration.

A major area for GAO questioning concerned the proposed size of the SPR given that "U.S. industries maintain commercially held stocks of crude oil and products equivalent to 120 days of oil imports." This estimate of reserves was based on earlier information provided by the United States to the IEA. Following is an analysis of the data used to arrive at the measurement of days of industry inventory reserve for purposes of the IEA reporting.

BASIS FOR REPORTING

Even prior to the 1974 International Energy Agreement, the European Common Market countries were reporting petroleum stocks through the Organization for Economic Cooperation and Development. When the IEA was founded, those countries insisted on many of the same counting conventions to which they were accustomed. It is commonly accepted among the member countries that the days of reserves calculated using this aggregate stocks data overstate the actual days a country could continue normal operations based on these reserves. This practice has been accepted for a number of reasons.

Although the IEA specified that member nations will have 70 days of reserves (90 by 1980), current "real" estimates of actual usable reserves are only around 20 days. Most countries (including the U.S.) would not be able to identify those quantities of stocks that could actually be used during an emergency. Given this difficulty, the U.S. pushed for the 90 day level by 1980 with the intent that 90 days as reported to the IEA would perhaps provide each country with a 30 day cushion of actual reserves.

METHODOLOGY FOR REPORTING

Data showing stocks, imports, exports, etc. of crude and petroleum products are obtained from the Bureau of Mines, restated by FEA according to IEA requirements and then submitted to the IEA in the form shown in the attached tables. The IEA uses these data to calculate days of sufficiency according to the following methodology:

Stocks of crude oil less 4 percent (average IEA naptha yield) plus *stocks of refined product* multiplied by 1.065 (crude equivalent conversion factor) equals crude equivalent *less 10 percent* (to account for unavailable stock equals available supplies.

Available supplies divided by average daily net imports of last calendar year equals the number of days of self-sufficiency.

The major problem with these data is determining the usability of these stocks. A step was taken to improve this accounting with adoption of the guidelines established in the annex "Emergency Reserves" to the Agreement on an International Energy Program (see attached).

That annex identifies stocks accepted as unavailable, and which are excluded from total supplies reported. There continue to be a number of stocks, however, which are still counted as available which obviously are not, such as 100 percent of those in working stocks. As indicated above, the IEA attempts to compensate for this definition weakness by deducting 10 percent from the crude equivalent figure in calculating available supplies. No country, including the United States, has devised a better method of accounting for unavailable stocks. Nevertheless, based on a number of National Petroleum Council surveys, the percentage of petroleum stocks found to be necessary for continuing refinery operations and product deliveries varies from 60 to 98 percent—the latter figure based on the most recent survey (1974 stocks).

CONCLUSION

While the U.S. figures reported to the IEA conform to IEA definitions, and are consistent with data provided by other IEA member nations, they should not be taken at face value, i.e., used as estimates of actual days of supply available to the United States during a supply interruption.

It also is important to recognize that even if inventories can be reduced during an emergency, this may cause distribution problems and shortages, with severe economic impacts. The purpose of the SPR is to reduce the vulnerability of the United States to these impacts.

OECD—QUARTERLY OIL AND GAS QUESTIONNAIRE

REPORT 48-1: SUPPLY OF OIL PRODUCTS, LAST QUARTER (PROVISIONAL DATA): 3D QUARTER 1976—TOTAL, UNITED STATES

	LPG	Naphtha	Gasolines		Kerosenes		Gas/diesel oil	Fuel oil	Other products	Total
			Aviation type	Other	Aviation type	Other				
A. Refinery gross output (including refinery fuel)	2,173	1,015	2,698	76,272	8,783	1,566	7,453	47,119	23,836	170,915
B. Plus imports (from report 2A and 2B)	771	2	17	416	612	34	60	16,283	856	19,051
C. Minus exports (from report 3A and 3B)	157	169	1	27	0	0	0	62	1,055	1,471
D. Minus international marine bunkers	0	0	0	0	0	0	75	3,903	0	3,978
E. Minus deliveries in international civil aviation	0	0	0	0	1,210	0	0	0	0	1,210

ANNEX—EMERGENCY RESERVES

ARTICLE 1

1. Total oil stocks are measured according to the OECD and EEC definitions, revised as follows:

A. Stocks included: Crude oil, major products and unfinished oils held in refinery tanks; in bulk terminals; in pipeline tankage; in barges; in intercoastal tankers; in oil tankers in port; in inland ship bunkers; in storage tank bottoms; in working stocks; and by large consumers as required by law or otherwise controlled by Governments.

B. Stocks excluded:

(a) Crude oil not yet produced.

(b) Crude oil, major products and unfinished oils held in pipelines; in rail tank cars; in truck tank cars; in seagoing ships' bunkers; in service stations and retail stores; by other consumers; in tankers at sea; and as military stocks.

2. That portion of oil stocks which can be credited toward each Participating Country's emergency reserve commitment is its total oil stocks under the above definition minus those stocks which can be technically determined as being absolutely unavailable in even the most severe emergency. The Standing Group on Emergency Questions shall examine this concept and report on criteria for the measurement of absolutely unavailable stocks.

3. Until a decision has been taken on this matter, each Participating Country shall subtract 10 percent from its total stocks in measuring its emergency reserves.

4. The Standing Group on Emergency Questions shall examine and report to the Management Committee on:

(a) the modalities of including naphtha for uses other than motor and aviation gasoline in the consumption against which stocks are measured,

(b) the possibility of creating common rules for the treatment of marine bunkers in an emergency, and of including marine bunkers in the consumption against which stocks are measured,

(c) the possibility of creating common rules concerning demand restraint for aviation bunkers,

(d) the possibility of crediting towards emergency reserve commitments some portion of oil at sea at the time of activation of emergency measures,

(e) the possibility of increasing supplies available in an emergency through savings in the distribution system.

ARTICLE 2

1. Fuel switching capacity is defined as normal oil consumption that may be replaced by other fuels in an emergency, provided that this capacity is subject to government control in an emergency, can be brought into operation within one month, and that secure supplies of the alternative fuel are available for use.

2. The supply of alternative fuel shall be expressed in terms of oil equivalent.

3. Stocks of an alternative fuel reserved for fuel switching purposes may be credited towards emergency reserve commitments insofar as they can be used during the period of self-sufficiency.

4. Stand-by-production of an alternative fuel reserved for fuel switching purposes will be credited towards emergency reserve commitments on the same basis as stand-by oil production, subject to the provisions of Article 4 of this Annex.

5. The Standing Group on Emergency Questions shall examine and report to the Management Committee on

(a) the appropriateness of the time limit of one month mentioned in paragraph 1,

(b) the basis of accounting for the fuel switching capacity based on stocks of an alternative fuel, subject to the provisions of paragraph 3.

ARTICLE 3

A Participating Country may credit towards its emergency reserve commitment oil stocks in another country provided that the Government of that other country has an agreement with the Government of the Participating Country that it shall impose no impediment to the transfer of those stocks in an emergency to the Participating Country.

ARTICLE 4

1. Stand-by oil production is defined as a Participating Country's potential oil production in excess of normal oil production within its jurisdiction which is subject to government control, and which can be brought into use during an emergency within the period of self-sufficiency.

2. The Standing Group on Emergency Questions shall examine and report to the Management Committee on

(a) the concept of and methods of measurement of stand-by oil production as referred to in paragraph 1,

(b) the appropriateness of "the period of self-sufficiency" as a time limit,

(c) the question of whether a given quantity of stand-by oil production is of greater value for purposes of emergency self-sufficiency than the same quantity of oil stocks, the amount of a possible credit for stand-by production, and the method of its calculation.

ARTICLE 5

Stand-by oil production available to a Participating Country within the jurisdiction of another country may be credited towards its emergency reserve commitment on the same basis as stand-by oil production within its own jurisdiction, subject to the provisions of Article 4 of this Annex provided that the Government of that other country has an agreement with the Government of the Participating Country that it shall impose no impediment to the supply of oil from that stand-by capacity to the Participating Country in an emergency.

ARTICLE 6

The Standing Group on Emergency Questions shall examine and report to the Management Committee on the possibility of crediting towards a Participating Country's emergency reserve commitment mentioned in Article 2, paragraph 2, of the Agreement, long term investments which have the effect of reducing the Participating Countries' dependence on imported oil.

ARTICLE 7

1. The Standing Group on Emergency Questions shall examine and report to the Management Committee regarding the reference period set out in Article 2, paragraph 1, of the Agreement, in particular taking into account such factors as growth, seasonal variations in consumption and cyclical changes.

2. A decision by the Governing Board to change the definition of the reference pe-

riod mentioned in paragraph 1 shall be taken by unanimity.

ARTICLE 8

The Standing Group on Emergency Questions shall examine and report to the Management Committee on all elements of Chapters I to IV of the Agreement to eliminate possible mathematical and statistical anomalies.

ARTICLE 9

The reports from the Standing Group on Emergency Questions on the matters mentioned in this Annex shall be submitted to the Management Committee by April 1, 1975. The Management Committee shall make proposals, as appropriate, to the Governing Board, which, acting by majority, not later than July 1, 1975, shall decide on these proposals, except as provided for in Article 7, paragraph 2, of this Annex.

COMPARATIVE ANALYSIS OF SELECTED PETROLEUM STATISTICS FOR THE OIL EMBARGO PERIOD AND THE MOST RECENT COMPARABLE PERIOD

[Primary inventories in thousands]

Selected Product Stocks	Year	October	November	December	January	February	March	April

ROYALTY OIL

ROYALTY OIL SUPPLY AVAILABILITY

The GAO report states that 74 million barrels (MMB) per year of royalty crude oil is and will be available through 1982 for use for the Strategic Petroleum Reserve. GAO indicates that of 74 MMB total, 34 MMB is presently supplied in kind to the Federal Government by Federal leaseholders. This royalty crude is contracted out for sale by the U.S. Geological Survey (USGS) to 55 small refiners. The remaining 40 MMB of royalty crude is marketed and sold by leaseholders along with their own oil production. The proceeds from the sale of the Government share of production from these leases is forwarded to the USGS.

USGS sources predict that royalty oil production will reach approximately 76 MMB in 1976, and is expected to decline thereafter. The breakdown of royalty crude sales indicates approximately 46 MMB presently under contract to 55 small refiners, with the remaining 30 MMB sold by leaseholders.

Comparison of the projected availability of all royalty oil (including that under contract) with the SPR's current fill schedule indicates that, even if the availability of royalty crude is maximized through the termination of current royalty contracts, there would be only a total of 256 MMB available for use.

Royalty oil projections—(MMB)

	Royalty oil total	Approximate SPR fill schedule
1977	71	18
1978	66	232
1979	62	135
1980	57	115
Total	256	500

TERMINATION OF EXISTING ROYALTY OIL CONTRACTS

GAO does not recommend the termination of current royalty oil contracts, but rather suggests that royalty oil not under contract could be used immediately for the Reserve, and that royalty oil supplies under contract until mid-1979 could be used thereafter.

Given the declining rate of royalty oil production, an estimated 18 MMB of this contracted royalty oil could be available for use in the Reserve in 1979, and 34 MMB is projected to be available in 1980. As is indicated in the table below, the total of available royalty oil for use in the Reserve given the assumption that small refiner contracts will neither be terminated nor renewed, amounts to 153 MMB, or about 30% of the total Reserve.

Royalty Oil Availability—(MMB)

	Contracted			
	Refiners w/exceptions relief		Refiners w/o exceptions relief	Other
1977	--		--	28
1978	--		--	26
1979	4		14	24
1980	7		27	23
Total	11	+	41	+101 =153 MMB

TRANSPORTATION COSTS

GAO disputs the validity of FEA's statement that the transportation costs associated with procuring royalty oil would be far more expensive than those costs attributed to filling the Reserve from other sources.

Assuming, as GAO does, that contracted royalty oil will not be available until mid-1979, the oil not under contract—the 101 MMB to be received by the Government in payment—represents the bulk of the oil GAO is recommending be used for the Reserve.

This oil which is not under contract is derived from 13,500 different leases scattered across the continental United States from wells now averaging a production rate of 14 barrels per day. FEA believes that the division of this oil, located in small and continually declining quantities and at diverse locations, would be prohibitively expensive as well as economically disruptive. The Government could minimize the economic disruption associated with physically diverting the oil by entering into hundreds or thousands of exchange agreements in order to procure other oil suitable for the Reserve at royalty oil prices. This would result in a complex and expensive administrative and legal network.

If this oil were not used for the SPR, it would leave only about 50 million barrels that is now going to small refiners.

ADVERSE IMPACT ON SMALL REFINERS

GAO contends that the small refiners currently receiving royalty crude oil would sustain little or no adverse impact from increased raw material costs should royalty crude be denied them, since the cost of crude oil to all refiners is equalized by FEA pricing regulations regardless of the actual crude purchase price. Further, according to GAO, only the 13 refiners of the 55 currently receiving royalty oil which have been granted "exceptions relief" from the purchase of price-equalizing entitlements would be adversely affected if the price of or access to royalty crude oil were altered.

At present, 18 of the 53 refiners receiving royalty oil under contract now obtain exceptions relief. The companies which receive exceptions relief to the entitlements program received it due to economic hardship, and,

but for the availability of royalty crude, these companies would have been in even more dire economic circumstances.

Of the remaining 35 refiners, 15 receive royalty crude as less than 20% of their total runs to stills, 15 receive it as 20% to 50% of their runs to stills, and five receive it as over half of their crude oil. These remaining 35 refiners which have access to royalty crude oil are small refiners which are, in general, marginally profitable. Royalty oil is a stable source of petroleum for them. If the Government were to take this oil it could create problems for those small refiners in obtaining alternative supplies.

POTENTIAL "SAVINGS" FROM USING ROYALTY OIL

Sufficient data is not available to make an accurate estimate of the potential reduction in oil costs for the SPR from using some or all of the royalty oil. The price of the oil varies from lower tier domestic to nearly world market prices, depending on the particular price controls applicable to the production. Data is not available on the quantities sold by price levels.

By using an average price level for royalty oil, GAO estimated that the savings could be about $3 per barrel. If this estimate were applied to the 55 MMB estimated to be available from small contractors, it would save about $165 million.

These savings assume that current price controls will continue through 1980. If price controls were removed, there would be no savings from using royalty oil.

The use of royalty oil would be a mechanism to pass a portion of the SPR costs along to purchasers of petroleum. The extent that the Goverment took the royalty oil, the private sector would have to replace it with oil and at world prices. FEA believes that the issue of whether to use royalty oil should be considered along with other alternative means of financing the SPR. For example, if an import tariff or an excise tax on gasoline were implemented as suggested by GAO, there would be no reason to use royalty oil to partially pay for the Reserve. Such taxes would avoid the disruption of the established supply relationships for the royalty oil and minimize the administrative burden on the refiners and the Government.

The SPR Plan proposed another alternative for passing some of the SPR costs along to the petroleum consumers. This proposal is to revise the Crude Oil Entitlements Program to permit FEA to obtain oil for the SPR at essentially the national composite price. This also would avoid disruptions of established supply relationships.

(This concludes additional Statements of Senators submitted today.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

OFFICIAL CONDUCT AMENDMENTS OF 1977

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now resume consideration of the pending business, S. Res. 110, which the clerk will report.

The assistant legislative clerk read as follows:

Senate Resolution 110 to establish a Code of Official Conduct for the Members, officers, and employees of the U.S. Senate; and for other purposes.

The ACTING PRESIDENT pro tempore. The pending question is on agreeing to amendment No. 93.

Under the previous order, the Senator from Maine (Mr. MUSKIE) is recognized.

RECESS UNTIL 1:55 P.M.

Mr. ALLEN. Mr. President, with the permission of the distinguished Senator from Maine and, in accordance with the majority leader's wishes, I ask unanimous consent that the Senate stand in recess until 1:55 this afternoon.

There being no objection, the Senate at 1:28 p.m. recessed until 1:55 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. RIEGLE).

OFFICIAL CONDUCT AMENDMENTS OF 1977

The Senate continued with the consideration of the resolution (S. Res. 110) to establish a Code of Official Conduct for the Members, officers, and employees of the U.S. Senate; and for other purposes.

Mr. ZORINSKY. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. On whose time?

Mr. ZORINSKY. To be charged equally against both sides.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. NELSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ANDERSON). Without objection, it is so ordered.

Mr. NELSON. Mr. President, I ask unanimous consent that the following Senators be added as cosponsors to Senate Resolution 110: Senators ROBERT C. BYRD, ALLEN, BROOKE, CASE, CHAFEE, CHILES, GLENN, HASKELL, METCALF, NUNN, PELL, and SASSER.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE addressed the Chair.

The PRESIDING OFFICER. Who yields time? I am told that the Senator from Maine has used his time on the amendment.

Mr. NELSON. The Senator from Maine has used his time on the amendment?

The PRESIDING OFFICER. His 1 hour, yes.

Mr. NELSON. I yield time from our side on the amendment, whatever is desired by the Senator.

Mr. MUSKIE. I should like 15 minutes to start with, and I think the distinguished Senator from Oregon would like to get involved in the discussion.

Mr. President, I ask unanimous consent that the privilege of the floor be granted to Jim Davidson and Charlie Jacobs of my staff during the consideration of Senate Resolution 110.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I thought it might be helpful at the outset of the discussion today to consider some of the editorial comment that has appeared in the press, with particular reference to the subject of my amendment. First of all, I emphasize the pending Muskie amendment is not designed to raise the limit on earned income. Much of the comment I read in editorials in the Washington Post, the New York Times, and so on, is addressed to my amendment as though that were its thrust.

This amendment accepts the committee test of what is reasonable, that is, that earned income be limited to 15 percent of the basic Senate salary, and applies it across the board to all outside income.

So when the New York Times refers to my amendment in these terms, it is simply serving its own editorial license for the purpose of making its own argument. In the New York Times editorial which appeared in the issue of March 17, 1977, entitled "Senate Speechmakers and Coupon Clippers," there is this sentence:

If the Senate eliminates that ceiling, that is, the 15 percent ceiling on earned income, as Senator Muskie proposes, it will, in effect, be proclaiming to the public that the new raise is not enough, not even $66,125 is enough, we want more.

I make the point to the New York Times that is not what my amendment provides at all. My amendment provides that if $66,125 is enough for some Senators; it ought to be enough for all Senators.

But it is not my understanding, Mr. President, that what the committee was considering was putting a cap on Senate income. As a matter of fact, nowhere in its report does the committee say that it is recommending a cap on Senate income. Yet the argument which the New York Times features is just that: That there ought to be a cap on Senate income, except as to Senators who have unearned income sources from outside their Senate salary.

So I suggest the New York Times address itself to that proposition, the proposition that there ought to be a cap on senatorial incomes.

The majority leader makes a similar statement. He says that we are not in the business of trying to equalize Senators' incomes.

In that, he takes a somewhat different line than the New York Times. He says that we are not in the business of trying to equalize senatorial incomes.

The implication of the majority leader is that ED MUSKIE is in the business of trying to equalize senatorial incomes.

Not at all.

I made the point at the very outset of my remarks last Friday that this technique of getting at conflicts of interest was not my choice, but it was the committee's choice and since the committee chose that discipline, the 15 percent on outside earned income, it seemed to me a fair proposition to expand that discipline to cover all outside income.

So it is the committee that triggered this approach, not ED MUSKIE. The 15-percent idea was not mine. I did not invent it. I did not propose it. The committee, the majority leader and others associated with it have proposed it.

I say that if the majority leader does not believe we ought to be in the business of equalizing senatorial incomes, then he

is inconsistent with his own proposition. The fact is that with respect to earned incomes, Senators are not all equal. Some Senators can command higher fees and more total income from this source than others.

The majority leader and the committee all say that we are going to equalize them, none of them can earn more than 15 percent above basic Senate salary, none of them, and none of them can earn more than $1,000 per individual lecture fee. The majority leader is in the business of trying to equalize the incomes of some Senators, but he is opposed to equalizing the outside incomes of all Senators.

So it is an interesting philosophical question as to which approach is equitable.

Even if I were to accept the suggestion that I am proposing to equalize the incomes of all Senators, is it fairer to equalize and limit the incomes of some Senators or is it fairer to do it for all Senators?

The majority leader has arrived at his own answer to that question, as has the committee, and I have a different answer.

But I do not think it is an answer to my argument to dismiss it as an attempt to equalize senatorial incomes.

The fact is, of course, that the pending amendment does not take anything away from anybody. What the pending amendment does is to require Senators who derive outside income from income-producing assets to put those assets in trust for their own benefit.

My amendment would not divest them of those assets as the committee proposal divests me of a source of income. There is no divestiture at all.

The amendment requires that income-producing assets be put in trust.

Second, my amendment does not even divest Senators of the income from those assets. It merely provides that during their term in office, Senators with access to such income shall not receive more than 15 percent of their basic Senate salary and that trust income in excess of that amount be put back into trust and deferred and available to Senators when their term of office is over.

So my amendment does not divest them of either the asset itself or of the income from that asset.

The most that it does is to defer their enjoyment of the income until they have finished their Senate term, and the majority leader calls that an equalization of income proposal.

May I remind the Senator that the committee proposal divests me totally of earned income above 15 percent of my basic Senate salary.

My amendment divests no one of any income. It simply defers its enjoyment until the end of a Senate term. So there is no income equalization implication to the Muskie amendment.

The New York Times editorial makes another point on which I would like to comment. Incidentally, Mr. President, I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE SPEECHMAKERS AND COUPON-CLIPPERS

If their mail is anything like ours; members of the Senate must know that the recent $12,900 Congressional pay raise is still hard for many citizens to swallow. How, then, can the Senate seriously consider—as it will begin doing today—a proposal that must make every member look as though he is trying to cash in even more on his official position?

The question arises in connection with Senate action on a clear, severe code of ethics for Congress. The House has already passed a commendable bill that includes a ceiling on Congressmen's outside earnings, such as fat fees for speeches, and a Senate committee has recommended a similar bill to the Senate. But now, a group of Senators led by Edmund Muskie of Maine have risen to battle. No fair, they say. Senators who make speeches should be treated the same as Senators who clip coupons. Either limit *unearned* income, too, or—preferably—eliminate any ceiling at all.

One may be personally sympathetic to less-affluent members of the Senate, and yet reject this argument for reasons both of political appearances and of logic.

Just imagine the appearances if the ceiling is scrapped. A Senator now earns $57,500 a year. Under the proposed ceiling, he could also earn up to 15 percent of that in outside activity—another $8,625. If the Senate eliminates that ceiling, as Senator Muskie proposes, it will in effect be proclaiming to the public that the new raise is not enough; not even $66,125 is enough—we want more.

As to the matter of unearned income: It seems to us that earned income creates a more troubling ethical problem. While some members may have accumulated large investments since attaining high office, most did so before. But earned income, by definition, can only be achieved while one actually serves in Congress. While some members with unearned income may be influenced by an awareness of which companies are paying them dividends, that influence is usually remote and slight. But earned income often comes from speeches to business, union and other groups with specific legislative interests. While some members may spend time managing their investments, most do not. Earning outside income, however, takes time away from public business.

To say that unearned income is a less urgent problem is not to say it is no problem at all. Once the ethics code is in place, Congress should go on to fashion remedies for it, too. But "unfairness" is no justification now for eliminating the ceiling on earned income from the ethics code. Both the ceiling and the code have now been endorsed by a Presidential commission, two Presidents, the House of Representatives and the Senate leadership. In its own interest as well as the public interest, we trust the Senate will concur.

Mr. MUSKIE. There is another sentence in the editorial:

While some Members may spend time managing their investments, most do not.

On the basis of what evidence does the New York Times reach that conclusion? I would have no judgment on that question at all, because there has been no disclosure in the history of the Senate of these kinds of assets, except as Members individually have done so voluntarily from time to time.

There was no hearing record on this question. How would an editorial writer, in the ivory tower of the New York Times, reach this conclusion?

While some Members may spend time managing their investments, most do not.

If the editorial writer who wrote that sentence has the evidence to support it, I should like to see it. I have never had assets of that magnitude. I have no personal way of knowing how much time one should devote to managing one's outside income-producing assets. But I will state that if I had outside assets that produced more than $8,600 a year in income, I would spend some time watching those investments, changing them when necessary, forming judgments as to their viability.

Whether it is an oil and gas lease venture, or a speculative real estate venture, or an investment in stock, I cannot imagine myself not spending some time looking over those investments, changing them as my interests dictate or as my judgment suggests. I cannot imagine that does not consume some time.

If, as has been rumored, there are Senators with incomes of $50,000 to $100,000 a year or more from outside investment, is the New York Times telling me they spend no time managing those investments, changing them, examining them, evaluating them, reading the market?

Even the committee refers to that kind of income as passive income. What, in heaven's name, is passive investment income? Perhaps a blind trust established by an ancestor, as to which you have no control except to receive a monthly check, may be regarded as a passive form of income. But if the assets should perhaps require somebody's management and that somebody is you, how can you do it responsibly, in your own interest, without spending some time at it? Not according to the New York Times:

While some Members may spend time managing their investments, most do not.

How do you dismiss such a critical test of the equity of this proposal so casually? What God-given judgment makes it possible for an editorial writer to make such a statement?

Then, there is the second sentence:

Earning outside income, however, takes time away from public business.

Well, does it? Since I am one of those to be judged and sentenced under this bill, perhaps my own case is an appropriate measure of the fairness of that judgment by the New York Times.

Last week, in discussing my amendment, I gave some of the facts bearing upon my own time, and I have more here—just as a for instance.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUSKIE. May I have an additional 10 minutes?

Mr. NELSON. Mr. President, I yield to the Senator such time as he may desire.

Mr. PACKWOOD. Mr. President, with respect to the time, I ask the Senator from Wisconsin this: Did not the majority leader say that Senator MUSKIE could have as much of the time under control as necessary?

Mr. NELSON. Yes. The Senator has just used up the 1 hour that the Senator has on his amendment. I am yielding time from the hour that we have, and I will yield from the bill itself any additional time that anyone wishes.

Mr. PACKWOOD. I thank the Senator.

Mr. MUSKIE. In 1973, Mr. President, the Senate was in session 184 days. I missed 4 of those days on the lecture circuit. That is 2.8 percent of the time.

In 1974, the Senate was in session 168 days. I missed 2 of those days. That represents 2.38 percent.

In 1975, the Senate was in session 178 days. I missed 1 full day and 2 partial days, for 1.59 percent.

In 1976, we were in session 142 days. I missed part of 2 days—five-tenths of 1 percent.

During the last 4 years, we had 2,449 rollcall votes. I missed no more than 40 of those because of lecture fees, and not many of those 40 were decided by a close enough vote to make a difference.

I ask this of the New York Times and others who would judge us: On the basis of what evidence do they conclude that those Members who have income-producing assets to which they must devote some time take less time to manage their own affairs than those on the lecture circuit, such as I, who have that kind of commitment to the public interest? Are they saying that we, somehow, should establish a standard requiring that no Senator ever miss a vote for any reason, that he should never miss a vote to tend to his own business, that 2 days out of 170 are too much to miss? What is the standard?

I have heard all this talk about the people expecting their Senators to be full-time Senators. What is a full-time Senator, or what should he be? The New York Times does not presume to bother with that insignificant detail. The Washington Post does not. Indeed, I cannot find any attention given to it in the Senate report. Nobody tells us what the test of a full-time Senator is.

Only one test is suggested, and that is that those who receive earned income unavoidably miss a disproportionate amount of time that they should be spending on the Senate business, and those with unearned income never, on the face of it, miss time managing their own interests to the exclusion of their public duties. That is the judgment of the New York Times. Is that even-handed? Is that objective? Is that dispassionate?

The New York Times has decided that we have to have a scapegoat in order to establish a code of ethics.

We have one, boys, we have one, and I guess I am one of them.

The Washington Post this morning published an editorial, and I ask unanimous consent that that editorial be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATORS ON THE SPEAKING CIRCUIT

The most controversial issue in the current Senate ethics debate is how much senators should limit their outside earnings, primarily speaking fees. This focus is encouraging. It suggests that broad financial disclosure rules, a ban on unregulated "slush funds" and other tough provisions in the proposed code have become much less controversial. It also shows that nowadays senators, compared to House members, are less inclined to practice law part-time, collect large fees as corporate directors or carry on other business activities that raise conflict-of-interest questions.

The senatorial specialty is speech-making. The lecture circuit can be lucrative; in 1973, various groups paid senators more than $1 million in honoraria. In 1974, 22 senators earned more than $15,000 each that way. Because this raised questions of seemliness, Congress then limited honoraria to $15,000 per year and $1,000 per appearance. The ceilings were raised to $25,000 and $2,000 last year. The pending Senate code would bring the earned-income limit down to 15 per cent of the official salary, or $8,625—the figure already adopted by the House.

Sen. Edmund Muskie (D-Maine) and others argue that the lower ceiling would be unfair to senators who lack independent wealth. Either the $25,000 limit should be retained, they say, or unearned income should also be limited. Sen. Muskie's position is especially credible because he has spent 30 scandal-free years in public offices, including posts with paltry salaries, and has taken pains to avoid investments that might involve the slightest conflicts.

Nevertheless, this argument has some flaws. Earned and unearned income are not alike. Stock dividends, for instance, flow at the same rate to all investors. Speaking fees do not. Moreover, honoraria are a direct result of one's official power and prestige, and often come from groups with a large interest in fostering senatorial goodwill. Majority leader Robert Byrd (D-W. Va.), for example, is a pretty fair fiddle-player. Yet as he said the other day, "I don't think any group of citizens would pay me $2,000 to play my fiddle for 15 minutes if I were a meatcutter or working in a shipyard or practicing law."

Of course, unearned income is not always conflict-free. A lawmaker's actions can affect or be influenced by his investments, too, though the connections are usually more remote. While disclosure solves many problems, a super-strict ethics code would require legislators to put their holdings in blind trusts, as top executive-branch officials must do. The purpose of blind trust, however, is not to limit income but to separate personal gain and official activities. Since honoraria cannot be made "blind," a consistent application of the separation principle would include barring senators from getting any fees at all from groups with any interest in legislation.

That is not what Sen. Muskie and his allies have in mind. Their greatest concern seems to be preserving honoraria as an income supplement. But the point of the pay raise to $57,500 was to make official salaries more adequate and reduce the need or justification for getting payments from interest groups. Many people, in fact, consider the pay raise defensible only in exchange for greater congressional self-discipline. Thus, lower limits on outside earnings, while not as vital as full disclosure and other rules, are timely and reasonable.

Mr. MUSKIE. I must say the Post editorial is generous to me when they say this:

Senator Muskie's position is especially credible because he has spent 30 scandal-free years in public offices, including posts with paltry salaries, and has taken pains to avoid investments that might involve the slightest conflicts.

I appreciate that. But the Post editorial concludes with this sentence:

Thus, lower limits on outside earnings, while not as vital as full disclosure and other rules, are timely and reasonable.

Well, I must say when I read that sentence my impression of the editorial was very clear and simple: "You are guilty of no wrongdoing, Senator, but we are going to impose sentence nevertheless." Let me repeat, "You are guilty of no wrongdoing, Senator; nevertheless we think your income has got to go."

Is that not what it is? The editorial would have been better and more consistent, more logical, if they had left out that tribute to me.

I mean, they admit of no exceptions with respect to unearned income. They are not at all concerned about the possibility of conflicts related to unearned income. They say:

A lawmaker's actions can affect or be influenced by his investments, too, though the connections are usually more remote.

Even that sentence implies that occasionally even in the view of the Washington Post there might be a conflict of interest related to unearned income. But they are not so concerned that they would cut off the income or limit income related to investments. So with respect to a Senator whose tour of the lecture circuit does not raise any alarm with them they would impose the discipline, but with respect to this other form of income they would, No. 1, concede no close possibility of conflict of interest, and even if they could they do not think that to avoid it justifies imposing an income limit.

Mr. PACKWOOD. Mr. President, will the Senator yield?

Mr. MUSKIE. Let me make one other point and then I will yield.

Just the other day on the front page of the Washington Post there was a story with a headline "The Rich Man's Club." The whole implication was there were Members of the Senate with wealth, and so many of them that it was not exactly a healthy thing.

Now, what does the Washington Post say? That the Senators they were talking about were a wealthy few who accumulated their wealth on the lecture circuit. What was that story all about?

Mr. President, I ask unanimous consent to have the article printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 14, 1977]

THE RICH MAN'S CLUB: FEW SENATORS LOSE MONEY IN OFFICE

(By T. R. Reid)

Patrick Leahy has used up half his savings. Gary Hart has had to struggle to stay even. But George McGovern has built up a comfortable blanket of financial security. And Daniel Inouye's net worth tripled over a 10-year period.

Those examples reflect the disparate results of a survey by The Washington Post of the personal financial implications of service in the U.S. Senate.

The survey, based on senators' financial disclosures and studies by various groups, shows that some senators have made considerable financial gains while in office, while some others have experienced relatively tight financial straits—particularly during their first years in Congress.

For the most part, the survey shows that Senators—even before receiving their new $12,900 pay raise—are a prosperous group of men who are far better off financially than most of their constituents.

The survey seems to disprove the suggestion, raised in recent months by supporters of the pay raise, that serving in Congress can be a costly drain on a member's financial resources.

The U.S. Senate has been known throughout its history as a rich man's club, and the current membership supports that description. At least 18 senators are millionaires, and about 30 others have net worth greater than $250,000.

In contrast, a study last year by Ralph Nader's Citizens' Action Group found only five senators who reported a net worth under $50,000. All were first-term members except Bob Packwood (R.-Ore.).

Some wealthy senators inherited their money, and some earned it thorugh business interests before entering government. But some have made significant financial progress during their service in Congress.

A few examples:

George McGovern, the South Dakota Democrat who was a history teacher at a small college before entering Congress, told his constituents in 1962 that his successful race for the Senate that year had left him $25,000 in debt.

After 15 years in the Senate, McGovern today reports a net worth of $237,000. He lives in a $135,000 house in northwest Washington, and owns a stately home near Kalorama Circle that he rents out for $3,000 per month. He recently gave his children a $65,000 house in St. Michael's on Maryland's eastern shore.

McGovern's financial growth is due to gains on his Washington real estate and fees for lectures and television appearances. Last year the senator was paid $25,000 by ABC news for a week's work as a political analyst.

When Hubert H. Humphrey (D-Minn.) came to the Senate in 1949, his wealth totaled about $50,000. By 1965, when he left the Senate to become Vice President, he was worth $171,000. Today, after a term as Vice President, two years of teaching and lecturing and another Senate term, he and his wife reported a combined net worth of $637,000.

Humphrey says "the increase in my net worth has resulted from hard work, good investments, frugality, and increased income." He says he earned a "good" income in 1969–70, when he was out of government, and has received income from writing and lecturing since returning to the Senate.

Sen. Daniel Inouye (D-Hawaii) reported a net worth of $72,000 in 1964, his first year in the Senate. At the beginning of 1974 he reported his worth as $224,000. The increase came from successful investments in real estate and corporate stocks. Inouye also earned about $13,000 annually in lecture fees in addition to his Senate salary between 1969 and 1973.

Sen. Edward Brooke (R-Mass.) was elected to the Senate in 1966 after a decade of law practice and five years in state and local government. Since coming to the Senate, he has purchased a vacation retreat, "LaBatterie," including a home and 10-acre estate, in the French West Indies, and a cooperative apartment in the Watergate complex. His equity in real estate is estimated at about $200,000; last year he reported stock holdings worth $95,500.

Brooke says he remortgaged his family home in Massachusetts to purchase the real estate he bought while in the Senate.

At the other end of the spectrum is Sen. James Abourezk (D-S.D.), who would appear to qualify for the title of "poorest senator" on the basis of senators' voluntary financial disclosures.

Abourezk last year listed his net worth at $23,433, down from the $24,858 he reported just after his election in 1972. Those figures do not include "a small amount of property" his wife inherited, the senator says.

Other senators who reported a net worth last year under $50,000 were Dick Clark (D-Iowa), Gary Hart (D-Colo.), John Durkin (D-N.H.) and Packwood.

Generally, those who come to the Senate with limited personal assets encounter financial problems in their first years here.

After one year in office, Abourezk had to borrow $6,000 to pay his federal income tax. Leahy spent so much of his savings buying a home in suburban Washington and settling in here, he says, that his net worth dropped from $95,000 to $52,000 in one year.

"The first year here was really hell," Hart recalled in an interview recently.

"I knew it was going to be expensive coming to Washington, but I had hoped we could keep our house in Denver. It turned out that we sold that house and still had to worry a lot about money that year."

Hart said he had been paying a $200 monthly mortgage bill on his Denver home. He sold that house and used the gain for the downpayment on a house in Bethesda. His new mortgage payment is nearly $800 monthly; in addition, he pays $100 monthly rent on an efficiency apartment in Denver.

Although Hart is reimbursed for transportation costs when he goes home, he does not receive a per diem allowance. Thus, a week's travel through his state can cost him $200 or more for hotel and miscellaneous expenses. (Members of Congress do receive per diem for travel on committee business.)

Although Hart had expected to bear those costs, he was flabbergasted to discover the out-of-pocket expenses he bore for social obligations to his constituents.

"You're always sending flowers for a funeral, or wedding presents, or bar mitzvah gifts for the kids of somebody who worked on the campaign," the senator said. "It's nickels and dimes here and there, but you end up spending a couple of thousand a year on it."

If he had more money, Hart said, he would like to entertain more constituents when they visit Washington.

"I see my colleagues in the (Senate) restaurant with six, 10 people they're taking to lunch. It would be nice if I could do that, but I haven't been able to afford it."

Like his senior colleagues, Hart gradually found ways to soften his financial predicament. A concert featuring pop singer Linda Ronstadt raised about $5,000 for a "constituents' fund" to defray office costs. University and interest groups were willing to pay $500 or more to hear a Gary Hart lecture, and the senator has added about $12,000 annually to his income through speaking engagements.

Even before the new pay raise, Hart had surmounted the serious financial worries of his freshman year.

"I'm not complaining," Hart said. "I didn't run for the Senate to get rich. But I'm a saver. I want to be saving money for college, for the future, and I can't do it."

Whether they grow rich or poor during their years on Capitol Hill, members of Congress generally sacrifice less and profit more from government service than officials in the executive and judicial branches, according to a study financed by the presidential commission on federal salaries.

The study showed that judges average a salary cut of 33 per cent when entering government, and top executive officials average a 23 per cent drop from their private sector salaries. But new members average a 2 per cent salary increase when they enter Congress.

Upon leaving government, top executive officials can expect a new salary 87 per cent higher than their government pay, the study found. Those few judges who leave federal service average an 84 per cent salary gain. Retired or defeated members of Congress can expect salaries 34 per cent higher than their Congressional pay.

Comparing the last private salary earned before entering government to the first salary earned after leaving, congressmen average a 61 per cent net salary gain. Executive officials have a net gain of 44 per cent, and judges 23 per cent.

Because the financial sacrifice, or "opportuity cost," of federal service was found to be smaller for congressmen than for employees of the other branches, the salary commission recommended larger increases for judges and most top executive officials than for congressmen.

But in the new salary scales just adopted, Congress and the judiciary both received raises of about 29 per cent, while executive positions were given smaller raises.

Like other studies of senators' financial status, The Washington Post survey was hindered by a lack of complete and reliable data.

About 20 senators refuse to disclose their public financial condition.

Some who do make public financial statements employ practices—such as valuing their holdings at cost, or excluding property held in their wives' names—which make it difficult to draw an accurate picture.

Some senators who are most outspoken about the need for disclosure provided incomplete disclosures of their own holdings.

Sen. Howard Cannon (D-Nev.) has sponsored legislation that would require all federal employees making $25,000 per year or more "to make full public disclosure of their personal holdings," as the senator describes it.

Cannon released a detailed statement of his own holdings and net worth in 1970. Last year he released a briefer statement, and declined to reveal his net worth.

Former Sen. Hugh Scott (R-Pa.) was a cosponsor of Cannon's disclosure bill. Scott regularly rebuffed questions about his personal financial holdings, even after allegations that Gulf Oil Corp. had paid him tens of thousands of dollars in cash over a period of years.

In 1964, Sen. Harrison A. Williams (D-N.J.) took the Senate floor for an eloquent speech insisting that senators and most Senate staff aides should make public their financial holdings each year.

Williams annually issues a personal financial statement. But he refused to reveal the holdings of his wife, Jeannette Williams, who is one of his chief staff aides.

Mr. MUSKIE. What they suggested in that story for the purpose of alarming the public they now describe as "a lawmaker's actions can affect or be influenced by his investments, too, though the connections are usually more remote." In other words, today, in the editorial column, it is not a bad thing; the Senate is a rich man's club, and I say, Mr. President. I have no personal judgment on that. We have had very little evidence in the public records on which to base such a judgment. But the Washington Post made such a judgment in its news story, and today it says that does not alarm the editorial writers of the Washington Post.

I am happy to yield to my good friend.

Mr. PACKWOOD. The Senator has indicated there has been an attempt to differentiate between what is called passive income and earned income. But is it not a matter of fact that in this bill there is even a whole variety of earned income that is exempt from this limitation? They have indicated, looking on page 26. "Proceeds from the sale of creative or artistic work." I take it that means if you want to spend your weekend painting instead of speaking you can sell that painting for whatever price it

might bring, and if you can be bought by some special interest group that wants to pay you $2,000 for a worthless painting that is all right. I might address that to the chairman of the committee because I was unaware of why that exception was put in.

Mr. NELSON. The Senator is referring to the——

Mr. PACKWOOD. To the artistic provision.

Mr. NELSON. You are referring to the remote possibility that sometime an artist might show up in the Senate, and if an artist did show up in the Senate and wanted to do his painting we thought we would let him do his painting in the same way that we permit writing books. The potential for conflict of interest is practically nil. It is not the kind of economic interest involvement that comes into play was honoraria.

Now, we do cover the situation in the remote chance that somebody thought an effective way to influence a Member would be to pay him an excessive price for a painting that he would not dare hang in his house. There is a paragraph which covers that:

A Member, officer or employee of the Senate shall not receive any compensation nor shall he permit any compensation to accrue to his beneficial interest from any source the receipt of which would occur by virtue of influence improperly exerted from his position as a Member, officer or employee.

Mr. PACKWOOD. Would that not apply to anything, not just an artistic work?

Mr. NELSON. It applies to anything. I was responding to the Senator's concern that somebody might sell a bad painting for a big price.

Mr. PACKWOOD. If you were to sell a mediocre piece of land for an inflated price, the same standard would apply, would it not?

Mr. NELSON. Yes.

Mr. PACKWOOD. Or to close stock, not listed, that has no easy, ascertainable market value, sold for an excessive price.

Mr. NELSON. It covers all those.

Mr. PACKWOOD. I am curious, we sort of ended up on Friday afternoon as to what it was—I sat in the committee with the distinguished Senator—the committee was trying to get at with this limitation. Was it a limitation of time? Was it a limitation of actual conflict of interest or was it an attempt to reconcile an apparent conflict of interest that the public had?

Mr. NELSON. I think one would agree that it is a combination of all of them. we are, after all, public officials, and in that respect we differ from all other citizens in this country who are not public officials. We are employees of the public and, as I said last Friday when my good friend from Maine gave his marvelous speech and walked out when I started mine [laughter] and as I said last——

Mr. MUSKIE. The Senator did not tell me he was going to make a speech. He said he was going to make some remarks.

Mr. NELSON. I do not know whether it would qualify as a speech or not. The Senator came by my desk and he said, "I do not have to listen to you, do I?" And I said, "I guess not." But I had to listen to him. [Laughter.]

Mr. MUSKIE. I think that is an accurate quote.

Mr. NELSON. Well, it is.

Mr. MUSKIE. But not with the same emphasis.

Mr. NELSON. Not quite so loudly. The Senator whispered in my ear because he did not want anybody else to hear it, and I do not blame him, but it was a very good speech.

We did discuss some of this after the Senator left. I hated to be left standing here alone, after the only important audience to talk to, the proponent of the amendment, walked out on me. It made me feel very sad.

Mr. PACKWOOD. I might call to the Senator's attention that I stayed and listened to his remarks.

Mr. NELSON. That is right.

I am trying to think of why the Senator did. [Laughter.]

Now, what was the Senator's question?

Mr. PACKWOOD. Why was this limitation put in? If I might say I can only think of three reasons, and I am trying to find out from the Senator who is chairman of the committee. One, it is we ought to be full-time Senators and we should not do anything that takes time away from this job. That is the time argument. Two, it is a conflict. If we go out and speak, it is indeed a conflict and that ought to be barred. Or three, even if it is not a conflict, it gives the appearance to the public of a conflict and—as the Senator indicated, appearance is reality—therefore, it should be barred for that reason.

Mr. NELSON. It is for all of those reasons, and I do not think one can ignore them. As public officials, the salary we receive ought to be adequate, but we provide in here that another $8,600 may be earned.

The quarrel is not, I take it, whether there should be no limit. The quarrel is where we should draw the line. Is anyone really going to defend the proposition that a Senator ought to be able to make $250,000 a year, in addition to salary, if he can make it giving speeches for honoraria or practicing law?

Mr. PACKWOOD. No. And conversely, the majority leader in his opening statement about Common Cause—and they are the principal progenitors of this—and as I recall, the chairman of the special Ad Hoc Ethics Committee, indicated if they had their preference there would be no outside earned income. Not 15 percent; none. I do not want to state that if it is not a true fact. I recall what the Senator told me personally—no outside income. The 15 percent is a compromise, but the next time there is a salary increase that comes along that equals the 15 percent we shall cut out the 15 percent.

Mr. NELSON. No; I do not think I said that. I did say it would be my personal preference that there not be any outside earned income, but I understood the kind of problem that even this limitation creates.

Mr. PACKWOOD. Let us take the following situation. We discussed this in committee, and we apparently have made an exception for it on earned income on page 26, line 8. This is the income from the family enterprises, if the services provided by the Senator, officer, or employee of the Senate are not material income-producing factors, and we had quite a debate in the committee on the definition of material income-producing factors.

I pose the question as to what would be the situation with my predecessor, Senator Wayne Morse, who had owned a farm in Poolesville, Md., and raised cattle. He had a hired hand on the farm, but by and large he spent a fair portion of his time running it; he spent every weekend there and made a very handsome profit selling cattle. Would that still be permissible? Would that be an exception under this? And the answer was this: yes, so long as he——

Mr. NELSON. No; that is not quite a correct answer. Even as to family enterprises, if the income produced is directly as a result of the energies and time spent by the Member producing that income, then it is within the 15-percent limitation.

Mr. PACKWOOD. That was not the specific answer on this question that we had in committee, and I shall be happy to cite the transcript if the Senator wishes as to what the answer was on that situation. So long as all he spent was the weekend, by and large Saturdays and Sundays, on the farm, made the principal decisions as to what cattle to sell and what to buy, that still would not be a material income-producing factor. At least, that was the answer in committee. Is the Senator changing now?

Mr. NELSON. No. Obviously, there is a problem involved when the Senator draws a line as to earned income, tries to define earned income, and then tries to respond to specific cases. But if an individual on weekends lived out on his farm that was being run by someone else and he does make decisions on weekends about what to plant, what crops to rotate, and what cattle to buy and sell, we concluded that that was an activity that is acceptable. However, if in fact he were spending a lot of time and we could compute that in fact it was much more than the income limit as a consequence of his personal energies, he would be covered by the limitation provision.

Mr. PACKWOOD. No. I think we clearly outlined the case. It was a weekend retreat. I can often recall Senator Morse saying as far as he was concerned, it was very therapeutic to get back there on weekends, root around in the dirt and get back to nature; he found it very worthwhile from the standpoint of the Senate and very worthwhile financially. I think, honestly, all he spent were weekends on his farm, and we concluded that would be all right.

Now take the situation of my other predecessor, Senator Dick Neuberger, who I believe the Senator knew. Dick Neuberger was a writer, an author, a prolific writer of articles. If one checks the Reader's Guide to Periodic Literature, he probably wrote 300 or 400 articles before he ever got to this Senate. If Dick Neuberger were still in this Senate and spent his Saturdays and Sundays

writing articles, that would be prohibited or would be prohibited when we get the honoraria down to zero, even though it takes no more time than it took Senator Morse on weekends to manage his farm.

Mr. NELSON. Writing, as the Senator knows, is covered by overall limitations on earned income and $1,000-per-article limit.

Mr. PACKWOOD. Why? Why is it wrong for all of his adult life for former Senator Neuberger to write and be paid by the New York Times, as he was on occasion, and on other occasions by Colliers, Liberty, the Saturday Evening Post, and Commentary, for articles, but when he becomes a Senator the same thing he has done all of his life on his own time is wrong?

Mr. NELSON. I hope the Senator is not using the words "right," "wrong," "good," "bad," in——

Mr. PACKWOOD. I will rephrase it. Why should he be prohibited on Saturdays and Sundays from writing articles when that is what he has done all of his life for money when Senator Morse is not prohibited from running his farm on weekends which is what he did all his life and receiving money for it?

Mr. NELSON. There is a potential in writing articles for which one might be paid by some magazines an excessive price which may be perceived, at least by the public, as a conflict of interest. Magazines have legislation pending all the time. Their postal rates, second-class mailing rates, are very important, and it can pose disturbing problems at least from an appearance standpoint.

Mr. PACKWOOD. Why then have we made an exception for books?

Mr. NELSON. Books would have to be published by regular standard publishers. We eliminate those fly-by-night publishers who might have published a book which, because of an arrangement with a corporation or a labor union, they knew would sell whether or not the book could succeed on its own out in the marketplace. But sitting home on one's own time writing a book which may or may not sell—depending on the public's choice—does not pose any conflict of interest question.

Mr. PACKWOOD. But is it a conflict of interest if the Reader's Digest pays you for an article?

Mr. NELSON. Well, without using the name of any magazine, the potential is there, given that all publications do business under the laws that we pass.

Mr. PACKWOOD. I only use that magazine because I notice it has paid the Senator from Wisconsin $2,500 for an article.

Mr. NELSON. Yes, which was contributed to the Nature Conservancy, as I recall it.

Mr. PACKWOOD. No; I think you are wrong on that.

Mr. NELSON. That one was not?

Mr. PACKWOOD. No, it was not. It turns out that the Senator from Wisconsin kept that money.

Mr. NELSON. Yes?

Mr. PACKWOOD. I do have a list, including the ones that were donated in that year, but that one was not.

But the Senator surely is not suggesting that Doubleday Publications is above——

Mr. NELSON. I am suggesting the potential for appearance of conflict is there, and that we ought to at least moderate it by setting limits on the total, which could be received in honoraria and the amount of each honoraria.

Mr. PACKWOOD. Well, now, the Senator says "the potential" for conflict of interest. We have Doubleday and Putnam and all the other book publishers down here from the time the session starts wanting some concession on how to write off expenses for research; they are forever asking for preferential treatment on mailing rates; they have a whole variety of interests before this Congress, maybe differing or maybe the same as Time magazine or Reader's Digest. But why should Richard Neuberger have been prevented from receiving money from Time or Reader's Digest or the old Saturday Evening Post, but Senator Wayne Morse not have been prevented from receiving money for the sale of his cattle?

Mr. NELSON. Senator Neuberger would not be precluded from writing. He could write 16 articles at $500 each or 8 at $1,000 each. We are arguing the question whether there should be any limit at all, and if there should be a limit, where should the line be drawn? I take that the Senator from Oregon does not agree that the line should be drawn here.

Mr. PACKWOOD. If there should be a limit because the problem is time, then the limit ought to apply equally to all things that take time.

Mr. NELSON. Time is just one of the elements.

Mr. PACKWOOD. Fine. I ask the Senator another question. I visited with a Member of Congress who owns 10 townhouses here. He lives in one and rents out the others. He grossed $38,900 for the rental of those nine last year. He manages them himself. I asked him how much time that toook. He said it took from 3 to 5 days a month, because you have to hire the plumbers, painters, and everything else.

Because that income is technically called rent, there is an exception for it. Three to 5 days a month; compare that with the amount of time it takes the Senator from Maine to speak. If the argument is time, he ought to be prohibited. If the argument was time, Senator Morse should have been prohibited.

I do not think the argument really is time. I do not think the argument ever was time, when we started out on this issue.

Mr. NELSON. I might say that I have never rested the argument on time alone.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PACKWOOD. Yes.

Mr. GOLDWATER. I would like to ask the Senator a question, as long as we are in this general area of conflict of interest.

U.S. News & World Report, probably one of the most influential magazine in the world, often prints interviews, and the Senators and Representatives who give them get nothing for them. Yet they either answer questions or attempt to write the answers out. How are we going to reckon that conflict of interest? I might write favorably on the B–1 bomber, and my friend Mr. PROXMIRE might write in opposition, both influenced by our own personal feelings, which the Senator calls conflict of interest.

How are we going to regulate the requests from our TV and radio stations at home, who ask that we do 10- or 15-minute programs, that we can get paid $5,000 or $10,000 apiece for from national television? Do any of us ever turn down a chance to appear on national talk shows, for which you receive nothing, not even a cold drink?

How do we measure these things in terms of a conflict of interest? I understand what the subcommittee was trying to get at, but I cannot see how we can regulate conflict of interest by merely applying a dollar limit to what we can receive. Does the Senator have an answer for that?

Mr. PACKWOOD. I have no answer, and I thought that the Ethics Committee in this case was hypocritical, but we could not get the votes to ban all outside earned income. So they are going to say, in essence, that you can be half ethical. You can speak to all these groups and write for money up to $8,700; after that, it is unethical. Before that it does not make any difference where it came from, as long as you have not reached the limit.

The majority leader, BOB BYRD, on the opening day, in his first statement indicated that he wanted to ban all outside earned income. That was his ultimate goal. Common Cause—and I say this is a Common Cause code—wanted to ban all outside honoraria and earned income.

I believe we are going down the road to becoming full-time elected bureaucrats, and we will spend all of our time, all our waking hours, on the job. We will probably build an annex here, and sleep down here as well.

Mr. GOLDWATER. If the Senator will permit a comment, when I came here there were 4,000 clerks working on the Hill. There are now 24,000. We do not write the legislation any more, for the most part. I might suggest facetiously that we do away with elections and put Congress under civil service.

Mr. PACKWOOD. Of course, grandfathering in those who are now here, so we will not be subjected to competitive tests.

Mr. GOLDWATER. That includes me?

Mr. PACKWOOD. Yes, of course.

Mr. GOLDWATER. Mr. President, I am much disturbed about this whole approach. I suppose I have done as much on the so-called lecture circuit as any other Member of this body. I think only one Member of this body missed more meetings than I did, and he became a President. I just missed that myself.

I can understand the concern of the majority leader when he looks around on Friday afternoon, and the check shows there are not many people here, and he assumes they are out making speeches. I can assure the leader that is not universally so. But I am very much concerned about the assumption this body has taken that somehow we can correct our moral image by limiting the income

that may come to us from what I will say is an unlimited source of funds, from schools, conventions, and so forth around this country, that I think actually benefit by hearing from the conservative, the liberal, the Republican, the Democrat, and so forth and so on.

But I get back to my original question, and I will not take any more time: When you can speak in the U.S. News & World Report to the end that probably every thinking or influential mind in the United States reads what you have to say, I think that is probably worth more money than any other medium you or I might use to get an idea across, and yet we get nothing for it.

I am not complaining about that. The same goes on the Sunday talk shows that we have all been on, with exposure to from 3 to 7 million people that we could not get otherwise. This, in my opinion, constitutes a conflict of interest, and yet there is no stoping of that.

The Senator was discussing an interesting point a moment ago: artists. I see in the Chamber my good friend HOWARD BAKER. He and I happen to be photographers. I make quite a bit of money every year selling my pictures. But I work on it Saturday and Sunday. I would hate to think that poor little darkroom of mine was suddenly filled with conflicts of interest. Not anything my wife might object to, but I am talking about what you usually find in a darkroom.

Mr. PACKWOOD. I assure the Senator he does not have to worry about that because we made a total exception. Income as proceeds from the sale of creative or artistic work is totally excepted. It does not count as outside earned income. The Senator can sell his pictures for whatever he wants. He can spend all his Saturdays and Sundays in the dark room. He is not limited at all.

Mr. GOLDWATER. I think that is a mistake. In fact, I think this whole approach is rather useless. I do thank my friend.

Mr. PACKWOOD. Let me conclude, because I think I know how we got here very gradually. One, this is not a time argument at all. If it was indeed a time argument, then we would not have made the exception that, as far as above the 15 percent is concerned, a Senator can earn up to $25,000, which is the outside limit now from honoraria, if it is given to charity. A Senator can give as much time as he wants to fly to Detroit to give a speech, the proceeds of which go to the Knights of Columbus or the Presbyterian Church. Time was never intended to be a factor. If it was a factor, we should have adopted the amendment of the Senator from New Hampshire which faced up to that situation and barred that income, too. Nor is it the appearance of conflict of interest.

Mr. DURKIN. Will the Senator yield for a second?

Mr. PACKWOOD. Just a moment.

It is not the appearance. The poll that has been cited most often is a Louis Harris poll taken for the Obey Commission in which the question was asked:

If a Congressman makes a number of speeches to business, trade, environmental, or labor groups which are affected by his work in Congress, and he receives a large fee for such speeches, would that bother you?

It would bother 71 percent, it would not bother 21 percent, and not sure total 8 percent.

But then Louis Harris asked a further question:

Would your concerns about that situation be substantially satisfied if the voters in his district were made fully aware of his situation and could vote for or against him in the next election if he had to file that income publicly?

The answer to that was 57 percent would be satisfied and 39 percent would not be satisfied.

We already have full disclosure on honoraria. Hopefully we will have full disclosure on some other matters before action on this bill is completed.

It is not a time question. It is not an appearance of a conflict of interest question. What it boils down to, and it emanates mostly from the other body, is that there is a jealousy between those who are on the speaking circuit and are in demand and those who are not. There is a jealousy regarding those who have taken by a cause, be it liberal or conservative, environmental or the war, who have gone around this country, stirred up a nation and brought that cause to a successful fruition, and at the same time rode that crest of popularity on the speaking circuit. It is jealousy because others are not asked to make those speeches.

If the argument is made that we are all going to be subject to a conflict of interest, that all of the special interest groups are going to invite us all to make speeches and buy us with honoraria, why are we all not invited?

We only have one vote apiece in this Chamber. Give or take a little on ability, only a few are more significant in terms of persuasion than are others.

I submit the answer is because some people have a message to carry. They have run for President; they are running for President. They have taken a stand long ahead of the rest of the Members of this Chamber on an unpopular issue and turned the Nation around. Then petty, jealous minds in the Congress resent the popularity and are going to attempt to limit it in this fashion, which I think, if we make it a law, is probably unconstitutional. I do not think the Supreme Court, under the equal protection clause, is going to say that we can limit some people's income in this Chamber and not others'. However, as a Senate rule, not subject to the normal court scrutiny because the court would give deference to how we conduct our own affairs, it may be constitutional.

It is grossly unfair. It does not stem from any desire to have us conserve our time and give our efforts to the Senate. It does not stem from any desire to curb an apparent conflict of interest which the public is not concerned with if there is full disclosure. It stems from the fact that some people have had the courage to take a cause and go around this country trying to rally people to their side and were paid for it as opposed to others who were never asked.

I yield the floor.

(Mr. JOHNSTON assumed the Chair at this point.)

Mr. CLARK. Mr. President, will the Senator from Oregon yield for a question?

Mr. PACKWOOD. I do not have the floor. I believe the Senator from Maine has the floor.

Mr. CLARK. Will the Senator yield for a question of the Senator from Oregon?

Mr. MUSKIE. I yield for a question.

Mr. CLARK. I just want to point out it does seem to me that the arguments the Senator from Oregon has made would all stand against the pending amendment. As the Senator from Maine has quite correctly pointed out, his amendment does not increase the amount a Member can make. It simply applies a similar standard or a like standard to those people who have unearned income. I guess I am asking the Senator, if we were to adopt the amendment of the Senator from Maine it would not help any situation which he has so far discussed; is that correct?

Mr. PACKWOOD. It would treat everybody equally badly, that is correct. At the moment, the pending bill treats some people badly and unequally.

Mr. CLARK. Does the Senator then intend to support an amendment that would treat everyone unequally and badly? Is that a better solution to this problem than simply moving to strike the 15-percent limitation?

Mr. PACKWOOD. I lost the question.

Mr. CLARK. I asked the Senator if he felt that the correct way to deal with this problem, the problem that he has discussed at some length, is to vote for the pending amendment as distinguished from the additional amendment of the Senator from Maine to strike the 15 percent.

Mr. PACKWOOD. The pending amendment would treat everybody equally and badly. If we are going to have equality in this Chamber, then let us have it. If the wisdom of this Chamber is that it is a good idea to limit outside income to 15 percent, let us limit all outside income to 15 percent. I will withhold my judgment on what I do on any other amendment until I see the outcome of that one.

Mr. CLARK. The Senator from Maine has the pending amendment to deal with everyone equally on unearned and earned income. If that amendment passes and becomes law, and we treat everybody equally and badly, as the Senator says, there could be another amendment to say, "Let us increase the amount." Those are two contradictory positions, it seems to me. Obviously, one could subscribe to either of them.

Mr. PACKWOOD. I have no amendment pending. I am supporting the present amendment of the Senator from Maine. I hope it will be agreed to.

Mr. MUSKIE. Mr. President, if I may respond to the question, in which I tried to raise the point I tried to cover in my remarks on Friday and today, the 15-percent limit is a technique adopted by the committee. The committee justifies it on the basis that the public's concern with congressional ethics virtually man-

dates that. I do not agree with that judgment.

In order to avoid appearing to pursue only my own interests and the interests of others in the same category, my first amendment is based on the assumption that the 15-percent test is right because the Senate says it is right; because the House adopted it as a legitimate discipline. What I am saying is: if it is right for us and if the Senate says that it is right, it is right for everybody so that everybody has to struggle with the same burden and the same inequity that as a Member of the Senate I am willing to try. Wrong as I think that approach is I am willing to try. That is the rationale of the first amendment. It is not that I think the 15 percent is right. I think the 15 percent is wrong.

Believing that I have some obligation to try to respond to what the committee, a committee selected by the Senate and authorized by the Senate, recommended, I am willing to try to make that 15 percent work. What I am saying is that if it is to work it ought to work for everybody. If it does not work for everybody, it is unfair and discriminatory.

The second amendment proceeds from there. If the Senate as a whole says, "No, that 15 percent is not right," whether in terms of their own personal circumstances or of their perception of what is fair, then we try to find another approach to imposing a discipline that is fair.

The disclosure discipline is one that we have applied to lecture fees for a decade, I think, for several years. We were told at the time that it was an adequate solution. Indeed, in this report, the committee goes out of its way to defend disclosure as an adequate discipline. It says that disclosure is the heart and core of this code of ethics. I think those are the precise words of the committee in its report.

Well, if disclosure is the heart and core and is adequate in terms of the committee, then I am willing to try that across the board if the 15-percent across the board is not acceptable to the Senate.

I do not consider those unreasonable approaches to get a Senate consensus at all. I think it is reasonable and I am willing to take the stricter one, the tougher one, first, and let every Senator vote up or down on whether that is reasonable for everybody. If it is not reasonable for everybody, in my judgment, it is not reasonable for anybody. Anyone can argue that 15 percent is a reasonable restriction on some portion of the Senate, but not all. It just escapes my very primitive sense of what is fair.

As long as I am on this subject, I wish to refer to some provisions in the Senate committee report which disclose this pattern of discrimination against earned income. It may be only unwitting and unconscious, but let me refer to it.

On page 3 of the committee report, there is this language:

> The Committee has not had the time to conduct an exhaustive empirical study of Members' financial situations, their outside interests, or their handling of their official accounts—

The committee has not had the time—

> Consequently, the Rules proposed by the Committee are not specifically designed to remedy practices or abuses found to exist in the Senate at the present time. Instead, the Committee has attempted to fashion rules of conduct.

Now, that language carries the implication, Mr. President, that the committee wanted to avoid overreacting, with possible unwarranted injury to some Members holding income-producing assets, until we know the circumstances surrounding them. But, Mr. President, there is no similar concern for earned income. We are to be disciplined whatever the facts. Whatever the facts, we are to be disciplined.

The Washington Post editorial this morning, to which I have already referred, has the same bias. It says:

> Senator Muskie, we do not consider you guilty of any wrongdoing, but we think sentence needs to be imposed anyway, and that your earned income ought to be limited anyway.

It is not a question of not knowing the facts. They are willing to pass judgment that I am not guilty of any wrongdoing, but still, I must be disciplined.

On page 3 of the report is this language:

> At the heart of the Code of Conduct is full and complete financial disclosure.

No. 1, with respect to unearned income, even the disclosure is not full and complete. All you have to do is examine such things as the categories of value, for example, and the disclosure of spouses income and the protection that was given those, to realize that even full and complete disclosure is not applied to unearned income but, with respect to lecture fees, not only is there full and complete disclosure, but full and complete divestiture above the 15 percent.

On page 4 of the committee report, there is this language:

> Throughout this proposed code of conduct, the Committee tried to mandate disclosure and prohibit practices in a way that would restore the public confidence and serve the public's legitimate interests without condoning wholesale, unwarranted invasions of privacy.

No similar concern is in the report, Mr. President, to avoid the wholesale divestiture of sources of earned income in cases where there is no jeopardy to the public, to the publics legitimate interest either in terms of time consumed or the sponsoring organization. The meticulous concern is that the privacy of recipients of unearned income is not invaded. But meticulous application of discipline is applied to recipients of earned income, whether or not there is a legitimate public interest in the divestiture.

On page 4, again, of the committee report, it states that some thoughtful commentators have pointed out the dangers of overreacting to the public mood. This is in the report. I continue to read from the report:

> These observers believe that we are going through, in columnist David Broder's phrase, "a new Puritanism", and fear that Rules designed to expose, prevent, or punish every conceivable deed of wrongdoing will accomplish little except hamstringing the Representative or Senator in performing the function for which he or she was elected.

So, clearly, by the committee's own language, they are leaving open loopholes for conceivable wrongdoing, because to do otherwise would be to accept an unrealistic new puritanism that would represent an overreaction.

So, to read from the report:

> Consequently, the committee concluded that financial disclosure of all holdings and possible conflicts was a preferable approach.

That is fine language, and I repeat it:

To avoid overreacting to the public mood—

> the committee concluded that financial disclosure of all holdings and possible conflicts was a preferable approach.

The trouble is when the committee and its report got to the earned income, it added a qualification to that language as to earned income. The committee evidently concluded that disclosure was not enough; that we had to expose, prevent, or punish every conceivable departure from a public interest standard even if the effect is to punish those who have not violated the public interest.

On page 5 of the committee report, we find this:

> The guiding principle followed by the Committee was to require only the amount of public financial disclosure necessary to satisfy the legitimate purpose of informing the electorate of private financial interest.

But even that standard is applied only as to unearned income. The disclosure requirement with respect to earned income is very specific and total. As to unearned income, we have what the committee calls categories of value. Why? Why?

Because of the "expensive and burdensome annual appraisal and evaluation of assets."

Well, I ask the committee, how does that financial burden compare with the burden of the complete divestiture of earned income above 15 percent of basic salary?

Where is that concern for a Senator's economic well-being when it comes to earning it?

We cannot ask for detailed exposure of the precise income, the dollar amount received by those who are the recipients of unearned income because of the expenses and the burdensome annual appraisal and evaluation of assets. But boy, we can deprive those on earned income of the income above 15 percent.

With respect to categories of value, the committee report states on page 18:

> Categories of value, rather than the exact value, are required when reporting investment or passive income—

Whatever is meant by passive income—

> A category of value for investment income provides enough information to determine the relative magnitude of any potential conflict of interest without unnecessarily invading the privacy of the reporting individual.

What a nice standard. I could live with that one.

But what are the categories for investment income?

Category A, not more than $1,000.

Category B, greater than $1,000 but not more than $2,500.

If that were to apply to earned income, if I had 20 lecture fees of $1,000 each and reported them as showing in category A, the citizen undertaking to evaluate the amount of my earned income would have to guess as to whether or not it was a total of $20,000 or 20 times $1,000.

If that difference is inconsequential for unearned income, why is it not then inconsequential for earned income?

The committee says these categories provide enough information to determine the relative magnitude, any potential conflict of interest. Why then should we not have the benefit of that kind of cloak of secrecy? Why should we not? The committee was not content to deprive us of that kind of blanket.

As to earned income, not only is this test insufficient for disclosure purposes in the view of the committee, but the difference between the present limit in the law of $2,000 and the proposed limit of $1,000 represents such a conflict that it must be prohibited.

Now, ask me, and know what my answer is, as to whether or not this represents a bias aimed at protecting and maybe even overprotecting sources of unearned income which is not given to earned income.

If the justification for reducing the individual lecture fee from $2,000 to $1,000 is so manifestly a greater risk of conflict of interest than $1,000 that the upper limit must be prohibited and the lower one imposed, then how do we conceivably justify the argument that the categories of value put into the resolution to protest unearned income are justified?

In the first place, going to the upper end of the scale, all income or investment income over $100,000 falls in the same category. It can be $200,000. It can be $1 million, $2 million, and it does not matter from what source it comes. We do not get any order of magnitude above $100,000.

What solicitude, Mr. President. And what in heaven's name is passive investment income? Is it real estate ventures? Is it income from partnerships? Is it income from oil and gas leases? Is it income from land development partnerships?

The committee brushes off all such details and contents itself with the bland description of passive income as sufficient description for all investment income from whatever source.

All we have to do is call it passive income and that forgives everything, that excludes all need to examine sources more closely, excludes all need to examine possible conflict. Just call it passive income and that covers the point.

One further point, Mr. President, and then I will be happy to yield for the time being, just another 5 minutes.

There is one other issue that has been raised by the Washington Post editorial that I think one needs to look at. That is the idea that is expressed in these words:

> Honoraria are a direct result of one's official power and prestige.

Senator BYRD, the distinguished majority leader, put it in these words:

> I don't think any group of citizens would pay me $2,000 to play my fiddle for 15 minutes.

Both the Post and Senator BYRD dismiss the idea that a Senator can have anything to say, or be able to say it in a way that it will attract audiences, audiences that will pay him to do so. They dismiss such things as ability, reputation, the message that a Senator wants to deliver, his effectiveness as a speaker.

None of these have anything to do with whether or not a Senator is invited to address an audience. None of these.

There is also the assumption that if those of us on the circuit who command these fees were not Senators that we could not make a success of anything else, that we could not make a success on the lecture circuit, that we are entirely without a means for earning our own living unless we are Senators.

What kind of standard are we setting? Because this standard says even if there is no conflict of interest, even if there is no time away from the Senate involved, a Senator should not be able to lecture before an audience that poses no conflict and get a fee because he has achieved prominence during his term as a Senator.

The fact is, I say to the committee, when I was just a Senator, I could not command fees on the circuit comparable to those I command now. My fees went up after I was a candidate for Vice President.

So the fees I am able to command now have nothing to do with my Senate career.

When I was elected to the Senate in 1959, I did not find booking agencies swarming into my office offering me $2,000 lecture fees; and I did not, for the next 8 years. If I could get a couple of hundred dollars, I was lucky.

So, obviously, there is something involved by way of ability, reputation, and message.

How about all these other people on the lecture circuit? Does the money they get on the lecture circuit have anything to do with their business professions or businesses or skills? How about Joe Namath? Football gave him his reputation. He does not command these big lecture fees because he had a reputation or an established reputation as a speaker.

How about Woodward and Bernstein? How did they get to command the fees they command for writing books or for lecturing? The answer to that is self-evident.

How about Ralph Nader? How about John Gardner? I do not suggest they are guilty of any conflicts of interest. How about the astronauts? The astronauts, together, signed book contracts, signed contracts with Life magazine. Why? Because they achieved prominence while performing a public duty.

Are Senators to be deprived of that old American freedom that a man who has ability and skill can convert it into income if he is willing to put the time and the energy into it, if there is not conflict of interest, and if it does not take time away from his Senate duties?

On Friday, I made the point that last year I made 19 lecture fees. That is 1 day out of 19. In terms of the days of the Senate session, it meant I missed one-half of 1 percent of the days that the Senate was in session.

Tell me what other overriding public interest mandates that I no longer be able to do that. Tell me. I have read the editorials. I have read the stories quoting the floor manager of this bill, the majority leader, and other members of the committee. None of them has given me a reason that stands up as to why any Senator should be prohibited from making a lecture before an audience as to which there can be no challenge on conflict-of-interest grounds, on a day when the Senate is not in session—why that Senator should not be able to get a fee, whatever it may be.

This morning's paper informed us the most recent former Secretary of State is going to receive $10,000 per lecture. For a year or 2 years after a Senator or a Secretary of State leaves office, should he be prohibited from going on the lecture circuit? If there is no conflict of interest, why should he not do it?

What kind of double standard is this? I say to Senators they are so panicked by this public drive for ethics in Government that they have picked this handy target and have zeroed in on it.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. BAYH. Mr. President, I believe the Senator is making a very persuasive defense of the position that he and I and some others espouse about the way in which this particular kind of income has been separated from the others. I think he is in a very good position—perhaps as much as any other Member of this body I see—to go on the offensive.

He and I have had a chance to sit around and sort of feel sorry for ourselves and our country, I suppose, because of the almost complete demise of confidence in our political institutions—the fact that many young people particularly do not feel that there is any dialog between them and their elders who govern them and determine their destiny.

Can the Senator tell the Senate his thoughts relative to the experiences he has had with the young people on the campuses? In addition to it being very unfair to separate this particular kind of income, does the Senator feel there is a positive benefit to be derived from people such as we, who have shouldered significant legislative responsibilities, who have run for the highest office in the land—the Senator has come within a whisker of being the Vice President of the United States—opening the kind of dialog that one experiences in pursuing this kind of activity, which would be limited under this bill?

Mr. MUSKIE. I touched on that point extensively on Friday, and I am delighted that the Senator has called my attention back to it. There is no question in my mind about that.

I read into the RECORD last Friday a rather long history of the lecture circuit

in American politics. It is as old as the Republic. I could not agree more with the Senator. The demand for our services across the country and the willingness of people to pay these fees indicates the hunger that is out there for this kind of service.

I am not talking about the obvious conflict-of-interest situations. This code of ethics has to deal with that. What I am talking about is the proper public role—and that is what the Senator is talking about—that a Senator should fill in engaging in a dialog with the American people.

President Carter, for 2 months, has been making much of the need to get back to the people; and he is going back to the people, in Clinton, Mass., in West Virginia, in the telephone call-in show that he had a little while ago.

More and more, we are tied down to our responsibilities in the Senate. In most years since I have come to the Senate, this has been a 12-month job. Therefore, opportunities to travel around the country, as I did when I first came here, holding hearings around the country, are more limited. But it is still important, and there still are people out there who do not have any special interest ax to grind, who are asking us to go out there. I do not believe we are going to go out there for nothing. I do not believe that, especially if you follow Ralph Nader on a campus—he is getting a maximum fee—or a John Gardner, or any of the others. I put many of those names in the RECORD the other day.

We have a right, if we are responding to a legitimate public need, to receive compensation for it; and with respect to everything else, we say the marketplace is the best test of what that compensation should be. We are not setting these fees by law. We are not mandating them.

Every invitation I receive has its own price tag. It may be $500; it may be $200; it may be $1,000; it may be $1,500. The price finally arrived at is one that is negotiated at arm's length between me and the organization that wants me. This business is not a very direct result of one's official power and prestige, with the implication that I am forcing these people to pay me anything to do this.

The committee says:

> No, that role is not of that much interest to the American public. We have to restrict it drastically, even in those situations where the Senator is able to do it on a Sunday or when the Senate is in recess, and even though the sponsoring organization poses no conflict of interest.

The whole idea of getting paid for lecturing is so fraught with the risk of conflict of interest that we have to forbid even the most innocent situation, except to the extent of 15 percent of our income.

One other thing I want to say. I think the Senator from New York (Mr. JAVITS) referred to polls that indicated the public desire for this kind of discipline. There has been a lot of reference to the Lou Harris poll as being the most recent and the foremost one that focuses on the problem to the greatest extent. I do not have the full poll here, but I have enough to indicate that the public is concerned by proposed conflicts other than those related to lecture fees.

For instance, there was this question:

> With respect to a Member of Congress who owns a large amount of stock in a major corporation which has Government contracts.

Sixty-seven percent of those interviewed would be bothered by that, 79 percent of those seriously, and 64 percent of those interviewed would be satisfied by disclosure as a discipline to prevent that sort of thing.

At the other end, and a leading question if I ever saw one:

> With respect to a Senator who makes a number of speeches to groups affected by legislation for a large fee.

Seventy-one percent, or 4 percent more than the other, would be bothered; 80 percent of them seriously bothered, and 57 percent would be satisfied by disclosure.

I picked out eight of the questions, and with respect to all of them disclosure would satisfy those interviewed.

With respect to those Senators who make an occasional speech to business, labor, or other groups affected by legislation for a small fee, 39 percent would be bothered, 67 percent satisfied with disclosure.

With respect to occasional speeches to colleges for a small fee, 29 percent would be bothered, 67 percent would be satisfied by disclosure.

So up and down the list between 57 and 70 percent would be satisfied by disclosure. So that is the public perception as revealed by the Harris poll.

But the committee goes along with disclosure for all but those at the bottom of the list in the poll, those who get earned income for making speeches, so they go farther, the committee goes farther, than the poll suggests that people need to be satisfied. That part of the poll we very seldom hear about, but it is there, and I think it ought to be part of the RECORD at this point.

At this point, Mr. President, I think I have covered most of the major points I had in mind covering when I started this afternoon. I suspect the distinguished floor manager, my good friend from Wisconsin, may like to get a crack at some of the points I have made, and I am prepared to yield the floor at this point so he may get his views into the RECORD, if he ready at this time, and I promise to sit around and listen.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, I ask unanimous consent that the time that has been used thus far on the bill be equally divided from the 25 hours on each side. I mentioned it to Senator THURMOND and he did not have any objection.

Mr. PACKWOOD. Reserving the right to object——

Mr. NELSON. From both sides on the bill.

The PRESIDING OFFICER. On this amendment?

Mr. PACKWOOD. Reserving the right to object——

Mr. NELSON. The amendment time has been used up, but I did yield to Senator MUSKIE, who is on the other side, I was negligent in yielding and the Parliamentarian advises me it is all coming from the time on my side.

The PRESIDING OFFICER. Is there objection?

Mr. PACKWOOD. I object.

The PRESIDING OFFICER. Objection is heard.

Who yields time?

Mr. EAGLETON. Mr. President, will the Senator from Wisconsin yield to me when he concludes his remarks at this juncture?

Mr. NELSON. I will yield to the Senator.

Mr. BAYH. Mr. President, will the Senator yield to me for 30 seconds in order to make a unanimous-consent request?

Mr. NELSON. I will yield 30 seconds without losing my right to the floor.

Mr. BAYH. Mr. President, I ask unanimous consent that Barbara Dixon and Tom Connaughton of my staff be granted the privileges of the floor during the debate on Senate Resolution 110.

I thank my colleague.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. EAGLETON. Mr. President, I ask unanimous consent that Mr. Mark Abels, a member of my staff, have the privileges of the flood during the pendency of the ethics resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, I renew my request that the time that has been yielded from the bill thus far be equally divided between the proponents and the opponents.

The PRESIDING OFFICER. Is that on the Muskie amendment?

Mr. NELSON. Yes.

Mr. PACKWOOD addressed the Chair.

Mr. THURMOND. Mr. President, I have no objection to that providing we can stop it whenever we want to. I do not know how far this is going.

Mr. PACKWOOD. Mr. President, reserving the right to object, I want to pose a question to the Senator from South Carolina, if I might, because in this case my side is not my side's position.

Will the Senator from South Carolina yield to me such time as I might need in this debate if, by chance, it is impossible to get time from the Senator from Wisconsin or we run out of time on our side?

Mr. THURMOND. Mr. President, I will certainly yield to the Senator from Oregon. I just do not know how the time is going to run. We may have to give some others time, too, and we will divide it around. I will certainly yield all we can.

Mr. PACKWOOD. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, I yield myself whatever time may be needed.

Mr. President, as I have listened to the all-out assault upon this resolution, one would think somehow that some cabal of Senators met some place secretly in a dark room, and drafted an evil code and brought it here onto the floor to impose unfairly upon the Members of the Senate.

How strange. Everything in the code was authorized by the resolution, and

not one single word was uttered by the Senator from Maine or the Senator from Oregon. The resolution whizzed through. This Senator did not ask for the job. The resolution passed, and I was appointed to it.

What did the resolution say that seems to now come as such a surprise to the Senator from Maine and the Senator from Oregon and others who are up here now shedding tears, because somehow or another we are cutting their income?

I pointed out Friday night that I had great difficulty shedding tears for the Senator from Maine who voted against the salary increase, and then stands on the floor and says, "You are taking my income away. I cannot live on it."

Why did he not fail to vote for the salary increase then?

What does the resolution provide? It states:

It shall be the function and the duty of the special committee to conduct a complete study of all matters relating to standards of conduct of members, officers, and employees of the Senate. Such study and recommended code of official conduct shall include but not be limited to standards (1) annual public disclosure of income, assets, debts, gifts, and other financial items.

That is in the code, as we were directed by the Senator from Maine and the Senator from Oregon, and the rest of the Senate to put it in the code.

They wanted it in the code. The whole Senate wanted it in the code. Not a word was said against. No Senator demanded a rollcall. No Senator amended the resolution creating the committee.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. NELSON. At this moment I shall not yield to the Senator from Maine but I will be happy to yield later.

No. 2, the resolution provides that the code of official conduct shall include restrictions on—and I wish the Senator from Maine would listen to this.

Mr. MUSKIE. I could listen better if I had a chance to ask questions.

Mr. NELSON. The Senator has had more time thus far than this Senator has had. I simply wish to have the Senator listen—and I know that it is quite an imposition—because the Senator walked out on me Friday night. At least if he sits here he should have to suffer the burden of listening to what I have to say as I suffered the burden of listening to what the Senator from Maine had to say.

So, the resolution which passed the Senate, with not one word spoken at that time by the Senator from Maine, provided that the code shall include restrictions on or the elimination of outside income from honoraria, legal fees, gifts, and other sources, financial or in-kind remuneration. That is in the code.

Mr. MUSKIE. May I ask the Senator a question?

Mr. NELSON. I will yield for a question if we could have it without a lecture.

Mr. MUSKIE. Is the Senator telling me this whole question was prejudged at the time the resolution was submitted?

Mr. NELSON. I am telling the Senator that as a Member of 100 in the Senate a resolution was submitted directing the creation of a committee and directing that the committee make such study and recommend a code of conduct which "shall include but not be limited to" standards covering outside earned income. I did not draft the resolution. The entire Senate adopted it.

Mr. MUSKIE. The Senator is not answering my question. This is the first time I have ever had it suggested that the introduction of a piece of legislation is binding thereafter on every Senator with respect to the contents of the introduced bill.

Mr. NELSON. This Senator did not suggest it was binding. What the Senator was suggesting is that indignation and outrage is being expressed all over the Chamber as though this comes as a great surprise. I am simply saying that it was in the resolution.

Mr. MUSKIE. Did I say it was a surprise?

Mr. NELSON. The resolution asked us to study it, and we came out with what the resolution directed us to do.

Mr. MUSKIE. Will the Senator yield for another question?

Mr. NELSON. I yield.

Mr. MUSKIE. Have I said in the few days of debate that I was surprised by what the committee did?

Mr. NELSON. The Senator sounded surprised and sometimes even astonished to my hearing.

Mr. MUSKIE. Astonished, yes, astonished as to the lack of judgment that went into it. But surprised that the committee yielded to the panic and the pressure of public opinion of what the House of Representatives had done and of the majority leader's leadership, no, I am not surprised by that.

Mr. NELSON. At least the Senator should not complain about a resolution that directed us to study and report on these six items listed here after not once raising his voice at any time against the resolution.

Mr. MUSKIE addressed the Chair.

Mr. NELSON. Let me continue.

Mr. MUSKIE. I think I am entitled to a comment on that, and it shall not be more than two sentences.

Mr. NELSON. Go ahead.

Mr. MUSKIE. Really.

Mr. NELSON. All right. I yield.

Mr. MUSKIE. The suggestion that a piece of paper introduced up at the desk must on that day be thoroughly analyzed and digested by a Senator, lest he should be held bound by what it says, I find incredible. I assumed that when a resolution directing the committee to undertake this study is introduced that committee will inquire with open mind the full dimensions of the problem and bring back some recommendations that relate to what it inquired about and Senators not be bound by a piece of paper that was first introduced. If that is what that resolution does, I tell the Senator this: I will leave a standing request at the desk that everything that is introduced which bears upon conduct of the Senate or inquiry into its activities be held until it has been debated and sent to committee. That is a most ridiculous kind of argument to make in a so-called deliberative body.

Mr. NELSON. Mr. President, I am simply responding to the suggestion that seems implicit in much of what has been said in the Chamber in criticism of the Code of Conduct. This committee was directed by the Senate to address itself to the issues listed in the resolution. We did address ourselves to the issue in the resolution.

Obviously, the Senator is not bound in advance by anything a committee may do. But we did do what we were directed to do, whether the Senator likes the result or not. Obviously, a committee of people, with differing viewpoints, directed to report to the Chamber recommendations covering the six items listed here, is not going to be in unanimous agreement. All legislation, as the Senator well knows, comes out as a consequence of compromise. I am simply pointing out, however, that we were directed to address ourselves to these items, the third of which is conflict of interest arising out of investments, securities, commodities, real estate, or other sources; fourth, office accounts and excess campaign contributions; fifth, Senate travel; and sixth, engaging in business or professional activities or employment, or other activities so as to avoid any conflict with the conscientious performance of official duties.

Not only did this resolution, which was introduced on January 18, direct us to address ourselves to these issues but it also directed us to report back by March 1, which we were unable to do; though the committee staff worked days and nights and on weekends, and members of the committee worked as fast and as conscientiously as we could, we were not quite able to meet that deadline. But we did what the Senate directed us to do, and not everyone is expected to agree with it 100 percent.

The question is continually raised: Why should there be any limitation?

If it is the argument of the Senator from Maine, that there should be no limit at all on outside earned income, whether it is $100,000, or $200,000, or whatever it may be, it is an argument that he will have to live with. I cannot defend it. I cannot personally accept it and I do not think the public does either.

This Senate has agreed twice previously to set limits on earned income from honoraria. We have set it at $25,000, we have set it at $15,000, and this committee is suggesting a figure that would amount to about $8,600.

I do not know where the perfect place may be to draw the line. As to the whole spectrum of amounts of money, if presented to 100 Senators each would draw a line some place different on that spectrum, with some saying zero and some saying no limit at all. We came down on a limit of $8,600.

I do not say there is any magic in it, but I would suggest that that 15 percent amounting to $8,600 a year, represents more than 50 percent of the mean annual salary, on the average, earned by our constituents—more than 50 percent of the average annual salary of those who sent us here—and that is why I believe that the figure is fair.

There is a question of time involved. It is not the whole question, but there is a question. There is also a question of seemliness.

(At this point Mr. HARRY F. BYRD, JR., assumed the Chair as Presiding Officer.)

Mr. JOHNSTON. Mr. President, will the Senator yield?

Mr. NELSON. For a question?

Mr. JOHNSTON. Yes; I have a couple of questions, as a matter of fact on another section, but while I was here I thought I might take the opportunity, if the Senator is willing, to elucidate on a couple of other points.

Mr. NELSON. I wonder if the Senator would object if I suggest that this Senator would like to complete the brief remarks I have here, and at that time I will be happy to yield.

Mr. JOHNSTON. Certainly. I shall return. I am not walking out in a huff; I am walking out to take a picture out here.

Mr. NELSON. As I said, I think there is a seemliness question involved, and there is a question of public confidence in our institutions.

Confidence is a very fragile matter. We do not even know all the elements that go into the minds of the people in the public, that cause them to make whatever determination they make whether public institutions deserve confidence. But as I suggested last Friday night, just about every institution, public and private, that I know of is under assault. The confidence that we used to have in our schools or our colleges, our corporations, unions, city governments, the Federal Government—all of the important large economic and social institutions in this country, which have an impact upon all of us and how we live—all of those institutions are being questioned everywhere, and challenged.

I suppose there are many reasons for it. Obviously, the difficulty of resolving adequately complicated questions in a highly industrialized, sophisticated society presents a greater challenge to our schools, a greater challenge to our corporations, and a greater challenge to the Federal Government than we have ever had before. The fact that we have been unable to resolve major problems that all of us would like to see resolved no doubt contributes something to the lack of confidence of the people of this country in so many of their institutions and to reduce the confidence of many people in the institution of Government itself.

What do we do about it? I do not pretend to know all the answers to that one. But I do know that if the President of the United States and Congress are going to make the kind of tough decisions that have to be made respecting a wide spectrum of problems in this country, the public will accept them only if they have confidence in the institutions which are making the decisions and asking for the sacrifice. They must believe that the decisions are prompted by our perception of the public good—and nothing else. Anything that contributes to a lack of confidence ought to be avoided if we can.

I do not think you could walk the main streets of America, and go from person to person, and get a response that would be very positive on behalf of Members of Congress earning large outside earned incomes. The support for it just is not there, and that does affect us.

This is a full-time job. Oh, I recognize that people spend their own time as they like on many other things. But when it involves earning income on the side more than 50 percent of the income of the average American family, I do not think that is acceptable, and I think it does affect the question of confidence.

The role of Congress is different in our era than ever before in history. It was only 1946 when the LaFollette-Monroney Reorganization Act was passed, and when it was passed, they decided that Congress had to adjourn, and I believe the date was July 31. That was considered a late date to accommodate any delays that might occur. Then everyone went home, the Congressmen back to their law offices, if they were lawyers, back to their farming if they were farmers, to running their insurance companies if they were insurance people, or to their banks.

I remember that when I got out of the Army and was participating in campaigns, Congressmen were here for a half year in that period of history, and it was recognized to be a part-time job. It was recognized that the Members of Congress went back to whatever economic role they desired or whatever role they were playing before they got elected to office.

That has changed in the last 2½ decades, so that there is no one in this body—no one—who can keep up with and master the work that we have to deal with. I cannot do it, and no one else can do it, either. We are presented with tough, serious questions that involve the whole spectrum of economic interests in this country. No one is able to master them all.

Furthermore, there has been another change, and that is that a quarter of a century ago, the Federal Government was not involved very deeply in the economy of this country.

What did we do? We had a defense budget, which was fairly small. We had an agricultural bill, from time to time a modest welfare program of assistance to States, a highway program paid out of the gasoline tax, a little bit of aid to education, and not much more.

Now we are involved in everything: The regulation of industries; in safety legislation, OSHA affecting all businesses in this country; in the control of pesticides, affecting all kinds of businesses in this country; in aid programs; in research. The military budget is so huge that it is now larger than was the entire Federal budget when I arrived 14 years ago. When I came here, the whole budget of this country was under $100 billion. Today, the Defense budget alone is over $100 billion.

So we are involved with the economic interests of every corporation and every institution in America. That is a dramatic change.

When we are involved in dealing with all these problems, making decisions daily which affect all Americans in very direct ways, we must watch the question of appearances of conflict. As I said last Friday, and I will repeat it now, the only capital asset public institutions have is confidence, and without public confidence, public institutions cannot and will not work.

We do not sell mousetraps. We represent people, making decisions that affect their daily lives. We have no capacity to lead unless the people have confidence that we are doing the best conceivable job it is within our power to do. When people believe in their institutions, their institutions can work and they will accept decisions by those institutions. When they do not believe, they will not accept decisions.

So it is an important matter that we deal constantly with the question of the confidence of the American people.

We are public officials. In that respect we differ from all other people in this country who are not public officials. Special rules and special laws are justly applicable to those who are performing the public business, and one such rule would place a reasonable limit on the amount of outside income a Senator could earn.

Mr. JOHNSTON. Will the Senator yield at that point?

Mr. NELSON. I will yield for a question.

Mr. JOHNSTON. I am concerned about appearances and——

Mr. NELSON. I yield for a question.

Mr. JOHNSTON. Yes. This is a predicate to the question.

Mr. NELSON. I do want to try to conclude because last Friday Senator EAGLETON was asked to come over to speak. We ran past 6 o'clock. Today Senator EAGLETON has been waiting to speak. If the Senator could make it brief, I would appreciate it.

Mr. JOHNSTON. Very well. Under rule XLIII, it states that no Member shall accept anything of value from any person where he knows that such thing of value might tend to affect the performance or future performance of official duties.

Is the Senator familiar with the rule of which I speak?

Mr. NELSON. Yes. That is not the pending legislation.

Mr. JOHNSTON. Yes. I had a question about that. If the Senator wishes to defer that question to another day, all right. I hope that can be avoided.

Mr. NELSON. Maybe the Senator will be willing to let me complete my remarks and then let Senator EAGLETON speak. After that I would be glad to respond. What is the question going to be?

Mr. JOHNSTON. Shall I state it or shall I wait?

Mr. EAGLETON. Mr. President, I would be pleased to wait. I am interested in the question.

Mr. NELSON. Is the Senator interested in the answer, too?

Mr. EAGLETON. Not particularly.

Mr. NELSON. Then if the Senator is not interested in the answer, I am not going to listen to the question.

Mr. JOHNSTON. I had a series of questions that would be 2, 3, 4, or 5 minutes in length. This concerns me greatly about the code. I think it is important.

Mr. NELSON. I think it is, too. This is the second day that Senator EAGLETON has been in the Chamber waiting to speak. I want to give him that chance. As a matter of fact, I will conclude right now, let him speak, and respond to questions later, if that is agreeable.

Mr. EAGLETON. Mr. President, I ask the Senator from Wisconsin to yield perhaps 20 minutes or 15 minutes on the bill, if he has ample time on the bill.

Mr. NELSON. There is ample time on the bill. I yield 20 minutes.

Mr. EAGLETON. Mr. President, as the Senator from Wisconsin (Mr. NELSON) pointed out, I was in the Chamber last Friday.

Mr. NELSON. Will the Senator use his microphone?

Mr. EAGLETON. I was in the Chamber for the entirety of Senator MUSKIE's Friday speech. In all candor, without trying to be cute or snide about it, it was one of the best speeches I have ever been privileged to hear in this Chamber. I mean that with great sincerity. It was an eloquent and brilliant speech. I commend it to the attention of my colleagues. It will be found on pages 8160 through 8163 of the RECORD.

Because of the lateness of the hour on Friday I did not have the opportunity to respond to the Muskie speech.

The difficulty with the Muskie approach is the fact that there are not 535 ED MUSKIES in the Senate and in the House of Representatives. If by some miracle that were the case, if every Member of both bodies possessed the same character, value judgments, moral correctness, as does Senator MUSKIE, then there would be no need for any code of ethics whatsoever. I speak not merely of the provision limiting outside earned income, which has been the focus of so much debate, but I speak of the entirety of the code which is before this body.

Indeed, there would never have been a need for an Ethics Committee, even the moribund Ethics Committee we have had kicking around the Senate for a decade or so. There would have been need for none of that, because ED MUSKIE is a person of enormous character. He is a very good and just individual.

He is so good and just that I supported him in 1972 when he was a candidate for President, and, quite frankly, if he had been a candidate in 1976 I would have supported him then as well.

What the Senator from Maine fails to acknowledge in his presentation is the practical truth; namely, that there are not 535 ED MUSKIES in the House and Senate. In Congress there is a diverse group of men and women of different backgrounds, with different mores, and with different approaches to both public issues and personal ethical conduct. Because there are some who would abuse the high office that they hold as a Member of the House of Representatives or as a Member of the Senate, it is necessary, it is of compelling necessity, that there be a code of ethics.

As the Senator from Wisconsin (Mr. NELSON) has pointed out, there is no magic in this particular provision, this 15-percent limitation on earned income. As he pointed out before he concluded, some may think there should be absolutely no outside earned income whatsoever. Some at the other end of the spectrum think it should be totally unlimited, "As much as you can earn, earn and report it."

In between those two polarized positions there is a whole series of benchmarks that could be established and, in fact, have been established from time to time, as the Senator from Maine pointed out in his speech.

At one time, there was no limit on outside earned income. The sky was the limit; as much as you wanted for any speech or appearance. Then it went to a $15,000 limit. I forget when we did that—a couple of years or so ago. I think there was a $1,000 limitation per appearance. Some people did not like that, so it was changed to a $25,000 aggregate limit with no more than $2,000 per appearance, et cetera, and now before us is the Ethics Committee report with this 15 percent or $8,500 aggregate limit.

One thing is clear: The overwhelming sentiment, I think, in this body and, more importantly in this instance, the overwhelmingly public sentiment, is that there should be some limitation and that there have been transgressions and excesses by some Members of Congress.

I remember reading sometime in the past year—perhaps in the Wall Street Journal—that a poll was taken and it identified 20 professions—ministers, lawyers, accountants, real estate agents, et cetera. It asked the people being interviewed to rank from 1 to 20 those for which they had the highest regard, from 1 down to No. 20.

If my recollection is correct, No. 1 were members of the ministry. I am sure of my recollection as to who were 18, 19, and 20. That I very much remember; 18 were lawyers; 19 were Members of Congress; and 20 were used car salesmen.

That is the truth. I happen to be a lawyer—not much of one. I happen to be a Member of Congress. So I rank both 18th and 19th. If I sell my wife's old car, I guess I am 20th. I point this out simply to illustrate the low state of esteem to which the Congress of the United States has sunk.

One could debate whether we who serve in Congress merit such low esteem. But the bottom line, the inescapable, unavoidable bottom line is that Members of Congress are held in inordinately low esteem.

Also, with respect to the Muskie speech, had I heard that speech 2 or 3 years ago, I might have not only agreed with its eloquence, I might also have agreed with his penultimate conclusion in that speech: that is, to eliminate the limit on outside earned income. But this is not 2 or 3 years back in time; this is 1977.

What has intervened, one might ask, that would cause me to have taken one position, maybe, in 1973 or 1974, but not to take that position today, conceding the eloquence of the Muskie speech? So I jotted down in rough form some of the things that have occurred in the last few years with respect to Congress which, in the last analysis, I think is the reason that we are held in such low esteem.

Just recently, there have been allegations that about 40 Members in the House of Representatives and in the Senate have taken some kind of emolument from the South Korean CIA. The statement was made by Senator BAKER on one of the national interview shows not too long ago.

We have had also the recent and highly publicized matters in the House of Representatives with respect to the relationship of a couple of Members of the House and secretaries, et cetera, on their staffs.

We have had, just recently, the rather stealthy manner in which the Congress of the United States approached the rather ticklish question of a pay raise. The pay raise has been the subject of some exchange between Senator NELSON and Senator MUSKIE. I think Congress is receiving as much criticism for the sneaky manner in which we handled the pay raise as for the substance of the pay raise itself. I refer, of course, to the fact that the House of Representatives never voted on the matter.

Further, in recent years, it has become obvious to members of the public that although there were Ethics Committees in both the Senate and the House, those Ethics Committees did absolutely nothing; that "Ethics" was the name on a committee room door, period, end of action.

We have had, in the last couple of years, allegations that Senators have received tens of thousands of dollars in illegal campaign contributions from corporations, and some specific names of Senators have been referred to.

We have had examples in the public press of extravagence and luxurious junkets, shopping sprees, carloads of gifts and the like.

We have had press allegations that the oil interests unduly influence legislation on energy, et cetera.

We have had the image of congressional staffers junketing around the world, paid for by foreign governments and the like.

There have been allegations about the practice of lame duck Members of the Senate and Congress junketeering around the world in the waning days of their terms.

And there has been the whole area of obscene campaign spending, of almost outright purchase of seats in the Congress of the United States in terms of the personal investment by a wealthy candidate.

We have had recent newspaper articles that have dredged up some of the "perks" of Members of Congress—free medical care, subsidized barber shop, airport parking places, and the like.

In short, Mr. President, the public has formed a judgment about us. We may be uneasy about that judgment. We may feel that we have been maligned and abused and wantonly discredited. But the inescapable fact is the public holds Members of Congress in low, low, low esteem.

Mr. President, I do not recite this litany of commentary on Members of Congress with any great glee or joy. I am not here to reventilate matters that have been the focus of nationwide publicity. I am not here to pick over the dead political carcasses of former Congressman.

However, I think this debate has to be put in the context of the times. We have to remember why this debate is being held in March of 1977. We have to know why it is that what Senator MUSKIE so persuasively advocated on the floor last Friday might have been the right thing to do some years back, but is not the right thing to do in this month of March 1977.

Regaining public confidence, Mr. President, is going to be much more difficult than was losing it. What was perhaps lost quickly will be regained ever so slowly.

An event or two, three, or four, one following the other spontaneously, can shatter public confidence—and it has been shattered. Rebuilding and regaining and reearning the confidence of the public will not be done overnight. No one code of ethics, no one bill, is going to recapture instantaneously the public esteem.

But here today we are in the early stages of that rebuilding process. That is where we are in March 1977. We will have to rebuild public confidence in us step by step, slowly, painfully, and perhaps continue to be the target of some unjustified abuse from the press and the public.

The Ethics Committee report before us here and now is that necessary, indispensable first step, and we have got to take it.

With respect to the specific provision that has been the subject of debate, it is an important facet of this total package called ethics reform. Some might call it the least important; another Senator might say that it is the most important. But it is part of the package and we have to adopt the whole package.

The House already has discussed, debated, and voted on their code of ethics. It is no secret, and I think properly so, that when Senator NELSON inherited this totally uncoveted assignment as chairman of this committee, he drew upon the hearings and the fine work that had been done heretofore by Congressman OBEY in the House of Representatives.

He did it as a matter of absolute necessity because the mandate of the resolution was to report back by March 1, which the committee could not have done without drawing on the work done by the Obey committee in the House of Representatives.

So we built upon the Obey committee's work, modifying and changing where needed.

The House has decided that a 15-percent or $8,500 limitation is necessary on outside earned income.

Repeating for the moment that it is arbitrary, yes, repeating that some can argue for a higher figure and some even for a lower figure, the end product is that the House has enacted a 15-percent limit. Now we are in the Senate and we have to act on this.

Thus, it will appear that maybe the very first vote tomorrow, will be on the question of whether we are going to go beyond the House-imposed limitation.

How will the public out there view this action?

Mr. MUSKIE. Will the Senator yield for a moment?

Mr. EAGLETON. Yes; I yield to my friend from Maine.

Mr. MUSKIE. I appreciate the kind personal references to me, but I would not like the impression to get out to the public that the first vote is going to be on lifting the ceiling imposed by the House.

The first vote will be on the pending amendment, which is to apply the 15-percent limitation across the board.

I am willing to accept that. The cosponsors of my amendment are willing to accept it. It is a legitimate kind of discipline to get to the problems that concern the Senator, and this Senator.

I would not want it suggested to the public that my emphasis is on increasing that limit.

I am willing to live with 15 percent if all of my colleagues are willing to do the same.

Mr. EAGLETON. I thank my colleague from Maine for correcting me in that regard. He is correct and he has expressed himself precisely.

Indeed, the first vote on this ethic business has already taken place. I think the Senator from New Hampshire (Mr. DURKIN) had a matter before the Senate last Friday. So, neither Senator MUSKIE nor I are right on what the first vote was.

But there is a vote forthcoming on applying the 15-percent limit on outside earned income.

But the overwhelming thrust of the Muskie-Nelson debate of Friday and today, and the overwhelming thrust of Senator MUSKIE's excellent speech on Friday, focused on this one question: Is there any evil in unlimited outside earned income, specifically from honoraria, lecture fees, chautauqua circuit, and the like? That was the gravamen of the debate between Senator MUSKIE and Senator NELSON, both Friday and today.

Mr. MUSKIE. Will the Senator yield?

Mr. EAGLETON. Yes; I yield.

Mr. MUSKIE. The reason for that, I say to the Senator, is to drive home the point, the limitation imposed by the Senate creates serious inequities.

The debate focused on that because the response to my amendment which is pending will be, although there has not been much discussion of it up until now, that it would impose serious inequities upon those whose outside income comes from sources, which will be described as unearned income, and the only way we can apply similar discipline across the board is to have a full understanding of the inequities that would be generated across the board. There has been so much emphasis in the press that somehow lecture fees are totally unacceptable from the public interest point of view, that it was important that the record contain some indication that there are inequities that flow from that discipline.

If we can all come to understand what this discipline means to each of us, whether our income is earned or unearned, then there might be a more realistic approach to the solution that we must ultimately accept.

I am willing to accept the 15 percent notwithstanding the inequities, provided everybody else is. But if the majority of this Senate is free of the inequities related to earned income and thus feels disposed to vote for the limitations that apply to earned income, that in itself will be another inequity which I think the record ought to make clear.

The PRESIDING OFFICER (Mr. SASSER). The Senator from Missouri's time has expired.

Mr. EAGLETON. I ask for an additional 5 minutes.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, I yield an additional 5 minutes from the bill.

Mr. EAGLETON. Mr. President, there is an evident disparity in treatment between earned and unearned income.

As the Senator from Maine well knows and as has been ably pointed out by the Senator from Wisconsin (Mr. NELSON) on several occasions, different Senators come to this body from varying financial backgrounds. Some poor. Some of moderate wealth. Some of enormous wealth.

There is no functional nor perhaps any constitutional method by which to cause an individual to divest himself of his worldly possessions or to divest himself of the income from those worldly possessions. A Senator is not obliged to take a pauper's oath.

We do not live, I say to the Senator from Maine, in a perfect world. We live in a very imperfect world. Thus, there cannot be absolute symmetry in the treatment of earned and unearned income.

In my opinion, the Congress, at the time it raised the pay of the Members of Congress from $22,500 to something like $42,500, in fact was saying that membership in Congress in the future would be a full-time job.

The Senator from Maine pointed out in his remarks how one can build up a reputation that will warrant more attractive speaker fees. That goes for Senator MUSKIE as a Vice Presidential candidate who stayed the course in 1968. Indeed, it was true for me as a Vice Presidential candidate who did not get through "spring training" in 1972.

By the way, he said that astronauts, some of whom are Members of the Senate, can enhance their worth insofar as the speaking circuit is concerned. It is interesting to note that the astronauts, when they were astronauts, were prohibited from outside earned income—speeches, articles, what have you. Being an astronaut was a full-time job with NASA. They were prohibited from outside earned income.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield.

Mr. MUSKIE. Does the Senator forget what I believe I recall correctly—a very lucrative contract with Time-Life that was signed by the astronauts collectively? I do not recall how much accrued to them from that. It is a long time ago. I think that is a matter of record.

It may be that subsequently, before the program was ended, that kind of arrangement was modified. I am not up to date on that. But I well recall that the astronauts, under a contract arrangement that was agreed to by their superiors in the program, nevertheless were allowed to earn substantial sums, in the hundreds of thousands of dollars, if not more. Am I wrong?

Mr. EAGLETON. Perhaps I am in error. It is my recollection—and I will apologize if I am wrong—that astronauts were not permitted to receive honoraria for speaking fees while they were still astronauts. What they did

after they retired as astronauts and went into private life was up to them.

Mr. MUSKIE. May I ask the Senator a specific question? I asked it several times rhetorically, and it is yet to be answered by any proponent of this resolution.

Mr. EAGLETON. Yes.

Mr. MUSKIE. Is there something inherently wrong, from a public interest standpoint, with a Senator who becomes prominent, for whatever reason, whether it be as a candidate for President or Vice President, or because he has a message that attracts widespread public attention, or because he is an effective public speaker—is there some public interest that mandates that he should not receive a fee for lecturing to an audience whose composition poses no public interest conflict, provided that the time he devotes to that does not come out of time he owes to the performance of his duties as a Senator? Is there some other public interest factor that escapes me?

If there is no conflict of interest, if it does not eat into his time, does the mere fact that he achieves prominence, sufficient prominence to attract this kind of attention while he was a Senator, deprive him of the right to perform that kind of public interest? Believe me, it is that kind of public interest.

What is the answer to that question? Nobody has answered that.

Not one of the abuses that the Senator has mentioned—and I kept a list of them—has anything to do with the situation I have just described.

The Senator mentioned South Korean payoffs, the trouble Congressmen have gotten into on the other side, the way in which we enacted the pay raise, illegal campaign contributions, junkets abroad, oil industry influence, campaign spending to purchase seats, the prerequisites of Congress. In order to deal with those abuses, do we have to cut off the kind of earned income that I have described?

Mr. EAGLETON. Let me respond to my colleague. His specific question is this: Is there anything inherently or indigenously wrong about speaker's fees? No, not inherently wrong; but there is something inherently risky. There is the considerable risk of the appearance of impropriety.

The PRESIDING OFFICER. The Senator's time is expired.

Mr. EAGLETON. May I have 5 additional minutes? Of the last 5 minutes, I used 1, and the Senator from Maine used 4.

Mr. MUSKIE. I would yield time to the Senator if I had any.

Mr. NELSON. I yield the Senator 5 minutes.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield.

Mr. THURMOND. Mr. President, I ask unanimous consent that Tony Campbell, of my staff, have the privilege of the floor during the consideration of this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, will the Senator yield more time so that I might ask the Senator from South Carolina a question?

I should like to engage in a colloquy with Senator MUSKIE. May I have some of the time under the Senator's control in order to continue a discussion with him—based upon the unanimous-consent agreement we had?

Mr. THURMOND. I have not said anything on this matter. I would like to say a few words following that. Would that be satisfactory to the Senator?

Mr. PACKWOOD. Yes.

Mr. EAGLETON. Senator MUSKIE's question is: Is there anything "inherently wrong" with honoraria for speeches?

Mr. MUSKIE. I put the question in terms of a specific one. I do not want an answer based upon the risk. I want an answer to a specific question.

Mr. EAGLETON. The Senator from Maine wants an answer he would like. I am going to have to give him an answer he will not like, and it is just too bad.

Mr. MUSKIE. The Senator does not have to give me the kind of answer he is proposing. I have read that in the report, and it makes no sense, and he evades my question.

Mr. EAGLETON. I do not evade the question.

I refuse to yield for 5 minutes to the Senator from Maine. After that, I will yield to him for as long as he wishes. But I am going to answer his question, one that will tinge his ears, and perhaps he will not like it, but I am going to give him an answer.

There is nothing inherently wrong, but there is something inherently risky. Appearances are sometimes as important as reality, and the Senator from Maine knows that.

Think back to the Haynsworth debate. What was said time and again on the floor of the Senate about Clement Haynsworth? He was honest, yes. He had good, lovely neighbors who liked him, yes. His fellow judges on the fifth circuit court of appeals liked him, yes. But what he had done gave "the appearance of being improper." He owned stock in the Brunswick Co., a few shares, and sat on an important Brunswick case. There was the "appearance of impropriety." He or his wife owned a company called Carolina Vendomatics, as I recall. They put vending machines in textile factories. An important textile case came up in his court. Everybody said Haynsworth was honest, but it was "the appearance of impropriety," to sit in judgment in this important case while his lucrative vending machines were in textile factories.

That is the evil or the potential evil or the risk that is involved in speaker's fees.

We recall that Justice Fortas, was denied the Chief Justiceship of the United States and later left the Court. Part—by no means all, but part—of the Fortas problem related to honoraria. Part of it related to a relationship he had with a tax-free, eleemosynary foundation.

We all know that Senators are approached about speaker's fees by various organizations: "Please come to city x to speak before our beloved members. We will give you a $2,000 or a $3,000 speaker fee, and we wish you well on your committee assignments."

Again, it is the appearance of impropriety which is involved.

I say, Mr. President, that at a time when we are held in such inordinately low esteem by the public, we can ill-afford the risk of even a tinge of impropriety.

I repeat what I said about Senator MUSKIE. He is as able and as honorable a man as I have ever known. There is no question about that. The people of his State revere him for his character and for his impeccable public conduct.

But we are not all Muskies. Would that we were, would that all of us were like him. But there are some who would abuse the privilege of their Senate office and, thus, we have to draw some tough lines.

Quibble with it a few dollars up or down, but a line must be drawn which says, "no further." That line has been drawn by the House of Representatives. Are we to say that our greed is a rational basis for exceeding the House-established 15 percent or $8,500 limit?

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. EAGLETON. I think that is where the Muskie argument collapses.

Yes, I yield.

Mr. MUSKIE. It is interesting, as the Senator answered my question, with all respect, I still do not believe he answered it. Two of the three abuses to which the Senator refers out of the history of recent years have nothing to do with honoraria. They had to do with holdings of income-producing assets. So obviously those kind of assets carry the risk of which the Senator speaks.

But this resolution does not apply the same strict discipline to them as it does to earned income, and that is why I put my question very specifically because I want to drive home the point. I am not going to try to do it with a question again, and I am not trying to abuse the Senator's time.

But my specific point is there is a public interest, there is a public role for a Senator to play in discussing the issues around the country. There are public platforms available to him which do not involve a conflict of interest, and I just do not see any public interest to be served in denying those platforms to Senators.

If you say that anything that has the appearance——

The PRESIDING OFFICER. The Senator's additional 5 minutes have expired.

Mr. EAGLETON. I do not know who has the time.

Mr. MUSKIE. I had been assured by the majority leader——

Mr. EAGLETON. Senator Nelson has the "white hat" time; I do not know who has the "black hat" time. Who has time for the "black hats?" [Laughter.]

Mr. NELSON. What is the request?

Mr. MUSKIE. I just wanted to finish a question in the form of a statement in response to something the Senator said, if we could have 5 minutes and, if so, I think we could wrap up that one—maybe not that much, 2 minutes.

Mr. NELSON. The Senator from South Carolina has been waiting but maybe I will yield 2 more minutes.

Mr. MUSKIE. May I have one of them?

All I want to say to my good friend

from Missouri—and no one is fonder of him that I am——

Mr. NELSON. The Senator is using up his 1 minute.

Mr. EAGLETON. That is all right. I like that part of his minute.

Mr. MUSKIE. If you adopt that philosphy that we just use the meat ax to eliminate risk-free situations, then you should not limit it to earned income; you should apply it across the board.

The second point I made is my amendment does not suggest confiscating assets or income. If the Senator will study it closely he will see that, and I will not try to explain it during this amount of time.

Mr. EAGLETON. The Ethics Committee has set forth a limit on outside earned income. It does not deny one forum to Senator MUSKIE or to Senator PACKWOOD or to Senator EAGLETON. We can speak at as many colleges as we want. I speak in Missouri at lots of colleges, and I am sure the Senator from Maine does the same thing. He speaks at Bowdoin, at Bates, and the University of Maine and, I presume he does as I do; that is, he does not charge a fee for a speech in his home State. Further, the dollar limit on outside earned income does not prevent him from speaking at as many forums as his lungs will permit. The limit on outside earned income merely says that beyond $8,500 you cannot charge a fee for such speeches.

So that the first amendment, freedom of speech, the right to inform, the right to carry the issues to the people, the right to follow in the footsteps of William Jennings Bryan at those great chatauquas of bygone eras, that right the Senator from Maine still has.

Mr. MUSKIE. Not on the same terms.

Mr. EAGLETON. What he will be denied will be fees in excess of $8,500 for exercising that right.

Mr. PACKWOOD. Mr. President, will the Senator from Missouri yield for a question?

Mr. EAGLETON. Whose time are we on?

Mr. PACKWOOD. On the time of the Senator from South Carolina.

Mr. THURMOND. I yield 5 minutes and then we will have to go ahead.

Mr. PACKWOOD. The Senator has talked about appearances, and I come to the Lou Harris poll where people stated recently, on this one which was "Would you be bothered by Members of Congress speaking before colleges for a small fee, and speaking before big business for a big fee," and then the question was asked of the voter "Would your concerns about that situation be substantially satisfied or not if the voters in his district were made fully aware of his situation and could vote for or against him in the next election," and that comes out 57 percent are satisfied.

If it is appearances, if it is trying to make sure the public is satisfied, what is the matter with disclosure? That appears to satisfy them from the poll.

Mr. EAGLETON. There are some Senators, and the Senator from Oregon is one of those, who very sincerely believe that simple disclosure answers everything.

Mr. PACKWOOD. So does the public.

Mr. EAGLETON. Let us examine this proposition. Take all the limit off everything; disclosure is the answer. So if you want to have a nice little law practice in Puckeyhuddle, Mo., and put your name on the door of "Shyster, Shyster, and Senator," and then pretend that the Senator is a member of that firm only for matters that do not pertain to the Federal Government, then I take it that "full disclosure" would satisfy. Well, the Nelson committee said "No" to that. With or without disclosure, a Senator cannot practice law. I think the Nelson committee was absolutely right. Disclosure is not necessarily the answer to everything.

I believe that Senator PACKWOOD was present in the Chamber when I pointed out the low esteem in which we are held by the public. Out of 20 professions we ranked 19th in public esteem.

Mr. PACKWOOD. Not for the reason we speak.

Mr. EAGLETON. For a whole host of reasons, good, bad, and indifferent. The end result is the same.

Mr. PACKWOOD. Not one of which relates to speaking, and on the one issue that says if it discloses where they get the fees from where they are speaking they say that is fine.

Mr. EAGLETON. We are talking about a total picture—an image—a bad, negative image. We now are in the process of trying to rebuild our image from a very negative one to, someday, a positive one. If we in the Senate, after the House has already locked in this 15-percent provision, say that 15 percent is not good enough for us, we have got to have more, then the public will say, "Aha, nothing is good enough for the Members of the Senate. They have got to have more, more, and more."

Mr. MUSKIE. Mr. President, will the Senator yield? That is not the pending amendment. The pending amendment is if the 15 percent is good enough for us, it ought to——

Mr. EAGLETON. Oh——

Mr. MUSKIE. Yes, the Senator has a nice little way of skirting around the point of questions. The point of this amendment is if the 15 percent is good enough to eliminate greed, which is what the Senator is talking about, on my part, and on the part of other Senators who depend on this source of income, why do you not get at the greed of those who benefit from unearned sources of income? What is wrong with the 15 percent as to them? The Senator has not mentioned that. The Senator disclosed in several answers to questions that the risk of conflict of interest related to earned incomes and he mentioned specific things that had nothing to do with earned income, that are related to other kinds of holdings. But the Senator has not addressed himself to the feature of this amendment at all.

Mr. EAGLETON. Well, I think about as much of this amendment, Mr. President, as the Senator from Maine does. He spent all Friday talking about everything but his own amendment. He talked about Chautauquas; he talked about William Jennings Bryan; he talked about Daniel Webster. He spent the whole afternoon talking about how these people informed the "folks out there," the great unwashed and uneducated, and all the Senator from Maine wanted to do was to carry on that noble tradition. That is what he talked about all day Friday. Now today, when he does not like something that is being said, he now wants to refocus the whole debate and recast it as he would like.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. EAGLETON. The issue he has raised time and again is whether there should be a limit on outside earned income.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. President, if the Senator will yield, the Senator knows full well he called it a fine speech and he did listen to it. He did listen to it.

Of course, I talked about the equities for Senators who go on the lecture circuit. I indicated then and indicated to the Senator earlier this afternoon that, notwithstanding what I regard as an unwise approach to the problem, I am willing to accept it but, in order to persuade those who do not depend on the lecture circuit, I had to indicate that there were inequities with the committee's approach and that I would balance the inequities by imposing a similar approach on unearned income. Otherwise, I could not make a case to Senators who have income producing assets. There are inequities for both of us.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUSKIE. I spent the time, as the Senator described, as he is right. I spent a lot of time on it. But the first amendment I offered and the first amendment I wrote, which is the one that is now pending, would apply the 15 percent across the board.

The PRESIDING OFFICER. Who yields time?

Mr. EAGLETON. Mr. President, will the Senator from South Carolina yield 50 seconds?

The PRESIDING OFFICER. Does the Senator from South Carolina yield time?

Mr. THURMOND. I yield 1 minute.

Mr. EAGLETON. I thank the Senator for yielding 1 minute.

With all due respect to our colleague from Maine, and we have had a good exchange here, he knows that the amendment now pending is a tactical ploy. It is merely a diverting strategy. He knows that it will not fly. He knows that from a constitutional point of view it raises very serious questions and that he is using it as a gimmick, as a strategy. What he is really after, what he has been talking about, and what he is really concerned about are limitations on earned income from honoraria. Of course, he can cast a smoke screen. He can allege how terrible it is not to treat earned and unearned income alike. But his basic gripe is not that. His basic gripe is on the outside earned income limit which he opposes and which I support.

I thank our colleague from South Carolina.

Mr. NELSON. Mr. President, let me say one word. I think this has been a very fruitful dialog and I would hope we could continue it. But the Senator from South Carolina did request time within which to speak.

Mr. MUSKIE. Mr. President, may I put a question? How long will the Senator from South Carolina be? I wish to respond to this last point made. I wish to know when I can expect to be recognized for that purpose.

Mr. THURMOND. Mr. President, the Senator from Maine has been talking since Friday off and on and, I think other Senators wish to talk awhile.

Mr. MUSKIE. I am agreeable. I only wish to find out.

Mr. THURMOND. It seems to me we should divide the time among all Senators. I am not going to talk long, only about 20 minutes or maybe less.

Mr. MUSKIE. I have no objection.

I simply want the Senator to tell me when I might be recognized. If it is an hour from now, that is fine; if it is not until tomorrow morning, that is fine.

Mr. THURMOND. I do not intend to speak over 15 or 20 minutes.

Mr. MUSKIE. That is fine. I thank the Senator.

Mr. THURMOND. Mr. President, I rise in opposition to Muskie amendment No. 93.

Mr. President, the arguments for placing a limit on outside earned income cannot be made for a similar limitation on unearned income. While it may look like an unfair distinction is being made, I believe this special committee has reached a result that is fair to all Senators.

For example, all outside earned income is not being abolished. A Senator may still earn up to $8,600 a year for outside speaking appearances and articles. In addition, any honoraria received in excess of $8,600 and up to $25,000 may be donated to charity by a Senator.

Unearned income, on the other hand, has not been limited under the new rules because a number of provisions have been proposed to ease public concerns about potential conflicts of interest and diversion from official duties that stem from Senators earning outside personal service income.

Mr. President, there is no doubt that the public sees outside earned income, especially honoraria, as troublesome.

In a Harris poll commissioned by the House Committee on Administrative Review, 71 to 21 percent of those polled said they would be bothered by a Congressman who would make a number of speeches to business, trade, and environmental or labor groups affected by his vote in Congress and receive a large fee for such speeches. Even where the fee received for such speeches was small, a 50 to 41 percent plurality was bothered by the practice.

Mr. President, the Harris poll also indicated the perceptions of the public with regard to unearned income, such as from family farms or businesses. When asked if they were bothered by these potential conflict-of-interest situations, only 22 percent objected to a Member retaining his investment in the firm even where he was receiving a share of the profits and not performing any services.

Only 15 percent objected to a Member owning a large farm, occasionally making some managerial decisions about its operation, but spending no time running it on a day-to-day basis.

Mr. President, other provisions have been included in the pending resolution to ease public concerns about potential conflicts of interest with regard to unearned outside income. A full financial disclosure section has been proposed which would identify the source and value of outside investments. In addition, in the conflict-of-interest provisions there is included a prohibition on service on the boards of publicly held or regulated corporations and financial institutions. This prohibition will eliminate any compensation to a Senator for service on such boards, thereby eliminating any potential for a conflict of interest.

Mr. President, one of the exceptions from outside earned income is royalties from books. The reason for this exemption is stated at page 39 of the committee's report:

> If an individual writes a book, and it becomes a best-seller, any royalties received based on the sale of the book are, for the most part, beyond his direct control. It is income which is, in effect, a return on a prior investment of time and energy.

Mr. President, this reasoning is the underlying basis for not including unearned income in the 15-percent limitation on a Senator's salary.

The basic difference between earned and unearned income rests on the personal time spent by a Senator on outside activities, whether it be making speeches and appearances, or spending a minimum amount of time managing a family enterprise.

Unearned income does not necessarily involve any personal time of a Senator. For example, income from stocks and bonds is derived solely through fluctuations in the stock market. A Senator takes his chances like any other public investor. Rents and annuities, dividends or other investment income is essentially earned without the personal services of a Senator and do not involve a conflict of interest, so long as such outside investments have been fully disclosed.

Mr. President, many Members come to this body having made wise and successful investments prior to their entrance into public service. If these investments constitute a potential conflict of interest, that conflict will be disclosed under the new rules. The Senator should be able to retain any investments he has made in the past, so long as they do not pose a conflict of interest and do not involve a substantial amount of time away from official duties.

Mr. President, I think this is a bad amendment, and I am not too sure that the amendment is offered in good faith, because if I understand the Senator from Maine, he is basing his amendment on the proposition that the 15-percent limitation should apply to not only earned income, but also unearned income.

Mr. PACKWOOD. Mr. President, will the Senator yield for a question?

Mr. THURMOND. I am glad to yield to the Senator from Oregon.

Mr. PACKWOOD. The Senator indicated a difference between earned and unearned income, and the earned income taking time to accomplish. I ask the Senator, Why not put all earned income under the same limitation?

Mr. THURMOND. The difference is that earned income takes time away from his service to his constituents while in Washington.

Mr. PACKWOOD. My question was, Why not put the same limitation on all earned income?

Mr. THURMOND. Because unearned income does not take time like earned income. Earned income is for personal services actually rendered.

Mr. PACKWOOOD. I understand that. Forget the unearned——

Mr. THURMOND. Now, unearned income, such as rents or interest or dividends, annuities, royalty income is taken out of the 15 percent limitation.

Mr. PACKWOOD. The Senator is correct. My question involves only the earned income, that which takes time, personal service. Why does not the code treat all earned income the same?

Mr. THURMOND. I think, Mr. President, you cannot get a rule that is perfect. What the committee has attempted to do is find a place to draw the line that will be fair to all regarding unearned income.

Mr. PACKWOOD. No, no, earned.

Mr. THURMOND. Well, earned income is covered under this resolution, with a limit of $8,600.

Mr. PACKWOOD. Not all earned income.

Mr. THURMOND. Well, where would——

Mr. PACKWOOD. Well, very specifically, we had a reference earlier to artistic works.

Mr. THURMOND. I also heard what the Senator said about a man managing an apartment house, but he could do that on Saturday, or even on Sunday, if he wanted to work on Sunday.

Mr. PACKWOOD. But you could make a speech on Saturday or Sunday also.

Mr. THURMOND. That is true. Most of them are made on Saturday nights, or probably some of them on Sunday.

Mr. PACKWOOD. Why limit them, then?

Mr. THURMOND. Well, with earned income, a man generally has to leave here while a college is in session, and after Friday night probably the college is not in session. I have made a number of speeches in colleges, and I do not think 5 percent of them were made after Thursday night, I would say.

Mr. PACKWOOD. Well, then, is your standard whether or not it takes you away from the Senate? If it does not take you away from the time of the Senate, should you be allowed to make them?

Mr. THURMOND. Well, any speech, when you go away if the Senate is in session, is going to take time.

Mr. PACKWOOD. No, no, my question is, If it did not take any time away from the Senate, should you be allowed to make it? First let me give a specific——

Mr. THURMOND. I think this, Mr. President: I think we have to do a little more here than figure it purely on a mathematical basis. There is one thing my father told me when I started out in public life. He said, "You have got to appear right as well as be right."

I think if you give the appearance that you are spending a lot of time away from Washington, even though you may not be busy on your particular duties at that time, if you are spending a large amount of time earning excessive speaking fees, which a great many Senators, or some, are earning, it gives the appearance that you are using your office for your personal gain.

I think Senator BYRD expressed that pretty well a few days ago when he made this statement—I do not know how many speeches the Senator made before he became a Senator or got in public life, or how many other Senators did, but here is what Senator ROBERT C. BYRD said:

I don't think any group of citizens would pay me $2,000 to play my fiddle for 15 minutes if I were a meatcutter, or working in a shipyard, or practicing law.

In other words, probably most of the invitations that are received here by Members of the Senate—and we have to admit this—are received because we are United States Senators.

Mr. PACKWOOD. Now a question. You are invited to speak at the Houston Baptist University commencement, as I was last year. Of course I was invited because I was a Senator. They wanted to have somebody with some name or prominence to speak. Is there something wrong with that?

Mr. THURMOND. There is nothing wrong, and I commend you for it. We have a provision in here that although you can collect the $8,600, a Senator may make other speeches if he wishes, so long as he donates them to charity.

Mr. PACKWOOD. All right. Then it is not a matter of time we are talking about, is it?

Mr. THURMOND. Yes, it is a matter of time, too. You have to balance it. If you can spare the time—maybe you cannot spare the time to deliver $8,600 worth, but we limited it to that because we had to have some basis and we felt that if we limited it to 15 percent of the salary, we would be reasonable.

Mr. PACKWOOD. The Senator seems to be making the argument——

Mr. THURMOND. Let me answer you. If you can find time to make all the appearances, and donate the money to your alma mater, an orphanage, or anywhere else you want to, if you can find the time and it does not interfere with your work, you can still do it.

Mr. PACKWOOD. That is right. If you can find the time, you can go out and make $25,000 worth of speeches, and donate most of it to charity.

Mr. THURMOND. That is right, and I predict once we agree to this resolution a lot of these charity speeches will probably not be made.

Mr. PACKWOOD. If you can find the time to do that, why can you not find the time to make $25,000 worth of speeches and take the money yourself?

Mr. THURMOND. Because I do not think you can probably find the time to make $25,000 worth.

Mr. PACKWOOD. Then how can I do it for charity?

Mr. THURMOND. Well, you can do it for charity, but how are you going to find the time?

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. THURMOND. Does the Senator want to ask something?

Mr. GOLDWATER. Yes.

Mr. THURMOND. Mr. President, I yield to the Senator from Arizona to ask the Senator from Oregon a question.

Mr. GOLDWATER. I will ask the Senator from South Carolina.

We are talking about time, and we are talking about a limit of $8,650. We have 50 days that I can count up that we are not doing a darn thing. We are home fishing, talking to constituents, having a good time. Would the Senator entertain an amendment where we could speak as often as we wanted to on those 50 days, and, instead of $8,500, we might earn $50,000 or $75,000? We would not be taking a second of time away from the Senate. We are home, sort of loafing.

Mr. THURMOND. Mr. President, I cannot conceive of such a situation. If the Senate is not in session the year around, we are busy the year around. I am as busy in my office when we are not in session as when we are in session, and I am sure most Senators are. This is a year around job.

Years ago it was not. You could come here 4 or 5 months, and then go back to your home State in the fall.

Mr. GOLDWATER. No, the Senator misunderstood me. I have already counted 10 days for Lincoln day, 10 days for Easter, 30 days in the month of Auguest. That is 50 days.

I realize the Senator works hard. I think all Senators do. But maybe we find some time that we do not have to be working. The question I am asking is, If it does not take one second away from Senate time, would it not be proper to allow us to make extra money during that time, when we are doing nothing but being home or being some place else, to make extra money if we can?

Mr. THURMOND. Mr. President, in reply to that, there has never been a time when I found myself doing nothing since I have been a Member of the Senate. These recesses are not to let you stop working or go fishing.

Mr. GOLDWATER. I am not doing that.

Mr. THURMOND. These recesses of the Senate, as I understand them, allow us to go back home with our constituents and speak to them, or spend the time in some other way we feel is helpful to our State or our country.

Mr. PACKWOOD. Are we allowed then, 2 or 3 weeks for a family vacation per year?

Mr. THURMOND. I do not know if there is a standard Senate policy on family vacations. August is the month they usually allow for family vacations.

Mr. PACKWOOD. If they allowed the month of August for a vacation, can I use it as I want?

Mr. THURMOND. I do not think it is a vacation, really. They call it a vacation, some of them do, and some of them take these recesses for a vacation. I have found that the Senate takes time the year round and it is hard for me even to find the day to take my wife off for 2 or 3 days anywhere. This work is demanding.

Mr. PACKWOOD. We may be coming to that. We will be here 51½ weeks per year and have full public financing of our campaigns. We will have no outside income. We will live at the public expense and be kept at the public expense. It will be a sorry day for this Senate when we get there, if we cannot take a 2 or 3 week vacation with our families because every waking hour and every sleeping hour belongs to the Senate. That is going to be a sad day for this Senate.

Mr. MORGAN. Will the Senator yield?

Mr. THURMOND. Instead of spending that 2 weeks with his family, as the Senator says he needs to do, if he is going to run off speaking everywhere and trying to use his position to make money, that is a decision he will have to make.

Mr. PACKWOOD. I will make a deal. Let us leave the decision up to my wife.

Mr. THURMOND. I expect she would want the Senator to stay with her and not go off and make money and, therefore, $8,600 should not affect the Senator so much.

Mr. PACKWOOD. I would be willing to reach a compromise. If the Senator would be willing to reach a compromise with my wife as to what she wants me to do for 2 or 3 weeks, maybe we can make a harmonious deal.

Mr. GOLDWATER. Let us forget the fact that the Senator works all the time he is at home and I work all the time I am home. Let us say we want to go off and make a little extra money at no expense to the public, at no expense to anyone. This is a hypothetical question. Should we be allowed to do that?

Mr. THURMOND. The Senator can do it. He can do it up to $8,600.

Mr. GOLDWATER. I am talking about more than $8,600.

Mr. THURMOND. Well, that is what we are limiting it to. In other words, $57,500 salary plus $8,600 makes $66,100. I believe any family in the Senate can live on $66,100.
